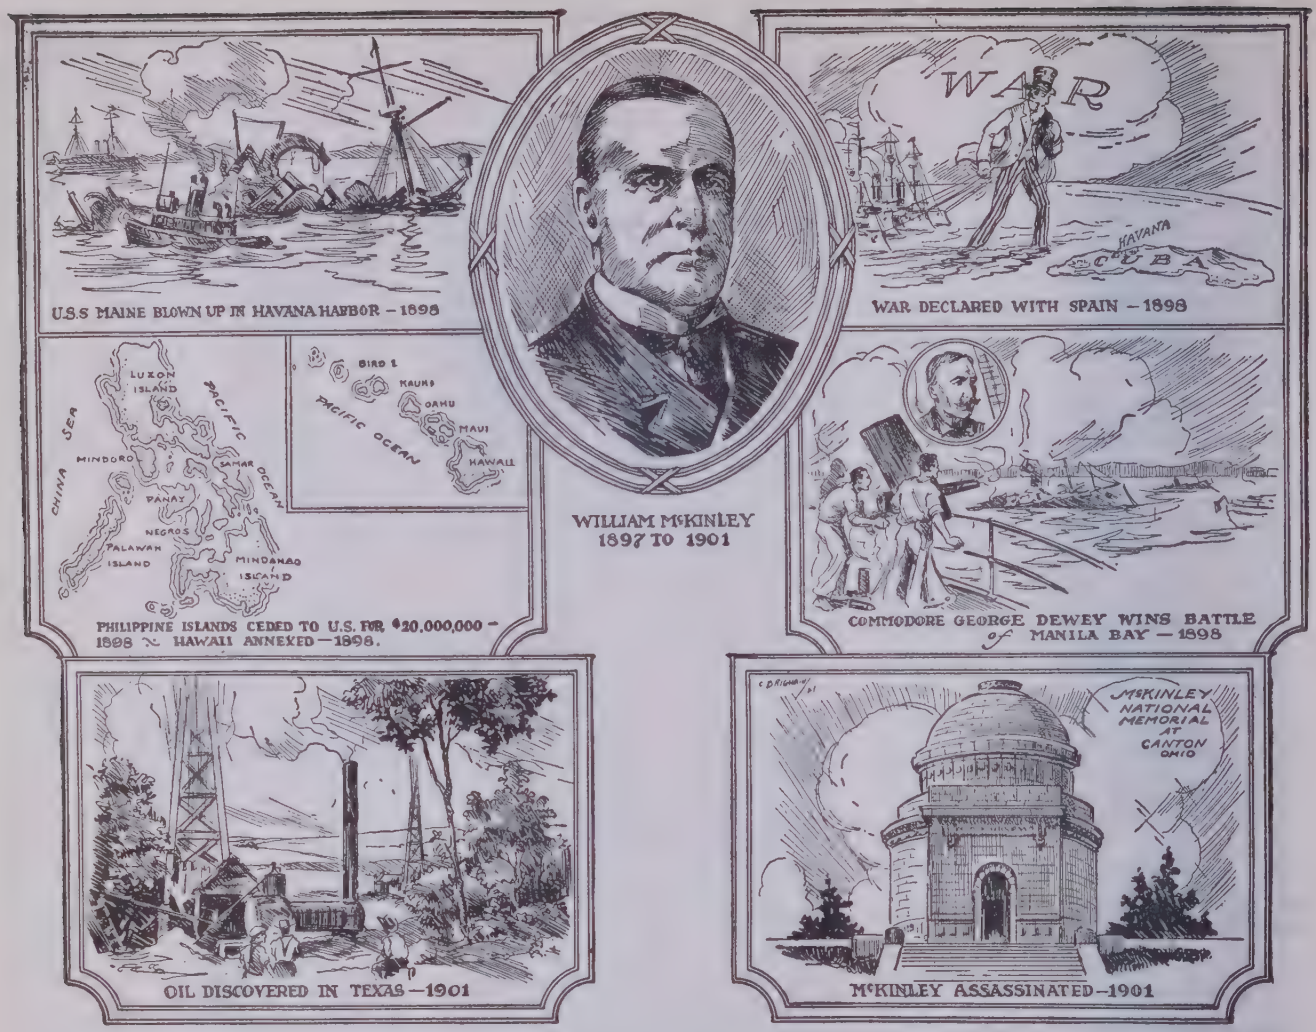
Ten Thousand, The Retreat of the.—The Persian Empire had become enfeebled through luxury and lack of discipline and Xenophon, who had been a Greek mercenary captain in Persian service, speaks of them as "reclining on tapestries wearing gloves and furs".....They no longer dared fight....They had for their maxim "never to fight the Greeks without Greek auxiliaries on their side." In the year 400 B. C., Cyrus marched against his brother, the Great King Artaxerxes, in the hope of securing the Persian throne. He had in his army 10,000 Greek auxiliaries, of whom Xenophon, the historian, was one. This army marched across Asia Minor to the Euphrates without resistance and offered battle at Babylon. The Greeks charged with their war-cry and the Persians ran before they came within bowshot. Only one Greek received a wound from an arrow; but Cyrus was killed and his army disbanded. The Persians treacherously killed five generals, twenty captains and 200 soldiers of the enemy and the Greeks burned their tents and chariots and began retreat. Through snow and famine they marched, through Armenia to the Black Sea and then to Greece. Xenophon was general of the 8,000 retreating soldiers.

Thirteenth Amendment.—Toward the close of the Civil War, on February 1, 1865, Congress passed the Thirteenth Amendment to the Constitution, by which slavery was to be abolished forever in all parts of the United States. Thus the Emancipation Proclamation of 1863 would be extended over all the country and incorporated into the Constitution. The President signed the amendment and during the next two months the majority of the northern states had approved it. It is necessary to have the approval of three-fourths of the states to ratify an amendment and therefore, at the close of the Civil War, in April, 1865, it was submitted to the southern states. Texas had not yet reorganized her government and took no action, Alabama and Mississippi would not accept it without changes, but the rest of the vanquished states, having already lost their slaves, voted approval. Of the five slave states which had taken no part in the war, Delaware and Kentucky opposed the amendment while West Virginia, Maryland and Missouri, who had voluntarily begun the freeing of their own slaves, took no interest.

By December 18, 1865, twenty-seven out of the thirty-six states of the Union had accepted the amendment and it became law.

Thirty Years' War.—The Thirty Years' War (1618-1648), was a religious war among the peoples of northern and central Europe. In the course of the conflict many other motives than the religious were of importance. The Catholics were at that time angered by the growth of Protestantism, which then had been in existence for about a century. The Catholics were united, but the Protestants were split into many sects, the strongest of which were the Lutherans and the Calvinists. The schism between these two sects was brought about largely through the intrigues of the Jesuits (Catholic monks), who recognized the weakness of dissension. The Lutherans deserted Frederick, one of their strongest leaders, because he was a Calvinist.

The fighting was mainly in Germany, which suffered disastrously from the ravages. Wallenstein, a mercenary pillager for a time maintained a large army by murder and robbery, but was prevented by Cardinal Richelieu of France from establishing the unification of Germany under one Catholic king. King Gustavus Adolphus, of Sweden, joined the forces of the Reformation with his veterans and was killed at his great victory at Lutzen (1632). When Europe was exhausted war was concluded with the Treaty of Westphalia (1648). The Protestants won the independence of the German states in the matter of religious faith. So far had the motives of religion vanished from the strife that it was two Catholic princes, Richelieu and Mazarin, who defeated the interests of the papacy.



Half the population of Germany and two-thirds of the personal property had been destroyed. Farmers had ceased to labor in the fields and the effects of the war on industry, trade, culture and morals were even worse. Education and the moral law were neglected and the peasantry did not recover for two hundred years. Such were the results of this one era of religious strife.

Trent Affair.—In the first part of the American Civil War (1861), Jefferson Davis, President of the Confederacy, sent two representatives, Mason and Slidell, to solicit aid from England. They embarked as missionaries at Havana on the English Steamer *Trent*. The *Trent* was stopped by an American Warship and Captain Wilkes, in command, seized the two Confederates and took them as prisoners to Boston. The British government, which had hitherto been neutral in the conflict, protested against this abuse of her naval rights and sent troops to Canada, prepared to cross the border to attack the United States. After Seward, Secretary of State, had negotiated with Great Britain, Mason and Slidell were released and allowed to continue their voyage to England, where, however, they failed to secure support for their cause.

Tweed Ring.—During Grant's administration a hotbed of political corruption was brought to light, known as the Tweed Ring. This society of political crooks under the leadership of "Boss Tweed" ruled the elections of New York State and influenced those of the nation. Their headquarters was Tammany Hall. Their strength lay in their control over the ignorant foreign vote and in the band of thugs which they employed to cast many times their given number of votes. They influenced the law making of the state by bribing the legislators and they amassed great fortunes by appropriating public funds.

For some time New York tolerated their tyranny—but the New York Times conducted a vigorous campaign against them, Thomas Nast ridiculed them in cartoons and at length the more honorable citizens drove them out of power.

Coincident with the disclosure of the Tweed Ring's activities came the disclosure of the Whiskey Ring. This was an agreement between distillers of whiskey and internal revenue officers to rob the government of the tax on whiskey. Suspicion

centered about Grant's secretary as one of the leaders of this ring, but his guilt was never proved.

Turkestan.—Turkestan is that region in Central Asia which is bounded on the north by Russia and the Caspian Sea, on the west by the Mongolian Desert, on the south by Afghanistan, and on the east by Thibet, India and Persia. It is divided politically into Russian and Chinese Turkestan, the former having an area of nearly a half million square miles. The climate is very severe and dry, the river countries being irrigated by canals connected with the streams and these areas produce, in addition to live stock, considerable wheat, rice, millet, oats and cotton.

The Russians invaded Turkestan soon after the conquest of Siberia. Peter the Great's expedition ending in disaster, but by the middle of the nineteenth century a chain of Russian forts began to appear across the southern frontier. In 1867 the Governor-Generalship of Turkestan was established with the capital at Tashkent. Later Bokhara was taken, then the khanates of Khiva and Khokand. In 1887 the Afghan boundary was laid out by an Anglo-Russian commission. During the whole nineteenth century the Mohammedans made repeated efforts to wrest control from China.

Turkey and the Turks.—Turkey in Europe has represented, since 1483, when Mohammed II. entered Constantinople, the most significant, the most far-reaching and the most terrible encroachment of the spirit of Asia upon that of Christendom which more or less has dominated Western Civilization. There have been many invasions of the denizens of the largest of all the continents which knows nothing of the spirit of human liberty, but the descent of the Turks upon Europe resulted in the establishment of an anomaly unknown to history. This thorn has been in the side of Europe, and at one time well toward the heart, since before Columbus discovered America. It has been held there by civilized European nations which have been played like the men on a chess board by the Sultan—for his own purposes—and through holding and upholding here this nation which has by sheer force of character earned for itself the sobriquet of the "Unspeakable Turk," doubtless these nations have enhanced their commercial relations and laid by many ducats.

At the beginning of the Great War Turkey in Asia covered about 700,000 square miles, while that of Turkey in Europe in 1916 was but 10,882 square miles. Besides Asia Minor the dominion included Armenia, Kurdistan, Mesopotamia, Syria and a part of Arabia. The people of Turkey have few industries and these are feeble. They are supported by farming and sheep raising done in the most primitive manner. They raise cereals and fruits, olives, coffee, tobacco, opium, flax and hemp and export annually 200,000 bales of cotton. In 1914, Turkey had a population of 21,273,900, the ruling element being the Osmanli Turks although they are in a numerical minority, except in the interior of Asia Minor, where their blood is mixed with that of Slavs, Greeks and Albanians.

During the Mongol invasions of Ghengis Khan early in the 13th century, a small group of Mohammedan Turks from Iran went into Asia Minor under Ertogrul, entering the service of the Sultan of Rum, the last remnant of the Seljukian Turks in western Asia. His son, Osman or Othman laid the foundations of the Ottoman Empire to which he gave his own name, on the ruins of that of his host and he destroyed the Seljukians in return for their hospitality. Orkhan, the son of Othman, made Brusa his capital in Bythinia, which with Gallipoli he took from the Byzantines, the latter giving him his first foothold in Europe. Orkhan was the organizer of the Ottoman Empire and the founder of the Janizaries, that devilish institution made up of the children of Christians who had been destroyed and their seed turned into an engine with which to destroy Christianity. The Janizaries were as efficient a fighting force as is known to history, and this force was turned against its own race and religion. Under Amurath, his successor, the Ottoman Empire became a European as well as an Asiatic power with Adrianople

as the Turkish capital. One by one the Byzantine dependencies were taken away until the Turks had surrounded Constantinople. Bajazet was defeated by Tamourlane, upon which his son, Mohammed I. ruled Islam and subdued Macedonia, Hungary and a part of Greece. At last Constantinople fell, in 1453, ending the Byzantine Empire. Servia, the Crimea and a part of Venetian territory in turn fell to the Turks who forged ahead under Selim I. (1512-20), who conquered Syria in 1516, annexed Egypt in 1517 and assumed guardianship of the sanctuary of Mecca proclaiming himself the successor of the Caliphs. Under Solyman, the Magnificent, (1520-66), the Empire rose to the height of its power, having taken much additional territory and acquired control of the Eastern Mediterranean. This shut off the trade with the Orient and destroyed Venice. Under Selim II., a Holy League was formed between Venice, Spain and the Pope, and their combined fleet defeated that of the Turks at the battle of Lepanto, which was the first great setback for the Moslem. But Cyprus, and Yemen and Spain fell to the Turks. With the disaster of Lepanto, Turkish power began to wane. The tides of Moslem swept up to the gates of Vienna and the fate of Europe and of human civilization hung in the balance, when John Sobieski, king of Poland came to the aid of the Germans and stopped the tidal wave of Ottoman power. Since that day the history of Turkey has been the record of the bloody struggle between East and West, smeared with the gore of assassination and murder and pillage. There is probably no lesson in human history more needed today, facing the problems of new Asia as we do, than the lesson of Asia in Europe during these four hundred years. Little by little the European Empire of the Oriental despot has been whittled down, in this tragic struggle of two unassimilable civilizations, the one that of Christian civilization, the other that of a people of very different ideals, fighting under the banners of Mohammedanism.

The United States of America.—In 1787 the thirteen colonies of America, which had revolted from England in the War for Independence (see American Revolution), found themselves in so weak and helpless a condition that they were in danger of falling again under the yoke of a foreign nation. To protect the freedom they had fought valiantly to win, they decided to join together under a strong national government and to call themselves the United States of America. A conference of delegates from the different colonies drew up a Constitution for the new government.

Under this Constitution the power of making laws was given to a Congress chosen by the people, the power of enforcing these laws to an elected President and his chosen cabinet, the task of administering national justice to a Supreme Court appointed by the President.

The new order of things went into effect on March 4, 1789, with George Washington as President. The eight years of his administration might be called the building of the American Nation.

Alexander Hamilton, Secretary of the Treasury, established a sound financial system throughout the country, undertook the payment of state and national debts and made good the credit of the United States with foreign nations. John Jay, ambassador to England, with much difficulty placed us on friendly relations with that country through Jay's Treaty. A national standing army was formed as a result of skirmishes with the Indians in the western territory. Washington, realizing the weakness of the new nation, wisely resisted the pleas of France for military aid in her war against England and Holland.

The strongest believers in individual freedom opposed the power taken over by the national government and held that all matters should be decided by the states separately. These people formed a political party called Republican. Those who upheld the national government were called Federalists.

During the Presidency of John Adams, (1797-1801), the French government, enraged at our refusals of aid, declared war on the United States. The peril seemed so real that Washington was called to prepare an army. When Napoleon came into power in 1799, however, a friendly agreement was reached.

The country suffered so at this time from treason and disloyalty among its own citizens that the Alien and Sedition Laws were passed, inflicting a heavy penalty on anyone who spoke or acted against the government.

The first Republican President, Thomas Jefferson, was elected in 1801. In 1803 he effected the Louisiana Purchase, by which the United States bought from Napoleon, not only the State of Louisiana, but all the territory stretching west of the Mississippi to the Rocky Mountains.

Had Jefferson not been a pacifist, the United States would surely have been drawn into war during his second term (1805-1809). France and England were engaged in a bitter struggle on the sea and, in their desperation, they made use of American ships in a way that utterly disregarded our rights as a nation. French and British warships robbed American merchant vessels of their cargoes and the British captured American seamen as well, forcing them to fight in her battles.

Jefferson issued protests to both nations in vain and in 1807 he put through Congress the Embargo Act, which forbade American ships to leave their harbours and shut the United States off from foreign commerce for more than a year. The Embargo Act was repealed in 1809 and trading forbidden only with France and England—yet the pillage continued.

Madison became President in 1809. He tried to follow Jefferson's policy of peace, until the anger of the American people at foreign outrages demanded war.

It was impossible to fight both England and France; France had showed less offence and some recent inclination to friendliness. Therefore, in 1812, the United States declared war on England as an ally of France. (For particulars see War of 1812.)

On land the American army suffered considerable defeat, but in naval encounters the American warships startled all with their victories. At the battle of New Orleans in 1815 the British troops surrendered and following this a treaty of peace was signed

No territorial gains were made by either side; but the rights of the United States were thereafter respected on land and sea.

Acknowledged by all as a nation, the United States now entered on a period of great internal development and growth.

In 1807 Robert Fulton had launched the first steamboat, a tiny craft which crawled up the Hudson at the rate of four miles an hour. New and better steamboats were being built and began to navigate the inland lakes and rivers. In 1825 was completed the Erie Canal, connecting Lake Erie with the Hudson River and thus making a direct route between the Great Lakes and the Atlantic Ocean. The steam railroad, started on a small scale in 1829, began rapidly to spread its network of tracks over the country. It was due to these new methods of transportation that the middle western territory now became populated; between 1815 and 1845 ten middle western states were admitted to the Union.

When Missouri sought admission in 1820, a dispute arose between northerners and southerners in Congress as to whether slavery should be allowed in the new territory. An agreement known as the Missouri Compromise was reached, stating that Missouri should be a slave state, but that thereafter slavery would be prohibited in all states admitted from the new western territory.

In 1823 President Monroe sent out a proclamation known as the Monroe Doctrine, which has influenced America's foreign policy ever since. In this the President aimed to protect the new republics of South and Central America from the designs of the European powers and stated that any attempt of a foreign nation to establish colonies on the American Continent would be opposed by the United States.

Under the Presidency of Monroe, the old Federalist party gradually disappeared and the Whig party grew up under the leadership of Henry Clay.

The first victory for the Whigs came with the election of John Quincy Adams in 1824. Party strife between the Whigs and the Republicans (then called Democrats), was so high that Adams was opposed by a Democratic Congress in everything he attempted.

In Georgia trouble arose with the Cherokee Indians in which Adams tried to secure justice for the Indians, but the Georgians, disobeying the President, drove the Cherokees from their territory and annexed the new land to the state of Georgia.

Andrew Jackson, a Democrat, who became President in 1829, started the "Spoils System," in which most Presidents have followed him since. He discharged all government officials who had been Whigs and replaced them with his supporters, Democrats.

In 1832 South Carolina, which had suffered under the heavy taxes imposed by the national tariff, threatened to withdraw from the Union to avoid these taxes. Her withdrawal was prevented both by the firmness of Jackson and the conciliation of Henry Clay, who brought about a reduction of the tariff.

In his headstrong fashion, Jackson abolished the National Bank and divided the government funds among State banks, causing heavy financial disasters. When Van Buren became President, in 1837, he established a National Treasury which should keep the funds of the government apart from the risks of bank transactions.

The territory of Texas had revolted from the rest of Mexico and now asked to be admitted to the United States. Admission was granted in 1845.

In the same year, under Polk's Presidency, a dispute arose with Mexico over the boundary line of Texas, a dispute which resulted in the Mexican War. The United States was victorious and, by the peace treaty, obtained the territory now

covered by California, New Mexico and Utah. (See Mexican War.)

Meanwhile beneath the surface of these events, the current of anti-slavery feeling, first observed in the Missouri Compromise (see above), was gaining greater strength.

In 1831, in Boston, William Lloyd Garrison had begun to publish a paper called The Liberator, in which he violently denounced slavery. At the same time groups of northerners called abolitionists were working for the freeing of the slaves. So troubled was Congress with petitions demanding the freedom of the slaves, that in 1836 the Gag Resolution was passed, decreeing that all such petitions be ignored. Protesting against the injustice of the Gag Resolution, many freedom-loving northerners, hitherto unconcerned, began to side with the abolitionists.

When the Mexican territory was annexed in 1846 a Congressman named Wilmot moved that slavery be prohibited in this territory, but his resolution (the Wilmot Proviso), did not pass the Senate. Those who had sided with Wilmot formed the Free Soil party and continued to fight for freedom in new states and territories. The Democrats took their stand for slavery; the Whig party gave way to the Free Soilers.

The strife between the southerners (mostly Democrats), and the northerners (largely Free Soilers), became so bitter in 1850 that a compromise seemed necessary to preserve the Union. The Compromise of 1850 abolished slavery in the District of Columbia, but made more strict the rules about the return of the runaway slave to his master. It also deprived Congress of the right to regulate slavery in the new western territory.

So evenly divided was the feeling in Congress on the slavery question that the attitude of any new state admitted to the Union might determine which way the vote would turn. Therefore, when, by the Kansas-Nebraska Act of 1854, Kansas was given the right to decide for herself whether she should be slave or free, both sides determined to force their way of thinking on the new state. Northerners and southerners moved rapidly into this thinly populated area in the hope of winning a majority in the first state election. So fiercely did the two groups of newcomers hate each other that a barbaric sort of warfare existed between them in Kansas for more than a year, in which over 200 lives were lost.

The old Whig party now disappeared entirely and the Free Soilers, calling themselves Republicans, held their first national convention in 1856. In spite of their efforts, a Democrat, James Buchanan, was elected President.

In 1857 the Supreme Court made the famous Dred Scott decision, forcing a slave who had escaped to free territory to be returned to his master. According to this decision a negro was a piece of property, not a person.

In 1859 an ardent abolitionist, John Brown, captured a national arsenal in Virginia and used this vantage point for freeing the slaves in the neighborhood. He was arrested by Federal troops, accused of treason and shot.

In the Fall of 1859 the Republicans elected Abraham Lincoln President. With the admission of Kansas as a free state, the southerners had felt that they were losing ground; and now, with the Republican party in power, they were certain that their right to own slaves would soon be denied them. They resolved to withdraw from a Union in which their best interests would not be preserved. In December, 1860, South Carolina declared herself separate from the Union. Georgia, Alabama, Florida, Mississippi, Louisiana and Texas followed her example.

No decisive action was taken by President Buchanan.

In February, 1861, six of the seceded states joined together as the Confederate States of America, with Jefferson Davis as President, and proceeded to take over the fortifications within their territory.

In South Carolina Major Anderson refused to give up Fort Sumter to the Confederates. A long siege followed which resulted in the firing on Fort Sumter by the southerners. (See Fort Sumter.) Lincoln, who had then just become President, now called for volunteers to fight the Confederacy and thus the Civil War began. (For particulars see Civil War.)

The Civil War started only as a struggle to preserve the Union, but in 1863 Lincoln issued the Emancipation Proclamation, declaring all slaves free, and from then on it was a war for freedom.

When the Confederacy surrendered in 1865, the seceded states returned to the Union and all slaves were released.

Soon after the northern victory, President Lincoln was shot by a half-insane southern sympathizer.

Vice-President Johnson, who then became President, wished at once to readmit the southern states to all their former privileges. Congress, on the other hand, wished first to make these states alter their constitutions so as to assure the negro full rights. The President and Congress fought each other at every step. Congress succeeded in passing the Fourteenth Amendment, making the negro a citi en, but leaving the question of his vote to individual states to decide. When the southern states rejected the Fourteenth Amendment, Congress ordered troops to be stationed in the South to supervise the lawmaking. Under this supervision the state legislatures passed such measures as Congress wished and were gradually readmitted to the Union.

In 1867 the United States purchased Alaska from Russia.

In 1868 President Johnson, accused of disobeying a law of the land, was impeached, i. e., ordered for trial by the the Senate. The Senate did not find him guilty.

In 1869 Grant, the renowned general of the Civil War, became President. At that time there was a serious dispute with England over the aid and protection given by that country to the southern states during the Civil War. The United States demanded that England should pay for the losses thus caused our government. The question was submitted to a tribunal of five nations, which decreed that England should pay the United States $15,500,000.

In the South had arisen the Ku-Klux-Klan, a band of southern gentlemen who had resolved to put down the disorder resulting from the negroes' freedom. They met in secret and acted in secret, punishing where they thought punishment was needed. By the "Force Bills" (1870-2), U. S. troops were ordered to suppress the Ku-Klux-Klan.

During Grant's administration a vast amount of political graft was revealed and the Liberal Republican party was formed to fight political graft.

When Rutherford Hayes became President in 1877, his first act was to withdraw the Federal troops from the South and after this the uprisings there gradually subsided.

The period of rebuilding the Union after the destruction of the Civil War was now ended.

A nation-wide railroad strike in 1877 marked the beginning of a new era—the era of modern industrialism.

It was now a very different United States from that which had drawn together under the Constitution in 1789. Not only had its area more than doubled, its population also had been increased many times by the immigration of vast hordes of foreign laborers—Irish, Germans, Italians, Swedes, Chinese—who came to do the work needed in the large factories, recently sprung up, on the new railroads, or in the newly discovered mines. The inferiority of this large part of the population to those for whom they worked made impossible the same sense of equality which had existed in the early Republic.

In 1881 the American Federation of Labor was formed, an organization of workmen for the purpose of bettering their conditions.

In 1882 Congress forbade the immigration of Chinese workmen to this country for ten years to come. In 1885 a law was passed prohibiting employers from bringing any foreign workmen to this country by contract.

The injustices of the large groups of manufacturers (or trusts) in ruining the business of the small manufacturer led to the establishment of the Interstate Commerce Commission in 1887, the aim of which was to prevent the trusts from taking unfair advantage of the small merchant in the transportation of their goods from state to state.

During the Presidency of Cleveland (1885-9), the Department of Agriculture first became a part of the National government.

The growth of industry had caused an increase in World Trade. During the Presidency of Harrison (1889-93), representatives from the South American Republics met with representatives of our government at Washington in the first Pan-American Congress—for the purpose of establishing better trade relations between American nations.

In 1893 the World Columbian Exposition was held at Chicago.

In 1898, under McKinley's Presidency, the United States was involved in a war with Spain (see Spanish War). As a result of the American victory, the Philippine Islands, Porto Rico and Cuba were ceded to the United States. In the same year the request of the Hawaiian Islands for annexation was granted.

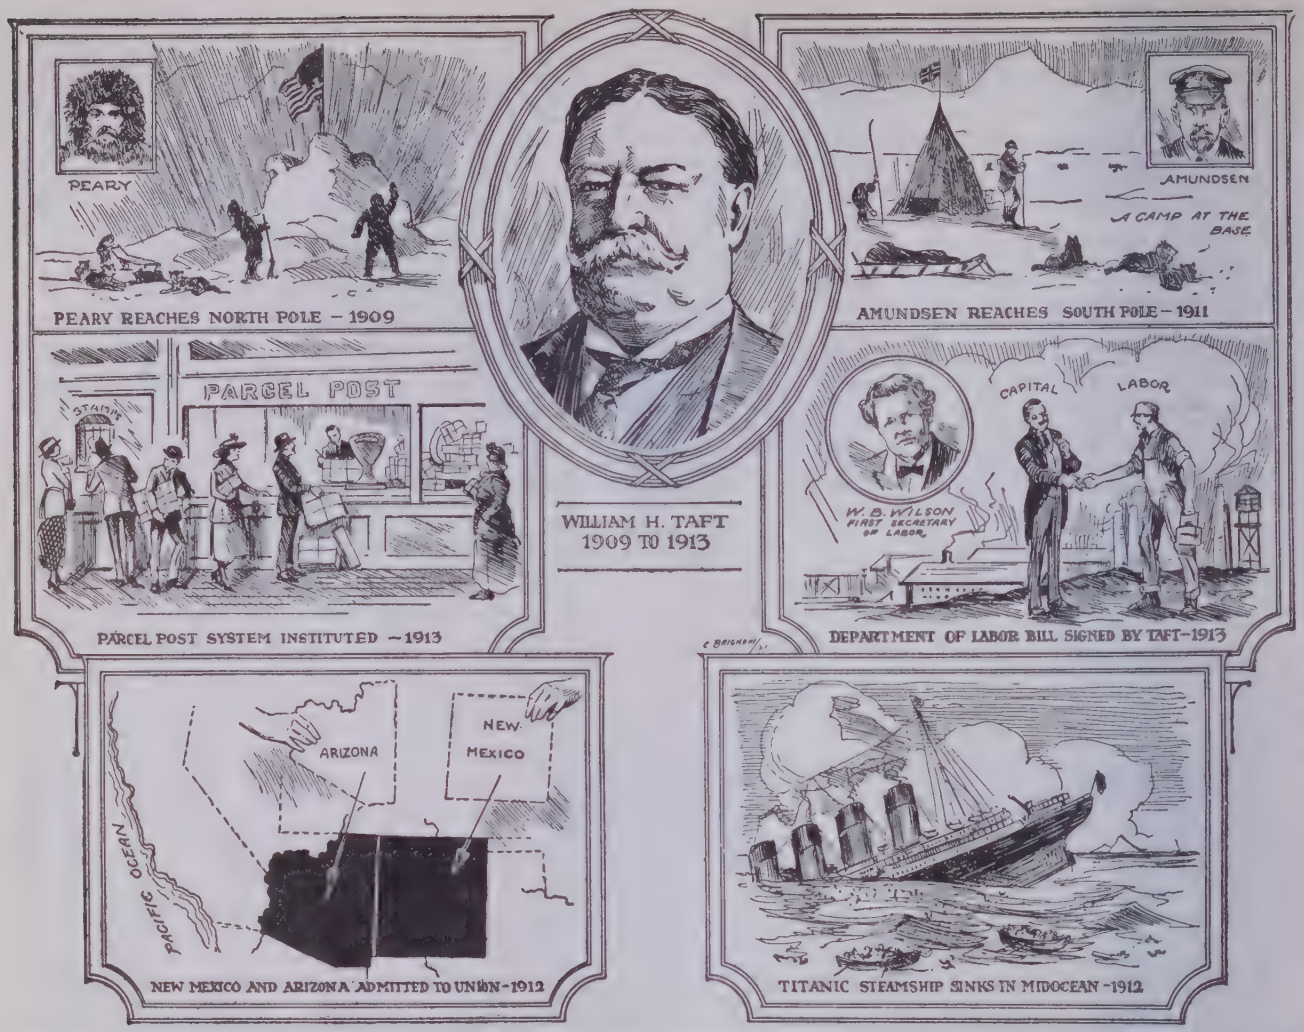
President Roosevelt (1901-9), did more than any President before him to reform the industrial situation. He established a Department of Commerce and Labor, as well as a Bureau of Immigration. He conducted vigorous investigations into the affairs of the large trusts, with the result that two of these trusts were later broken up. During his administration the railroad rates were equalized and the Pure Food Bill became law. He set on foot a movement for the conservation of forests and other natural resources of the country.

He was active in world affairs as well and brought about peace in 1905 between the warring parties in the Russo-Japanese War. He also secured the rights to, and began the work on, the Panama Canal, which was completed by President Taft (1909-13), who was expected to carry on Roosevelt's work, but who was interfered with by the conservative element in power and could accomplish little. A Commerce Court was established to act with the Interstate Commerce Commission, the tariff was slightly reduced, and a literacy test was required for immigrants.

A series of revolutions in Mexico seemed to endanger the American citizens on the border. Taft refused to recognize President Huerta, a murderer and a brigand, and for a time forbade the sale of weapons to the Mexicans.

On Wilson's accession to the Presidency in 1913, Congress held the longest session in its history, and many reform measures were passed under the leadership of the new President. In April, 1917, the United States joined Great Britain, France, Italy, and Russia against Germany and was a deciding factor in winning the World War. The Armistice was signed Nov. 11, 1918. President Wilson attended the Paris Peace Conference, and played a large part in drawing up the Covenant of the League of Nations. The U. S. did not join.

Warren G. Harding was elected President in 1920, largely as a protest against Wilson's foreign policy. After a short post-war depression the nation entered upon a period of great prosperity. At the Washington Conference in 1921 naval armaments were limited for ten years. Coal and rail strikes became serious. The administration of Calvin Coolidge (1923-29) brought governmental economy.



Herbert C. Hoover's inauguration was followed late in 1929 by a stock-market crash and business depression. His attempts at checking the depression were unsuccessful, and Franklin D. Roosevelt, Democrat, was elected in 1932. The new President tried to ease conditions and raise prices by regulating industry, abandoning the gold standard, carrying on extensive public works, and appropriating huge sums for relief. Foreign trade was stimulated by reciprocal treaties. Re-elected in 1936, Roosevelt announced plans for wide reform.

United States and World Power.—The close of the nineteenth century marked the close of an era in United States History. The Spanish War had broken down the "Chinese Wall" of American exclusion with what the French call "Village spire patriotism," and the United States emerged with a foothold outside the main continental domain, ready to reach out for the world trade her growing industries had been preparing for. Some glimpses of the conception began to appear that political and commercial policies must coincide, and that if this country is to be a commercial world power, it must be a political world power. This conception was forced upon us by events; it did not guide events. The general upheaval of war and foreign acquisition started the awakening which on the part of the masses had been very slow, and is even to this day, after the Great War has been fought. There are a few men of affairs who realize that the planet is one place, and the United States is but a part of it, and related to all of it. Henceforth we must reckon with this fact.

Van Buren's Administration (1837-1841).

I. Panic of 1837.—When Jackson had ordered the cessation of deposits of the national funds in the United States Bank, certain other banks were chosen which were called "pet banks". Large amounts were put into circulation, fostering speculation, to the extent that soon there was no money for anything. These banks began to issue bills payable in gold and silver without the specie with which to meet the obligations. "Wild Cat" banks were formed with little or no capital and this was the legacy left over from "Jackson's Reign" to the Van Buren incumbency. Since the greater part of the speculaton was in public lands, Jackson's order that agents should receive nothing but gold for land precipitated the panic which extended to all branches of trade. Everywhere banks failed—even the national banks, and the Treasury suspended payment upon its obligations and was compelled to issue notes to the amount of $10,000,000.

II. Repudiation (1837).—During the period of speculation states had undertaken the construction of railroads, canals and other public works, issuing bonds, whose obligations they could not pay. In some cases the money had been squandered, in others

plundered, and some of the states refused to pay their debts, taking refuge behind the clause of the Constitution which forbids a state to be sued by an individual. Later some states paid up, as for example Pennsylvania, but some never did. Since much of this money had been invested in Europe, American honour received a deadly blow and American credit fell so low that even the United States government was unable for years afterwards to place a loan in Europe.

III. Subtreasury Established (1840).—Van Buren, who had run for office on the platform of walking in the footsteps of his illustrious predecessor, hurried to find a way to remedy his mistakes and proposed the Subtreasury System which severed all connection between the government and banks of issue and allowed the government to do its own banking. Vaults were built and government monies deposited, to be paid out by government agents under heavy bonds, but this scheme had the disadvantage of holding such money out of circulation, except through the payment of salaries and interest and the purchase of its own bonds. This also worked much hardship.

IV. Abolition Movement (1834-1840).—For some years the Abolition Movement had been in progress, resulting in riots and sometimes in bloodshed. In 1835 a mob broke up a meeting in Boston and dragged Garrison through the streets with a rope around his body and in 1837, Elijah P. Lovejoy was murdered in front of the office of his own paper at Alton, Illinois. Whittier, the poet, lost his books and papers through a mob in Philadelphia, and large rewards were offered in the South for the miscreants who opposed slavery. The feeling grew in depth and power both North and South and was hastening the day of reckoning, which even then seemed to be inevitable—as J. Q. Adams had said long before: that the Union would ultimately split on the slavery issue.

Washington's Administration (1789-1797).

I. The Constitution of the United States, Effective (1789).—The consolidation of the national life under the Constitution is in both time and importance the first element of the history of the United States. The alternative had been the Constitution or anarchy and civil war. Patrick Henry voiced the sentiments of the opposition in that it would establish "one great, consolidated, national government of all the people of the states." The report of the Framers to Congress stated that they had kept forward the greatest interest of every true American: "the consolidation of our Union, in which is involved our prosperity, felicity, safety, perhaps our national existence." It is probable that the Union would not have lasted till the year 1800 if the opponents of liberalism had had their way.

II. Cotton Gin, Invention of the (1793).—"If the Cotton Gin had never been invented, it is probable that slavery would have been abolished in the South before 1825." (Channing, Student's History of the United States, p. 2.) Eli Whitney, the inventor was a Connecticut schoolmaster, resident in Georgia, and by conceiving a device by which cotton fibre could be drawn by saw teeth through openings too small to admit of the passage of the seed, he multiplied the capacity of a slave in cleaning cotton about three hundredfold. His invention made billions of dollars for the South, but he was mobbed when he sought to enforce his rights in his own invention. The year before the appearance of the Cotton Gin, the South exported 189,000 pounds of cotton; by 1824 the amount had been increased to 142,000,000 pounds exported. It is probable that if the states north of the Ohio River had been cotton states, slavery would be flourishing yet.

III. Mint, Establishment of the United States.—The first institution for the coining of money was established through the efforts of Robert Morris in Philadelphia, in 1792. In 1854 a second mint was erected at New Orleans. The country had been filled with base coin which made an alarming situation Counterfeiters were busy imitating paper money and coin ano

the finances of the country were in a state of anarchy. The Act creating the United States Mint was passed April 2, 1792, and the same year three pieces were struck, the Dime, the Half-Dime, and a trial Cent with a silver center. But the first regular issue of money was the copper cent of 1793, of which there are now extant eleven varieties. A local wit published a skit: "Alexander the coppersmith has done me much harm (Alexander being Hamilton, the first Secretary of the Treasury), the Lord reward him, according to his works." (Paul.)

IV. Jay's Treaty.—Neither England nor the United States had complied with all of the stipulations of the Treaty made at the close of the Revolution and the tension was so great that but little would have precipitated another war. Added to this was the new war between France and Great Britain, in which both nations bore down heavily upon American shipping. To settle the mooted questions Washington sent John Jay, Chief Justice of the United States, as Minister to Great Britain to negotiate a new treaty. Jay was one of the ablest of American statesmen and one of the most unselfish, but the treaty he negotiated in 1794, notwithstanding, aroused fierce opposition. Britain agreed to evacuate the posts held by her by June 1, 1796; joint commissions were to settle the matter of debts; also the indemnity for negroes taken away and the boundary disputes on the northwestern frontier were to be settled, but the British government would not yield on the matter of impressment and neutral trade. Jay was burned in effigy and Washington was abused, but it postponed the second war with Great Britain for many years.

V. Addition of New States.—Acts were passed by the First Congress, third session, admitting Vermont (1791), and Kentucky (1792), and Tennessee in 1796. Already the slavery question had entered American political life and it became bound up with the admission of states. There were also anti-slavery petitions and a Fugitive Slave Act, delivering slaves escaped from one state to another.

Waterloo, Battle of.—The battle of Waterloo was fought at the little village of that name in Belgium, eleven miles south of Brussels, on June 18, 1815. Preliminary battles had been fought at Ligny two days before, where Napoleon had defeated the Prussians under Blucher, and at Quatre-Bras, on the same day, where Wellington compelled Marshal Ney to retreat. Wellington had 67,000 men and Napoleon had about 72,000. The most of the day's battle consisted of attacks by the French which were met by a dogged resistance by Wellington's army. Meanwhile Napoleon sent troops to stop Blucher, who was advancing with 50,000 men. At seven o'clock in the evening Napoleon decided to make a last stroke for victory, Wellington having used up nearly all of his cavalry, and he stormed the whole line. The famous French Guard in four divisions was defeated one by one by British troops who had been hidden, and the French army began to disappear in a rout, Blucher joining just in time. The losses of Blucher and Wellington were about 20,000 men, while the French army was well nigh annihilated, losing 35,000 men killed and many wounded and captured. This battle ended the menace of Napoleon, who was soon retired to St. Helena, where he died May 5, 1821.

White Leagues.—After the Ku-Klux-Klan and other mysterious brotherhoods of southern gentlemen had been disbanded by the Force Acts of 1870 and 1871 (see Ku-Klux-Klan), the same groups of southerners formed White Leagues, through which they strove to deprive the negro of political power and restore order. These leagues did not employ the supernatural trickery of the Ku-Klux-Klan; they worked with as much openness as any political party, but with the military methods of a police force.

The White League was strongest in Louisiana, where the white people were least sundered by class distinctions. Here in 1872 they protested that Governor Kellogg, a Republican, had been unlawfully elected by keeping white citizens from the polls and they set up McEnery, the Democratic candidate, as rightful governor. Two opposing state governments existed side by side until Grant recognized Governor Kellogg. In September, 1874, Governor Kellogg ordered the White League to give up their firearms and so started an uprising of the white citizens of New Orleans headed by the White League, which ended in Kellogg's flight, the defeat of the Federal troops and the establishment of a new state government under McEnery. Grant condemned the action of the White League and sent fresh troops to replace Kellogg in power. However, another election soon followed, with victory for the White League.

Wilson's Election (1912).—The split in the Republican party owing to the repudiation of the Taft Administration by many republicans principally on account of his attitude towards Big Business, resulted in the election of Woodrow Wilson as President of the United States, receiving on a popular vote, 2,000,000 less than his combined opponents. Nevertheless, the Democrats got control of the Senate (51 to 45), and of the House (291 to 144), something that had not occurred before excepting in the session of 1893 to 1895, since the Presidency of James Buchanan.

Wilson's Administration (1913-1921).

I. Seventeenth Amendment (1913).—On May 31, 1913, the Seventeenth Amendment of the Constitution of the United States, providing for the direct election of Senators by the people, having been duly ratified by a sufficient number of states, was declared in force. To make that body truly representative, there remains another Amendment to be submitted and declared, to make Senators elected according to populations, so that Rhode Island, for example, cannot pair with New York or Texas.

II. Panama Canal Opened (1914).—The Panama Canal was opened for world traffic in August, 1914, the American steamer *Ancon* going through the locks crowded with officials and guests. In January, 1914, Colonel Goethals, the engineer who had completed the great task, was made the first governor of the Panama Canal Zone. The tonnage passing through the canal increased from nearly five million tons in 1916, to eight million tons in 1919.

III. League of Nations.—Incorporated in the Peace Treaty, President Wilson being at Paris, was a Covenant of a League of Nations with 26 articles. When the matter became known in the United States enough Senators to defeat it signed a round robin declaring their opposition. When it became known that our Allies had, unknown to us, made secret treaties with each other and against those principles for which Americans contended, there was a strong revulsion which was given a great impluse when the American representatives among other things deliberately betrayed China to Japan, which had done little in the war without careful reference to her own selfish interests. The consequence was, that after much opposition in the senate and elsewhere, the whole treaty was rejected, November 19, 1919, by a vote of 55 to 39.

World War.—Open wars for conquest, such as Cyrus the Persian and Alexander the Great had waged in centuries past, were not the practice among civilized nations of the twentieth century, and hence it was thought that the modern world had grown beyond warfare. But, among the great European powers, the same desire for conquest existed as in earlier days and, hidden beneath the cloak of diplomacy, the rulers wrestled with each other more fiercely than ever for territorial gains. Nationalism, Militarism, Imperialism, were the watchwords of the times. In some quarters, to maintain peace it was thought necessary for each nation to terrify its neighbors by the size of its army or navy, and if any one nation seeemd acquiring dangerous power, the others allied against it. In 1900 two great alliances dominated Europe:

(1) The Triple Entente—an agreement between France, Russia and England for mutual help in case of attack.

(2) The Triple Alliance—a similar agreement between Germany, Austria and Italy.

The strength of these two alliances was so nearly equal that each of the six nations involved felt able to hold its own in case of war, while neither group was enough stronger to dare make war on the other. Thus a perfect balance of power kept the peace of Europe for the first decade of the twentieth century.

In 1912 and 1913 a few of the Balkan states rebelled from the rule of Austria and sought independence under the protection of Russia. The weakening of Austria and the strengthening of Russia which resulted upset the equilibrium between the two alliances—the Triple Entente was now undoubtedly the stronger. Austria prepared for war to regain her Balkan provinces and Germany followed her in order to prevent the aggrandizement of Russia. The other nations of Europe, scenting the danger, plunged likewise into an orgy of preparedness. England attempted conciliation with Germany, in the desperate hope of averting a European war.

On June 28, 1914, the Archduke Francis Ferdinand of Austria and his wife were murdered by a Serbian anarchist while they were visiting in Bosnia, a Serbian territory which the Austrians had subjugated. This gave the provocation for which Austria had been waiting. Without real ground for suspicion, she accused the Serbian government of causing the murder and sent to Serbia an ultimatum with the following demands:

(1) That she suppress all anti-Austrian propaganda.

(2) That she dismiss from the army and from civil service anyone obnoxious to Austria.

(3) That she allow Austrian officials to sit in Serbian Courts.

To the last of these humiliating demands Serbia refused to submit and offered to settle the dispute at the Hague Tribunal, but Austria wanted absolute submission and declared war on Serbia. Russia, the avowed protector of Balkan freedom, began to mobilize her army to protect the

tiny Balkan nation from so formidable a foe. Germany at once declared war on Russia, on August 1st, saying that she was required to defend her ally, Austria. France, as an ally of Russia, began to mobilize, whereupon Germany declared war on France August 3rd.

Germany's first move was the sending of three military expeditions against France —one to the southeast through Luxemburg, one from Metz across the Franco-German borderline and one through Belgium. The troops passed through Luxemburg without armed resistance but Belgium forbade their entrance, and when the Germans forced their way in on August 4th, rose in arms to oppose them. England, among other European nations, had guaranteed the neutrality of Belgium, that is, had promised that there should be no fighting on her territory. She now threatened war if Germany would not withdraw her troops from Belgium. Germany replied that entrance through Belgium was a military necessity and that "necessity knows no law." England declared war on Germany on August 5th. Soon afterward Japan, as an ally of England, joined the war and in November Turkey allied herself with Austria and Germany, who were known as the Central Powers. The Triple Entente and its supporters were called the Allies. Italy, although bound by the Triple Alliance, would not join the Central Powers as she believed them unjustified in causing the war. In 1914 the opposing sides in the conflict were as follows:

The Allies	The Central Powers
Russia	Austria
France	Germany
England	Turkey
Belgium	
Serbia	
Montenegro	
Japan	

"Paris within a month" had been the boast of the Germans as they began their French campaign, but the small Belgian army halted them for ten days on their first advance and laid low their hopes. By the time the Germans had rallied sufficiently to crush the Belgian forces, destroy the town of Liege and take possession of Brussels, the French had been able to strengthen their defence and guarded the Belgian border.

Elsewhere the danger seemed greater.

The German division which had entered through Luxemburg stood within twenty-five miles of Paris on September 1st and, joined with the division which had taken the fortress at Namur, formed a line of attack one hundred miles long. At that moment Von Kluck moved the joined forces eastward with the intention of surrounding the enemy, but he had miscalculated and walked his men into a trap surrounded by French and English. The battle of the Marne ensued (Sept. 5-10), in which the Germans were driven back to the River Aisne.

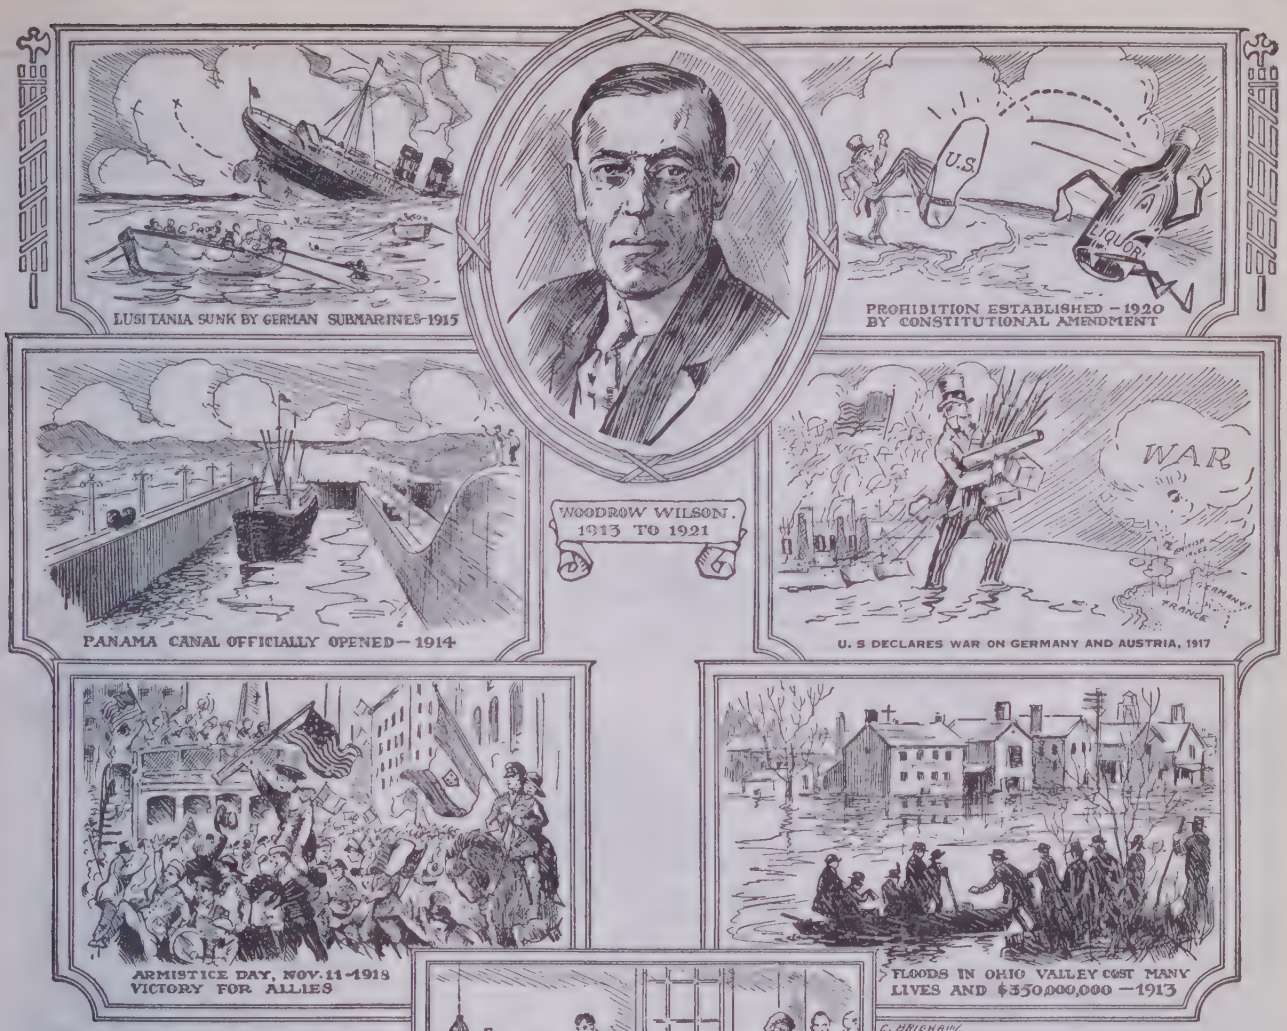
After their defeat at the Marne the Germans wreaked their anger on Belgium. They destroyed great cathedrals and other works of art; they extracted large tribute from the people; they confiscated machinery and other supplies; they burned a great part of the city of Louvain. But that which brought upon them the violent hatred of all the world was the brutality with which they maimed and murdered unarmed civilians. By October 10th the German army had occupied all but the small southwestern corner of Belgium.

The opposing armies along the Aisne, unable to break through each other's defences, tried to outdo each other by extending their trenches to the north and to the south. By the end of October the line of entrenchment reached from Switzerland to the coast of Belgium and for the next three years the French and British opposed the Germans along this line without important gains on either side. In the Fall of 1915 the British centered their effort on a drive to the northeast of Arras, but in spite of their fresh supply of men and munitions they only succeeded in forcing back the Germans two or three miles on a twenty-mile front. Between February and July, 1916, the German attack on the French fortress Verdun threatened to bring about a collapse of the Allied armies; but when defeat seemed most certain the French forces rallied in accord with General Joffre's words "They shall not pass," and drove back the army of the German Crown Prince. From July to November, 1916, the battle of the Somme raged, east and northeast of Amiens. Here the British tanks were first used. The Germans retreated a few miles, each side having lost from 600,000 to 700,000. In 1917 the British held the enemy at Arras, where the battle of Vimy Ridge occurred and the French fighting was fiercest along the Aisne, about the Chemin des Dames. During the course of the year the Germans shortened their line to a direct route from Noyon to Arras, thus cutting off one-eighth of their French gains.

Meanwhile in eastern Europe the Russians fluctuated between success and disaster. In 1914 they forced their way into East Prussia, but after the battle of Tannenberg were driven back. They invaded victoriously the Austrian province of Galicia, but had to abandon all they had gained when they withdrew their troops to combat the Germans in Poland. Here they were ineffective and in the summer of 1915 surrendered the important Polish towns to Germany. In 1916 Russia held her ground against the enemy and for a time threatened to invade Hungary, but the ever-watchful Germans and Austrians halted her advance. Early in 1917 revolution seized the ancient empire—the Czar abdicated and a republic was established in which Kerensky became military and political leader. The lapse in discipline resulting from the new freedom steadily weakened the Russian army. When the Bolsheviki took hold of the government in November, the new leaders, Lenine and Trotzky, offered to make peace with Germany, but the German demands for territory were so preposterous that the treaty was not signed. Germany then advanced her army on a five-hundred-mile front into the heart of revolution-torn Russia and forced her terms of peace. By the Treaty of Brest-Litovsk, March, 1918, Russia ceded to Germany one-half million square miles of territory, including Poland, the Ukraine, Lithuania, Courland, Livonia. Thus the strength of Russia, with her vast population and wealth of resources, was wrenched from the Allies to the profit of the Germans.

The first marked activity in southern Europe was the fatal expedition of French and English against Constantinople. They landed at Gallipoli on the Dardanelles in April, 1915, but the Turks and Germans lay in waiting and would not allow them to gain a footing. The Allies withdrew after heavy losses of men and battleships.

In May, 1915, Italy joined the Allies. It is believed that she hoped through victory to regain her territory along the Adriatic, where Austria then ruled.



In October the Germans invaded Serbia with the aid of Bulgaria who, seeing a fair prospect for booty in the project, at this moment joined the Central Powers. The British and French sent troops to Salonika to protect Serbia, but before these arrived the small nation had surrendered to the overpowering numbers of her enemy.

In May, 1916, the Italians, who had made slight gains along the Dalmatian Coast, were suddenly pushed back into their own territory by an Austrian drive. Just then the Russians became a menace in Hungary, the Austrian troops were dispatched thither and the Italians once more advanced, this time as far as the important city of Göritz. Encouraged by Russia's temporary success, Roumania now joined the Allies and began an invasion of Transylvania. At once a German army was sent which drove the Roumanians back into their own country and took from them their capital. Before long Germany was in possession of two-thirds of Roumania, exploiting her grain fields and oil wells.

Through the summer of 1917 Italy's advance on the Austrian front continued. But in the autumn, after the breakdown of Russia, the German forces released from that region joined the Austrian defence and caused a disastrous retreat of the Italians far beyond their gains. Once more in Italy they took their stand along the Tagliamento and were driven from there to the Piave. Had not the French and British at this moment reinforced the Italians and halted the Austro-German advance it is probable that the city of Venice would have fallen and all Italy surrendered.

Meanwhile in remote regions decisive events were occurring. It was not alone the capture of Kiao-Chou and all other German strongholds in the Pacific by Japan, Australia and New Zealand, nor the conquest of German South Africa by British subjects. The war in the air, the war beneath the sea had far-reaching effects. The German Zeppelins, hovering over England at the dead of night, dropped bombs which killed many thousands and shook the morale of the country. The German battleships never encountered the British navy in open fight, but German submarines, unseen, destroyed English warships and merchant vessels. England's position had made it possible for her to cut off all German commerce at the beginning of the war by blockading the harbours of Hamburg and Bremen. She also searched all vessels bound for Holland, Norway or Sweden to see if these contained any contraband of war, destined for German use. Germany argued that submarine warfare was her only weapon against these English injustices. In February, 1915, Germany confiscated all grain in her territory, that she might better feed her army. England then declared that all foodstuffs sent to Germany should be considered contraband of war and as such removed from the ships bearing them to German destinations. Germany claimed that England was trying to conquer her through starvation and struck back by declaring a zone of war in the waters about the British Isles. Within this zone enemy merchant vessels would be sunk by submarines with or without warning and neutral ships passing through would be in danger of destruction.

In May, 1915, the British ship the *Lusitania* was sunk without warning and 1,200 of its passengers, among whom were 100

Americans, perished. President Wilson's note of protest to Germany was ignored. Other such disasters occurred and the notes of protest continued.

In January, 1917, England extended the area of her German blockade and Germany so extended her war zone that commerce between Europe and America would not be safe for any neutral vessel. Unable to make her repeal this drastic measure, the United States declared war on Germany April 6, 1917, and planned to fight in co-operation with the Allies on the French front.

Only a fraction of the American forces reached France in 1917, and fought bravely without making any change in the course of events.

Following the United States, seven other countries declared war on Germany, namely: Cuba, Panama, Greece, Siam, Liberia, China and Brazil.

In March, 1918, the Germans braced themselves to their greatest drive against the Allied front. Attacking the British on March 21st, at a point of weakness, along the Somme they pushed through the line of defence and on to Amiens. Within a week the Germans captured six French towns. On April 12th the English retreated from the Flanders front, but took a firm stand at Ypres, beyond which they could not be moved. On May 19th Soissons fell into alien hands and on May 31st the Germans were at the Marne, within forty miles of Paris. They had with them a tremendous machine gun by which they bombarded Paris from afar.

The Americans were now winning glory by their advance into Belleau Wood.

After the fall of Chateau-Thierry on July 15th General Foch, as Commander-in-Chief of the Allied forces, undertook an offensive along the Marne that completely reversed the fortune of war. From Chateau-Thierry to the Aisne the French advanced six miles and reclaimed twenty villages. With steady pressure all along the front and daring thrusts at important points, the Allies pushed back the Germans beyond their recent gains. General Pershing's troops wrecked the St. Mihiel salient on September 12th and 13th. By the end of September the Germans were back on the Hindenburg line where they waged a fierce battle of defence. In Belgium the British broke through the German line and drove the Germans back from the coast, while in France the Americans advanced along the Meuse. German retreat continued steadily and surrender was only a question of time.

The success of the Allies was strengthened by the triumphs of the British General Allenby in Asia Minor. By October, 1918, he had freed Mesopotamia, Syria, Palestine and Arabia from Turkish rule. In September of the same year Bulgaria surrendered to an army of French, British, Greeks, Serbians and Italians. Serbia's independence was restored.

In October Italy again advanced against the Austrians, who now retreated with heavy losses.

On October 31st Turkey signed an armistice of unconditional surrender, opening the Dardanelles and the Bosphorus to the Allies.

On November 4th Austria surrendered, abandoning all territory gained in the war and relinquishing certain regions along the coast of Italy.

The German Emperor, now facing more bitter defeat every hour, asked for a peace conference. But before the terms of an armistice had been presented a mutiny among the army and navy and a revolution among the population of Germany had broken out. On November 9th the Emperor abdicated and fled to Holland and on November 11th the Allies signed an armistice with the provisional German government.

The WORLD WAR

(1) Archduke Franz Ferdinand, heir apparent of Austria-Hungary, was assassinated by a Serbian student at Sarajevo, Bosnia, on June 28, 1914 —— a direct cause of the war.

(2) War actually began on Sunday, August 2, 1914, when German troops invaded Luxemburg.

(3) On August 4th, 1914 Germany invaded Belgium—a pitiless destruction of homes, churches, cemeteries etc. —

The German War Cloud advancing under General von Kluck in 1914 — an indirect cause of the World War.

(4) German invaders hurled back across the Marne by French and British in the First Battle of the Marne - September 1914

(6) Belleau Woods - where the Marines stopped the Kaiser on his way to Paris.

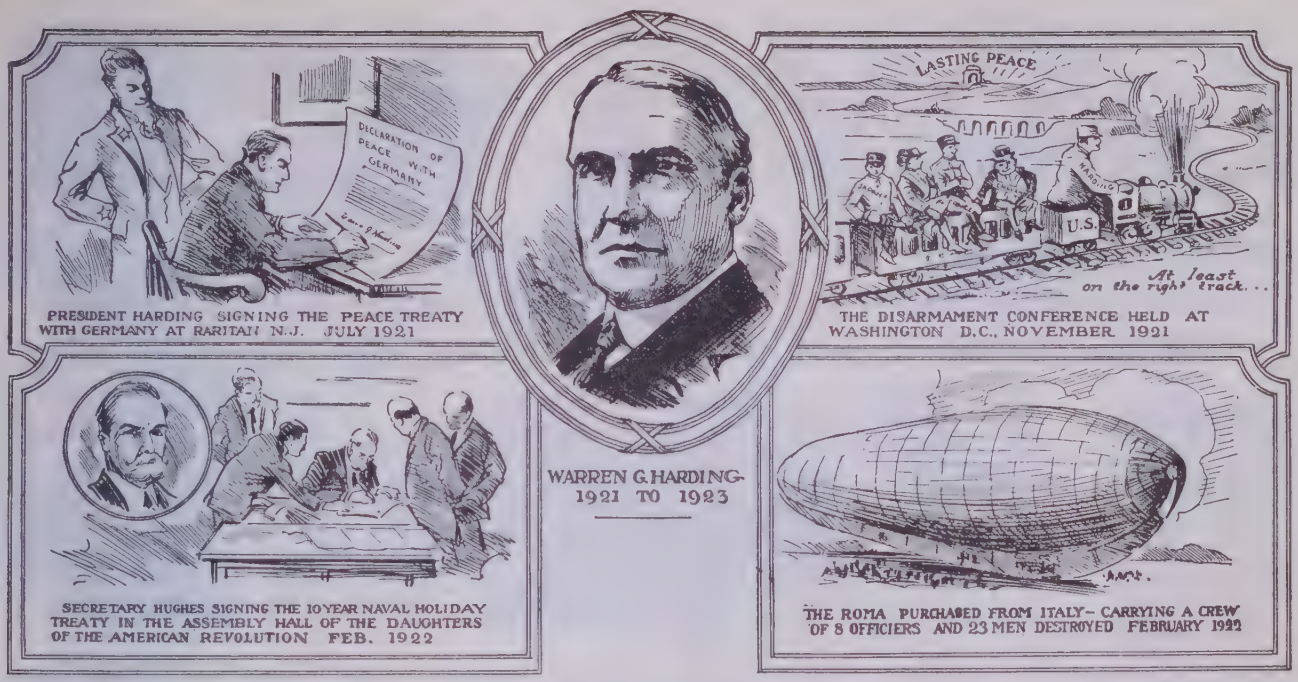
(5) American Army swarms across the Ocean 1917-18 —— the Convoy shown above.

(7) Gallantry of our soldiers at Chateau Thierry turned fighting in favor of the Allies — 1918

(9) Bagdad Railway Line and German world empire broken by gallant Italians at the Piave River, 300,000 prisoners and 5000 guns captured October 1918

(8) The greatest battle of the war. The Argonne Sept 26-1918 American troops with superhuman persistence push on to a glorious victory.

(10) First great naval battle of the war was fought by German and British Fleets off Jutland, Denmark, May 31, 1916. Both sides claim victory.

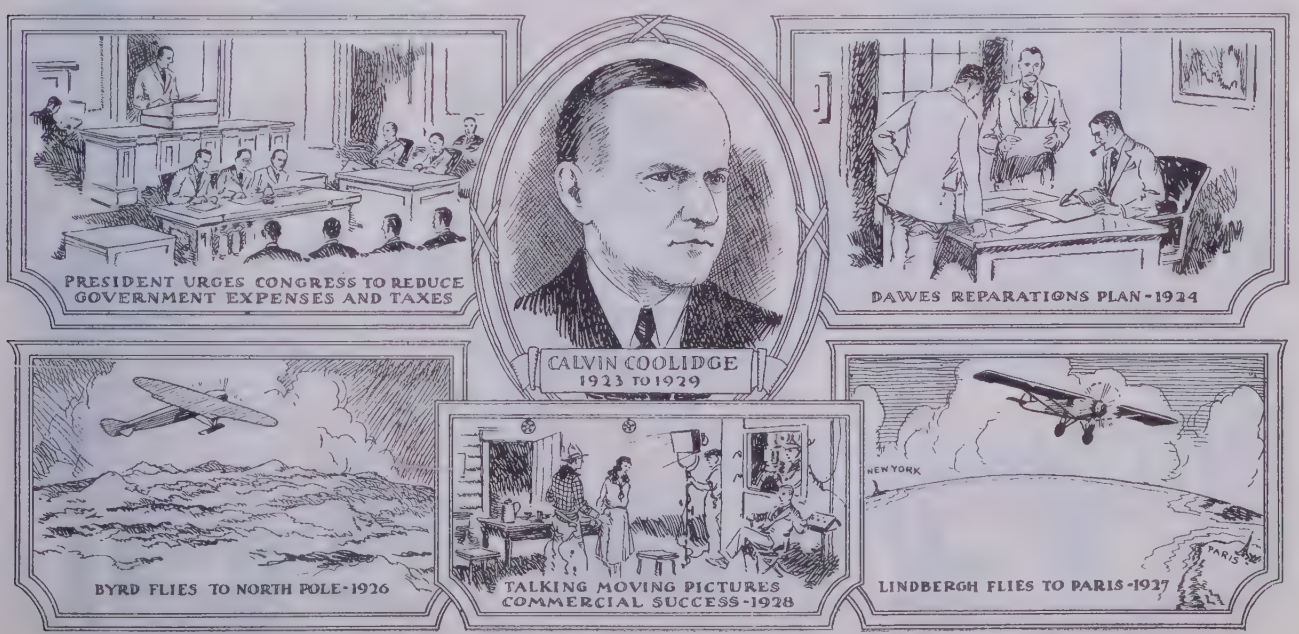


(11) American and British troops force their way through twelve miles of defense between Cambrai and St. Quentin, Oct 1918

(12) Under the White Flag—
Preceded by a trumpeter and carrying white flags. German plenipotentiaries present themselves to French outposts on the night of Nov. 7, 1918. The beginning of the end of the world's great war—Armistice signed November 11-1918 Germany conquered. Treaty of Versailles signed - 1919 & League of Nations formed.

Brighaus

THE LEAGUE OF NATIONS



The League of Nations was organized at the Paris Peace Conference, 1919, and came into operation January 10, 1920. During the World War the centuries-old plan of organizing the nations into an association for the preservation of peace and the supervision of international affairs was actively discussed. In the United States various organizations were formed (League to Enforce Peace, League of Free Nations Association) to familiarize the public with the idea, which was warmly advocated in America by ex-President Taft, in England by Sir Edward Grey and Lord Robert Cecil, in France by Léon Bourgeois, and in South Africa by General Smuts. It received the approval, in 1916, of President Wilson, who ultimately made it the cornerstone of his foreign policy. Government commissions in the United States, Great Britain and France studied alternative plans. At Paris, the principle of a League was approved by the Peace Conference on January 25, 1919, and a draft Covenant of the League on February 14. The final draft of the Covenant was approved April 28 and, largely because of the insistence of President Wilson, was embodied in the Treaties of Peace.

The basic machinery provided by the Covenant consists of the Assembly, the Council, and the Secretariat. The Assembly is representative of all the member states, each of which, with three delegates, has a single vote. The Council is composed of delegates of the five principal powers, and of delegates of nine other powers elected by the Assembly. The permanent Secretariat established at the seat of the League, (Geneva) is headed by a Secretary-General, to be appointed by the Council with the approval of the majority of the Assembly. The first Secretary-General named was Sir Eric Drummond.

No specific duties are assigned at the Assembly by the Covenant. It "shall meet at stated intervals and from time to time as occasion may require," and may deal "with any matter within the sphere of action of the League or affecting the peace of the world" (Article 3). The approval of two-thirds of the Assembly is necessary to the admission of a new state to membership in the League (Article 1). The Council must meet at least once a year. Aside from certain specific duties such as responsibility for the territorial regions entrusted to the League (the Saar, Danzig, mandated territories), the formulation of plans for the reduction of armaments and for a Court of International Justice, it is given general duties connected with the settlement of international disputes. The Covenant provides that in case of war or threat of war, upon the request of any member of the League, the Secretary-General shall summon a meeting of the Council. Any dispute likely to lead to a rupture which is not submitted to arbitration, is to be investigated by the Council, which shall endeavor to effect a settlement; if unsuccessful the Council is to publish a report containing its recommendations. It may refer the case to the Assembly and must so do if demanded by either party to the dispute (Articles 12, 15). Should any member of the League resort to war in disregard of its Covenants, it is the duty of the Council to recommend what effective military, naval, or air force should be contributed by the several governments to protect the Covenants of the League (Article 16). Except where expressly provided, decisions of the Council as of the Assembly, must be unanimous (Article 5). They take the form, furthermore, not of instructions to the several governments, but merely of recommendations.

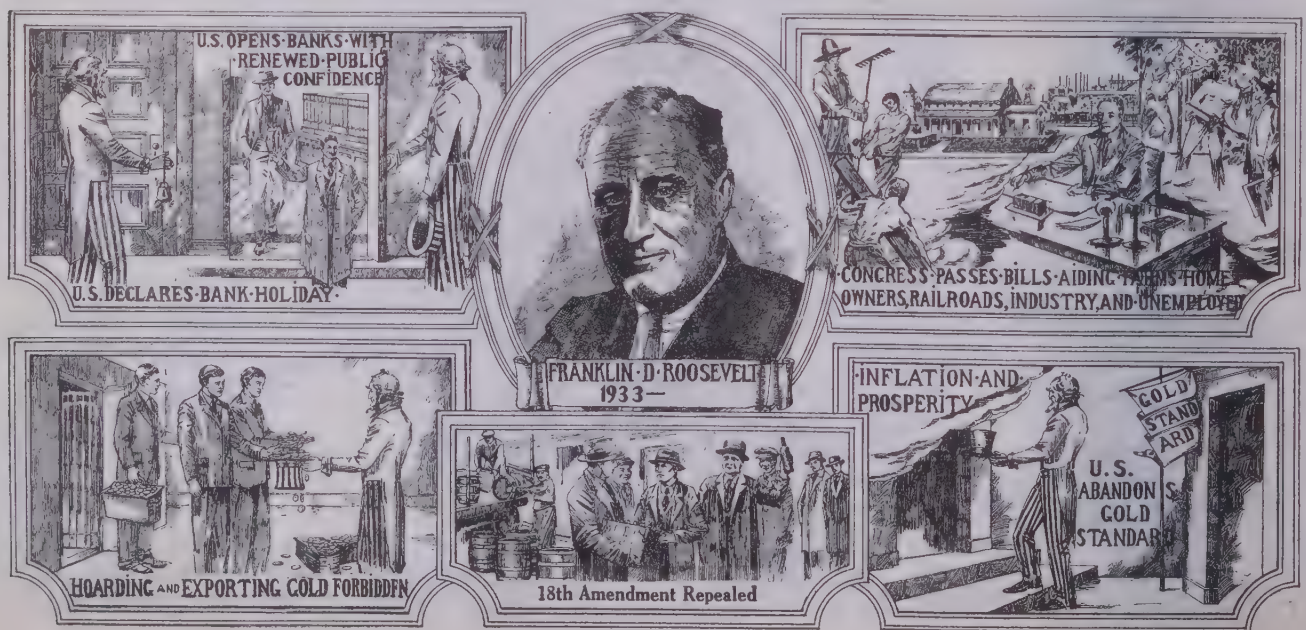
The Secretariat is a permanent expert body, providing the information and arranging for the organization necessary to the functioning of the Assembly and Council.

Although the functions of the League in the organization of international activities in time of peace may ultimately become of chief significance, its more obvious functions lie in the field of international disputes. The Covenant provides in the first place against wars of aggression by requiring each mem-

ber-state "to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League" (Article 10). In the second place the Covenant provides (Article 12, 13), for the continuation of arbitration as a method of settling disputes. The members agree that whenever any dispute shall arise between them which they recognize to be suitable for submission to arbitration and which cannot be satisfactorily settled by diplomacy, they will submit the whole subject matter to arbitration." If the dispute cannot be submitted to arbitration the members agree before going to war, to submit the matter to the Council, which shall initiate he processes of conciliation, as stated above (Article 15). Should any member resort to war in disregard of these Covenants it is regarded as having committed an act of warfare against all members of the League which agree to institute an immediate economic boycott (Article 16). Furthermore, any war or threat of war is declared a matter of concern to the whole League which "shall take any action that may be deemed wise and effectual to safeguard the peace of the nations" (Article 11).

The membership of the League includes most of the sixty-three nations of the world, the German Republic being admitted in 1926 as the fifty-sixth member. The United States, though not a member, participates officially and unofficially in various committees and activities, and registers its treaties in the Geneva office. In addition to unofficial relations, the work in which this government took active official part during 1927 included the International Economic Conference, the Special Commission on the Private Manufacture of Arms, the Ninth Session of the Advisory Committee on Traffic in Opium and Other Dangerous Drugs, the Meeting of Government Experts on Double Taxation and Fiscal Evasion, the Advisory Committee for the Protection of Children and Young People, the Joint Conference on Communications and Transit, and the Conference on Import and Export Prohibitions and Restrictions.

The Council of the League meets four times a year and upon special occasions. The Assembly convenes each year in September



The work of the League is described in its numerous reports. Threatened wars regarding the AAland Islands, Upper Silesia, Vilna, Albania, Greece, Mosul, etc., were averted. The Outlawry of war, by means of the "Protocol for Pacific Settlement of International Disputes," approved by the Fifth Assembly, though not accepted in practice, paved the way for the famous Locarno pact. Disarmament remains a subject for intensive study in conference.

Reconstruction has been furthered by the economic restoration of Austria and Hungary by means of commissions of the League. War prisoners, numbering half a million were restored to twenty-six different nations. The Refugee Settlement Commission has aided in the settlement of homeless millions. There are commissions to safeguard the rights of backward peoples and of the racial, religious and linguistic minorities whose status was changed as a result of the war. The International Labor Organization has been established as a central ageney to study and improve the condition of labor. The protection of children is a subject of international inquiry. The Public Health Organization exchanges information with the health authorities of all countries and maintains a warfare against epidemic diseases in danger zones. The control or suppression of traffic in opium, in women and children; and the complete abolition of slavery are subjects proposed for international agreement.

Intellectual Cooperation is the object of one of its commissions, and one of the chief aims of the League which provides an international center for information, discussion and agreement.

The Permanent Court of International Justice was established in 1921. Its judges are elected by the Assembly and Council of the League, meeting simultaneously; its budget is part of that of the League; the Council of the League may ask the Court for advisory opinions. The Court sits at The Hague. Its competence is determined by any two states agreeing to submit any dispute to it; by those states which recognize its compulsory jurisdiction; and by a mass of treaties and international agreements which provide for the submission of any dispute arising under them to be submitted to the Court.

In 1932 and 1933 The League unsuccessfully attempted to stop Japan from warring with China. Japan resigned from the League.

FLAGS OF THE NATIONS

The merchant flags are shown except where the mark (N) indicates the national flag. (*International Code of Signals*, published by the Hydrographic Office, U. S. Navy, has been followed, except for the flag of Russia, where *Seagoing Vessels of the United States*, U. S. Department of Commerce, has been used.)

Chronological History of the World

HISTORY. Universal history is usually treated in three principal divisions:

I. Ancient History, which begins with the earliest written records and terminates A. D. 476, with the destruction of the Roman empire.

II. The Middle Ages, which extend from the fall of Rome, A. D. 476, to the discovery of America, A. D. 1492.

III. Modern History, which commences at the latter epoch, and continues to the present time.

The events which mark the separation between the *first* and *second* periods, are the irruption of the Teutonic tribes, the consequent fall of the western Roman empire, and the foundation of the modern European states; between the *second* and *third*, are the extension of learning by the invention of printing, the taking of Constantinople, the maritime discoveries of Spain, Portugal, and other European countries, with the more extensive use of firearms.

I. Ancient History may be subdivided into six periods:

1. The nebulous period, comprising the fragmentary accounts of the early Assyrians, Babylonians, Egyptians, Chinese, Hindus and Hebrews, down to 2000 B. C.

2. The Mosaic period, from the time of Abraham to 1200 B. C., during which Moses promulgated his great code of moral and political laws.

3. The Assyrian-Babylonian period, which witnessed a long series of Assyrian conquests, the zenith of Babylonia, the rise of Greece and Rome, and the foundation of the Persian empire,—1200 to 529 B. C.

4. The Persian-Macedonian period, from 529 to 323 B. C., during which both the Persians and the Greeks reached their greatest achievements.

5. The Greek-Roman period, from 323 B. C. to the Christian era, saw the decline of the Greeks and the coming universal power of the Romans.

6. The period of the Roman empire, from the time of Christ to 476 A. D., was notable for the foundation of Christianity, Christian persecutions, the division of the empire, Roman luxury and corruptions, and the incursion of the Teutonic hordes.

II. The Middle Ages may be treated in the following six periods:

1. *First*, the foundation of the modern states of western Europe, A. D. 476–622, when the Saxons invaded Britain, A. D. 449; the Visigoths settled in Spain, A. D. 507; the Ostrogoths in Italy, A. D. 489; and the Franks began the formation of the French monarchy, A. D. 481.

2. The *second* comprehends the age of Mohammed, with the propagation of his creed, and the establishment of the states which embraced his religion, to the treaty of Verdun, A. D. 622–843.

3. The *third* embraces the period from the treaty of Verdun, when the empire of the West was divided, to the Dark Ages, 843-936.

4. The *fourth* is the interesting period of the Dark Ages, A. D. 936-1096, during which the monarchy of Charlemagne fell to ruin, the Capetian dynasty began to reign in France, Italy was parceled out among a number of petty princes, while in Germany, Otho commenced the long-continued struggle against feudalism.

5. The *fifth* is the romantic or heroic period of the Crusades, A. D. 1096-1273, in which the Roman legal code, the foundation of modern jurisprudence, began to be studied.

6. The *sixth*, from 1273 to 1492, beheld the revival of the fine arts in Italy, the taking of Constantinople and diffusion of its learned men, the revival of letters, the discovery of America, A. D. 1492.

III. Modern History falls conveniently into five periods:

1. The period of the Reformation, including its commencement by Luther, A. D. 1517, till the termination of the long series of religious wars, by the treaty of Westphalia in 1648. This period produced many important changes in Europe.

2. The period from 1648 to the death of Louis XIV., in 1715, during which Russia entered European politics, and Great Britain began to assume large influence on the Continent.

3. The period from the death of Louis XIV. to the Congress of Vienna, 1815, which marked the fall of Napoleon. In this period was established the independence of the United States, Prussia advanced to the front rank of European powers, the French Revolution occurred, and the world witnessed the rise and fall of Napoleon.

4. From the Congress of Vienna, 1815, to the American Civil war, the most momentous period in American history.

5. From the close of the American Civil war to the present time, a period of unprecedented development and expansion.

PARALLEL OUTLINES OF UNIVERSAL HISTORY

FROM THE DAWN OF HISTORY TO THE TIME OF ABRAHAM, B. C. X-2000 (?)

Characteristics of the Centuries	Babylonia—Assyria	Egypt	Arts and Sciences	Literature
B. C. 5000—4000 Modern research shows the existence of flourishing city states in the Mesopotamian region, whose origin and growth far antedate this period. Early Babylonian and Egyptian civilization.	5000 (?) Kengi, or Sumerians, seem to be the advance guard of Babylonian civilization. 4500 (?) Struggles for mastery among petty Babylonian Kings. Kingdom of Shirpurla dominates, with Sungir (Shinar) as its capital. 4100 (?) Dynasty of Erech begins about this time.	5000 (?) Tombs of pre-dynastic Kings at Abydos reveal an advanced state of civilization. 4400 (?) Menes founds the old Egyptian empire, Memphis, the capital. Animal worship becomes prominent in Egyptian life.	5000 (?) At this date many of the industrial arts had made considerable advancement both in Babylonia and Egypt. 4100 (?) Architecture in stone begun in Egypt; copper tools introduced, and artisanship fostered.	
B. C. 4000—3000 Period of the pyramid builders. The Accadians flourish in the Euphrates valley.	4000 (?) Nippur becomes the religious center. 3900 (?) Agade becomes the chief center of Northern Babylonia. 3800 (?) Sargon I., of Accad, reached the Mediterranean, and conquered Elam, a kingdom east of Babylonia. 3700 (?) Babylon made capital. 3200 (?) End of the dynasty of Sargon.	4000 (?) Athothis, King. 3733 (?) Khufu (Cheops) builder of the great pyramid, reigns. 3666 (?) Khafra (Chefren), pyramid builder, reigns. 3633 (?) Menkaura (Mykerinos), pyramid builder, reigns. (Egyptian history almost a blank until the 11th dynasty.)	3900 (?) Great Pyramid at Gizeh. The Sphinx carved. 3750 (?) Temples to the gods built by Sargon I. at Nippur and Agade. 3300 (?) Canals and irrigation in Egypt begun.	"Moral Precepts" of Ptah-hotep.

FROM THE DAWN OF HISTORY TO THE TIME OF ABRAHAM, B. C. X-2000 (?)—Continued

Characteristics of the Centuries	Babylonia—Assyria	Egypt	Arts and Sciences	Literature
B. C. 3000—2000 Invasions of Accad and Babylonia by the Kings of Ur and the Elamites, respectively. Babylonian dominions extended. First migrations from the Aryan center; Celts move westward; Indo-Persic tribes, south. Chinese civilization evident. Flood narratives accepted, and Sabbath observed among Semites.	3000 (?) Accad under Kings of Ur. 2500 (?) Isin takes high rank among Babylonian cities, and a dynasty is founded there. 2450 (?) Arabians and Elamites irrupt into Babylonia. 2400 (?) City of Babylon first rises into prominence. 2300 (?) Elam supreme in Babylonia. 2300-2250 (?) Hammurabi unites Babylonia.	3000 (?) Herakleopolis becomes the seat of government. 2800 (?) Amenemhat I., first of the 12th dynasty. 2650 (?) Usertesen III., King, conducts expedition against Ethiopia. 2400 (?) Government moved to Thebes. 2100. Egypt conquered by the Hyksos, or Shepherd Kings.	3000 (?) Era of palace and temple building renewed in Babylonia; statues of Gudea. 2750 (?) Temple at Heliopolis built; also temple of Osiris at Abydos. 2371-25. Egyptian obelisks erected. 2300 (?) Amenemhat III. constructs Lake Mœris, and the labyrinth near it. 2200. Astronomy known in Chaldea.	Inscription of Una, found at Abydos. Egyptian *Book of the Dead.* *Code of Hammurabi.*

FROM ABRAHAM TO THE PERIOD OF ASSYRIAN ASCENDENCY, B. C. 2000–1200.

Characteristics of the Centuries	Hebrews	Babylonia-Assyria	Egypt	Europe	Arts and Sciences	Literature
B. C. 2000—1200 Egyptian revolt from the Shepherd Kings. New Egyptian empire. Rise of Assyria—originally settled by emigrants from Babylonia. Wars with Babylonia. Sidon, a Phenician city, at its zenith. Phenician colonies established round the Mediterranean. Advanced civilization in Crete. Exodus of the Hebrews from Egypt under Moses. Hittites rise to great power, contending equally with Egypt and Assyria.	2000(?). Abraham, Hebrew patriarch. 1728 (?). Joseph. Migration of the Hebrews into Egypt. 1491 (?). Moses; Exodus from Egypt. 1451 (?) Hebrews conquer the promised land, Canaan. Hebrew theocracy established.	2000 (?). Kassites (Arabians) conquer Babylonia. 1900. Assyria settled by Babylonian emigrants, Nineveh made the capital. 1700. Phenicia conquered by Egypt. 1500. Long series of wars begun between Babylonia and Assyria. 1310. Tiglath-Adar I. conquers Babylonia. 1300 (?). Shalmaneser I. rules in Assyria. 1220. Assyria again independent.	(Period of great obscurity.) 1800 (?). Revolt of Thebes against the Hyksos. 1670. New Empire expands under Thothmes III.; Palestine, Phenicia and part of Asia Minor conquered. 1524-1488. Expeditions against Syrians and Ethiopians, under Seti I. 1500. Egyptus reigns, and gives his name to the country. 1333. Rameses II. wages war against the Hittites; oppresses the Hebrews. 1322. Menephthah, the supposed Pharoah of the Exodus. 1269. Rameses III. 1244-1091. Decay of the Empire under the Rameses Pharaohs.	2000. Celts reached western Europe. Principal settlements made in central France. 1700. Arcadians migrate to Italy. 1582. Earliest date in the Parian chronicles of Greece, preserved in the Arundelian marbles. 1504. Areopagus established. 1457. Kingdom of Mycenæ founded. 1453. First Olympic games at Elis. 1400. Minos reigns in Crete. 1384. Founding of Corinth. 1356. Eleusinian mysteries instituted by Eumolpus. 1266. Œdipus, King of Thebes. 1263. Argonautic expedition of Jason. 1239. Latinus reigns in Italy. 1235. Theseus reigns in Athens for 30 years. 1233. Carthage founded by the Tyrians. 1225. First Theban war. 1220. Priam, King of Troy. 1216. Second Theban war. 1213. Helen (later of Troy), carried off by Theseus, afterward marries Menelaus.	2000. Babylonian industry flourishes under the Kassite kings. Phenicians skilled artisans. 1650. Library founded at Thebes; manuscripts transcribed. 1524-1488. Magnificent palaces and temples erected at Thebes. 1400. Babylonian language in commercial use among eastern Mediterranean countries. 1388-1322. Rameses II. builds many palaces and temples in Egypt. 1370. Bucklers used in single combat. Music and poetry cultivated in Greece. 1263. Temple of Apollo at Delphi built. Jason leads first naval expedition on record. 1240. The ax, wedge, wimble, and lever, also masts and sails for ships, invented by Dædalus of Athens. 1224. Game of backgammon invented by Palamedes, of Greece.	*Pentaur*, a descriptive poem, in epic form. Thothmes III. causes chronology of Egyptian kings to be made. *Papyrus Ebers.* The *Vedas* of India. The *Amarna Letters.* Chinese *Book of Changes.*

THE ASSYRIAN-BABYLONIAN PERIOD, B. C. 1200-529

Characteristics of the Centuries	The Hebrews		Asia and Africa	Europe	Arts and Sciences	Literature
B. C. 1200—1000			1194. Trojan war. 1184. Troy taken.			
Heroic age of Greece; Hebrews reach their highest point of national power. Beginning of the Medo-Persian nations. Celts disperse over western Europe and into British Isles.	1161. Israel enslaved by the Philistines. Samson born. 1136. Samson slays 1,000 Philistines. 1116. Samuel, last Judge of Israel. 1095. Saul becomes King of Israel. 1085. David born. 1055. Death of Saul; accession of David. 1048. David, King of all Israel. 1042. The Ark removed to Jerusalem. 1036. Revolt of Absalom. 1033. Solomon born. 1016. Death of David. 1015. Solomon anointed King. 1012. Solomon begins the Temple. 1004. Dedication of Temple.		1140. Tiglath-Pileser real founder of the Assyrian empire. 1123. Chow dynasty begins in China. 1044. Ionian emigrants settle in Asia Minor.	1152. Alba Longa built by Ascanius. 1124. Æolian migration. Thebes, capital of Bœotia, founded. 1104. Return of the Heraclidæ. End of the Kingdom of Mycenæ. 1070. Heremon, of Galicia, conquers Ireland. 1060. Athens governed by Archons.	1115. Mariner's compass known in China.	Dictionary of Chinese completed by Pa-out-she.
B. C. 1000—900	975. Death of Solomon. Revolt of the Ten Tribes. Two kingdoms formed.		1000. Solomon and Hiram, King of Tyre, form an alliance; also Solomon and Pharaoh. 986. Utica built. Samos built.	976. Capys reigns in Alba Longa.	1015. Minos gives Crete his code of laws. 1000. Solomon extends his commerce to India; builds Palmyra, Baalbec, and other cities.	The *Zend-Avesta* of Zoroaster.
Homeric age. Celts already in Britain, with bronze in use. Phenician trade extended from Senegal to India. Temporary decline of Assyria.	Judah	Israel				
	971. Shishak, King of Egypt, takes Jerusalem.	975. Jeroboam establishes idolatry.	971. Shishak, of Egypt, plunders Jerusalem.			Homer, Greek poet.
B. C. 900—800		918. Ahab and Jezebel. 901. The Syrians besiege Samaria. 896. Elijah translated to heaven.		935. Bacchus, King of Corinth. 895. Tiberinus, King of Alba, drowned in the river Albula, which is thenceforward called the Tiber.	916. The Rhodians begin navigation laws.	
Accurate Assyrian chronology begins. Decline of Phenician cities.	888. Philistines plunder Jerusalem. 884. Usurpation and death of Athaliah.	884. Jehu, King. 840. Jehoash defeats King Benhadad of Syria.	825. Dynasty of the Tanites in Egypt. 820. Arbaces, King of Assyria.	864. Romulus, King of Alba Longa.	884. Lycurgus reforms the constitution of Sparta. 869. Gold and silver coined by Phidon, ruler of Argos.	Homer's poems brought into Greece.
B. C. 800—700			797. Ardyssus, first King of Lydia.	814. The Kingdom of Macedon founded by Caranus.	786. Corinthians employ triremes, or vessels with three banks of oars.	Hindu "Brahmanas."
Ethiopian supremacy in Egypt. Assyrian conquests continue; Tiglath-Pileser III.; Sargon; Babylonia rises to height of its power.	741. Pekah, King of Israel, besieges Jerusalem; 120,000 of his men slain. 726. Hezekiah abolishes idolatry.	770. Pul invades Israel, and is bribed to depart. 721. Samaria taken by the Assyrians; Ten Tribes carried into captivity.	767. Sardanapalus, King of Assyria. Media subjected to Assyria. 747. Era of Tiglath-Pileser III.; old Assyrian dynasty destroyed. 736. Tiglath-Pileser III. conquers Syria and part of Israel. 721. Shalmaneser, King of Assyria, takes Samaria; Sargon II. carries the Ten Tribes into captivity.	769. Syracuse founded by Archias of Corinth. 753. Building of Rome. 750. Sabine war. 747. Union of Romans and Sabines. 743. First Messinian war.	772. Sculpture first mentioned among the Egyptian arts. 721. First eclipse of the moon observed by the Chaldeans at Babylon. Religion of Buddha introduced in India.	
	Hebrews					
	717. Hezekiah, King. 712. Sennacherib invades Judah. 711. His army (185,000) destroyed by pestilence. 696. Manasseh, King.	717. Sennacherib, King of Assyria. 710. Media becomes a kingdom.		716. Romulus reputed murdered.	710. Roman calendar reformed; year divided into 12 months instead of 10, as before.	Greek lyric poetry flourishes.

THE ASSYRIAN-BABYLONIAN PERIOD, B. C. 1200-529—Continued

Characteristics of the Centuries	Hebrews	Babylonia	Egypt	Europe	Arts, Sciences, Etc.	Literature
B. C. 700—600 Zenith and fall of Nineveh, and Assyrian empire. Media rises to power. Perhaps last migrations from the Aryan center—Teutonic and Slav races.	677. Manasseh, carried to Babylon, is afterward restored. 606. Conquest of Jerusalem by Nebuchadnezzar.	680. Babylon and Nineveh are united under Esarhaddon. 660. Assyria at height of power. 648. Saracus, King of Babylon and Nineveh. 612. Nineveh a second time destroyed. 606. Nebuchadnezzar defeats Necho of Egypt, invades Judea and takes Jerusalem. 604. Nebuchadnezzar, King of Babylon. 599. Birth of Cyrus.	660. Psammetichus, King of Egypt. Memphis becomes the capital. 610. Pharaoh-Necho, King of Egypt.	685. Second Messinian War. 678. Argæus, first King of Macedon. 672. Tullius Hostilius, King of Rome. 664. First sea-fight on record—between the Corinthians and Corcyreans. 658. Byzantium founded. 640. Latins conquered by the Romans. Philip I., King of Macedon. 616. Tarquinius Priscus, King of Rome.	680. Chess invented. 640. Spherical form of the earth and true cause of lunar eclipses taught by Thales. 621. Draconian code formulated. 610. Pharaoh-Necho begins a canal between the Mediterranean and Red Sea. Many lives lost in the attempt. He also sent out a Phenician fleet which circumnavigated Africa.	Iambic verse introduced. Attempt to discover the primitive language of mankind. Alcæus and Sappho, Greek poets.
B. C. 600—500 Zenith and fall of Babylon. Long reign of Nebuchadnezzar; he ravages Egypt. The seventy years' captivity of Judah. Rise of Persia.	591. Ezekiel prophesies in Chaldea. 586. Captivity of Judah completed, Jerusalem destroyed, Temple burnt. 579. Jews carried to Babylon. **Persia** 560. Cyrus, King of Persia. 548. Cyrus conquers Lydia. 538. Takes Babylon. 536. Persian empire founded by Cyrus, composed of Assyria, Media, and Persia. Captivity of the Jews ended. 535. Temple rebuilt at Jerusalem. 529. Death of Cyrus; Cambyses, King of Persia.	589. Invades Phœnicia. 572. Takes Tyre. 562. Crœsus, King of Lydia, subjects Asia Minor. 538. Babylon taken by Cyrus the Persian.	600. Psammis, King of Egypt. 594. Pharaoh-Hophra (Apries), King of Egypt. 581. Egypt invaded by Nebuchadnezzar. 569. Amasis, King of Egypt, makes alliance with Greece. 536. Pythagoras visits Egypt. 535. Made tributary by Cyrus.	602. Illyria conquered by Macedon. 594. Solon, Archon of Athens. 578. Servius Tullius, King of Rome. 567. Conquest of Etrurians by Rome. 565. First census of Rome: 84,700 citizens. 539 The Phœnicians emigrate to Gaul and build Massilia (now Marseilles). 528. Thrace comes into view.	594. Solon's code supersedes that of Draco in Athens. 578. Money coined at Rome by Servius Tullius.	Gautama, Founder of Buddhism. Poems of Anacreon.

THE PERSIAN-MACEDONIAN PERIOD, B. C. 529-323

Characteristics of the Centuries	Persia	Greece	Macedonia	Rome, Etc.	Arts, Sciences, Etc.	Literature
B. C. 600—500 Continued	525. Cambyses conquers Egypt and makes it a Persian province. Psammenitus, last King of Egypt. 521. Darius I., King of Persia. 508. Darius extends his rule to the Indus.	527. Pisistratus dies, after seizing Athens. 510. Followers of Pisistratus expelled; Democracy established at Athens.		530. Cadiz built by the Carthaginians. 509. The Tarquins expelled from Rome. Brutus and Collatinus first Consuls. 507. The Capitol finished.	First public library founded at Athens. Abolition of regal government at Rome, and establishment of a republic. Phœnician letters carried to Ireland from Spain.	Confucius, the Chinese philosopher.
B. C. 500—400 Zenith of Persia; and the glorious century of Greece. Struggles of Patricians and Plebeians at Rome.	500. The Ionians revolt and burn Sardis. 490. Darius sends an army of 500,000 into Greece. 487. Egypt revolts, and is subdued by Xerxes. 483. Xerxes, King of Persia.	490. Battle of Marathon. 483. Aristides banished.	497. Alexander I., King.	494. Tribunes of the people chosen. 491. Coriolanus banished.	The Temple of Minerva built. Etrurians excel in music, drama, and architecture.	Pindar, the greatest of the Greek lyric poets. Æschylus, Sophocles.

THE PERSIAN-MACEDONIAN PERIOD—Continued

Characteristics of the Centuries	Persia, Etc.	Greece	Macedonia	Rome, Etc.	Arts, Sciences, Etc.	Literature
B. C. 500—400 Continued	481. Expedition of Xerxes into Greece; destroys Athens. 479. Returns defeated.	480. Battle of Thermopylæ. Battle of Salamis and defeat of Persians. 479. Battle of Platæa; Persian fleet destroyed at Mycale. 476. Themistocles rebuilds Athens. 465. Third Messinian War.		480. Carthaginians defeated. Hamilcar killed in battle.		Euripides, writer of tragedies.
	465. Xerxes assassinated. Artaxerxes I., King.	461. Pericles impresses himself upon Grecian affairs. 457. Long walls of Athens begun.		460. Cincinnatus, Consul. 456. Cincinnatus, Dictator.	Voyage of the Carthaginians to Britain for tin.	
	456. Esther. 449. Persians defeated at Salamis. 445. Jerusalem rebuilt by Nehemiah. 440. Siege of Samos by Pericles.	431. Peloponnesian War. 429. Death of Pericles, having governed Athens 40 years. 416. War with Sicily.		451. Laws of the 12 tables.	441. The battering ram invented.	Aristophanes, the ablest writer of Greek comedy. Plato, the greatest of the Athenian philosophers.
			413. Archelaus, "Patron of Learning," seizes the throne.	413. Egypt regains independence. 411. Roman famine.		
		411. Athens governed by the "400." Alliance of Sparta with Persia 408. Capture of Byzantium.		407. Carthaginians war on Sicily.		
B. C. 400—300	401. Cyrus the Younger defeated. Retreat of the 10,000 under Xenophon.					
Decline and fall of Persia before Alexander the Great; Greek language and Greek civilization extended all through the Levant. Roman wars with the Samnites. Internal quarrels of the Romans diminish.	400. Delhi founded. 387. Greek cities of Asia made tributary to Persia.	400. Return of the 10,000. 370. Predominance of Thebes.	399. Archelaus murdered. 392. The Illyrians invade Macedonia, and possess the throne.	390. Rome destroyed by the Gauls. 376. War between patricians and plebeians. Lucius Sextus, first plebeian Consul. 371. Curule magistrates appointed. 369. Military tribunes abolished.	399. Catapults invented by Dionysius. 380. Treatise on conic sections by Aristæus. 368. A celestial globe brought into Greece from Egypt.	Sanskrit grammar, *Panini*. Aristotle, the founder of the Peripatetic school of philosophy. Mencius, Chinese philosopher.
		360. War of the Allies against Athens. Decline of Grecian republics. 356. Second Sacred War. 344. Philip subdues Sparta. Aristotle visits Mitylene.	360. Philip II., King; institutes the Macedonian phalanx; defeats Athenians. 356. Philip II. conquers Thrace and Illyria. Birth of Alexander the Great. 341. War against the Athenians. Siege of Byzantium.	343. Samnian war, continued 53 years. 340. War with the Latins.	360. Philippics of Demosthenes delivered.	Xenophon, an Athenian historian. Orations of Demosthenes and Æschines delivered.
	338. Royal family destroyed with poison.	339. War with Macedonia.	338. Athenians and Thebans defeated at Chæronea. Philip master of Greece.	337. First plebeian Prætor.		Aristotle begins his philosophical works.
	336. Darius III., King.		336. Philip assassinated by Pausanias; Alexander III., surnamed the Great, succeeds to the throne.		336. Eclipses calculated by Calippus the Athenian.	
		335. Greeks conquered by Alexander the Great. Thebes destroyed.	335. Enters Greece, conquers Greeks, and succeeds to head of army against Persians.		335. Caustic art invented.	
	334. Alexander the Great invades Persia. (See under Macedonia.)		334. Invades Persia. Defeats Persians at the Granicus. 333. Battle of Issus.			
		332. Egypt conquered by Alexander, and Alexandria built.		332. Caledonian monarchy (Scotland) founded by Fergus I. Roman treaty with Alexander the Great.		
	331. Battle of Arbela. Darius III. murdered. Alexander founds the Grecian or Macedonian monarchy.	330. Æschines, the orator, banished.			328. Voyage of Nearchus from the Indus to the Euphrates.	
		327. Alexander invades India. 325. Demosthenes banished. 323. Ptolemy I. restores the independence of Egypt.		327. Second Samnite war.		

Alexander the Great dies in Babylonia. The Grecian cities revolt from Macedonia, and in 321 Antipater becomes Regent of Greece. Persia was reconquered from the Greeks, and remained tributary to Parthia till about A. D. 250.

THE GREEK-ROMAN PERIOD, B. C. 323-1 A. D.

Characteristics of the Centuries	Rome, Etc.	Macedonia	Greece	Syria, Judea	Egypt, Carthage	Arts, Sciences, Etc.	Literature
B. C. 400—300 Continued	321. Roman army surrenders to the Samnites. 320. Samnites defeated at Luceria.		319. Polysperchon succeeds Antipater, and proclaims liberty to the Grecian cities.		320. Ptolemy I. (Soter) carries 100,000 Jews into Egypt.		First work on mechanics written by Aristotle.
	317. Syracuse and Sicily usurped by Agathocles.	317. Cassander assumes the throne of Macedon.	317. Demetrius Phalerius governs Athens. 315. Cassander rebuilds Thebes.			317. Commerce of Macedon with India through Egypt.	
	312 War with the Etruscans.		312. Pyrrhus II. greatest hero of his time. 306. Democracy established at Athens by Demetrius.	312. Seleucus I. retakes Babylon. 301. Battle of Issus. Alexander's empire divided anew, into four parts: Syria, Macedon, Greece, Egypt.	301. Phenicia united to Egypt.	312. The Appian Way constructed. 310. Aqueducts and baths in Rome.	
B. C. 300—200					300. Golden Age of the Ptolemies.		
Semi-Greek kingdoms built on the ruins of the Persian empire; in Egypt the Ptolemies; in Syria, the Antiochi.		296. Philip IV.	294. Demetrius murders Alexander, and seizes throne of Macedon.	291. Seleucus founds Antioch, Edessa, and Laodicea.		293. Sun-dial erected at Rome, and time divided into hours. 290. Fabius introduces painting at Rome. The Colossus of Rhodes built by Chares.	Euclid, the celebrated mathematician.
Many Jews at Alexandria.	286. Law of Hortensius, by which the decrees of the people had force of those of the senate.	286. Lysimachus, King of Thrace, subjects Macedonia.		285. The Scythians invade Bosporus.		285. Dionysius founds the solar year, to consist of 365 days 5 hours 49 minutes.	
Rome mistress of Italy; then, victorious over Carthage, extends her influence to Greece and Spain. Peasant proprietors replaced by slaves in Italy.			284. Achæan republic.				The Septuagint begun at Alexandria.
	281. The Tarentine war.	279. Irruption of the Gauls. 277. Reign of Antigonus. 272. Antigonus restored.		281. Antiochus Soter succeeds Seleucus.	283. Death of Ptolemy Soter. Ptolemy Philadelphus, King of Egypt.	283. The Pharos built at Alexandria, first lighthouse on record.	
		268. Second incursion of the Gauls.	268. Athens taken by Antigonus.		269. Egypt first sends ambassadors to Rome.	267. Ptolemy makes a canal from the Nile to Red Sea.	Persian Chronicle written.
	266. Rome mistress of all Italy.					266. Silver money first coined.	Berosus, Babylonian historian.
	264. First Punic war.		255. Athens joins the Achæan League.	262. Invasion of the Gauls.			
	241. End of first Punic war.	250. Parthia revolts from Macedon.		246. Antiochus II. poisoned by his wife.	246. Ptolemy Euergetes subdues Syria.		
	225. The Gauls repulsed in Italy.			226. Seleucus III., King of Syria.		224. Archimedes makes known his discoveries in mechanics.	
	219. Hannibal takes Saguntum, and crosses the Alps.	220. Philip assists the Achæans.	220. The Social war begins.	219. War with Ptolemy.	221. Ptolemy Philopator, King.	219. Art of surgery introduced.	Plautus, Latin poet.
	218. Second Punic war. Hannibal defeats the Romans at Ticinus and Trebia.						
	216. Varro at Cannæ totally defeated by Hannibal.	211. Alliance of Philip and Hannibal.		211. Antiochus the Great, King of Syria.

The war becomes a great struggle between autocracy and democracy. Fall of German military autocracy and the establishment of several republics. Peace of Versailles accepted by all powers except U. S. Economic distress, depreciated currency, shortage of labor and raw materials. Numerous strikes. Most countries in Europe accept League of Nations. Diplomatic problems with Russia. Labor party in power in Great Britain for first time in history. **1925.** Locarno Pact ratified. **1929.** Fifteen nations sign pact for renunciation of war. **1930, '31, '32, '33, '34.** World wide depression. European dictatorships. **1933, '34, '35, '36.** European nations except Finland default in war debt payment to United States. **1935.** Germany renounces Versailles treaty. **1936.** Italian conquest of Ethiopia. **1937.** Labor conditions improved. Nations restrict war supplies to Spanish combatants.	**1914.** Regional Banking System. **1915.** Lusitania torpedoed. **1917.** U. S. enters World War on side of Allies. **1918.** Allies win war. Pres. Wilson formulates peace terms. **1919.** National Prohibition and Woman Suffrage. **1920.** Harding elected President. **1921.** Peace with Germany. International Disarmament Conference called. **1924.** Strict immigration law. **1927.** Devastating Mississippi floods. Lindbergh makes first non-stop flight, N. Y. to Paris. **1929.** Oil conservation policy announced. Byrd flies over South Pole. **1930.** Kellogg made judge of World Court. **1931.** Bank holiday. Hoarding law passed. Sound banks reopen. Gold Standard abandoned. National Recovery Act. **1933.** F. D. Roosevelt, President. **1935.** $4,800,000,000 appropriated for recovery and relief. **1936.** Supreme Court rules T.V.A. constitutional. **1937.** Wagner Labor Relations Act. Sit-down strikes.	**1914.** England declares war on Germany. **1915.** Government takes control of industries. **1917.** Jerusalem surrenders to Britain. **1918.** Woman Suffrage adopted. **1921.** Irish Revolution. **1922.** Irish Free State organized. **1923.** War Debts agreement with the U. S. **1925.** Conservative Party in power. Stanley Baldwin, Prime Minister. Adopts Gold Standard. **1927.** Diplomatic relations with Russia severed. **1928.** Woman suffrage. **1929.** Tea tax abolished. **1930.** Death of Balfour. Naval Arms Conference (United States, England, Japan, France, Italy) met and made a limited agreement. **1931.** Gold Standard abandoned. **1932.** First protective tariff act passed. **1935.** Industrial skies brighten. **1936.** George V. dies. Edward VIII, King. Abdicates Dec. 11. George VI, King. **1937.** Coronation of George VI.	**1914.** Invades Belgium and Northern France. Defeated at the Marne. Government controls industries and food. **1915.** Russians driven back. **1918.** Collapse of German military power. Revolution. German republic. Emperor William flees. **1922.** Republic stabilized by President Ebert. **1923.** The Ruhr invaded by France. Currency inflation and depreciation of the mark. **1924.** New currency. Dawes' Plan accepted. **1925.** Allies still occupy some parts of Germany. Von Hindenburg elected President of Germany. Ruhr evacuated. **1926.** Germany joins League of Nations. **1927.** Interallied control of Germany ceased. **1930.** Young plan adopted. Bruening became chancellor. Rise of German Fascists under Hitler. **1932.** Von Hindenburg re-elected President over Hitler. **1933.** Jews suppressed. **1934.** Von Hindenburg dies. Hitler becomes Reichsfuehrer with power of dictator. **1935.** Saar returned to Germany. Germany abrogates Versailles treaty. Conscription of large army. **1936-37.** Attempt at self-sufficiency. **1937.** German troops in Spain.	**1914.** The Austrian Crown Prince assassinated, June 28. Austria declares war on Serbia. **1916.** Francis Joseph dies and is succeeded by Charles I of Austria and Charles IV of Hungary. **1917.** U. S. declares war against Austria. **1918.** Hungary declares a republic, followed by Austria. Unconditional surrender and the abdication of the Emperor. **1919.** Famine in Vienna. **1920.** Horthy, conservative leader, in control of Austria. General social stagnation. **1923.** Expenditures reduced, revenue increased. **1925.** June, new Shilling currency goes into effect. **1926.** Union of Germany and Austria proposed. **1928.** Industrial conditions improve. **1930.** Signs treaty with Italy. **1931.** Cultivates German friendship. Tariff agreement. **1933.** Treaty of Little Entente; Czecho-Slovakia, Jugo Slavia and Roumania. **1934.** Chancellor Dollfuss assassinated. **1936.** Great political unrest. Schuschnigg, dictator.	**1914.** Resists German invasion. **1916.** Conference of the Allies at Paris plans to paralyze German trade after the war. Verdun defeated. **1917.** Germans driven back to Hindenburg line. **1918.** Five violent offensives of the Germans. Grand allied offensive. Nov. 11 armistice signed at Senlis. Victory. **1919.** Peace Congress at Versailles. **1920.** Deschanel elected president. **1922.** Reconstruction proceeded rapidly and the devastated areas rebuilt. **1923.** Germany ignored and partly repudiated war indemnity and therefore France invaded the Ruhr to levy collection. **1924.** Doumergue elected President. **1925.** War with Riffians in Morocco. **1927.** Treaties signed with Germany and Yugoslavia. **1928.** Treaty signed with United States. **1929.** Death of Marshal Foch. **1930.** Coste and Bellonte fly from Paris to New York. **1931.** Doumer elected president; 1932, killed. **1932.** Lebrun, President. **1936.** "People's Front" majority in Chamber of Deputies. **1937.** Paris Exposition.

PARALLEL OUTLINES OF AMERICAN HISTORY BY F. F. STEPHENS, Ph.D.

Historical events owe much of their importance to their relations with one another. The use of parallel outlines often enables the reader to see these relationships at a glance. It is recommended that when using these Parallel Outlines of American History the reader turn frequently to the preceding Parallels of Universal History for the same periods and turn also to the brief articles in the following pages on the History of Important Nations and their Dependencies as well as to the Dictionary of Biography in the latter part of the volume.

I. PERIOD OF DISCOVERY AND EXPLORATION, 1492-1607

RULERS	SPANISH EXPLORERS
1474-1516. Ferdinand and Isabella	**1492.** Columbus sails from Palos, Friday, Aug. 3, on his first expedition. He discovers a small island of the Bahama group, Oct. 12, Cuba, Oct. 28, and Hispaniola (now Hayti), Dec. 6. He returns to Spain the next year.
	1493-1496. Columbus makes his second expedition, discovers Jamaica, May 3, 1494, and explores various islands.
	1498-1500. Columbus sails on his third expedition, discovers various islands, lands on the mainland without knowing it to be a new continent, but is sent back to Spain in irons, where he is received with honor and the charges against him dismissed.
	1499-1507. Amerigo Vespucci on the coast of South America. He writes letters describing his exploration and an Alsatian geographer suggests that the land be named for him.
	1502-1504. Columbus makes his fourth and last voyage to America, discovers more islands, and explores the coast of the Isthmus.
	1510. Alonso de Ojeda founds San Sebastian, the first colony in South America.
	1513. Ponce de Leon discovers Florida, and takes possession in the name of Spain.
	Balboa crosses the Isthmus and discovers the Pacific.
1516-1556. Charles I.	**1519.** Francis de Garay discovers mouth of Mississippi. Cortes overthrows Aztec power in Mexico.
	1519-1521. Magellan's circumnavigation of the globe.
	1520-1527. Exploration of Atlantic coast of North America by Spanish explorers.
	1528. Explorations of Narvaez from Florida westward.
	1539-1542. De Soto penetrates the Mississippi Valley region as far northward as the later state of Arkansas.
	1540-1542. Coronado's expedition northward from Mexico to the present site of Santa Fe, and to Quivera (Kansas).
1556-1598. Philip II.	**1556.** Pedro Menendez de Aviles discovers and names the harbor of St. Augustine, takes possession of the land in the name of the king of Spain, and destroys the Huguenot settlements.

RULERS	PORTUGUESE EXPLORERS
1495-1521. Emanuel the Great. (Golden age of Portugal).	**1498.** Vasco da Gama reaches India by sailing around Africa.
	1500. Cabral discovers the coast of Brazil. Garper Cortereal, in the service of Portugal, discovers Labrador.

RULERS	FRENCH EXPLORERS
1515-1547. Francis I.	**1524.** Giovanni da Verrazano, in the service of the King of France, coasts between the 28th and 50th degrees of north latitude, and discovers New York harbor.
1547-1559. Henry II.	**1534-1535.** Discovery and exploration of St. Lawrence Bay and River by James Cartier.
1559-1560. Francis II.	**1562.** Jean Ribault establishes a Huguenot settlement at Port Royal.
1560-1574. Charles IX.	**1563.** Laudonniere establishes a Huguenot settlement at the mouth of St. John's river, naming it Fort Caroline.
	1565. The Huguenot settlement destroyed by Menendez.
	1567. De Gourgues avenges the destruction of the Huguenots by destroying the Spanish forts in Florida.
1574-1589. Henry III.	**1603.** Samuel de Champlain explores the St. Lawrence.
1589-1610. Henry IV.	**1604.** Champlain founds a settlement on St. Croix island.
	1605-1606. Champlain explores the coast of New England.

RULERS	ENGLISH EXPLORERS
1485-1509. Henry VII.	**1497.** John Cabot discovers the North American continent.
1509-1547. Henry VIII.	**1527.** Captain John Rut explores the coast of North America.
1547-1553. Edward VI.	**1565.** John Hawkins passes along the coast of Florida.
1553-1558. Mary.	**1566.** Charter is granted to Sir Humphrey Gilbert to open a northwest passage.
1558-1603. Elizabeth.	**1576-1578.** Voyages of Sir Martin Frobisher to discover a northwest passage.
	1577-1580. Circumnavigation of the globe by Sir Francis Drake. He takes possession of New Albion, (California) in 1579 in the name of Queen Elizabeth.
	1578. Attempt of Sir Humphrey Gilbert to plant a colony in Newfoundland.
	1584. Raleigh's expedition, under command of Amadas and Barlowe, takes possession of coast of Virginia in the name of Queen Elizabeth.
	1585. Raleigh's second expedition leaves 107 men on Roanoke Island. They are afterward rescued by Sir Francis Drake.
	1587. Raleigh's third expedition, under John White, lands 120 people. The colony disappears entirely.
	1602. Gosnold's exploration along the coast of New England.
	1603. Martin Pring enters the present harbor of Plymouth.
1603-1625. James I.	**1606.** Charter for colonization granted to the London and Plymouth Companies. The former promptly sends an expedition which founds the colony of Virginia by planting a settlement at Jamestown, May 13, 1607.

II. THE COLONIAL PERIOD, 1607-1775

The Southern Colonies	The Middle Colonies	New England Colonies	English Rulers and Events
1607. The first permanent English settlement at Jamestown. **1612-1616.** Introduction of tobacco culture into Virginia. **1619.** Meeting of the House of Burgesses in Virginia, the first representative body in America.	**1609.** Henry Hudson on the Hudson River. **1614.** Beginnings of settlements on Manhattan Island. **1617-1623.** Beginnings of the settlement of New Jersey by the Dutch.	**1608-1620.** The "Pilgrim Fathers" in Holland.	**1603-1625.** James I. develops the Divine Right of Kings theory. Development of Puritanism.

WAR TO THE PRESENT TIME—A. D. 1865-

Spain and Portugal	Italy and Greece	Russia	Lesser Countries	Arts, Sciences, Etc.	Literature
1915. Revolutionary outbreaks in Portugal. Military clique overthrown by Democrats.	**1912.** Balkan war against Turkey.	**1913.** Serfdom abolished.	**1913.** Peace treaty with Turkey. War among Balkan Allies over spoils.	**1912.** New chemical element discovered—Niton.	Tagore's **Poems.**
1916. Portugal enters war.	**1913.** King George of Greece assassinated.	**1914.** Russia enters war against Teutonic Alliance.	**1914.** Japan, Servia, Belgium enter war on side of Entente.	**1916.** German submarine Deutschland makes voyage to U. S.	Rolland's **Novels.**
1917. Serious strikes in Madrid.	**1915.** War: Italy vs. Austria.	**1917.** Revolution. Czar abdicates. Bolsheviki government set up.	**1915.** Bulgaria enters war on side of Teutons.	**1917.** Invention of "Liberty Motor" and depth bomb.	Heidenstam's **Poems.**
1919. Royalist revolution in Portugal. Peace Treaty signed.	**1917.** Constantine abdicates. Greece joins Entente.	**1918.** "Ukraine Republic" makes peace with Central Powers. Bolsheviki sign peace treaty with Germany. Lenin and Trotsky government gaining strength.	**1916.** Rumania declares war on Austria.	**1918.** First fabricated steel ship launched.	France's **Novels.**
1923. Senhor Teixeira Gomes installed as president of Portuguese Republic.	**1921.** Greece at war with Turkey. The Fascisti under Mussolini put down Syndicalism and seize the government.	**1920.** Defeat of Wrangel.	**1917.** Siam, China and Brazil enter war against Teutonic Allies.	**1919.** Discovery of helium gas, non-explosive.	Yeat's **Poems.**
1925. Direct cable to United States inaugurated.	**1922.** Mussolini becomes Premier. Greek army driven out of Asia Minor by the Turks.	**1921.** Commercial peace with United States. Lenine and Trotsky have stabilized Russian affairs.	**1918.** Rumania makes peace with Central Powers. Bulgaria and Turkey surrender unconditionally.	**1921.** Wireless telephone perfected.	Bergson's **Writings.**
1926. Spanish Criminal Code revised. Spanish Victories in Riffian War.	**1924.** By a plebiscite, Greece becomes a Republic.	**1924.** Death of Lenin. Alexis Ivanovitch Rykoff new head of Soviet government.	**1919.** Independence of Czecho-Slovakia, Jugo - Slavia, Poland, Lithuania.	The Einstein Theory announced.	Wells' Outline of History (1922). The education of Henry Adams.
1927. Revolution in Portugal. Arbitration Treaty signed, between two countries.	**1925.** All Greeks compelled to leave Turkey.	**1925.** Trotsky deposed. Diplomatic relations resumed with Japan.	**1921.** Ireland given freedom.	**1923.** Radio broadcasting perfected. The Tomb of King Tut-Ankh-Amen discovered.	Conrad's **Novels.**
1930. Rivera resigned. Died. Gen. Berenguer mad. premier.	**1928.** Italy returns to gold standard.	**1927.** England severs diplomatic relations.	**1923.** Devastating earthquake in and about Tokio.	**1926.** Aeroplanes used to explore Polar Regions.	Benavente's **Dramas.**
1931. Alfonso XIII relinquishes throne; Zamara becomes provisional president.	**1929.** Italo-Vatican treaty.	**1928.** First 5-Year Plan.	**1926.** Arbitration Treaty, outlawing war, made between Sweden, Norway, Denmark and Finland.	**1927.** Television successful. Radiotelephony between U. S. and England.	Hamsun's **Novels.**
1935. Conditions improve in Portugal under Premier Salazar.	**1933.** Turks adopt Turkish in lieu of Arabian language in Mosques.	**1930.** Drive against the churches. Railroad in Asia.	**1929.** Dictatorship in Jugoslavia.	**1929.** Cascade tunnel opened.	Shaw's **Plays.**
1936. Agaña elected president of Spain. '36-'37. Civil War.	**1935.** Italy declares war on Ethiopia. Greece recalls its former king, George II.	**1931.** Strengthens economic position in Far East.	**1930.** Carol returned as King of Rumania.	**1929.** Einstein publishes new theory identifying gravitation with electro-magnetism. Dirigible **Graf Zeppelin** flew around the world.	Undset's **Novels.**
	1936. Ethiopia conquered.	**1932.** Treaty with France.	**1932.** Japan and China at war. League of Nation orders Japan to evacuate Manchuria.	**1930.** Ninth planet, Pluto, discovered at Flagstaff, Arizona.	**1933.** Noel Coward's "Design for Living." Sinclair Lewis' "Ann Vickers."
	1937. Italian troops in Spain.	**1935.** Dictator Stalin controls Russia.	**1933.** Japan refuses, resigns from League. Paraguay and Bolivia at war.	**1932.** Vitamin C isolated.	**1934.** Allen's "Anthony Adverse."
		1937. Political unrest.	**1935.** Japan denounces Washington Naval Treaty.	**1936.** Dirigible Von Hindenburg establishes trans-Atlantic air-service.	**1935.** Proletarian tendency arises, e.g. Halper's "Union Square."

	1664. New Jersey granted to Berkeley and Carteret.		
1669. Lock's Fundamental Constitutions for the Carolinas drawn up.			
1670. Charleston, S. C., founded.			
1676-1677. Bacon's Rebellion in Virginia.		**1675-1676.** King Phillip's war in New England.	
	1681. Grant of Pennsylvania to William Penn.		
	1682. Philadelphia laid out by Penn.		
	1683. First Assembly in New York under English rule.		
		1684. Massachusetts becomes a royal colony.	
		1686-1689. Andros, governor of New England.	**1685-1689.** James II.
	1689-1690. Leisler's rebellion in New York.		**1688-1689.** The "Glorious Revolution."
			1689-1702. William III and Mary.
		1691. Incorporation of Plymouth and Maine with Massachusetts.	
	1702. New Jersey becomes a royal province.	**1691-1693.** Salem witchcraft episode.	
1692. William and Mary College founded.		**1700.** Yale College founded.	
		1704. Appearance of "The Boston News Letter," the first newspaper in America.	**1702-1714.** Queen Anne.
			1714-1727. George I.
	1732. Zenger's trial and acquittal in New York, establishes freedom of the press.		**1727-1760.** George II.
1721-1729. The Carolinas become royal colonies.			
1732. Organization of the Georgia Trustees to assist poor debtors and to form a military outpost against Spain.			
1733. Savannah founded.	**1752.** Franklin experiments with electricity.		**1733.** Molasses Act.
1736. Appearance of "The Virginia Gazette," first newspaper in the South.	**1765.** First medical school in America at the University of Pennsylvania.		

II. THE COLONIAL PERIOD, 1607-1775—Continued

French Rulers	French Colonies	Spanish Rulers	Spanish Colonies
1589-1610. Henry IV.	1608. Champlain founds Quebec.	1598-1621. Philip III.	1610. Leon, Central America, is founded.
1610-1643. Louis XIII.	1611. French Jesuits settle at Port Royal.		1611. Talamanca Indians of Central America massacred by the Spanish.
	1615. Champlain explores Lake Huron, and establishes Indian missions.		1617. Separation of Rio de la Plata (modern Argentina) from Paraguay.
	1620-1635. Champlain governor of (New France) Canada.		
	1629-1632. English capture and restore the French settlements in New France.	1621-1665. Philip IV.	1630. Alvarado subdues Central American Indians.
	1634. Jean Nicolet explores Lake Michigan.		Hayti seized by French buccaneers.
1643-1715. Louis XIV.	1641. Montreal founded.		1630-1644. The Dutch get control of Brazil.
	1659. French fur traders explore Lake Superior.		1638. Discovery of the use of quinine in Peru.
	1668. Marquette establishes mission at Sault Ste. Marie.		1644-1655. Portuguese expel the Dutch from Brazil.
	1669. La Salle explores the Ohio River.	1665-1700. Charles II.	1665. St. Augustine pillaged by English buccaneers.
	1671. The French take formal possession of the Northwest.		1671. The Danes occupy St. Thomas.
	1673. Marquette and Joliet discover the Upper Mississippi.		1685. Dampier, an English buccaneer, sacks Leon.
	1681-1682. La Salle descends the Mississippi to its mouth.		1693. Gold mining begins in Brazil.
	1685-1687. La Salle attempts to colonize the lower Mississippi, fails to find its mouth, plants a short-lived settlement at Matagorda Bay, Texas, and is killed by his own men while journeying overland to Canada.		1695. Capture of Cartagena by the French.
		1700-1746. Philip V.	1698. The Darien scheme; 1,200 Scotchmen attempt to settle on the Isthmus but fail.
			1711. French capture Rio de Janerio, but restore it.
			1713. By the Treaty of Utrecht, England gains right of supplying Spanish colonies with African slaves.
	1699. Biloxi founded by Iberville and Bienville.		1726. Founding of Montevideo.
	1702. Settlement in Alabama on the Mobile river.		1740. Oglethorpe attacks St. Augustine, Florida, but is repulsed.
	1710. Port Royal captured by an English fleet.		1742. The Spanish invade Georgia unsuccessfully.
1715-1774. Louis XV.	1718. New Orleans founded.		
	1729. Massacre of French at Natchez by Indians.	1746-1759. Ferdinand VI.	1746. Lima destroyed by an earthquake.
	1749. French take possession of Ohio Valley. Fort Rouille (Toronto) built.		1759. Expulsion of Jesuits from Brazil.

STRUGGLE OF FRANCE AND ENGLAND FOR NORTH AMERICA: THE INTERCOLONIAL WARS.

Causes	Events	Results
General:	**1689-1697. King William's war.**	1697. Peace of Ryswick.
Historical rivalry between the French and English nations.	1690. Destruction of Schenectady and other towns by the French and Indians. Seizure of Port Royal by the English.	Restoration of conquests by both nations.
Opposite tendencies and characteristics of their colonists.	**1702-1713. Queen Anne's war.**	1713. Treaty of Utrecht.
Simply the American phase of European wars.	1704. Deerfield destroyed by French and Indians.	France ceded to England the Hudson Bay region, Nova Scotia (Acadia), Newfoundland, and St. Christopher island (in the West Indies).
Special:	1706. Invasion of Carolina by French and Spanish. Their repulse by William Rhett.	
Conflicting claims regarding Acadia and New France.	1710. Capture of Port Royal, Acadia, by an English fleet, and change of name to Annapolis.	
Conflicting claims for the Ohio Valley.	**1744-1748. King George's war.**	1748. Treaty of Aix-la-Chapelle.
Disputes over boundaries.	1745. Siege and capture of Louisburg, Cape Breton Island, by colonial troops.	Mutual restoration of conquered territory.
Clashes between the frontiersmen of the two nations.	**1754-1763. Old French and Indian war.**	1763. Treaty of Paris.
The Indian policies of the two nations, resulting in incessant Indian troubles.	1754. Congress of Albany. The Albany Plan of Union.	France ceded to England all Canada (except two unfortified islands in the Gulf of St. Lawrence), and all her territory east of the Mississippi except New Orleans; and to Spain all her territory west of the Mississippi, and New Orleans.
	1755. Banishment of Acadians (French) from Nova Scotia.	Spain ceded to England Florida in exchange for Havana.
	1755. Braddock's defeat.	The war created a bond of union among the colonists and gave the colonists some experience in warfare.
	1757. Capture of Fort William Henry by the French.	
	1758. Capture by the English of Louisburg, and of Fort du Quesne. The latter place is renamed Fort Pitt (Pittsburg).	
	1759. Capture of Quebec by General Wolf, Sept. 13.	
	1760. Capture of Montreal by the English.	
	1761. Capture of Havana by the English.	

III. PERIOD OF UNION AND INDEPENDENCE, 1761-1783

Spanish Colonies	Causes of the Revolution	British Colonies
	Increasing divergence of English and American institutions.	1761. James Otis argues against the legality of the issuance of Writs of Assistance.
	The colonial policy of England (the "mercantile system"), by which the colonies were arbitrarily governed.	1763. Patrick Henry, in the "Parson's Cause," attacks the king's veto power.
	Restrictions on external and internal trade through the Navigation acts.	1765. Passage of the Stamp act by the English Parliament. The Stamp Act Congress, representing nine colonies, meets in New York, October 7, to protest against the Stamp act.
	Restrictions on manufactures.	Adoption of resolutions by the Virginia House of Burgesses, proposed by Patrick Henry, against the exercise of the taxing power by England.
	Arbitrary methods of enforcing the trade laws.	Organization of the Sons of Liberty.
	Insistence of the colonists upon their rights as Englishmen.	1766. The Stamp act is repealed, but the Declaratory act passed by the English Parliament.
	Contests between the royal governors and the popular assemblies.	1767. Passage of the Townshend acts, levying new duties, providing for the reorganization of the Colonial Customs Service, and providing for the coercion of the New York Assembly.
1765-1778. Abrogation of restrictions upon Spanish colonial trade.	Fear that the crown would appoint a bishop to control the colonial church.	1768. The circular letter of Massachusetts sent to the other colonies. Troops sent to Boston.
	Taxation of the colonists without representation.	1769. The second set of Virginia resolutions adopted.
	Maintenance of a standing army in the colonies.	1770. The "Boston Massacre," March 5.
	(See the Declaration of Independence for an American statement of the causes of the war.)	Repeal of duties, except on tea.
1768. Unsuccessful revolt of the French against Spanish rule in Louisiana; severely punished.		1772. Organization of local Committees of Correspondence.
		1773. Organization of colonial Committees of Correspondence.
		The Boston Tea Party.
		Daniel Boone in Kentucky.
1773-1774. Earthquakes and volcanic eruptions in Central America destroy Santiago and Old Guatemala.		1774. Passage of the "Intolerable Acts" by Parliament to punish Massachusetts.
		Meeting of the First Continental Congress at Philadelphia, September 5.
1776. Creation of the viceroyalty of Buenos Ayres, including also Uruguay, Paraguay, and Bolivia.		1775. Passage of the New England Restraining Act by Parliament.
		The beginning of war between England and her colonies at Lexington, April 19.
		Meeting of the Second Continental Congress, May 10.
		1776. Appointment of committees in Congress to draft a form of confederation for the colonies, to draft a Declaration of Independence, and to form foreign alliances.

Results of the Revolution

By Treaty of Paris:
- England acknowledges the independence of the United States.
- The boundaries of the United States are fixed.
- Free navigation of the Mississippi and the Great Lakes is given the United States.
- Certain rights in the fisheries are given the United States.
- England cedes Florida to Spain.

THE UNITED STATES

1776. Adoption of the Declaration of Independence, July 4. It is signed August 2.
Delaware forbids the further importation of slaves.

1777. The Articles of Confederation are sent to the states for ratification.

1778. An offensive and defensive alliance is concluded with France (the first and only such alliance concluded in the history of the United States). A commercial treaty is also signed with France.

1779. Sept. 23. Victory of the *Bon Homme Richard*, John Paul Jones, commander, over the *Serapis*, Captain Pearson, commander. The most daring naval exploit of the war.

1780. Massachusetts adopts a state constitution containing a clause in the bill of rights which in 1784 was interpreted to prohibit slavery.
Pennsylvania provides for gradual emancipation.
The treason of Benedict Arnold at West Point and the capture and execution of Major André.

1781. Articles of Confederation go into effect.

IV. PERIOD OF THE CONFEDERATION, 1781-1788

THE UNITED STATES

Foreign and Commercial Affairs	Domestic Affairs
	1781. The "Five per cent. Amendment" to the Articles of Confederation is proposed but is later defeated by Rhode Island. 1781-1802. Cession to Congress of the claims of various states to western lands.
1782. Holland recognizes the independence of the United States. 1783. Denmark, Sweden, Spain and Russia recognize American independence. Peace signed with Great Britain, Sept. 3. 1784. Congress adopts the decimal system of coinage.	1783. The revenue amendment is proposed. Is defeated later by New York. Washington resigns his command December 23. 1784. Congress passes the Jefferson ordinance for the government of the West. Dispute between Connecticut and Pennsylvania over the Wyoming Valley. Organization of the Methodist Episcopal church in America.
1785. Benjamin Franklin returns from his post in France, and is succeeded by Thomas Jefferson. John Adams is appointed minister to England. 1785-1787. Commercial disputes between various ones of the States.	1785. Passage of the ordinance for the survey and administration of the Western territory. Disestablishment of the Anglican Church in Virginia by the passage of the Religious Freedom Act.
1786. A convention at Annapolis to adjust the commercial difficulties between the states leads to the call for the Philadelphia Convention of 1787. Commercial treaty is concluded with Prussia.	1786. Shays's rebellion in Massachusetts. The craze for paper money results in its issue in seven states. Culture of sea-island cotton introduced into Georgia and South Carolina. 1787. The "Ordinance of 1787" guarantees to the Northwest religious freedom, freedom from slavery, encouragement of education, civil liberty, and the admission into the Union of new states from that section. The Philadelphia Convention, in session from May 25 to Sept. 17, formulates a new Constitution and sends it to the states for ratification. 1788. The new Constitution is ratified by a sufficient number of states to put it into force.

British North America	Latin America and the West Indies
	1780. Peruvian insurrection led by Amaru.
1783. Treaty of Paris leaves Canadian boundaries and fishing rights ambiguous.	
1784. About 40,000 Loyalists from U. S. settle in Nova Scotia and Upper Canada (west of Ottawa river). Province of New Brunswick, with Loyalist population, separated from Nova Scotia. 1785. Lieut-Gov. Hope reports dissensions regarding laws, land tenure, religion and education between French Canadians, (200,000) on lower St. Lawrence river, and "United Empire Loyalists" (some 10,000) settled between Montreal and Kingston. 1786. Sir Guy Carleton, soon afterward made Lord Dorchester, appointed Gov.-Gen. over whole of British North America.	1786. Pacification of the negroes and Indian tribes in Dutch Guiana.
1788. Lord Dorchester, in spite of racial disputes, advises against dividing province of Canada into two. But British Government, in response to popular demand, prepares to divide the province and provide for representative government.	

V. FROM THE ADOPTION OF THE CONSTITUTION TO THE CIVIL WAR, 1789-1861

THE UNITED STATES

Political Events	Presidents and Cabinet Officials	Social and Industrial Progress	British North America	Latin America and the West Indies
1789. Organization of the executive, legislative, and judicial departments of the new government. The first Congress meets in New York. 1790. First decennial census is taken. Congress decides to locate the national capital on the banks of the Potomac. Assumption of the public debts previously contracted by the several states. Passage of the first excise law. 1790-1795. War with the Indians north of the Ohio. 1791. Organization of the First National Bank. Ratification of the first ten amendments to the Constitution. Admission of Vermont into the Union.	**George Washington.** *President.* John Adams, *Vice-President.* Thomas Jefferson, *Secretary of State.* Alexander Hamilton, *Secretary of Treasury.* Henry Knox. *Secretary of War,* Edmund Randolph, *Attorney-General.*	1789. Control over foreign commerce passes from the states to the federal government. North Carolina establishes the first of the state universities. 1790. Samuel Slater sets up first complete cotton machinery at Pawtucket, Rhode Island. First patent law is passed. Organization of the "Pennsylvania penal system." 1790-1799. Rapidly increasing demand for cotton. 1791. Alexander Hamilton's Report on Manufactures. Formation of the New York Society for promoting Agriculture.	1789 and 1793. Sir Alexander Mackenzie explores the Athabasca region. 1790. British Parliament appropriates £3,110,000 to reimburse the Loyalists for their losses in the American Revolution. 1791. "Constitutional Act" passed by British Parliament separating Canada into Upper and Lower provinces, with Ottawa river as boundary. Each province was granted a legislature comprising an appointed upper house and an elected lower house. Accordingly French law was continued in Lower while English law was established in Upper Canada. Protests came only from the small British element in Lower Canada.	1791. Beginning of the negro insurrection in Hayti, prompted by French revolutionary doctrines.
1792. Admission of Kentucky. Formation of the first political parties under the Constitution.		1792. Founding of Williams College. Formation of the Massachusetts Society for promoting Agriculture.	1792. 1200 negroes previously carried from U. S. by Loyalists and emancipated, deported from Nova Scotia to Sierra Leone in West Africa as colonists.	
1793. The first proclamation of neutrality as to the war in Europe issued, April 22. First fugitive slave act passed. Cornerstone of national capitol laid by Washington. Case of Chisholm *vs.* Georgia decided. Genet's meteoric career as minister from France.	**George Washington,** *Reëlected President.* John Adams, *Reëlected Vice-Pres.* Thomas Jefferson, E. Randolph, T. Pickering, *Secretaries of State.* Alexander Hamilton, O. Wolcott, *Secretaries of Treasury.* Henry Knox, T. Pickering, J. McHenry, *Secretaries of War.* E. Randolph, W. Bradford, C. Lee, *Attorney-Generals.*	1793. Whitney invents the cotton gin; cotton production greatly stimulated. Establishment of a mint at Philadelphia. Appearance at Cincinnati of the first newspaper north of the Ohio, *The Sentinel of the Northwestern Territory.* Rapid expansion of American carrying-trade, resulting from American neutrality.	1793. Legislature of Upper Canada provides for gradual abolition of slavery.	
1794. Whisky insurrection in Western Pennsylvania. Jay treaty concluded with England. Ratified the next year. Wayne defeats the Indians at Maumee Rapids. 1795. Treaty of the Escurial with Spain. Treaty at Greenville with the Indians north of the Ohio. 1796. Admission of Tennessee. Washington issues his farewell address, September 17. The French Directory issues a decree against American commerce.		1794. Mail boats and passenger boats are established on the Ohio from Wheeling to Limestone (Maysville). Founding of Bowdoin College. 1795. Jacob Perkins patents a machine for cutting and heading nails. 1796. The first permanent type-foundry is established at Philadelphia. The New York Insurance company is incorporated. 1797. The first patent for a cast-iron plow is granted Charles Newbold of New Jersey. A financial panic. 1798. "Hail Columbia" is composed by Joseph Hopkinson. First salt manufactory established in Ohio. Merino sheep are introduced from Spain.	1794. Toronto, previously called York, made capital of Upper Canada. Jay Treaty affects Canadian Commerce. 1794-1795. Political disputes in Lower Canada over liquor licenses and fees. 1796. Resignation of Lord Dorchester after a decade of splendid service as Governor-General. Surrender by Great Britain of military posts in United States Northwest Territory. 1797. Beginning of construction of Sault Ste. Marie Canal.	1794. Toussaint L'Ouverture becomes leader of the Haytian revolt. 1795. Subjugation and deportation of Jamaican Maroons (descendants of runaway slaves dwelling in mountain fastnesses). Etienne Boré founds the sugar industry in Louisiana.
1797. Special session of Congress to consider relations with France. The X. Y. Z. overtures. 1798. Adoption of the Eleventh amendment. Passage of the Alien and Sedition laws. The Virginia and Kentucky Resolutions. The navy department is established. Naval quasi-war with France. 1799. Second set of Kentucky Resolutions. Death of Washington. 1800. The capital is removed from Philadelphia to Washington. Treaty with France abrogates the treaty of alliance of 1778.	**John Adams,** *President.* Thomas Jefferson, *Vice-President.* T. Pickering, John Marshall, *Secretaries of State.* O. Wolcott, Samuel Dexter, *Secretaries of Treasury.* J. McHenry, Samuel Dexter, R. Griswold, *Secretaries of War.* Chas. Lee, *Attorney-General.* Benjamin Stoddert, *Secretary of Navy,*	1799-1800. The "Great Revival" of evangelical religion. 1800. An act passed to permit the sale of small tracts of public land on credit. India rubber is first imported into the United States. 1800-1825. Beginning of labor organizations.	1800-1812. Many Americans and Scotch immigrate into Upper Canada.	1800. Transfer of Louisiana from Spain to France.
1801. John Marshall is appointed Chief Justice. The "party revolution" by which the Republicans displace the Federalists. 1801-1805. War with Tripoli. 1802. Spain withdraws the right of deposit at New Orleans.	**Thomas Jefferson,** *President.* Aaron Burr, *Vice-President.* James Madison, *Secretary of State.* Samuel Dexter, Albert Gallatin, *Secretaries of Treasury.* Henry Dearborn, *Secretary of War.* Levi Lincoln, *Attorney-General.*	1801. New York *Evening Post* is founded by Alexander Hamilton. Beginning of sheet-copper manufacturing at Canton, Mass. 1802. The Du Pont powder works established.		1801. Toussaint L'Ouverture declares Haytian independence and is made president of the "Black Republic" for life. 1802. Toussaint, after capitulation to a French Army, is imprisoned in France, where he dies in 1803. 1802. Dutch recapture British Guiana.

V. FROM THE ADOPTION OF THE CONSTITUTION TO THE CIVIL WAR—Continued

THE UNITED STATES

Political Events	Presidents and Cabinet Officials	Social and Industrial Progress	British North America	Latin America and the West Indies
1803. Louisiana is purchased from France for $15,000,000. Admission of Ohio. Case of Marbury *vs.* Madison is decided.	Benjamin Stoddert, Robert Smith, *Secretaries of Navy.*	1803. Tobacco is exceeded by cotton as an export crop. South Carolina opens her ports to the foreign slave trade. First shipment of anthracite coal from Lehigh to Philadelphia. Grain-cradle is patented.	1803. Slavery made illegal in Lower Canada.	1803. Great Britain reacquires British Guiana by treaty. France abandons effort to subjugate Hayti.
1804. Adoption of the twelfth amendment. Hamilton killed in a duel by Aaron Burr.				
1804-1806. Lewis and Clark expedition.				1804-1806. Dessalines Emperor of Hayti; Massacre of White population.
1805. Failure of the Chase impeachment.	**Thomas Jefferson,** *Reëlected President.*	1805. Robert Fulton originates the marine torpedo.		
1805-1807. Conspiracy of Aaron Burr.	George Clinton, *Vice-President.*			
1806-1808. The European "Continental System" brings distress on American shippers.	James Madison, *Secretary of State.* Albert Gallatin, *Secretary of Treasury.* Henry Dearborn, *Secretary of War.*	1806. Passage of a bill for the construction of the Cumberland Road. Gas for lighting is first used by David Melville, Newport, R. I.	1806. Quarrels in Lower Canada between French and English over taxation system. First French-Canadian newspaper, *La Canadian*, established to lead crusade against English element as alien intruders.	1806. British Parliament prohibits slave-trading in British ships and the importation of slaves into British colonies.

Rodney, *Attorney-Generals.* Robert Smith, J. Crowninshield, *Secretaries of Navy.*	1807. Gallatin's famous report on Roads, Canals, Harbors, and Rivers. Successful trip of Fulton's steamboat, the *Clermont*, from New York to Albany.	1807. Governor Sir James Craig suppresses *Le Canadian* temporarily. 1807-1812. Struggle between Craig, supported by an English clique, and the French majority in the assembly.	1806-1811. Christopher President (King 1811-1820) of Hayti.
1809. The Embargo act is repealed and a non-importation act passed.	**James Madison,** *President.* George Clinton, *Reëlected Vice-Pres.* Robert Smith,	1808. American Fur Company founded by J. J. Astor. 1810. Exhibition at Pittsfield, Massachusetts, of Merino sheep; is called the first county fair. Metallic pens first made by Peregrine Williamson of Baltimore.		1808. Royal family of Portugal emigrates to Brazil. 1810. Revolutionary movements begin in Argentina and Chile.
1810-1814. The United States takes possession of West Florida.	James Monroe, *Secretaries of State.* Albert Gallatin, *Secretary of Treasury.*			1810-1815. Revolt led by Hidalgo in Mexico unsuccessful.
1811. Battle of Tippecanoe with the Indians. Henry Clay and John C. Calhoun first appear in the House of Representatives.	William Eustis, J. Armstrong, *Secretaries of War.* C. A. Rodney, Wm. Pinkney, *Attorney-Generals.*	1811. The first steamboat leaves Pittsburgh for New Orleans via the Ohio and Mississippi Rivers. Wooden shoe pegs invented. Beginning of an era of state banking activity.		1811. Paraguay declares independence. Revolution begins in Columbia and Venezuela.
1812. War declared against Great Britain. Admission of Louisiana.	Paul Hamilton, William Jones, *Secretaries of Navy.*	1812. First metallic pen factory is established in New York. Invention of stoves built with grates to secure draft.	1812-1814. War between United States and Great Britain evokes Canadian loyalty to British Empire. American attempts to invade Canada repulsed.	1811-1812. Francisco Miranda, Dictator of Venezuela.

THE WAR OF 1812, 1812-1815

Causes	Results	New England Opposition
Violation of the American flag on the high seas.	Treaty of Ghent, Dec. 24, 1814, provided:	Caused by the destruction of New England commerce through the commercial policy of the "Virginia dynasty," the declaration of war being regarded as the culmination of this policy.
The blockade of American ports.	For the cessation of hostilities.	The Opposition was shown:
Impressment of American seamen.	For the appointment of commissioners to settle boundaries.	By the vote of New England Congressmen against the war.
The destruction of American commerce by the Orders in Council.	Restoration of conquests.	By the refusal of New England states to furnish their military quota.
Aid given by the British traders to the Indians of the Northwest, thus inciting them to war.	The war developed a consciousness of nationality.	By the refusal of their financiers to make loans to the government.
The desire on the part of the westerners to get possession of Canada.	It gained fame for Jackson and Harrison, thus affecting our later political history.	By the sale of provisions to the English armies.
	It promoted the growth of American manufactures.	By the Hartford Convention.

PRINCIPAL LAND BATTLES

1812. Aug. 15, Surrender of Hull to Brock at Detroit.
Oct. 13, defeat of Van Rensselaer by Brock at Queenstown.

1813. April 27, York is taken by Gen. Dearborn and the Parliament House burned.
Oct. 5. Harrison defeats Proctor at Thames, Canada.
Nov. 11, at Chrysler's Farm, near Montreal, the Americans are defeated and driven from Canada.

Adams, *Secretary of State.* W. H. Crawford, *Secretary of Treasury.* J. C. Calhoun, *Secretary of War.* William Wirt, *Attorney-General.*	1821. Credit sales of public lands stopped. Statistics of immigration first kept. Daily meeting with regular call of stocks begun on "Change" in New York. First public high school in United States opened in Boston. Publication of Edward Livingston's reformed code of laws for New York.		1821. Independence proclaimed in Peru, Nicaragua, Salvador and Costa Rica. John VI. returns from Brazil to Portugal, leaving his eldest son, Dom Pedro as regent. Iturbide revolution in Mexico. 1821-1830 Blivar president and dictator of Colombia.
1822. The independence of South American republics recognized. Reciprocity treaty with France concluded.	S. Thompason, J. E. Rogers, S. L. Southard, *Secretaries of Navy.*	1822. Gaslight introduced into Boston.	1822. Proposal is made in British House of Commons for a reunion of Upper and Lower Canada. In response to protest from French Canadians the bill is withdrawn.	1822. Brazil declares independence and makes Dom Pedro its Emperor. 1822. Iturbide declared Emperor of Mexico. 1822-1843. Boyer, President of Haytai.
1823. President Monroe states the "Monroe Doctrine" in his annual message to Congress.		1823. Champlain canal, connecting the Hudson at Albany with Lake Champlain, opened.		1823. Revolt led by Santa Anna overthrows Iturbide, who is executed, 1824.
1824. Protective policy greatly extended by an act of Congress. Case of Gibbons *vs.* Ogden decided. Visit of La Fayette to the United States.		1824. Glazed-ground wall-papers are first made. Hemlock tanning factory established in Green County, New York.	1824. Founding of the Canada Co. to promote colonization in the district about Lake Huron. W. L. McKenzie founds the *Colonial Advocate* to attack the administration in Upper Canada. A mob wrecks the printing office, but this increases the influence of the paper. McKenzie is repeatedly expelled from the legislature.	1824. Mexico adopts federal republican constitution. Bolivar establishes Peruvian independence and is made dictator. 1824-1839. Federal republic of Central America. Chronic disorder.
1825. Presidential election is thrown into the House of Representatives and results in the choice of Adams. Treaty of 1824 with Russia regulating navigation and fisheries in the Pacific is ratified. 1825-1831. Dispute with Georgia over Indian land cessions.	**John Q. Adams,** *Presidnet.* J. C. Calhoun, *Vice-President.* Henry Clay, *Secretary of State.* Richard Rush, *Secretary of Treasury.* James Barbour, P. B. Porter, *Secretaries of War.* William Wirt, *Attorney-General.*	1825. Erie canal is completed. Appearance of *The Workingman's Advocate*, the first representative of the labor press in the U. S. Isaac Babbitt of Taunton, Mass., invents babbitt metal.		1825. Portugal recognizes Brazilian independence. Uruguay revolts from Brazil, achieving independence in 1828. Upper Peru separates from Peru, taking name of Bolivia and adopting curious constitution framed by Bolivar.
1826. Death of Thomas Jefferson and John Adams, July 4th.	S. L. Southard, *Secretary of Navy.*	1826. The Quincy tramway, sometimes wrongly called the first railroad in the U. S., is built from Quincy to tidewater, three miles away.		1826. Panama Congress called by Bolivar, with a view to general Latin-American federation. Various treaties are arranged; but the main purpose is defeated by non-participation of Chile and Argentina.
1827. Convention between U. S. and Great Britain to settle northeastern boundary. Anti-Masonry has its rise.		1827. Baltimore and Ohio railroad is chartered. First rail laid July 4, 1828.	1827. French malcontent majority in Lower Canada assembly elect the agitator, Papineau, as speaker. Gov. Lord Dalhousie refuses his sanction on ground of Papineau's unfitness.	

V. FROM THE ADOPTION OF THE CONSTITUTION TO THE CIVIL WAR—Continued

THE UNITED STATES			BRITISH NORTH AMERICA	LATIN AMERICA AND THE WEST INDIES
POLITICAL EVENTS	PRESIDENTS AND CABINET OFFICIALS	SOCIAL AND INDUSTRIAL PROGRESS		
1828. Tariff of Abominations passed. Publication of Calhoun's "Exposition" in protest.			1828. British Parliament appoints committee of investigation, but its report offers no solution of the Lower Canadian problem. Beginning of demand for responsible government in Upper Canada.	1828. Mexican presidential election produces civil war.
1829. The Postmaster General made a member of the President's Cabinet. Sweeping changes in the civil service.	**Andrew Jackson,** *President.* John C. Calhoun, *Reëlected Vice-Pres.* M. Van Buren. Edw. Livingston, *Secretaries of State.*	1829. The steam locomotive is first successfully used. Process of manufacturing galvanized iron is perfected.	1829. Opening of Welland Canal. 1829-1830. Quarrel in Nova Scotia over quit-rents, and popular discontent at the dominion of an oligarchy. Discontent also in New Brunswick, Prince Edward's Island and Cape Breton.	1829. Venezula withdraws from Republic of Colombia. Slavery abolished in Mexico. 1829-1833. Santa Anna dictator in Mexico.
1830. First general pre-emption law passes. West Indian trade is opened to American vessels. The famous Webster-Hayne debate in the U. S. Senate.	S. D. Ingham, Louis McLane, *Secretaries of Treasury.* J. H. Eaton, Lewis Cass, *Secretaries of War.* J. McP. Berrien, R. B. Taney, *Attorney-General.* John Branch, Levi Woodbury, *Secretaries of Navy.* W. T. Barry, *Postmaster-General.*	1830. Organization of the Church of Latter Day Saints (Mormons). Baldwin Locomotive works established in Philadelphia. Chloroform discovered by Samuel Guthrie.	1830-1831. Efforts at conciliation in Lower Canada thwarted by Papineau.	1830. Ecuador separates herself from Colombia.
1831. The Anti-Masonic party holds the first national nominating convention. Rise of the Abolitionists. Garrison publishes the *Liberator*. Treaty with France for the payment of claims.		1831. Wm. Manning patents the first mowing machine. Opening of the first school for the blind. McCormick invents (but does not patent) the first successful reaper.		1831. Upon abdication of Dom Pedro I., his son, Dom Pedro II., becomes Emperor of Brazil.
1832. National Republican party frames the first party platform with Henry Clay as its presidential candidate. Black Hawk War. New tariff law enacted. Nullification in South Carolina. Jackson vetoes the U. S. Bank bill.		1832. The Ohio river joined to Lake Erie by the Ohio canal. First street railway in the U. S. commences running in New York. Pork packing industry begins in Chicago.	1832. Opening of Rideau canal.	1832. Residue of Republic of Colombia adopts name of New Granada, with new constitution. Santa Anna elected President of Mexico. Continues, with occasional vicissitudes, to be virtual dictator during remainder of his long life. 1832-1836. Santander, President of New Granada. Interlude of peace.
1833. U. S. bank deposits removed from the National Bank and placed in "pet" banks. Compromise tariff is passed, providing a gradual reduction of duties.	**Andrew Jackson,** *Reëlected President.* Martin VanBuren, *Vice-Pres.* Edw. Livingston, Louis McLane, John Forsyth, *Secretaries of State.* Louis McLane, Wm. J. Duane, Roger B. Taney, Levi Woodbury, *Secretaries of Treasury.* Lewis Cass, B. F. Butler, *Secretaries of War.* Roger B. Taney, B. F. Butler, *Attorney-Generals.* Levi Woodbury, M. Dikerson, *Secretaries of Navy.* Wm. T. Barry, Amos Kendall, *Postmaster-Generals.*	1833. Railroad from Charleston, S. C., to Augusta, Ga., completed. The first patent for a successful reaper is granted Obed Hussey of Ohio. Ross Winans builds the first typical American passenger cars.		1833. British Parliament enacts law for emancipation of all slaves in British colonies, to be completed in 4 to 6 years; appropriates £20,000,000 in compensation to owners.
1834. Congress creates the Indian Territory. Resolution of Censure of Jackson passes the Senate. National debt is extinguished. Whig party first takes its name.		1834. McCormick patents an improved reaper. 1834 and 1837. Congressional acts change ratio of gold and silver from 15 to 1 to 16 to 1.	1834. The Ninety-two Resolutions, a French Canadian declaration of rights, claiming exaggerated powers for the provincial legislature.	1834-1839. Confederation of Peru and Bolivia.
1835-1836. Controversy over the dissemination of abolition literature through the U. S. mails. 1835-1842. Second Seminole War.		1835. Morse invents magnetic telegraph. Steam first applied to printing press. J. G. Bennett begins publication of New York *Herald*.	1835. A royal commission investigates but fails to relieve the deadlock by which the governor and assembly of Lower Canada keep each other impotent.	1835. Anglo-American settlers in Texas declare Texas independent of Mexico. 1835-1852. Rosas dictator in Argentina.
1836. Admission of Arkansas. Bill passes Congress for the distribution of the surplus revenue among the states. Jackson issues the "Specie Circular." 1836. Roger B. Taney is made Chief Justice. 1836-1844. J. Q. Adams fights the "gag resolution" excluding anti-slavery petitions from Congress.		1836. Friction match is patented. First American patent for a typewriting machine. Over 20,000,000 acres of public land sold in one year. 1836-1838. Invention of the screw propeller.		1836. Massacre of captives by Mexican troops at Alamo, Texas. Samuel Houston, President of Texan Republic, defeats Mexican army at San Jacinto, and captures Santa Anna.
1837. Admission of Michigan. Formation of the Liberty party. The Caroline Affair. Passage of the "expunging resolution." Great financial panic.	**Martin Van Buren,** *President.* R. M. Johnson, *Vice-President.* John Forsyth, *Secretary of State.* Levi Woodbury, *Secretary of Treasury.* J. R. Poinsett, *Secretary of War.*	1837. Massachusetts State Board of Education is organized with Horace Mann as its first secretary. Invention of the hot-air blast in iron smelting.	1837. French and British factions in Lower Canada take arms. Clash at Montreal, November 6. Insurrection by French on Richelieu river quickly crushed by British army. Insurrection of radicals in Upper Canada, led by McKenzie and M. S. Bidwell, promptly put down by Lieut-Gov. Head.	1836-1848. The New Granada "twelve years" of clerical and oligarchial oppression.

V. FROM THE ADOPTION OF THE CONSTITUTION TO THE CIVIL WAR—Continued

THE UNITED STATES			BRITISH NORTH AMERICA	LATIN AMERICA AND THE WEST INDIES
POLITICAL EVENTS	PRESIDENTS AND CABINET OFFICIALS	SOCIAL AND INDUSTRIAL PROGRESS		
1838. "Underground railroad" begins aiding fugitive slaves to escape from the South. 1838-1839. "Aroostook War" between Maine and New Brunswick.	B. F. Butler, Felix Grundy, Henry D. Gilpin, *Attorney-Generals.* M. Dickerson, J. K. Paulding, *Secretaries of Navy.* Amos Kendall, John M. Niles, *Postmaster-Generals.*	1838. First shipment of grain from Chicago. *Great Western* and *Sirius* cross the Atlantic.	1838, May. Earl of Durham, a liberal imperialist, appointed governor. Proclaims amnesty and investigates conditions in both Canadas. Resigns in November to present his views in the British Parliament.	1838. Revolt of Carrera in Guatemala overthrows Central American Union. Emancipation of slaves completed in British colonies, Jamaica, Barbadoes, Bahama, Bermuda, Guiana, etc. 1838-1841. Mirabeau B. Lamar, President of Texas.
1839-1847. "Anti-Rent" agitation in New York.		1839. Vulcanized rubber patented by Goodyear. J. W. Draper takes the first photograph from life.	1839. Lord Durham's famous report, advising reunion of two Canadas into single province to overcome French majority in Lower Canada and advocating responsible government. With consent of legislatures of both Canadas, Parliament passes Union Act on the Durham plan. Upper and Lower Canada, in spite of latter's much larger population, given equal representation in Union Legislature.	1839-1841. War between Peru and Chile.
1840. Passage of Sub-Treasury bill.		1840. Van Buren introduces the ten-hour system into the public establishments. Adams Express Company begins operation between New York and Boston.	1840-1847. In Nova Scotia agitation, led by Joseph Howe, for responsible government. Similar movement in New Brunswick.	
1841. The Sub-Treasury act repealed. Death of President Harrison, April 4. 1841-1842. Quarrel between President Tyler and the Whigs. Friction with England over the McLeod affair.	**Wm. H. Harrison,** *President.* John Tyler, *Vice-President.* (Harrison dies April 4, 1841, and is succeeded by **Tyler**). Daniel Webster,	1841. Dorothy Dix begins her forty years' crusade for the better treatment of the insane. Horace Greeley establishes the New York *Tribune*. First steam fire-engine built and used in New York.	1841. First parliament of the United Canadas opens, June 14.	1841-1845. Samuel Houston again President of Texas.
1842. Decision in case of Prigg *vs.* Pennsylvania renders ineffective the old fugitive slave law. A new tariff act raises the existing rates. Webster-Ashburton treaty with England. Dorr's rebellion in Rhode Island. 1842-1848. Fremont's explorations of the West.	H. S. Legaré, A. P. Upshur, J. C. Calhoun, *Secretaries of State.* Thos. Ewing, Walter Forward, J. C. Spencer, Geo. M. Bibb, *Secretaries of Treasury.* John Bell, John McLean, John C. Spencer,	1842. Buffalo connected with the East by railway. Nasmyth steam-hammer invented. First factory for pocket knives established in Connecticut. First use of anaesthesia in a surgical operation by Dr. Crawford W. Long, of Athens, Ga., who failed to announce his discovery.	1842. Webster-Ashburton treaty adjusts boundary between Maine and New Brunswick.	1842. Second federation of Central America established; had little success.
1843. Bunker Hill monument dedicated.	Jas. M. Porter, Wm. Wilkins, *Secretaries of War.* J. J. Crittenden, H. S. Legaré, John Nelson, *Attorney-Generals.* Geo. E. Badger, A. P. Upshur, David Henshaw, T. W. Gilmer,	1843. The manufacture of manila paper is begun in Boston.	1843. Opening of McGill University (chartered 1821) at Montreal. Opening of King's College at Toronto; renamed the University of Toronto, 1850. 1843-1845. Quarrel between Gov. Metcalf and Canadian Ministry, controlled by the French, over governor's prerogative.	1843. Eastern (Spanish) port of Island of Hayti, taking name Dominican Republic, separates from Haytian Republic; former dominated by negroes, latter by mulattoes.
1844. First treaty with China secures commercial rights for U. S. Treaty for the annexation of Texas rejected by the Senate.	John Y. Mason, *Secretaries of Navy.* Francis Granger, C. A. Wickliffe, *Postmaster-Generals.*	1844. Manufacture of iron rails in this country begins. First successful use of the telegraph. Independent discoveries of anaesthesia claimed to have been made by W. T. G. Morton, C. T. Jackson and Horace Wells, New England dentists.		
1845. Admission of Florida. Annexation of Texas by joint resolution and admission of Texas as a state. 1845-1846. The Slidell mission to Mexico. U. S. Naval Academy established at Annapolis.	**Jas. K. Polk,** *President.* Geo. M. Dallas, *Vice-President.* Jas. Buchanan, *Secretary of State.* R. J. Walker, *Secretary of Treasury.* Wm. L. Marcy, *Secretary of War.*	1845. Petroleum discovered near Pittsburg. Separation of Southern from Northern Methodist and Baptist churches, resulting from quarrels over slavery. Invention of a leather rolling machine used in shoe-making.		
1846. Oregon Treaty with Great Britain. Admission of Iowa. The Walker tariff reduces rates. Independent treasury reëstablished. 1846-1848. War between Mexico and the U. S.	John Y. Mason, Nathan Clifford, Isaac Toucey, *Attorney-Generals.* Geo. Bancroft, J. Y. Mason, *Secretaries of Navy.* Cave Johnson, *Postmaster-General.*	1846. The sewing machine is invented by Elias Howe. Anaesthesia begins to enter general use. First slate quarry in Vermont is opened. 1846-1848. Great wave of immigration from Ireland.		1846. Treaty between New Granada and U. S., giving U. S. right of way across Isthmus of Panama.

V. FROM THE ADOPTION OF THE CONSTITUTION TO THE CIVIL WAR—Continued

THE MEXICAN WAR

PRINCIPAL BATTLES

The Americans were victorious in every conflict.

Place of Battle	Dates	Commanders		Engaged	
		American	Mexican	Amer.	Mexican
Bracite.	Dec. 25, 1846	Doniphan.	Ponce de Leon.	500	1200
Buena Vista.	Feb. 23, 1847	Taylor.	Santa Anna	4700	17000
Cerro Gordo.	April 18, 1847	Scott.	Santa Anna.	8500	12000
Chapultepec.	Sept. 13, 1847	Scott.	Santa Anna.	7200	25000
Contreras.	Aug. 20, 1847	Scott.	Valencia.	4000	7000
Churubusco.	Aug. 20, 1847	Scott.	Santa Anna.	8000	25000
Huamantla.	Oct. 9, 1847	Lane.	Santa Anna.	500	1000
Mexico.	Sept. 14, 1847	Scott.	Santa Anna.	6000	.....
Molino del Rey.	Sept. 8, 1847	Worth.	Alvarez.	3500	14000
Monterey.	Sept. 24, 1846	Taylor.	Ampudia.	6600	10000
Palo Alto.	May 8, 1846	Taylor.	Arista.	2300	6000
Resaca de la Palma.	May 9, 1846	Taylor.	Arista.	2000	5000
Sacramento.	Feb. 28, 1847	Doniphan.	Trias.	900	4000
Vera Cruz.	Mar. 27, 1847	Scott.	Landero.	12000	6000

The only naval engagements of importance during the war with Mexico were the bombardment of Vera Cruz, by Commodore Conner, which lasted four days, and the bombardment of Monterey, Commodore Sloat, both cities being forced to surrender.

Causes of the War

Long-standing irritation over claims of American citizens upon Mexico, which the latter refused to pay.
The annexation by the U. S. of Texas which Mexico claimed as still a part of her territory.
Disputes as to whether the Rio Grande or Nueces River was the boundary of Texas.

Results of the War

The Treaty of Guadalupe Hidalgo.
a. The Rio Grande was made the boundary between Texas and Mexico.
b. California and New Mexico were ceded to the United States.
c. The United States paid Mexico $15,000,000, and assumed $3,500,000 due American citizens.
It intensified the slavery question in American politics.

THE UNITED STATES

Political Events	Presidents and Cabinet Officials	Social and Industrial Progress
1846-1847. Attempt to pass the Wilmot Proviso fails.		1847. Richard M. Hoe invents the rotary printing press. Use of adhesive postage stamps authorized.
1848. Organization of the Free-Soil party. Admission of Wisconsin. Organization of Oregon without slavery.		1848. The Associated Press first organized. First school for the feeble-minded opened. Discovery of gold in California.
1849. Creation of the Department of Interior. California applies for statehood. Angry debates in Congress over the status of California, New Mexico and Utah, the Texas boundary, fugitive slave rendition, the inter-state slave trade, and slavery and the slave trade in the District of Columbia.	**Zachary Taylor,** *President.* Millard Fillmore, *Vice-President.* John M. Clayton, *Secretary of State.* Wm. M. Meredith, *Secretary of Treasury.* Geo. W. Crawford. *Secretary of War.* R. Johnson, *Attorney-General.* Wm. B. Preston, *Secretary of Navy.* Jacob Collamer. *Postmaster-General.* Thomas Ewing, *Secretary of Interior.*	1849. Rush of gold-seekers to California.
1850. "Compromise of 1850" admits California and adjusts other slavery questions. Death of Calhoun. Nashville Convention to consider Southern situation and policies. The Hulsemann letter. Clayton-Bulwer treaty with Great Britain ratified. Death of President Taylor.	(Death of President Taylor July 9, 1850. **Fillmore** becomes *President.*) Daniel Webster, Edw. Everett, *Secretaries of State.* Thos. Corwin, *Secretary of Treasury.* Chas. M. Conrad, *Secretary of War.* J. J. Crittenden, *Attorney-General.* Wm. A. Graham, J. P. Kennedy, *Secretaries of Navy.*	1850. First national labor organization, that of the printers, formed. Government grant of land to the Illinois Central Railroad, inaugurating a new plan for stimulating railroad building. First census of manufactures made by federal government.
1850-1856. Passage of Personal Library laws in Northern states. 1851-1852. Visit of Louis Kossuth to the United States. "Finality Resolutions" adopted by Congress.		1850-1860. Period of railroad consolidation. 1851. H. J. Raymond founds the New York *Times*. The B. and O. railroad reaches the Ohio. Western Union Telegraph Company established. Hudson River railroad reaches Albany.
1852. Death of Clay and Webster.	Nathan K. Hall, S. D. Hubbard, *Postmaster-Generals.*	1852. Publication of "Uncle Tom's Cabin."
1853. The Gadsden Purchase from Mexico.	A. H. H. Stuart, *Secretary of Interior.*	1853. N. Y. clearing house established. Chicago is reached by rail.
1854. Commodore Perry secures favorable commercial treaty from Japan. Native American party (the "Know-Nothings") becomes prominent. Black Warrior affair. Ostend manifesto. Kansas-Nebraska Act. Organization of the Republican party.	**Franklin Pierce,** *President.* Rufus King, *Vice-President.* Wm. L. Marcy, *Secretary of State.* James Guthrie, *Secretary of Treasury.* Jefferson Davis, *Secretary of War.* Caleb Cushing, *Attorney-General.*	1854. The Mississippi river is reached by rail from the East. Hotel elevator patented by Otis. First marble soda fountain erected in Boston.
1855. Troubles in Kansas. First Agricultural college in U. S. opened at Cleveland, Ohio.	J. C. Dobbin, *Secretary of Navy.* Jas. Campbell, *Postmaster-General.* R. McClelland, *Secretary of Interior.*	1855. St. Louis is reached by rail. Bessemer process patented.

British North America	Latin America and the West Indies
1847-1854. Earl of Elgin, governor of Canada, pursues policy of pacification. Industrial depression resulting from British free-trade legislation.	1847. Faustin Soulouque, a negro, elected President of Hayti. Third Central American federation established. 1848. Peace between Mexico and U. S.
1849. Rebellion Losses Bill, to pay both loyal and disloyal for property destroyed in rebellion of 1837, passed by Canadian legislature and approved by Elgin on ground of popular demand. In protest rioters burn the Parliament House at Montreal. University of Toronto founded.	1849. Soulouque proclaimed Emperor of Hayti; establishes a grotesque imperial court. Liberal success in New Granada; Jesuits expelled. War of Central American Federation against Guatemala. Confederation defeated and virtually destroyed. 1850. Cuba invaded by American filibusters under Lopez. African slave-trade abolished in Brazil.
1851. Renewed agitation over clergy reserves. Parties split into factions.	1851. Second filibustering expedition against Cuba; Lopez captured and shot.
	1853. Republican constitution framed for Argentine Confederation; civil war prevents its use until 1862.
1854. Led by John A. McDonald, Conservatives of Upper Canada fuse with Liberals (French) of Lower Canada, establishing an effective ministry which settles the clergy reserves question, abolishes seigniorial tenure, and makes a reciprocity treaty with U. S.	1854. Castilla revolution in Peru; slavery abolished. Gradual abolition of slavery, initiated by law of 1821, completed in New Granada, Venezuela and Ecuador.
	1855. Completion of railroad across Isthmus of Panama. William Walker, filibuster from U. S., invades Nicaragua.

V. FROM THE ADOPTION OF THE CONSTITUTION TO THE CIVIL WAR—Continued

THE UNITED STATES

Political Events	Presidents and Cabinet Officials	Social and Industrial Progress	British North America	Latin America and the West Indies
1856. First Republican national convention. Assault of Brooks upon Sumner. Civil strife in Kansas.		1856. First bridge across the Mississippi built at Rock Island, Illinois. University of Iowa admits women to various departments.	1856. Legislature for Vancouver Island established. Gold discovered on Fraser river, British Columbia.	1856-1857. Walker, president of Nicaragua; driven out in 1857 but returns for another attempt at end of year.
1857. The Dred Scott Decision. Mormon rebellion in Utah. Great financial panic.	**James Buchanan,** *President.* J. C. Breckenridge, *Vice-President.* Lewis Cass, J. S. Black, *Secretaries of State.*	1857. Attempt to lay first telegraphic cable across the Atlantic fails. New York organizes a system of metropolitan police.	1857. Ottawa selected as capital of Canada. Confusion in politics; ministries feeble and short-lived.	1857. Mexico adopts a new constitution. 1857-1863. Civil war in New Granada; victory of revolutionists under Mosquera.
1858. Lincoln-Douglas debates in Illinois. Admission of Minnesota. Second treaty with China ratified.	Howell Cobb, P. F. Thomas, John A. Dix, *Secretaries of Treasury.* John B. Floyd, Joseph Holt, *Secretaries of War.* J. S. Black, E. M. Stanton, *Attorney-Generals.*	1858. Second attempt to lay cable successful temporarily. First transatlantic message. Gold discovered near Pike's Peak. 1858-1861. Division of Presbyterian church over slavery.	1858. Canadian delegation visits England to ask for changes in system of government. Governor is appointed for British Columbia, but no legislature provided.	1858. Soulouque dethroned, Haytian Republic reëstablished; regime of chronic disorder ensues.
1859. Admission of Oregon. John Brown's raid on Harper's Ferry.	Isaac Toucey, *Secretary of Navy.* A. V. Brown, J. Holt, H. King, *Postmaster-Generals.* Jacob Thompson, *Secretary of Interior.*	1859. First petroleum well dug. Photolithography for maps in colors introduced.	1859. Convention of reformers at Toronto demands separation of Upper from Lower Canada in matters of local government.	
1860. Democratic Party splits asunder on slavery question. Constitutional Union party formed. Lincoln elected over Breckenridge, Bell and Douglas. South Carolina secedes, Dec. 20.		1860. Salt first attains commercial importance in Michigan. Oil fever in the Allegheny river valley.	1860-1864. George Brown urges a federation of all British North American provinces.	1860. William Walker, on a filibustering expedition against Honduras, is captured and shot.

VI. PERIOD OF THE CIVIL WAR AND RECONSTRUCTION, 1861-1876

THE CIVIL WAR, 1861-1865

Causes	Executive of the Confederacy	The Southern Confederacy	CAMPAIGNS AND BATTLES (See American Battles for further details)
The underlying causes of the war were: (a) Conflict between the doctrines of state sovereignty and nationalism. (b) Sectional antagonism over numerous issues concerning negro slavery. The immediate cause was the secession of southern states. The reasons for secession, as given by southern leaders, were: (a) Northern hatred of slavery and slander of slaveholders; the political campaign against the slave holding interest, and the endorsement of such exploits as the John Brown raid. (b) The misinterpretation of the Constitution by the North in its refusal to admit the doctrine of state sovereignty, the repudiation of the Dred Scott Decision, and the enactment by Northern states of "personal liberty laws." (c) The sectional election of Lincoln. The purpose of the North was to maintain the supremacy of the federal government under the Constitution and to preserve the Union. The purpose of the South was to set up an independent slave-holding Confederacy.	**Jefferson Davis,** *President.* A. H. Stephens, *Vice-President.* Robt. Toombs, R. M. T. Hunter, Judah P. Benjamin, *Secretaries of State.* C. G. Memminger, G. A. Trenholm, *Secretaries of Treasury.* L. P. Walker, Judah P. Benjamin, G. W. Randolph, Jas. A. Seddon, J. C. Breckenridge, *Secretaries of War.* S. R. Mallory, *Secretary of Navy.* J. P. Benjamin, Thos. Bragg, Thos. H. Watts, George Davis, *Attorney-Generals.* John H. Reagan, *Postmaster-General.*	The Confederacy comprised the states of Va., N. C., S. C., Ga., Fla., Tenn., Ala., Miss., Ark., La. and Tex. 1861. Feb. 4. Convention of seceded states at Montgomery, Ala., which established a provisional government and framed a constitution. May 13. Recognition of the belligerency of the Confederacy by England, followed by other nations. April-June. Provision made by the Confederate Congress for establishing a larger army and floating loans. 1862. Feb. 22. Permanent constitution goes into effect. Military conscription act. Beginning of huge issues of bonds and paper money. 1863. Provision for seizure of food supplies at rates fixed by Confederate commissioners. 1864. Drastic military conscription act. Controversies of President Davis with Vice-President Stephens, Governor Vance of N. C. and Governor Brown of Ga. 1865. April. The Confederacy collapses. May 11. Davis is captured.	(Note: "F" indicates Federal victory, "C" Confederate, and "Ind." Indecisive.) 1861. April 13-14, bombardment of Fort Sumter (C). July 21, first battle of Bull Run (C). Aug. 10, battle of Wilson Creek (C). 1862. **In the East:** March 9, naval battle of the *Monitor* and *Merrimac* (Ind.) May-July, the Peninsular Campaign (C). Lee's first invasion of the North, resulting in the capture of Harper's Ferry, Sept. 15 (C), and the battle of Antietam, Sept. 17 (F). **In the West:** Feb.-April, Grant's West Tennessee campaign (F). April 6-7, Battle of Shiloh (F). April 25, capture of New Orleans (F). Dec. 31-Jan. 2, battle of Murfreesboro (F). 1863. **In the East:** May 2 and 3, battle of Chancellorsville (C). June-July, Lee's second invasion of the North. Gettysburg, July 1-3 (F). **In the West:** July, opening of the Mississippi by the capture of Vicksburg, July 4 (F), and Port Hudson, July 9 (F). Sept. 19-20, battle of Chickamauga (C). November, Chattanooga campaign (F). 1864. **In the East:** May 5-7, battles of the Wilderness (Ind.); this was the beginning of Grant's campaign for Richmond. June 19, naval battle of the *Alabama* and *Kearsarge* off the coast of France (F). Oct. 19, battle of Cedar Creek (F). **In the West:** May-Sept., Sherman's campaign before Atlanta (F). Aug. 5, battle of Mobile Bay (F). Nov. Dec., Sherman's march to the sea. Dec. 15-16, battle of Nashville (F). 1865. **In the East:** End of the Richmond campaign by the surrender of Lee at Appomatox Court House, Virginia, Aptil 9 (F). April 26, surrender of Johnston (F). **In the West:** May 4, surrender of Gen. Taylor (F). May 26, surrender of all the remaining Confederate troops west of the Mississippi by Gen. Kirby Smith, and end of the war.

Results

The Union was preserved.
Slavery was abolished.
Secession as a working program was shown to be impracticable.
The war cost the lives of nearly one million able-bodied men.
The national debt was increased to $2,750,000,000.
An incalculable amount of property was destroyed.

VI. PERIOD OF THE CIVIL WAR AND RECONSTRUCTION, 1861-1876—Continued

THE UNITED STATES

Political Events	Presidents and Cabinet Officials	Social and Industrial Progress	British North America	Latin America and the West Indies
1861. Admission of Kansas. Peace convention at Washington fails. Morrill high tariff bill enacted. Trouble with England over the *Trent* affair. Southern states form a confederacy. 1862. Slavery abolished in the District of Columbia. Legal tender notes, "greenbacks," issued. Slavery abolished in the territories. Preliminary proclamation of emancipation, Sept. 22. Treaty with Great Britain for the suppression of the slave-trade. 1863. Proclamation of Emancipation, Jan. 1. Draft riots in New York. Admission of West Virginia. National banking act passed.	**Abraham Lincoln,** *President* Hannibal Hamlin, *Vice-President* Wm. H. Seward, *Secretary of State.* Salmon P. Chase, W. P. Fessenden, *Secretaries of Treasury.* Simon Cameron, E. M. Stanton, *Secretaries of War.* Edward Bates, James Speed, *Attorney-Generals.* Gideon Welles, *Secretary of Navy.* M. Blair, Wm. Dennison, *Postmaster-Generals.* Caleb B. Smith, John P. Usher, *Secretaries of Interior.*	1861. McKay invention for sewing soles on uppers. Joint high commission to adjust various questions between Canada and U. S. disrupted by disagreement over Alaskan boundary. 1898-1904. Earl of Minto, Gov.-Gen.	1898. U. S. battleship Maine destroyed by explosion in Havana harbor.

SPANISH AMERICAN WAR, 1898

Causes	Results
Sympathy for the oppressed Cubans. The "reconcentrados," people driven into the towns by Weyler, die by thousands, and Americans who aided them are arrested and their property destroyed. The proximity of Cuba and its geographical position make its situation of great importance to the United States. Destruction of American property. Publication of a letter of the Spanish Minister, in which he speaks slightingly of President McKinley. The blowing up of the battleship *Maine*.	The Treaty of Paris: Spain gives up title to Cuba. Spain cedes Porto Rico, Guam and the Philippines to the United States. The United States gives Spain $20,000,000. The direct cost of the war to the United States is about $130,000,000. Soldiers killed, 430. A larger number die of disease. The United States becomes the guardian of Cuba. An increase in our navy and standing army. The war in the Philippines. The question of territorial expansion in our politics.

THE ARMY

Engagements—The Army	Our Losses	
	Killed	Wounded
Bombardment of Cienfuegos, May 11, 1898	1	11
Bombardment of San Juan, May 12, 1898	1	7
Guantanamo, June 11-20, 1898	6	16
Bombardment of Santiago, June 22, 1898	1	9
Santiago campaign, June 21-July 17, 1898	260	1341
Porto Rico campaign, July 25-28, 1898	3	40
The reduction of Manila, August 13, 1898	17	106

THE NAVY

Manila Bay, Philippine Islands. May 1, 1898.	American Vessels: *Olympia, Baltimore, Raleigh, Boston, Concord, Petrel.* American Commander: Geo. Dewey.	Spanish Vessels: *Reina Cristina, Castella, Don Antonio de Ulloa, Isla de Luzon, Isla de Cuba, General Lezo, Marquis de Duero, Cano Velasco, Isla de Mindanao, Sandoval, José Garcia, Leyte* and torpedo boat *Barcelona.* Spanish Commander: Admiral Montijo.
American Casualties: Seven men slightly injured. No damage to ships.	Spanish Casualties: All ships destroyed, 450 men killed and wounded.	
Before Santiago, July 3, 1898.	Amercian Vessels: *Brooklyn, Texas, Oregon, Iowa, Gloucester.* American Commander: Winfield Schley.	Spanish Vessels: *Almirante, Oquendo, Christobal Colon, Vizcaya, Infanta Maria Teresa,* and torpedo boats *Pluton* and *Furor.*
American Casualties: One man killed. *Brooklyn* struck thirteen times, *Texas* once, but neither badly damaged.	Spanish Casualties: All ships destroyed, more than 600 men killed and wounded, and rest surrendered.	Spanish Commander: Admiral Cervera.

The total number of vessels captured from Spain during the war of 1898 was 58.

VIII. PERIOD OF NATIONAL EXPANSION, 1897-1930—Continued

Woodring—Of Navy: Claude A. Swanson—Of Interior: Harold L. Ickes —Of Commerce: Daniel C. Roper—Of Agriculture: H. A. Wallace—Of Labor: Frances Perkins — Postmaster Gen'l: James A. Farley — Attorney Gen'l: Homer S. Cummings.

Social and Industrial Progress

1911. Western Union inaugurates night, day and cable letter service.

1913. Parcels Post System inaugurated.
Great floods in the Ohio and Mississippi Valleys.

1915. Transcontinental telephone service inaugurated by Bell lines.
Panama Expositions in San Francisco and San Diego, California.

1916. President Wilson appoints an Industrial Preparedness committee, composed of the heads of large manufacturing establishments.

1918. Railroads placed under Government control for duration of war, vast reduction in number of trains and fare raised.

1919. National Woman Suffrage.
Lieut. Reed was first to cross Atlantic in aircraft.
Non-explosive helium gas discovered by Prof. Cody of Kansas University.

1920. Nationwide prohibition went into effect.

1921. Prices drop. General decline.
Federal Reserve Banking system averts panic.

1924. Immigration limited to 2 per cent of 1890 population.
U. S. Aviators first to encircle the world.

1925. Severe tornado in Middle West.
Henry Ford starts airplane freight line between Detroit and Chicago.
Airship Shenandoah wrecked.

1926. Anthracite coal strike ended.
Disastrous hurricane in Southern Florida.

1927. Charles A. Lindbergh makes first non-stop flight from New York to Paris.
Greatest Mississippi flood.

1929. Tornadoes in Arkansas and Mississippi.

1930. Report of law enforcement commission.
Boulder (Hoover) Dam construction started.

1931. Commodity prices continue decline.

1932. Reconstruction Finance Corporation.

1933. Nation-wide run on banks. President declares bank holiday. Law declares criminal the hoarding or transporting of gold to foreign countries. Sound banks reopen with renewed public confidence.
Naval Dirigible Akron destroyed in storm at sea. 73 perish.
Congress passes bills aiding farmers, home owners, railroads, industry and unemployed.
Chicago World's Fair, a Century of Progress.

1936. Supreme Court upholds T.V.A.

1937. Supreme Court upholds minimum wage law for women and Wagner Labor Relations Act. Sit-down strikes prevalent. Social Security Act in force. Transatlantic airship, Von Hindenburg, burns at Lakehurst, N. J.

British North America

1911. April Preferential trade agreement made with British West Indies.
1911. H. R. H., the Duke of Connaught, Governor-General.
Robert L. Borden, Premier.

1914. Canada establishes a Parcels Post service.
Extends hearty support to the Mother country in the European war by training and sending overseas large numbers of soldiers.

1915. Winnipeg post office institutes monthly rural free mail delivery to points within Arctic Circle.

1917. Canada adopts conscription.
Unionist Government of Sir Robert Borden defeats liberals, headed by Sir Wilfred Laurier. Conscription law confirmed by heavy vote.

1918. Grim war activities.
Draft riots in Quebec.

1919. Peace celebrated.
Great progress in reconstruction.

1922. President Harding signed postal treaty between U. S. and Canada.

1926. Gold Rush in Ontario.
Canada protests against Chicago drainage canal diverting water from Great Lakes.

1927. New diplomatic policy established. Canada sends minister to U. S.; and U. S. sends minister to Canada.
120,000 square miles of Labrador added to Newfoundland.
Ontario discards Prohibition.
Peace Bridge opened between Buffalo and Fort Erie, Canada.

1930. R. B. Bennett, premier.

1931. Earl of Bessborough appointed governor-general.

1932. Canadian taxes increased.

1934. Newfoundland abandons dominion form of government.

1935. Bank of Canada opens. Lord Tweedsmuir, Governor-General.

1937. Forceful suppression of sit-down strike in Oshawa, Ont.

Latin America and the West Indies

1911. Revolution in Mexico expels Diaz and makes Francisco I. Madero President.
Ramon Caceres, President of San Domingo since 1906, assassinated.

1913. Madero government overthrown; Gen. Huerta made provisional President.

1914. Huerta regime is overthrown. United States troops occupy Vera Cruz in an effort to enforce respect for the American flag and American rights.

1915. U. S. government assumes control of Haitian financial affairs, including administration of customs and police, for a period of ten years.
U. S., followed by European and South American nations, formally recognizes Carranza as chief executive of the Mexican de facto government, after two years and eight months' cessation of diplomatic intercourse. Permission is given for the importation of arms to defeat Villa, the revolutionist.

1920. Military revolution in Bolivia. Chile mobilizes army. Bolivia and Peru draw together.

1921. War averted.

1923. Pan-American Conference unites in new peace assurance for all Central and South American Governments.

1925. Gerardo Machado becomes President of Cuba.
1925. Coolidge as arbitrator orders plebiscite in deciding Chile and Peru's dispute over Tacan and Arica.

1926. U. S. protests confiscation of alien lands by Mexico.
Mexico expels foreign clergy.
Conditions greatly improved in South America.

1927. Great unrest in Mexico.
Revolution in Nicaragua.

1928. Sandino causes uprising in Nicaragua.
Pres.-elect Obregon assassinated.

1930. Revolts in Argentina, Bolivia, Brazil, Panama and Peru.

1931. Revolts in Venezuela and Honduras.
President Machado of Cuba given dictatorial powers.

1931. Mexico repudiates gold standard.

1932. Rodrigues President of Mexico. Revolt in Chile. War between Peru and Bolivia.

1933. Revolt in Cuba against Machado government. He fled to U. S.

1934. War between Bolivia and Paraguay.

1935. Revolution in Uruguay.
Religious persecution in Mexico.

1936. Bolivia and Paraguay at peace. Inter-American Conference for the Maintenance of Peace at Buenos Aires.

1937. Many churches reopened in Mexico.

NOTABLE WARS OF HISTORY

The figures prefixed to the names of leaders and battles, *etc.*, indicate to which of the two contesting parties the leader belonged, or by which the victory was won; they correspond to the numbers used in the column giving the names of the contesting parties. **D. B.** = Decisive Battles of the world as given by Creasy.

Name of War, Contestants and Dates	Cause of Conflict	Leaders	Chief Battles and Incidents	Results and Comments
1. TROJAN WAR. (Mythical—circa 1200 B. C.) (1) Greeks vs. (2) Trojans	Greeks avenge the abduction of Helen of Troy by Paris.	(1) **Agamemnon, Achilles, Ulysses.** (2) Hector.	(1) **Siege of Troy.**	Capture and destruction of Troy. Schliemann's excavations identify Ilium on the Hellespont as the site of ancient Troy.
2. FIRST MESSENIAN WAR— 8th Century B. C. (1) **Spartans** vs. (2) Messenians.	Spartans covet Messenian land.	(2) Aristodemus.	(1) **Siege of Mount Ithome.**	Messenians become tributary of Sparta and their land is, in part, confiscated.
3. SECOND MESSENIAN WAR— c. 630-600 B. C. (1) **Spartans** vs. (2) Messenians.	Spartan oppression causes Messenian revolt.	(1) Tyrtaeus (poet). (2) Aristomenes.	(1) **Eira.**	Greater part of Messenians flee to Sicily. Those remaining become Helots (Spartan serfs).

NOTABLE WARS OF HISTORY—Continued

Name of War, Contestants and Dates	Cause of Conflict	Leaders	Chief Battles and Incidents	Results and Comments
4. FIRST SACRED WAR—c.590-589 B.C. (1) **Amphictyonic League** vs. (2) Crisæans.	People of the city of Crisa (port of Delphi) oppress pilgrims to the oracle.	(1) **Cleisthenes of Sicyon.**	(1) **Siege of Crisa.**	For the first time Greek cities join in an effective league. Crisa destroyed.
5. PERSIAN WARS—500-579 B.C. (1) **Persians** vs. (2) Greeks.	Aid given by Athens and Eretria to revolting Ionic Greek cities, leading to burning of Sardis, C. 497.			
a. First Persian Expedition—493 B.C.	Continued plans of Darius for subjugating Greece.	(1) **Mardonius.**	(1) **300 ships lost by storm off Mt. Athos.**	Partial success against Macedonians and Thracians.
b. Second Persian Expedition—490 B.C.		(1) **Datis, Artaphernes.** (2) Miltiades.	(1) **Naxos, Eretria.** (2) Marathon (490).	The Athenians are victorious and the Persians retreat to Asia Minor.
c. Third Persian Expedition—481-480 B.C.	Xerxes desires to avenge his father's defeat.	(1) **Xerxes.** (2) Leonidas, Eurybiades, Themistocles	(1) **Thermopylæ, Artemisium, Athens burned.**	Xerxes retreats to Persia after his defeat at Salamis.
d. Fourth Persian Expedition—479 B.C.	War continued by troops which Xerxes left behind.	(1) **Mardonius.** (2) Pausanias, Aristides.	(2) Athens laid waste. (2) **Platæa, Mycale.**	All Persian invasions and attempts to subjugate Greece cease.
3. THIRD MESSENIAN WAR—464-456 B.C. (1) **Helots of Messenian descent** vs. (2) Spartans.	Confusion following earthquake gives Helots courage to revolt.		(2) Mt. Ithome besieged. Sparta sent home her Athenian allies.	Messenians capitulate and are allowed to leave the Peloponnesus never to return. Athens retaliates by settling them at Naupactus.
7. PELOPONNESIAN WAR—431-404 B.C. (1) **Sparta and Allies** vs. (2) Athens and Allies.	Envy of Sparta and her allies at Athens' growing power and influence. Discontent among some of the Athenian subject states.	(1) **Archidamus, Agis, Brasidas.** (2) Demosthenes, Cleon, Nicias.	(1) **Invasion of Attica, Plague in Attica, Siege of Platæa, Delium, Amphipolis.** (2) Mitylene, Sphacteria.	By the peace of Nicias (421) both sides are to restore conquests and prisoners but terms are imperfectly carried out.
a. First Period—431-421 B.C. b. Second Period or Decelean War—413-404 B. C.	Sparta takes advantage of Athens' weakness, resulting from the failure of the expedition to Syracuse, to renew the war.	Alcibiades serves Athens, Sparta and Athens in turn. (1) **Lysander.** (2) Conon.	(1) **Decelea occupied. Attica ravaged. Many subject states of Athens revolt. Notium, Ægospotami, Surrender of Athens.** (2) Abydos, Cyzicus, Arginusæ.	The Spartans tear down the walls of Piræus and Athens. Athens loses her foreign possessions and fleet but becomes an independent ally of Sparta. Sparta is now supreme in Greece.
8. GAULS' INVASION OF ITALY—390 B.C. (1) **Gauls** vs. (2) Romans.	Roman people refuse to surrender Roman ambassadors who had aided the Etruscans against the Gauls.	(2) M. Manlius, Capitolinus, Camillus.	(1) **Battle of the Allia. Sack of Rome.**	Gauls retire on payment of ransom. The overthrow of Rome had no permanent effect on her fortunes.
9. SECOND SACRED WAR—c. 356-346 B.C. (1) **Phocians** vs. (2) Amphictyons.	Phocians seize and plunder Delphi because of fine imposed by Amphictyonic Council.	(1) **Onomarchus.** (2) Philip of Macedon.		Thebans and Thessalians invite aid of Philip against Phocians and he takes their place in the Amphictyonic Council.
10. THIRD SACRED WAR—339-338 B.C. (1) **Macedonians** vs. (2) Athenians, Thebans.	Amphictyons call in Philip to punish Amphissa, whereupon he seizes Elatea, thereby threatening Athens. Athenians aroused by Demosthenes.	(1) **Philip of Macedon.**	(1) **Chæronea.**	Philip gains leadership of Greece. Henceforth Greece is under the control of Macedonia.
11. SAMNITE WARS—343-290 B.C. (1) **Romans** vs. (2) Samnites.	A duel between two rival races for supremacy in Italy.	(1) **Marcus Valerius Corvus, P. Decius Mus.**		Capua is retained by the Romans and Teanum surrendered to Samnites.
a. First Samnite War—343-341 B.C.	Campanians implore aid of Romans against Samnites who are laying waste their territories in revenge for aid given the Sidicini of Teanum.			
b. Second or Great Samnite War—327-304 B.C.	The occupation of Palaeopolis by the Samnites. In 311 the Etruscan cities joined in the war against Rome.	(1) **Papirius Cursor.** (2) Fabius Rullianus Gavius Pontius.	(1) **Fregellæ, Sutrium, Lake Vadimonis, Bovianum.** (2) Caudine Forks.	Samnites sue for peace. They resign all their conquests but retain their independence within their native mountains.
c. Third Samnite War—298-290 B.C.	While Romans are engaged with the Gauls the Samnites enter Lucania and refuse to withdraw.	(1) **Q. Fabius Rullianus, P. Decius Mus (son).** (2) Gellius Egnatius, Gavius Pontius.	(1) **Sentinum.**	Samnites defeated but not crushed.
12. WARS OF ALEXANDER THE GREAT IN ASIA—334-328 B.C. (1) **Greeks** vs, (2) Persians, Egyptians, Bactrians, Indians.	A war of conquest, a scientific expedition and a journey of discovery.	(1) **Alexander the Great, Nearchus.** (2) Darius III., Memnon.	(1) **Granicus, Issus, Siege of Tyre, Arbela.**	Alexander conquers Asia from the Mediterranean Sea to the Indus R. and from the Arabian Sea to the Jaxartes R. and begins the Helenizing of the East. Founds Alexandria in Egypt. The empire breaks up after Alexander's death 323.
13. ROMAN WAR WITH TARENTUM AND EPIRUS—282-272 B.C. (1) **Romans vs.** (2) Tarentum and King Pyrrhus.	The people of Tarentum capture Roman ships and insult Roman embassy. They call in King Pyrrhus of Epirus.	(1) **Manius Curius.** (2) Pyrrhus.	(1) **Beneventum, Tarentum.** (2) Heraclea, Asculum.	Pyrrhus returns to Epirus and his allies one by one submit to Rome, which is left supreme from Straits of Messina to the River Arno and the headland of Ancona.
14. FIRST PUNIC WAR—264-241 B.C. (1) **Romans** vs. (2) Carthaginians.	A struggle for supremacy in Sicily. Pretext, Campanian mercenaries, having seized Messina, appeal to Rome for aid.	(1) **C. Duilius. M. Atilius Regulus. P. Claudius Pulcher. C. Lutatius Catulus.** (2) Hamilcar Barca, Himilco, Hanno.	(1) **Agrigentum, †Mylæ, Ecnomus, †Panormus, †Ægadian Islands,** (2) Siege of Lilybæum, (2) Drepana.	Carthaginians surrender Sicily and pay a war indemnity. Carthage retains the Western Mediterranean and Rome is launched on her career of conquest.
15. SECOND PUNIC WAR—218-201 B.C. (1) **Romans** vs. (2) Carthaginians.	A duel to the death between East and West. Pretext, Hannibal's attacks on Saguntum in Spain.	(1) **Q. Fabius Maximus, Publius Scipio. P. Cornelius Scipio Africanus.** (2) Hannibal, Hasdrubal.	(1) **Syracuse, Capua, Metaurus, Zama.** (2) Ticinus, Trebia, Trasimene, Cannæ.	Hannibal succumbs as a result of the loyalty of Italy. Carthage forced to give up Spain, to pay an annual tribute, to surrender her fleet, and to agree not to go to war without the permission of Rome.
16. FOUR MACEDONIAN WARS—214-146 B.C. (1) **Romans** vs. (2) Greeks.	Alliance of Philip, King of Macedon, with Carthage.	(1) **T. Quinctius Flaminius. L. Aemilius Paulus.** (2) Philip of Macedon, Perseus.	(1) **Cynoscephalæ, Pydna**	Macedonia becomes a Roman province.

NOTABLE WARS OF HISTORY—Continued

Name of War, Contestants and Dates	Cause of Conflict	Leaders	Chief Battles and Incidents	Results and Comments
17. THIRD PUNIC WAR—149–146 B.C. (1) **Romans** vs. (2) Carthaginians.	War of Carthage with Massinissa gives Rome the pretext for completing the destruction of Carthage.	(1) **Scipio. Æmilianus. Africanus.**	(1) **Siege of Carthage.**	Carthage destroyed. Most of her territory becomes a Roman province of Africa.
18. JUGURTHINE WAR—111–105 B.C. (1) **Romans** vs. (2) Jugurtha of Numidia.	Jugurtha, disregarding intervention of Rome, captures Citra and massacres male population.	(1) **C. Marius.** (2) Jugurtha.	(1) **Muthul, Citra.**	Numidia divided. The war reveals the corruption and incapacity of the Senatorial government of Rome.
19. MARSIAN OR SOCIAL WAR—90–88 B.C. (1) **Romans** vs. (2) Italian Allies.	Italian socii (allies) are denied the right of Roman citizenship.	(1) **C. Marius. Sulla.**	(1) **Asculum.** Italians form a Federal republic, Italia, with capital at Corfinium.	Roman citizenship granted to all Italian residents.
20. FIRST ROMAN CIVIL WAR—88–82 B.C. (1) **Optimates** vs. (2) Democrats.	Reform measures of Sulpicius are carried by means of violence. Command of army of Asia is transferred from Sulla to Marius.	(1) **Sulla, Pompey.** (2) Marius, Cinna, Sertorius. Carbo.	(1) **Sacriportis, Colline Gate, Sulla's proscription.** (2) Marius's Reign of Terror.	Sulla is appointed dictator.
21. THREE MITHRIDATIC WARS—88–63 B.C. (1) **Romans** vs. (2) Pontines and Armenians.	Ambition of Mithridates VI. and Roman interference.	(1) **Sulla, Lucullus. Pompey.** (2) Mithridates. (Pontus). Tigranus. (Armenia).	(1) **Chæronea, Orchomenus, Cabira, Tigranocerta.** (2) Massacre of Italians in Asia.	Reorganization of the East, Pontus, Syria and Cilicia become Roman provinces.
22. GLADIATORIAL AND THIRD SERVILE WAR—73–71 B.C. (1) **Romans** vs. (2) Revolted Gladiators and Slaves.	Uprising of a band of gladiators, escaped from Capua and joined by many slaves of southern Italy.	(1) **Crassus, Pompey.** (2) Spartacus.	(1) **Silarus.** (2) Mt. Vesuvius.	Revolt put down with cruelty, 6,000 crucified.
23. GALLIC WAR—58–51 B.C. (1) **Romans** vs. (2) Tribes of Gaul.	Deisre to extend the Roman empire.	(1) **Julius Cæsar.** (2) Vercingetorix. Ariovistus.	(1) **Siege of Alesia.**	Conquest and organization of Gaul by Cæsar. Gauls Romanized; boundaries of the old world enlarged (Cæsar's expedition to British 55–54 B. C.); means acquired for changing Rome into a monarchy.
24. SECOND ROMAN CIVIL WAR—49–31 B.C. First Period, 49–45 B.C. (1) **Followers of Cæsar (democrats)** vs. (2) Followers of Pompey (republican aristocrats).	Struggle for mastery between Cæsar, conqueror of Gaul, and Pompey, conqueror of the East.	(1) **Cæsar.** (2) Pompey and his sons.	(1) **"Crossing the Rubicon." Pharsalus, Thapsus, Munda.**	Cæsar is appointed dictator for life. He is the founder of the new monarchy at Rome.
Second Period, 43–42 B.C. (1) **Friends of Cæsar (Second Triumvirate)** vs. (2) Cæsar's Assassins.	Assassination of Cæsar, 44 B. C.	(1) **Antony, Octavius, Lepidus.** (2) Brutus, Cassius, Sextus Pompey.	(1) **New proscription (Murder of Cicero). Philippi.**	Brutus and Cassius, defeated, commit suicide.
Third Period—31–30 B.C. (1) **Octavius** vs. (2) Antony.	A continued struggle for supreme power.	(1) **Octavius.** (2) Antony. Cleopatra.	(1) **Actium.** (A. D. 9.) Arminius. **5th D. B.**	Triumph of Octavius, grand nephew of Julius Cæsar. End of the republic and beginning of the empire.
25. JEWISH WAR—A.D. 66–70. (1) **Romans** vs. (2) Jews.	Revolt of the Jews against Rome.	(1) **Titus, son of Emperor Vespasian.**	(1) **Siege of Jerusalem.**	Destruction of Jerusalem and the temple.
26. DACIAN WARS—86–90, 101–102, 105–107. (1) **Romans** vs. (2) Dacians.	Rome desire to extend her conquests.	(1) **Domitian, Trajan.** (2) Decebalus.		Dacia is made a Roman province. Roman conquest and empire reaches its highest point.
27. CIVIL WARS OF THE ROMAN EMPIRE—193–284.	Contests for the throne among rival generals (barrack emperors).			Reorganization of empire by Diocletian (284–305).
28. WARS OF CONSTANTINE THE GREAT FOR THE EMPIRE—310–323. (1) **Constantine** vs. (2) Others. Augusti.	Confusion following abdication of Diocletian.	(1) **Constantine.** (2) Maxentius, Maximinus. Licinius.	(1) **Turin.**	Constantine becomes sole ruler of Roman Empire. He redistricts the empire, moves the capital to Constantinople and recognizes Christianity.
29. INVASION OF ROMAN EMPIRE BY NORTHERN BARBARIANS—375–493. (1) **Romans** vs. (2) Teutons and (Huns) Teutonic Tribes; Visigoths, Vandals, Suevi, Franks, Burgundians, Ostrogoths, Alemanni, Jutes, Saxons, Angles, Lombards.	The Huns (Mongolians) press upon the Teutons, who are forced to seek new lands within the boundaries of the Roman empire.	(1) **Valens, Stilicho Ætius, Leo (bishop of Rome)** (2) Alaric, Walja (Visigoth); Genseric (Vandal); Hengist and Horsa (Saxons); Attila (Hun); Theodoric the Great (Ostrogoth).	(1) **Battle near Chalons (451). 6th D. B.** (2) Adrianople, Sack of Rome. Visigothic kingdom of Tolosa (Toulouse), (415–507). Vandals settle in Africa (429–534). Carthage (439). Burgundians occupy Rhone Valley (443). Angles, Saxons and Jutes invade England (449), Huns and Ostrogoths ravage Gaul. Huns destroy Aquiliea and Venice founded (452). Vandals plunder Rome (455). Odoacer gains ascendency in Rome. The fall of the Roman empire (476). Ostrogothic kingdom in Italy (493–555).	Overthrow of the Roman empire in the west, though it continued in the east until 1453. This blending of Roman and Teutonic elements under the influence of the Christian religion and what remained of classic civilization formed the civilization of the middle ages.
30. WARS OF JUSTINIAN,—533–534. (1) **Eastern Empire** vs.— (2) Vandals in Africa and (3) Ostrogoths in Italy—535–555.	Desire to restore west to eastern empire.	(1) **Belisarius, Narses.** (3) Vitiges, Totila.	(1) **Battle of Taginae (552).**	Destruction of Vandal power in Africa and of the Ostrogothic kingdom in Italy. Exarchat established at Ravenna.

NOTABLE WARS OF HISTORY—Continued

Name of War, Contestants and Dates	Cause of Conflict	Leaders	Chief Battles and Incidents	Results and Comments
31. WARS OF THE FRANKS—486–814. (1) **Franks** vs. (2) Neighboring Peoples.	Desire to extend the limits of Frankish territory and to ward off attacks from without.	(1) **Clovis (486-511), Charles Martel (714-741), Pepin the Short (751-768). Charlemagne (768-814).**	(1) **Soissons (486), Clovis conquers Alemanni and becomes a Catholic Christian (496); Battle of Tours (732). 7th D. B. Conquest of Bergundy (534), Charlemagne conquers Lombards (774-776), Saxons (772-804), Bavarians (788), Avars (791), Northern Spain (778).**	Franks becomes leading power in the west and revive the western empire. (Christmas day, 800.)
32. HEPTARCHIC WARS IN ENGLAND—588–828.	Struggle for supremacy among the seven Teutonic kingdoms.	Ethelbert (Kent). Edwin (Northumbria). Offa (Mercia). Egbert (Wessex).	The supremacy was successively held by kings of Kent, Northumbria, Mercia, and Wessex. Maserfield (642), Ellandun (825).	"The indistinct noise of many battles and devastations of many kingdoms overrun and lost." (Milton.) All England at last united under Egbert, king of Wessex (802-837).
33. NORTHMEN INVASIONS—ninth and tenth Centuries. (1) **Northmen** vs. (2) People of Western and Southern Europe.	Opportunity for plunder and conquest and later the driving out of adventurous spirits by the organization of settled kingdoms of the north.	(1) **Hastings, Rolf, Sweyn, Canute.** (2) Alfred (England). Odo (France).	*In England.* Treaty of Wedmore. Massacre of Danes (1002). *In France.* (2) Siege of Paris. Grant of Normandy to Rolf (977).	The Northmen are the last swarm of Teutonic conquerors. They readily assimilate civilization and infuse new energy into western Europe.
34. SARACEN OR MOHAMMEDAN WARS—632–1492.	Saracens are ambitious to found a world wide Mohammedan empire.	(1) **Omar, Amru, Hassan, Mousa, Tarik, Abderrahman, Mohammed II. Abdallah.** (2) Yezdegerd (Persia), Leo the Isaurian, Charles Martel, Constantine, Palæologus, Ferdinand of Aragon.	(1) **Yarmouk (Syria). Damascus, Jerusalem Cadesia (Persia), Alexandria, Carthage, (697), Xeres (Spain), Granada, Toledo.** (2) Constantinople (716), Tours, Jerusalem, Las Navas de Tolosa (1212). (1) **Constantinople** (1453). (2) Granada (1492).	The Saracens attempted to conquer and convert Europe at three different times between 710 and 1492. Their power began to wane from the latter date.
35. NORMAN CONQUEST—1066. (1) **Normans** vs. (2) English.	William, duke of Normandy wishes to increase his territory and his power.	(1) **William the Conqueror.** (2) Harold, king of England.	(1) **Hastings. (A. D. 1066.) 8th D. B.**	The king received added power and a modified feudalism introduced into England. Southern Italy and Sicily were also conquered by bands of Normans in the eleventh century and the kingdom of Naples founded.
36. CRUSADES—1096–1270. (1) **European Christians** vs. (2) Turks and Moslems. First Crusade—1096–1099.	The appeal of the eastern emperor for aid, the desire to recover the Holy Sepulcher from the infidels, the love of adventure, and hope of gain.	(1) **Peter the Hermit, Godfrey of Bouillon, Bohemond of Tarentum. Robert of Normandy.**	(1) **Nicæa, Antioch, Jerusalem.**	Jerusalem is subdued and a transient kingdom is founded at Jerusalem.
Second Crusade—1147–1149.	The Conquest of Edessa by the Moslems threatens Jerusalem. Preaching of Saint Bernard.	(1) **Conrad III. of Germany, Louis VII, of France.**	Unsuccessful attack on Damascus.	Armies almost annihilated by hunger, disease and the enemy.
Third Crusade—1189–1192.	Capture of Jerusalem by Saladin.	(1) **Richard I. of England, Philip Augustus of France. Frederick Barbarossa of Germany.** (2) Saladin.	(1) **Acre.**	The Latin Christians secure by treaty the privilege of visiting the tomb of Christ for three years without molestation.
Fourth Crusade—1201–1204. (1) **Crusaders** vs. (2) Eastern Empire.	Appeals of Innocent III. Through influence of the Venetians the Crusaders turn aside to attack Constantinople.	(1) **Dandolo, Doge of Venice, Baldwin of Flanders.**	(1) **Sack of Constantinople.**	Division of eastern empire. The Venetians get the monoply of trade and most of the islands and coast lands of the Ægean and Ionians seas. The remainder is erected into a feudal state, the Latin empire.
Children's Crusade (legendary)—1212.	Ignorant enthusiasm aroused by visions and miraculous tales.	A shepherd lad, Stephen of Vendome.	Thousands of children, women and peasants march from France and Germany to the Mediterranean.	Only a small number return home; the others perish on the way or are sold into slavery by French merchants.
Fifth Crusade—1228–1229.	Vow of Frederick II. of Germany. He goes under pope's excommunication.	(1) **Frederick II.**		Frederick, by treaty with the sultan, secures a truce for ten years and the restoration of Bethlehem, Nazareth and Jerusalem to the Christians. Jerusalem is finally lost in 1244.
Sixth Crusade—1248–1254.	Louis IX. of France starts on a crusade via Egypt.	(1) **Louis IX., later St. Louis.**	(1) **Damietta.** (2) Expedition to Cairo.	Louis is captured in battle and released on payment of heavy ransom and evacuation of Damietta.
Last, Seventh Crusade—1270–1291.	Louis IX goes against Mohammedans of Tunis, Prince Edward of England to Syria.	(1) **Louis IX. Prince Edward.**	Death of Louis by the plague. (2) Acre, last Christian stronghold in Syria, falls (1291).	The results of the crusades were development of commerce, introduction of new customs, products and manufactures, increase in freedom of lower classes, especially townsmen, and the power of the crown.
37. WAR OF THE (1) **Empire** vs. (2) Italian Communes—1158–1183.	Frederick Barbarossa's attempt to restore imperial rights over the cities of northern Italy.	(1) **Frederick I. Barbarossa.** (2) Pope Alexander III.	(1) **Milan (1162).** (2) Legnano (1176).	By treaty of Constance (1183) the cities of Lombardy are recognized as practically self-governing republics, the barest overlordship remaining to the emperor.
38. WARS OF THE BARONS IN ENGLAND—1215–1265. (1) **Barons** vs. (2) Kings John and Henry III.	Misgovernment of John and Henry III.	(1) **Stephen Langton, Simon de Montfort.** (2) King John, Prince Edward, later Edward I.	(1) **Signing of Magna Charta. Lewes, Simon de Montfort's Parliament.** (2) Evesham.	The beginning of constitutional monarchy—henceforth the king is below the law, not above it.

NOTABLE WARS OF HISTORY—Continued

Name of War, Contestants and Dates	Cause of Conflict	Leaders	Chief Battles and Incidents	Results and Comments
39. HUNDRED YEARS' WAR 1337–1453. (1) **English** vs. (2) French.	The conflict of interests of the French and English kings in Guienne, Flanders and Scotland. Edward III. advances claim by descent to the throne of France.	(1) **Edward III. Edward the Black Prince. Prince Henry V. Duke of Bedford.** (2) Du Guesclin, Charles V., Joan of Arc.	(1) **Crécy, Calais, Poitiers, Peace of Bretigny, Agincourt. Treaty of Troyes.** (2) Orleans (1429). Castillon (1453).	England loses all her land in France except Calais. During the earlier stage of this war about one-third of the population of western Europe perished from the Black Death.
40. AUSTRO-SWISS WAR— 1315–1388. (1) **House of Hapsburg** vs. (2) Swiss Confederation.	Hapsburgs assert feudal rights over the peasants of the Swiss cantons.	(1) **Leopold III. of Austria.** (2) Arnold von Winkelried.	(2) Morgarten, Sempach, Näfels.	Independence of Swiss secured.
41. HUSSITE WAR–1419–1436. (1) **Bohemian followers of John Huss** vs. (2) Catholic Europe.	Execution of John Huss, the Bohemian religious reformer by the council of Constance.	(1) **Ziska, Procopius the Great.** (2) Emperor Sigismund, Cardinal Cesarini, Frederick of Brandenburg.	Revolt of Prague. Four crusades repulsed.	After the overthrow of the radical Hussites (Taborites) by the conservative Hussites (Calixtines) in the battle of Lipan a Catholic reaction set in which culminated in 1462 with the revocation of the compacts made by the Council of Basel with the Hussites.
42. WARS OF THE ROSES— 1455–1485. (1) **Yorkists (White Rose)** vs. (2) Lancastrians(Red Rose).	Misgovernment under Henry VI. encourages Richard, duke of York, representing the second line of descent from Edward III. to claim the throne against Henry VII. (third line).	(1) **Richard, duke of York. Edward IV. Richard III.** (2) Duke of Somerset. Queen Margaret. Earl of Warwick ("Kingmaker"). first a Yorkist and then a Lancastrian. Henry VII.	(1) **St. Albans, Northampton, Mortimer's Cross, Towton, Barnet, Tewkesbury.** (2) Wakefield, Bosworth Field.	Henry Tudor (Lancastrian in the female line) secures throne as Henry VII. By his marriage with Elizabeth of York he unites the warring factions and establishes an almost despotic rule in England.
43. WARS FOR CONTROL OF ITALY—1494–1529. (1) **French** vs. (2) Spanish.	Conflicting claims to the throne of Naples and to the duchy of Milan.	(1) **Charles VIII. Louis XII., Bayard ("Chevalier sans peur et sans reproche"), Francis I.** (2) Ferdinand of Aragon, Charles V., duke of Bourbon, Fürstenburg.	Invasion of Italy by Charles VIII. (1494). League Cambray (1508). Holy League (1511). (1) **Marignano.** (2) Pavia.	All the leading powers of western Europe were drawn into this struggle. By the peace of Cambraes (1529) France renounced her claims to Italy. One effect of these wars was to tie the hands of Charles V. so as to prevent his putting down Lutheranism in Germany.
44. SCHMALKALDIC WAR— 1546–1547. (1) **Charles V.** vs. (2) League of Schmalkalden.	Charles V. attempts to crush Protestantism in Germany.	(1) **Emperor Charles V., Duke Maurice of Saxony.** (2) John Frederic, Elector of Saxony; Philip, Landgrave of Hesse.	(1) **Mühlberg.**	Protestantism temporarily crushed. Its recovery in 1552 was followed by the religious peace of Augsburg 1555.
45. RELIGIOUS WARS IN FRANCE—1562–1598. (1) **Catholics** vs. (2) Huguenots (Protestants).	Massacre of Huguenots at Vassy is a signal for uprising.	(1) **Duke of Guise, Henry III.** (2) Catherine de Medici. Conde, Coligny, Henry of Navarre (Henry IV.)	(1) **Massacre of St. Bartholomew (1572).** (2) Siege of Paris, Ivry (1590), Henry of Navarre becomes a Catholic (1593). Riots of Image Breakers. Council of Blood.	By the edict of Nantes (1598) the Huguenots are given equal political rights with Catholics, limited freedom of worship, the possession of La Rochelle and other strong places as cities of refuge.
46. WAR OF LIBERATION IN THE NETHERLANDS— 1568–1648. (1) **Spain** vs. (2) Revolted provinces in the Netherlands.	Political and religious tyranny of Spain. Duke of Alva enforces the Inquisition.	(1) **Duke of Alva. Alexander of Parma.** (2) William of Orange, Jan van Olden, Barneveldt, Maurice of Nassau.	(1) **Mechlin, Haarlem.** (2) Brill, Siege of Leyden, "Spanish Fury" at Antwerp. Pacification of Ghent (1576). Union of Utrecht (1579). Declaration of Independence (1581).	By the Peace of Westphalia (1648) the independence of the seven northern provinces, the United Netherlands, is recognized. The ten southern provinces continue under Spanish rule until 1713.
47. THIRTY YEARS' WAR— 1618–1648. (1) **German Protestants and their Allies, England, Holland, Sweden and France** vs. (2) Imperial German Catholics and their allies, Spain, Italy.	Disputes over interpretation of peace of Augsburg (religious and political disputes leading to the revolt of Bohemia). The war passes through four phases—(1) Bohemian–Palatinate. (2) Danish. (3) Swedish. (4) Swedish–French.	(1) **Frederick, Elector Palatine, Mansfield, Gustavus Adolphus, (Sweden) Turenne and Conde (France).** (2) Emperor Ferdinand II., Maximilian of Bavaria, Tilly, Wallenstein.	(1) **Stralsund, Edict of Restitution, Breitenfeld, Lützen.** (2) White Hill, Magdeburg, Nördlingen.	This war is closed by the peace of Westphalia. Alsace thereby goes to France, Switzerland is separated from the empire and the Palatinate is divided. The secularized lands of northern Germany are secured to Protestanism while leaving to Catholicism, Austria, Bohemia and Bavaria. Germany is left desolate.
48. CIVIL WAR IN ENGLAND—1642–1649. (1) **Royalists (Cavaliers)** vs. (2) Parliamentarians(Roundheads) allied with Scots (to 1647).	Charles I. attempts to force a personal government on England. His disputes with Parliament covered (1) taxation, (2) privileges of Parliament, (3) religion, (4) control of the militia.	(1) **Charles I., Prince Rupert, Montrose.** (2) Cromwell, Essex, Fairfax, Leslie.	(2) Marston Moor, Naseby, Preston.	The second civil war (1648) determines the army leaders to bring Charles I. to trial and execution (1649). A Commonwealth was then established without King or House of Lords but with Oliver Cromwell as Protector (1653 to 1659). The son of Charles I. restored in 1660 as Charles II.
49. FIRST THREE WARS OF LOUIS XIV.—1667–1697. (1) **France** vs. (2) a. Spanish Netherlands. b. Dutch republic. c. Grand Alliance (German states, England, Holland).	Louis XIV.'s passion for fame and desire to increase French territory in Europe.	(1) **Turenne, Conde, Luxembourg.** (2) William III., De Ruyter.	Chambers of Reunion. (1) **Ravaging of Palatinate, Steenkirke, Neerwinden.** (2) Sasbach, La Hogue, Namur.	Extension of boundaries of France to the northeast.
50. SPANISH SUCCESSION in America, **QUEEN ANNE'S WAR**—1701–1714. (1) **France, Spain and Bavaria** vs. (2) Austria, England, Holland, Portugal, Savoy.	Acceptance by Louis XIV. of the bequest of the Spanish dominion to his grandson, Philip of Anjou, in violation of the partition treaty to which he had consented.	(1) **Vendome Villars, Leopold of Dessau.** (2) Duke of Marlborough, Eugene of Savoy, Heinsius.	(2) Gibraltar, Blenheim, Ramillies, Turin, Oudenarde, Malplaquet.	By the peace of Utrecht in 1713 and that of Rastadt in 1714 Spain and the Indies go to Philip of Anjou; Naples, Milan, Sardinia and former Spanish Netherlands to the Austrians. England receives Newfoundland, Acadia and Hudson Bay Territory from France and Gibraltar from Spain.

NOTABLE WARS OF HISTORY—Continued

Name of War, Contestants and Dates	Cause of Conflict	Leaders	Chief Battles and Incidents	Results and Comments
51. NORTHERN WAR—1700–1721 (1) **Sweden** vs. (2) Russia, Poland, Denmark, Saxony.	Peter the Great joins Poland, Denmark and Saxony for the purpose of despoiling Sweden, the first power of the north, of her Baltic ports.	(1) **Charles XII.** (2) Peter the Great (Russia), Augustus II. of Saxony.	(1) **Invasion of Denmark. Narva, Invasion of Saxony.** (2) Pultava.	By the peace of Nystadt (1721) Sweden cedes large territories to Russia. Russia takes the place of Sweden as the foremost power of the north.
52. WAR OF THE AUSTRIAN SUCCESSION—1740–1748. (1) **Austria, supported by Hungary, Bohemia, England, Holland and Saxony** vs. (2) Prussia, France, Spain, Bavaria.	When Maria Theresa succeeded her father, Charles IV. of Austria, Frederick the Great of Prussia seized Silesia. This precipitated a struggle for Austrian territories. At the death of Charles VI. of Austria the right of Maria Theresa to the throne is contested chiefly by Frederick the Great of Prussia who seizes Silesia.	(1) **Maria Theresa, George II of England, Charles of Lorraine.** (2) Frederick the Great of Prussia, Emperor Charles VII, Schwerin.	(1) **Dettingen.** (2) Mollwitz, Chotusitz, Prague, Fontenoy, Hohenfriedburg, Soor. Peace of Dresden.	By the treaty of Aix-la-Chapelle Silesia is secured to Prussia, which state now becomes a great European power. This war is one phase of the long rivalry between France and Great Britain for seapower and dominion in America and India.
53. SEVEN YEAR'S WAR, OR THIRD SILESIAN WAR; in America, FRENCH AND INDIAN WAR—1756–1763. (1) **England, Prussia** vs. France, Austria, Russia Spain, Sweden.	Maria Theresa wishes to regain Silesia. Hostilities between French and English in America and India. George II's concern for his ancestral territory of Hanover.	(1) **Frederick the Great, Duke of Cumberland. Wolfe (America) Robert Clive, (India).** (2) Daun (Austria) Charles of Lorraine, Montcalm (America).	(1) **Dresden, Rossbach, Leuthen, Zorndorf, Minden.** (2) Kolin, Hohkirchen, Kunersdorf. *In America:* (1) **Louisburg, Fort Duquesne, Quebec.** *In India:* (1) **Plassey, Wandewash.**	The peace of Paris (1763) gives England, Canada, the supremacy in India and certain islands, especially in the West Indies. Prussia retains Silesia. This war really founded the British empire which is based on sea-power and colonial dominion.
54. AMERICAN REVOLUTIONARY WAR—1775-1783. (1) **English Colonies in America aided by France** vs. (2) England.	The revolt of the colonies against England was caused by infringements upon what they considered their rights of government, especially local self government and taxation.	See page 135.	See page 135.	Recognition of the independence of the United States in the peace of Paris (1783). The Mississippi river becomes the western boundary of the United States.
55. WARS OF THE FRENCH REVOLUTION—1792-1802. (1) **Revolutionary France** vs. (2) Coalitions of England, Austria, Prussia, Holland, and Spain. The Empire, Russia. a. First Coalition—1792–1797.	Intrigues of emigrés; horror of Europe at the execution of the king; French offer of aid to revolutionists in other countries.	(1) **Dumouriez, Kellermann, Jourdan, Hoche, Pichegru, Napoleon Bonaparte, Moreau.** (2) Duke of Brunswick, Coburg, Charles of Austria.	(1) **Valmy, Occupation of Nice and Savoy, Jemmapes. Execution of king (1793). Annexation of Belgium, Fleurus, Lodi, Siege of Mantua.** (2) Mainz, Neerwinden, Kaiserslautern, Wurzburg.	By peace of Campo Formio (1797) the French frontier is advanced to the Rhine, Venice is given to Austria and the Cisalpine and Ligurian republics founded in Italy under French control.
b. Bonaparte's Egyptian Expedition—1798–1799.	Bonaparte aims to prepare the way to attack Great Britain's power in India and dreams of rivaling early conquerors of the east.	(1) **Napoleon Bonaparte.** (2) Nelson (England).	(1) **Battle of the Pyramids.** (2) Battle of the Nile at Aboukir, Acre.	Nelson's victory removes a serious menace to British power in India, cuts off the French in Egypt and deprives France of communication with its best troops and ablest general.
c. Second Coalition.—1799–1802.	The mistakes of the government of the Directory and the prestige of Nelson's victory enable Great Britain to form the Second Coalition.	(1) **Napoleon, Joubert, Moreau.** (2) Suvarcff, Melas, Archduke John.	(1) **Marengo, Hohenlinden.** Napoleon's passage of the Alps (Great St. Bernard). (2) Novi.	The Peace of Presburg ends the contest between France and Austria. Much harsher terms are imposed on Austria. Peace of Luneville with Austria (1801); peace of Amiens with England (1802); Surrender of England's conquests except Trinidad and Ceylon; Malta to be restored to Knights of Malta.
56. NAPOLEONIC WARS—1802–1815. (1) **France under Napoleon** vs. (2) European Powers led by England. a. Third Coalition—1805.	Neither England nor France regarded the peace of Amiens as more than a truce. Among the many causes of friction leading to renewal of war chief place was given to England's refusal to restore Malta.	(1) **Napoleon.** (2) Nelson, Mack, Alexander I. (Russia), Kutusoff.	(1) **Ulm, Austerlitz.** (2) Tratalgar.	As a result of his brilliant successes Napoleon in 1802 becomes consul for life and in 1804 took the title emperor of the French. Confirmation of treaty of Campo Formio, with the recognition of Batavian, Helvetian, Cisalpine and Ligurian republics.
b. (Fourth) War with Prussia and Russia.—1806–1807.			(1) **Double battle of Jena and Auerstadt. Berlin decree. Eylau (indecisive). Friedland.**	By the treaties of Tilsit (1807) Russia recognizes Napoleon's relatives as kings of Naples, Holland and Westphalia and consents to the creation of the Confederation of the Rhine and the grand duchy of Warsaw under Napoleon's control. Alexander and Napoleon combine to dominate Europe. Prussia cedes territories containing half her population.
c. Peninsular War—1808–1814.	Rebellion of Spain against Joseph Bonaparte, whom Napoleon had placed on the throne.	(1) **Soult, Massena.** (2) Duke of Wellington.	(1) **Corunna.** (2) Talavera, Lines of Torres Vedras, Albuera, Salamanca, Vittoria, Toulouse.	French expelled from the peninsula.
d. Fifth War with Austria—1809.		(1) **Napoleon.** (2) Archduke Charles.	(1) **Aspern, Wagram.**	Austria cedes 32,000 square miles of territory, containing 3½ million inhabitants.
e. Invasion of Russia—1812.	Alexander's refusal to enforce Napoleon's continental system, and other causes of dispute.	(1) **Napoleon, Marshal Ney.** (2) Kutusoff, Barclay de Tolly.	(1) **Smolensk, Borodino.** Burning of Moscow. Retreat from Moscow. Passage of the Beresina.	Less than 20,000 of the half million men in Napoleon's army recrossed the Russian frontier.
f. War of Liberation—1813–1814.	The disastrous Russian campaign, together with the steady progress of the British in the peninsular war encourages the oppressed states of Germany to rise against Napoleon's tyranny, Prussia taking the lead.	(1) **Napoleon, Ney, Macdonald.** (2) Frederick, William III., Francis I. Alexander I, Schwarzenberg Blücher, Bernadotte.	(1) **Lützen, Bautzen, Dresden,** (2) Dennewitz, Leipzig, (Battle of the Nations.) Allies enter Paris.	Driven from Russia in 1812, from Germany in 1813, Napoleon in 1814 was forced to surrender France itself. By the treaty of Fontainebleau he was given the Island of Elba and an annual revenue of 2,000,000 francs.
g. Waterloo Campaign—1815.	Quarrels among the allies and dissatisfaction of French with Louis XVIII. tempt Napoleon to return from Elba.	(1) **Napoleon, Ney.** (2) Wellington, Blücher.	Napoleon lands at Cannes (March 1); enters Paris March 20. (1) **Ligny.** (2) Quatre Bras, Waterloo, (June 18).	Waterloo marks the final downfall of Napoleon. He is transported to the island of St. Helena, where he died in 1821. In the Congress of Vienna the allies reconstructed Europe, restoring in general the legitimate rulers and erecting barriers against democratic movements and liberal ideas.

NOTABLE WARS OF HISTORY—Continued

Name of War, Contestants and Dates	Cause of Conflict	Leaders	Chief Battles and Incidents	Results and Comments
57. WAR OF 1812—1812–1814. (1) **United States** vs. (2) Great Britain.	Controversies over aggressions on neutral trade and British impressment of American seamen.	See page 285.	See page 285.	Peace of Ghent in 1814 led to the settlement of the northern boundary of the United States.
58. WAR OF GRECIAN INDEPENDENCE—1821–1829. (1) **Greeks, aided by England, Russia and France** vs. (2) Turks.	Revived feeling of Greek nationality, stimulated by a widespread secret society working for a restoration of a Greek empire at Constantinople.	(1) **Ypsilanti, Diebitsch** (Russia) **Codrington,** (England), **Byron,** (England). (2) Ibrahim, Pasha.	Massacre of Greeks at Chios. (1) **Navarino, Adrianople.** (2) Missolonghi.	The treaty of Adrianople, 1829, compelled Turkey to acknowledge the independence of Greece, which chose as king the Bavarian prince Otto I.
59. MEXICAN WAR—1846–1848. (1) **United States** vs. (2) Mexico.	Boundary disputes occasioned by the annexation of Texas.	See page 140.	See page 140.	By the treaty of Guadalupe Hidalgo, Mexico gives up to the United States all territory north of the Rio Grande and Gila rivers, comprising Texas, New Mexico, California, Nevada, Utah, Arizona and part of Colorado and Wyoming.
60. CRIMEAN WAR—1854–1856. (1) **Russia** vs. (2) Turkey aided by Great Britain, France and Sardinia.	The question of the political status and future of the lands of the Turkish empire. Immediate cause, the claim of Russia to a protectorate over all Greek Christians living under the sultan's rule.	(1) **Mentchikoff, Gortchakoff.** (2) Canrobert, Pelissier (France), Raglan, Simpson (England).	(1) **Balaclava.** (2) Alma, Siege of Sebastopol, Inkermann.	In the peace of Paris (1856) Russia's claim to a protectorate is disallowed, the Danube is opened to navigation and the Black Sea is closed to war vessels of all powers.
61. SEPOY MUTINY—1857–1858. (1) **Sepoys** vs. (2) English.	Uneasiness created by the rapid progress of British ways and rule causes a revolt of native Sepoy troops of India. Immediate cause the rumor that cartridges furnished troops were greased with a mixture of hog and beef fat—the one animal an object of loathing to Mohammedans, the other of religious worship to the Hindu.	(1) **Nana Sahib.** (2) Nicholson, Havelock, Campbell.	Mutiny of Sepoys at Meerut. (1) **Massacre at Cawnpore.** (2) Delhi, Relief of Lucknow.	Following the suppression of the mutiny the charter of the East India company is revoked and India passes directly under the crown, a secretary of state for India being added to the British ministry.
62. WAR OF ITALIAN LIBERATION—1859. (1) **Sardinia-Piedmont and France** vs. (2) Austria.	Since 1848 Sardinia-Piedmont had been the center of the movement for Italian unity. Following promises of aid from Napoleon III. Cavour traps Austria into declaring war over the question of disarmament.	(1) **Victor Emmanuel, Napoleon III., Garibaldi.** (2) Francis Joseph II., Gyulay.	(1) **Montebello, Magenta, Solferino.** Peace signed at Zurich, Nov. 10, 1859.	By this war Victor Emmanuel gained Lombardy. In 1860 Tuscany, Parma, Modena and the papal legations were added. In 1861 he gained Sicily and Naples, together with the title King of Italy. Venetia followed as a result of alliance with Prussia in 1866 and the addition of Rome in 1871 completed the unification of Italy.
63. AMERICAN CIVIL WAR—1861–1865. (1) **Federal Government of United States** vs. (2) Southern Confederacy.	The election of Lincoln, which marked the triumph of the Free-Soil Republican party, was made the pretext for secession and the formation of the Southern Confederacy. War followed upon the attempt of President Lincoln to supply Fort Sumter.	See page 290.	See page 290.	Resulted in the abolition of slavery and the preservation of the union.
64. DANISH WAR—1864. (1) **Austria and Prussia** vs. (2) Denmark.	Incorporation of the duchy of Schleswig with Denmark in violation of treaty of 1852.	(1) **Gablenz (Aus), Prince Frederic Charles (Prus.)** (2) Dermeza, Gerlach.	(1) **Invasion of Jutland** (1) **Storming of Düppel.**	Denmark gives up Schleswig-Holstein, which is jointly administered by Austria and Prussia.
65. AUSTRO-PRUSSIAN WAR—1866. **Prussia with smaller North German States, and Italy** vs. (2) Austria, Hanover, Saxony, and South German States.	Friction over Schleswig-Holstein enables Bismarck to force Austria into a war for suppremacy in Germany.	(1) **William I., Prince Frederic Charles, Moltke, Victor Emmanuel.** (2) Benedek, Archduke Albert, Gablenz, Prince Charles of Bavaria.	*In Bohemia:* (1) **Soor, Koniggrätz or Sadowa.** (2) Trautenau. *In the West:* (1) **Aschaffenburg.** (2) Langensala. *In Italy:* (2) Custozza, Lissa.	Closed with the peace of Prague, Aug. 23, 1866, which authorized the re-establishment of the federated German states, excluding Austria; Austria ceded Venetia to Italy, and her rights in Scleswig-Holstein to Prussia. Hanover, Hesse, Nassau are also annexed to Prussia.
66. FRANCO-PRUSSIAN WAR—1870–1871. (1) **France** vs. (2) Prussia supported by all German States including South.	Jealousy of France at Prussian gains and friction over Hohenzollern candidacy for the throne of Spain. Bismarck's falsification of the "Ems dispatch" tricked France into a declaration of war.	(1) **Napoleon, Mac Mahon, Bazaine.** (2) William I. Moltke, Prince Frederic Charles, Crown Prince Frederic William.	(1) **Saarbrucken.** (2) Weissenberg, Wörth, Vionville, Gravelotte, Sedan, Capitulation of Metz, Orleans, Capitulation of Paris.	Closed in 1871 with the treaty of Versailles with the following results: (1) The French military power was destroyed; (2) the western frontier of Germany was rendered secure; (3) The German empire was established; (4) Germany acquired Alsace and Lorraine. In France Napoleon III. is deposed and the Third republic established, 1870.
67. RUSSO-TURKISH WAR—1877–1878. (1) **Russia** vs. (2) Turkey.	Turkish misgovernment and revolts in her Christian subject provinces, which were barbarously put down ("Bulgarian atrocities") arouse all Europe but Russia alone declares war.	(1) **Grand Duke Nicholas, Gurka, Grand Duke Michael, Alexander II.** (2) Suleiman Pasha, Osman Pasha, Mukhitar Pasha.	(1) **Passages of the Danube at Shitova. Shipka Pass, Plevna, Storm of Kars.**	By the peace of San Stefano as revised in the congress of the powers at Berlin, Montenegro, Servia and Roumania become independent; Bulgaria remains tributary but receives a Christian prince; Russia obtains large indemnity and part of Armenia and also Bessarabia.
68. CHINESE-JAPANESE WAR—1894–1895 (1) **Japan** vs. (2) China.	Rival claims to suzerainty over Korea.	(1) **Ito, Yamagata, Oyama, Nogi.** (2) Tso, Yeh, Wei.	(1) **Yalu River, Port Arthur, Wei-hai-wei, Niuchwang.**	Treaty of Shimonoseki, signed April 17, 1895, removed Korea from Chinese influence; ceded Formosa and the Pescadores to Japan, and awarded to the latter an indemnity of $180,000,000.

NOTABLE WARS OF HISTORY—Continued

NAME OF WAR, CONTESTANTS AND DATES	CAUSE OF CONFLICT	LEADERS	CHIEF BATTLES AND INCIDENTS	RESULTS AND COMMENTS
69. SPANISH WAR—1898. (1) **United States** vs. (2) Spain.	Interference of the United States on account of the inhuman warfare waged by Spain in an attempt to suppress Cuban independence.	See Spanish-American War, page 294 (1) **Sir George White Buller, Methuen, Roberts, Kitchener, French.** (2) Cronje, Botha, De Wet, Delarey.	See page 294. (1) **Siege of Ladysmith, Paardeberg.** (2) Colenso, Spion, Kop, Vaal, Krantz, Magersfontein.	By the treaty of Paris, Dec. 10, 1898, recognized the sovereignty of the United States in Cuba, and ceded to this country the Philippines, Porto Rico and Guam, in consideration of $20,000,000.
70. SOUTH AFRICAN or BOER WAR—1899-1902. (1) **Great Britain** vs. (2) Transvaal, Orange Free State.	Resistance by the Boers to the British form of government in the Transvaal.	(1) **Togo, Kuroki, Oku, Nodzu, Oyama, Nogi.** (2) Kuropatkin, Alexieff, Makaroff, Stoessel, Stakelberg, Linievitch.	(1) **Port Arthur and Chemulpo, Vladivostok, Yalu River, Dalny, Siege of Port Arthur, Mukden, Sea of Japan.**	Boers surrendered May 31, 1902; are granted the right of self-government under British Sovereignty, and united with other self-governing British colonies in South Africa, in 1910, to form the Union of South Africa.
71. RUSSO-JAPANESE WAR—1904-1905. (1) **Japan** vs. (2) Russia.	Russian encroachments in Manchuria and their fortification of Port Arthur.	(1) **Czar Ferdinand, Crown Prince Constantine, Gen. Savoff, King Peter.** (2) Nazim Pasha, Muktor Pasha. Leaders Same as above.	(1) **Lule Burgas, Adrianople, Janina, Scutari, Kirk, Kilissa.**	Closed Sept. 5, 1905, by treaty of Portsmouth by which Korea passes under control of Japan, China regains Manchuria, and Japan is granted important railroad rights.
72. THE BALKAN WAR—1912-1913. (1) **Balkan Allies; Bulgaria, Greece, Servia and Montenegro** vs. (2) Turkey.	Turkish misrule and atrocities, combined with racial and religious hatred.	(1) **Lloyd George, Haig; Joffre, Foch, Clemenceau; King Albert; Orlando, Cadorna, Diaz; Wilson, Pershing, Sims; Venezelos; Brusiloff, Rennenkampf.** (2) William II, Hindenberg, Ludendorf, Tirpitz, Hollweg; Charles II.	Roumania attacks Bulgaria from the north. Turkey recaptures Adrianople. (1) **Invasion of Belgium; First Battle of the Marne; Battle of Verdun; Second Battle of the Marne; Battle of Caporetto; Battle of the Piave; Siege of Gallipoli; Allenby takes Palestine; Battle of Jutland; Submarine Warfare; Bombardment of Paris; Fall of the Hindenberg line; The American army in Battles of Argonne Forest; Aerial combats; Armistice at request of German Great Headquarters.**	By treaty of Bucharest, most of land conquered in First Balkan war divided among the Allies. Roumania gets a slice in the north. Albania created a state.
73. Second Balkan War—**1913.** (June 30 to July 29.) (1) Greece, Serbia, Montenegro, Roumania, Turkey vs. (2) Bulgaria.	Bulgaria, dissatisfied with her portion, makes war on her allies.			Germany lost her commercial position; surrendered her fleet; her military autocracy fell; her colonies passed to her opponents; Alsace-Lorraine and parts of Schleswig and of Silesia seceded. The map of Europe was made over; Poland, Czecho-Slovakia, Jugo-Slavia, Hungary and small states on the Russian frontier became independent. Italy recovered and redeemed her lost provinces. Europe became industrially stagnant; Russia starved and Germany, Austria and Italy were torn with internal disorders. Republics were established and monarchies fell.
74. THE WORLD WAR—(1914-1919). (1) **France, England, Belgium, Italy, Serbia, Russia, Roumania, America, Greece Japan, (China, Brazil, Portugal, Montenegro)** vs. (2) Germany, Austro-Hungary, Bulgaria and Turkey.	The assassination of Archduke Francis Ferdinand of Austria-Hungary by a Serbian peasant destroyed the equilibrium of Europe and loosed the pent up jealousies among nations, especially Germany's lust for world empire and commercial primacy.	(2) William II, Hindenberg, Ludendorf, Tirpitz, Hollweg; Charles II.	Russian Revolution; Emperor William's abdication; Communism in Russia; The Peace of Versailles.	Naval disarmament was begun and reduction of land armaments became a necessity because of crushing European National debts. The Turk was discredited but retains his hold on Constantinople.

Outline of Military Events

1914 WEST FRONT

Aug. 1. Germany invades Luxemburg.
2. Demands passage through Belgium, refused.
3. Ultimatum to France.
4. Belgium invaded. British ultimatum to Germany.

Battles for Liege forts till Aug. 15, delaying Germans 11 days. Brussels falls Aug. 20, Namur Aug. 22. Louvain library burned.

8. English expeditionary force under Gen. French arrives.
21-23. Battle of Mons-Charleroi. English and French retreat from Belgium. Germans advance within 25 miles of Paris.

Sept. 6-10. Battle of the Marne, won by French under Foch and Joffre. The Germans, beaten, retreat to the Aisne.
12-17. Allies fail to break the German lines.

By Oct. 8 the trench system extended from the sea to Switzerland—300 miles.
Oct. 8. Fall of Antwerp.
16-28. Battle of the Yser; Belgians cut the dykes in Flanders.

Oct. 22-Nov. 15. Battle of Ypres. The German losses at the Yser and Ypres 150,000. They occupy industrial France and Belgium.

EAST FRONT

Aug. 1. Germany declares war on Russia.

6. Austria declares war on Russia.
18. Russians invade East Prussia. This causes withdrawal of troops from the west. Battle of Tennenberg destroys first Russian army.

Aug. 27-Sept. 3. Russians invade Galicia, almost destroy Austria's army. Capture of Halicz, Tarnow, Lemburg.

Sept. 6-10. Russians under Gen. Rennenkampf annihilated at Mazurian lakes by von Hindenberg.

Nov. 5. Russians take Jaroslav. The Germans attempt invasion of Poland, but fail in three offensives and narrowly avert disaster in the Battle of Lodz (Nov. and Dec.).

1914 ITALY, BALKANS, TURKEY

June 28. Murder of the Austrian archduke at Serajevo.
July 23. Austrian ultimatum to Serbia.
29-30. Austrians bombard Belgrade.

Aug. 4. Turkey forms alliance with Germany.
7. Montenegro declares war on Austria.

Oct. Turkey violates her neutrality by protecting two German battleships and shelling Russian cities on the Black Sea (Oct. 29).
Nov. 3. Russia declares war on Turkey.
Nov. 5. Great Britain declares war on Turkey and annexes Cyprus.
Nov. 10. Austrians invade Serbia.

Dec. 14. Serbia expels the Austrian army from her soil.

NAVAL AND MINOR EVENTS

Aug. 2. Great Britain promises France that her navy will oppose any attempt of Germany to attack from the Channel.
4. United States declares her neutrality.
5. President Wilson offers to mediate between belligerent nations; appeals for peace.
18. Pres. Wilson appeals for neutrality of sentiment.
23. Japan declares war on Germany.
26. British capture Togoland.
28. British naval victory off Helgoland.

Sept. 3. French government moved to Bordeaux (temporarily). German colonies, New Guinea, Bismarck Archipelago, and other East Indian islands taken by the Australians.

Oct. 13. Belgian government retires to Havre, France. Germans capture Ghent.

Nov. 1. German naval victory off Chile.
7. Japan captures Tsingtau and a number of islands in the Pacific.
10. Embden, German raider, sunk in the East Indies.

13. United States proclaims neutrality of Panama Canal Zone.
21. British take Basra on Persian Gulf.

Dec. 8. British naval victory off the Falkland Islands.
17. Khedive of Egypt deposed as a German sympathizer and a protectorate proclaimed. The British navy controls the seas.

THE WORLD WAR—Continued

1915 West Front

March-April. French and English offensive in the Champagne.
March 10. Battle of Neuve Chapelle.

April 22-26. Second battle of Ypres. Germans use poison gas for the first time.

May 9-June. Battle of Arras.
Sept. 25.-Oct. Failure of the Champagne offensive.

Dec. 15. Sir John French retired from command, succeeded by Sir Douglas Haig.

East Front

Jan.-Feb. Second Russian invasion of East Prussia crushed by Hindenburg in the Mazurian Lakes (4-13 Feb.).
March 17. Russians capture Przemysl.
April-Aug. Great German offensive in Poland and Galicia under Hindenburg and Mackensen.

May 2. Battle of the Dunajec River. The Germans break the Russian lines.

June 2. Fall of Prsemysl.
22. Fall of Lemburg.

Aug. 5. Fall of Warsaw. All Poland is overrun. Capture of Courland.

Sept. 8. Grand Duke Nicholas removed from command and transferred to the Caucasian Front.

The Russian losses in the campaign: 1,200,000 killed and wounded, 900,000 captured, 65,000 sq. miles territory taken. The Russian line now runs from Riga to East Galicia.

1915 Italy, Balkans and Turkey

Feb.-March. Failure of British and French fleets to force the Dardanelles.

April 26. Allied troops landed on the Gallipoli peninsula.
30. Germans invade the Russian Baltic provinces.

May 23. Italy declares war on Austria.

Aug. 20. Italy declares war on Turkey.

Oct. 5. Russian ultimatum to Bulgaria.
13. Bulgaria joins the Central Allies. Germans, Austrians, Bulgars in a combined offensive crush Serbia.
Sept. 18. Fall of Vilna.
Nov. 5. Fall of Nish.
Dec. 2. Monastir taken. Serbia completely crushed.
19. Gallipoli expedition abandoned.

Naval and Minor Events

Jan. 24. An English patrolling squadron defeats a number of German raiders on the Dogger Banks.
28. American merchantman, "Wm. P. Frye," sunk by the "Prinz Eitel Friedrich."
Feb. 10. U. S. notifies Germany that she will hold her strictly accountable for the loss of American vessels.
18. German "war zone" established around the British Islands—a so-called blockade.
20. U. S. sends identical notes to Great Britain and Germany suggesting agreement on naval warfare.
April 28. American merchantman "Cushing" attacked by a submarine.
May 1. American vessel "Gulflight" sunk, two Americans lost. Bernstorff, German ambassador, publishes warning in American papers for passengers to keep off the liners crossing the "war zone."
7. Lusitania sunk off Ireland, 1,154 dead, of whom 114 are Americans.
10. Germany expresses sympathy for lives lost on the Lusitania.
13. First Lusitania note.
25. American ship "Nebraska" attacked by a submarine.
June 8. Bryan resigns as Secretary of State.
9. Second Lusitania note.
July 21. Third Lusitania note. The U. S. complains of unsatisfactory replies.
Aug. 19. The "Arabic" sunk. Two Americans lost.
Sept. 1. Germany promises that her submarines will sink no more liners "without warning."
8. U. S. demands recall of Austrian ambassador, Dr. Dumba.
Dec. 4. U. S. demands recall of German attaches Boy-Ed and von Papen.

1916 West and East Fronts

Feb. 21. Battle of Verdun begins. The French resist heroically under Petain.
25. Fort Douaumont taken.

March 8. Germany declares war on Portugal.

July. The effort to take Verdun and open the way to Paris fails. Great losses (Germans at least 500,000 men) bring little gains.
1. British begin battle on the Somme to relieve pressure upon Verdun.

Sept. 26. Combles taken. The allies fail to break German lines. The losses on the Somme are estimated at 700,000 for the Germans and 800,000 for the French and English.

Balkans, Italy and Turkey

Jan. 8. Gallipoli evacuated.
13. Cettinje falls to the Austrians.
Feb. General Townshend besieged at Kut-el-Amara.
Grand Duke Nicholas starts a successful offensive in Armenia.
16. Capture of Erzerum.
27. Russians take Kermanshah.
April 17. Trebizond taken.
29. Relief expedition to Gen. Townshend forced back. The British in Kut surrender (13,000 men and all supplies).

May 16. Austrians start successful drive from the Trentino, but Brusiloff's drive compels them to give it up (June 7).
June. Russians under Brusiloff begin offensive in Volhynia and Bukovina.
17. Czernowitz captured and all Bukovina overrun.

Aug. 6. Italy begins offensive.

9. Garizia taken, advance upon Trieste.

27. Roumania declares war on Austria and Italy on Germany.
Sept. Roumanians invade Transylvania, unsupported by the Russians; Germans and Austrians under Mackensen and Falkenhayn drive them back. Bulgarians attack from the south and thus crush Roumania's armies. Valuable grain and oil supplies lost.

Dec. 6. Bucharest falls.

1916 Naval, Submarine and Other Events

Feb. 10. Germany sends note to neutrals that armed merchantmen will be sunk as warships without warning.
15. Secretary Lansing states that such ships have right to carry arms in self-defense.

March 24. "Sussex" sunk without warning in violation of pledge.

April 8. U. S. states that unless submarine warfare is given up, she will sever diplomatic relations.
25-28. Sinn Fein rebellion, led by Sir Roger Casement, supported by Germany.

May 4. Germany acknowledges sinking of the "Sussex," and in the main meets demands of the U. S.

25. Compulsory military service adopted in Great Britain. Basis laid for an army of 5,000,000.

27. Pres. Wilson before League to Enforce Peace states that the U. S. is ready to join any practical league to preserve peace.
31. Battle off Jutland.

June 5. Lord Kitchener drowned.
21. U. S. demands apology and reparation for the sinking of the "Petrolite."

Sept. 7. Denmark sells the Virgin Islands to the U. S. for $25,000,000.

Oct. 28. English ship "Mariana" sunk without warning. Six Americans lost.
Nov. 6. English ship "Arabic" torpedoed.
Dec. 5-7. Lloyd George displaces Asquith as head of Cabinet to infuse new energy into the war.
12. Germany offers peace, refused by the allies as empty and insincere.
14. English horse transport sunk. Seventeen Americans lost.
18. Pres. Wilson sends peace note to the belligerents to which Germany replies on Dec. 26.

1917 West and East Fronts

March 17-19. Germans retreat on a front of 100 miles to the Hindenburg Line, destroying everything, and evacuate 1,300 square miles.

19. Abdication of the Czar.

April 9. Battle of Arras. Vimy Ridge taken.

April 16. French successes about the Aisne between Soissons and Rheims.

May 15. Petain succeeds Nivelle as head of the French forces.

17. Russian Provisional Government reconstructed, Kerensky becomes minister of war.

June 7. Capture of Messines Ridge, 7,500 German prisoners.

26. First American troops reach France.

July 19. Russian army, raised by Kerensky, begins offensive in Galicia but is easily stopped.

31. Battle of Flanders (Paeschendaele Ridge).

Aug. 15. Canadians capture Hill 70 commanding Lens.

Sept. 3. Germans occupy Riga.

Nov. 22-Dec. 13. Battle of Cambrai. Great success under Gen. Byng. Battle of Bourlon Wood.

6-7. Kerensky overthrown by the Bolsheviki.

Dec. 13. Germans drive British back from Cambrai.

15. Bolsheviki government concludes armistice with Germany.

23. Peace negotiations begun at Brest Litovsk.

Italy, Balkans and Turkey

Jan. 2. Dobrudja captured by the Bulgarians.
5. Foscani falls.

Feb. 24. Gen. Maude recaptures Kut-el-Amara.

March 11. British take Bagdad and advance into Palestine.

May 15. Italians begin offensive on the Isonzo front.

June 12. Constantine, king of Greece, compelled to abdicate.

29. Greece joins in the war on the Central allies.

Aug. 9. Italians capture Gorizia.
29. Fall of Monte Santo.

Sept. 14. Capture of Monte San Gabriele.

Oct. Battle of Caporetto, beginning of the retreat to the Piave River.

Nov. 18. British capture Ascalon and Jappa.

Dec. 9. Fall of Jerusalem.

1917 United States Naval and Minor Events

Jan. 10. Allies state their terms. Germany has sunk 5,034,000 tons of shipping.
19. "Harrowdale" sunk, 72 American seamen taken prisoners to Germany.
Feb. 1. Germany declares unrestricted submarine warfare and breaks her pledge.
3. U. S. severs diplomatic relations with Germany and dismisses Bernstorff.
5. By this time the Germans had killed 14,120 non-combatant English people through their submarines.
12. U. S. informs Swiss minister she will not negotiate with Germany until submarine warfare is discontinued.
26. Pres. Wilson asks authority to arm merchant ships.
28. Disclosure of Zimmerman note to Mexico promising her New Mexico, Arizona, etc., if she would go to war with the U. S.
March 14. China breaks diplomatic relations with Germany.
March 27. Brand Whitlock, minister to Belgium, withdrawn.

April 6. U. S. declares war on Germany.
8. Relations with Austria severed.
20. U. S. breaks diplomatic relations with Turkey.

May 4. First American destroyers join British fleet.
18. Pres. Wilson signs Selective Service Act.

June 15. First Liberty Loan, $3,035,226,850, subscribed.

July 4. Dr. von Bethmann-Hollweg resigns as German Chancellor.
14. Dr. Georg Michaelis becomes Chancellor.
20. Drawing of numbers for the first draft.
30. Mutiny in German fleet in Wilhelmshaven and Kiel.

Aug. 10. Food and Fuel Control bill passed.

Sept. 8. Luxburg dispatches revealed in the U. S.

Oct. 27. Second Liberty Loan, $4,617,532,300, subscribed.
30. Count von Hertling succeeds Michaelis as Chancellor.

Nov. 13. Clemenceau succeeds Ribot as Premier of France.
29. First session of the Interallied Conference in Paris. Col. E. M. House chairman of American delegation. Sixteen nations represented.

Dec. 7. U. S. declares war on Austria.
6. U. S. destroyer "Jacob Jones" sunk by submarine. Forty men lost.
26. Proclamation issued taking over the railroads by the government. W. G. McAdoo appointed director general.

THE WORLD WAR—Continued

1918 WEST FRONT

March 21. Central Allies begin unexampled drive between Arras and La Fere. First and second British lines broken and fifth British army annihilated. By the 3rd of April Allies are driven back 35 miles on a front of 60 miles. Gains of 1916-17 are lost and Germans are eight miles from Amiens.

April 9. Germans start drive for the Channel ports. Fall of Bailleul. The Kemmelberg taken.

May 27. Third offensive begins. Attack from Ailette River to Berry-au-Bac, a front of 33 miles. The Aisne Heights swept and the Vesle River crossed. The Germans break through the lines on the Ourcq and march towards Paris. Soissons, Chateau-Thierry, Dormans fall. The Germans advance 34 miles. The first American troops stop them at Cantigny and Chateau-Thierry.

June 9. The Germans strike between Montdidier and Noyon, intending to capture Compiegne and open way to Paris. Checked by French.

July 15. Fifth drive from Chateau-Thierry to Main de Massiges, the Marne crossed. Americans driven back, Rheims menaced. Foch launches counter attack.

July-Nov. The Great Allied Offensive. German reserves exhausted. Retreat to the Vesle. British drive from Amiens under Rawlinson. Evacuation of the Montdidier sector. Foch next drives for the Hindenburg Line. Mangin crosses the Ailette. Byng in the north takes 30,000 prisoners. Evacuation of the Lys River section. Horne attacks from Arras, takes 20,000 Germans. Sept. 12-13, Pershing takes the salient of St. Mihiel. Next drives north from Verdun, takes Montfaucon, Varennes, and moves up the Meuse. The Belgians and Gen. Plumer advance to take Roulers, Menin, and threaten Ostend and Bruges. On Oct. 8 the decisive thrust occurs. Cambrai and Douai fall. Valenciennes captured, thus outflanking the whole German positions west of the Dutch frontier, Maubeuge and Mons fall. Final American effort at Argonne and Sedan.

Nov. 11. Germany, totally defeated in the West, signs armistice at Senlis. She promises to evacuate all territory held, including Alsace and Lorraine, return all people deported therefrom, surrender of large quantities of war material, evacuate all land west of the Rhine, return all prisoners of war, abandon treaties of Brest-Litovsk and Bucharest, surrender most of the German navy, allow occupation of Rhine valley by the Allies.

1918 MISCELLANEOUS

April-May. Third Liberty Loan. $4,176,516,850 subscribed.

June 12. Austrian offensive on the Piavo defeated by Diaz.

Aug.-Sept. English advance under Allenby in Palestine north of Jerusalem with the help of the King of Hedjaz.

Sept. 25. Serbian-Greek offensive destroys Bulgarian armies, which flee and retire up the Vardar valley. Battle of Samaria. Allenby envelopes the Turks, captures 40,000 prisoners, 700 guns and all their supplies. Uskib falls.

30. Prince Max of Baden succeeds Hertling as Chancellor.

Oct. 1. Allenby captures Damascus.

2. Serbians enter Nisn. Bulgaria makes complete surrender.

31. Unconditional surrender of Turkey.

Oct.-Nov. Fourth Liberty Loan, $6,989,047,000 subscribed.

Nov. 4. Austria surrenders without terms.

1919. June 28. Peace treaty between Germany and the Allies signed at Versailles.

CHRONOLOGICAL TABLES OF RULERS

KINGS OF ASSYRIA BEFORE THE DIVISION

B. C.	
2017	Semiramis (?)
1937	Arabs seize Nineveh
1446	Belochus
1433	Artossa
1421	Belatores
1183	Tuaeus
1139	Thinaeus
840	Sardanapalus
820	Burned in his palace
790	Pul (?)
	After death of Sardanapalus Assyrian Empire ends, being divided into Assyrian, Babylonian and Median kingdoms.

KINGS OF SMALLER ASSYRIA

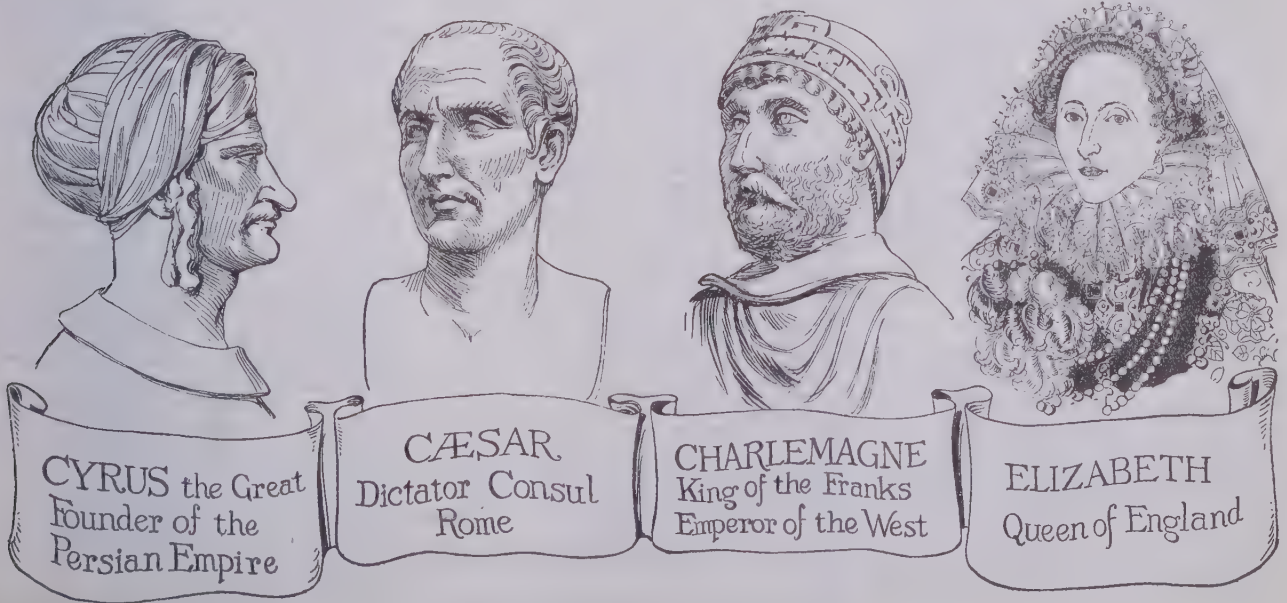
1180	Alexius Comnenus II.
1183	Andronicus
1185	Isaac Angelus
1195	Alexius Angelus
1203	Isaac Angelus restored
1204	Alexius Mourzoufle
1204	Baldwin I.
1206	Henry
1217	Peter de Courtenay
1220	Robert de Courtenay
1228	John de Brienne and Baldwin II.
1237	Baldwin alone
1261	Michael Paleologue
1283	Andronicus II.
1328	Andronicus III.
1341	John Cantacuzene
1355	John Paleologue
1391	Manuel
1425	John Paleologue II.
1448	Constantine XIII.
1453	Constantinople taken by Turks, and end of Empire.

KINGS OF SCOTLAND

A. D.	
503	Fergus
843	Kenneth Mac Alpine
943	Malcolm I.
953	Indulf
959	Duff
963	Culen
970	Kenneth II.
987	Constantine III.
995	Kenneth III.
1002	Malcolm II.
1033	Duncan I.
1039	Macbeth
1057	Malcolm III.
1093	Donald III.
1094	Duncan II.
1098	Edgar
1107	Alexander I.
1127	David I.
1153	Malcolm IV.
1165	William
1214	Alexander II.
1249	Alexander III.
1286	Margaret
1292	John Baliol
1306	Robert I.
1329	David II.
1371	Robert II.
1390	Robert III.
1406	James I.
1437	James II.
1460	James III.
1488	James IV.
1513	James V.
1542	Mary Stuart
1567	James VI. who in
1603	became James I. of England

KINGS OF SYRIA



B. C.	
312	Seleucus I. Nicanor
281	Antiochus I. Soter
261	Antiochus II. Theus
246	Seleucus II. Callinicus
226	Seleucus III. Ceraunus
223	Antiochus III. the Great
187	Seleucus IV. Philopater
175	Antiochus IV. Epiphanes
164	Antiochus V. Eupator
162	Demetrius I. Soter
150	Alexander I. Balas
145	Demetrius II. Nicanor
144	Antiochus VI. Theus
143	Diodotus or Tryphon
139	Antiochus VII. Sidetes
130	Demetrius II. Nicanor
126	Alexander II. Zebina
124	Seleucus V.
123	Antiochus VIII. Grypus
97	Seleucus VI. Nicanor
93	Antiochus Eusebes
92	Antiochus IX. Grypus
91	Philip
90	Demetrius Euchares

KINGS OF SYRIA—Continued

B. C.	
85	Antiochus Dionysius
83	Tigranes
69	Antiochus Asiaticus
65	Syria becomes a Roman province

KINGS OF SWEDEN

A. D.	
825	Regnar Lodrock
	Reigns uncertain
966	Eric the Victor
994	Olaf
1026	Edmund Jacobson
1035	Edmund or Amand III.
1041	Haakon
1056	Stenkell
1060	Ingo I.
1054	Halstan
1080	Philip
1100	Ingo II.
1130	Ragwald
1133	Magnus I.
1144	Suercher II.
1150	Eric X.
1162	Charles VII.
1168	Canute
1192	Suercher III.
1211	Eric XI.
1220	John I.
1223	Eric XII.
1250	Waldemar
1276	Magnus II.
1290	Birger II.
1318	Magnus III.
1365	Albert
1397	Margaret
1411	Eric XIII.
1441	Christopher
1448	Charles VIII.
1458	Christian I.
1520	Christain II.
1528	Gustavus I. Vasa
1556	Eric XIV.
1569	John III.
1592	Sigismond I.
1606	Charles IX.
1611	Gustavus Adolphus II.
1632	Christina
1654	Charles X.
1660	Charles XI.
1697	Charles XII.
1718	Ulrica Eleonore
1720	Frederic
1750	Adolphus Frederic
1771	Gustavus Adolphus III.
1792	Gustavus Adolphus IV.
1809	Charles XIII.
1818	Charles John XIV.
1844	Oscar Frederic
1859	Charles XV.
1882	Oscar II.
1907	Gustaf V

GEOGRAPHY

What Is Geography?—The Greek word "geography" means, literally, "description of the earth." It is plain, at the outset, that the term cannot merely refer to a knowledge of boundary lines between states and countries. If we imagine a child knows geography when he has learned to give the names of the continents, of the different empires or common wealths contained therein; if he can enumerate the states of the Union and bound them glibly—we are mistaken. It is helpful, especially for traveling, for letter communications, for commercial intercourse, for an understanding of political history, to know these things, but it is not geography, at least, not all of it, by far.

In common practice, geography includes teaching of the configuration of land and seas, of lakes and rivers and streams of all kinds; of mountain ranges and plateaus. Names of cities and hamlets, the number of inhabitants and other statistical material, are added. Some children learn to be quite proficient in this knowledge, especially those who are blessed with a good mechanical memory. Again, knowledge of this kind is helpful. It is, indeed, a description of the earth's surface.

Children so taught will even learn the definitions of various kinds of land and sea formation, such as islands, peninsulas bays, straits, and the like. Sad to say, often enough these definitions, ever so glibly recited, carry no definite meaning to the child. At one time, when a child was examined for admission to a certain school in Manhattan Borough, New York City, he was able to give the definition of an island perfectly, as being "a body of land entirely surrounded by water;" but when he was asked whether he had ever been on an island, he answered in the negative, not connecting the fact that he was standing on Manhattan Island with his word knowledge of what an island is.

Again, children may learn to "read maps" as it is called. They will find, with comparative ease, foreign countries on the map, locate the various states and provinces, rivers and mountains, oceans, lakes and watersheds, etc. They will point out the routes of travel from New York to Yokohama, and from there to the Sahara Desert. They will tell you about the vegetable and mineral staples to be obtained from these various regions.

Just the same, they may not find the way to the nearest postoffice, nor distinguish between north and south when lost in the woods, near their home.

Indeed, they would be even confused in reading their maps if you should happen to lay the atlas upside down before them so that "north" is at the bottom of the sheet, and "south" at the top, or at some other angle. For to them, "north" is "up," and "south" is "down," in accordance with the manner in which maps are usually drawn for school consumption. Thus, we speak of "up north" and "down south," as if one were really higher, and the other lower. As a matter of fact, considering the actual elevation, the distance from the center of the earth, north is lower than south, the earth's circumference being larger at the equator than at the poles, as the earth is "flattened" at the poles. In the southern hemisphere, everything is reversed.

Purpose of Geography Study.—If we were to remain stationary at any one place on this earth, or if we were entirely independent of other parts of the world for our individual or collective existence, there would be no need for us to study geography. But even Robinson Cruso, on his desert island, had to explore his surroundings, to learn about the possibilities of his exile for human existence, for making the island a home for himself, for eventual communication with the outside world.

Geography implies the exploration of our environment so that we may first of all locate ourselves within it. We must know where we are, what our immediate and more distant surroundings are, how we may get from one place to another, how we can communicate with our neighbors, how we can obtain shelter and food under the conditions under which we live, how we can protect ourselves against harmful influences in our environment, how we can adjust ourselves to it and use it for self-improvement, how we can widen our physical horizon, and so forth.

From time immemorial, when first man lived on this earth, he undertook to explore the territory in which he was placed. The instinct driving him to do so was, of course, primarily that of self-protection, and of exploiting his environment for his own maintenance. But an element of curiosity was perhaps always more or less associated with his primary instincts. From his aboriginal cave, as a center, he widened his circle of knowledge evermore; he learned all he could about the forest in which it was located, the mountain side in which it was hollowed out; the stream with its fish that flowed at its base, towards the lake, or sea, beyond; the animals inhabiting the woods, and their beneficial or dangerous qualities; the character of the vegetation, as to food value or treacherous poison; the view towards the nearest mountain tops with their possibilities of harboring an enemy tribe—and so there was an endless chain of environmental lore which the primitive gradually stored up in his mind, to transform the spot where he was placed by nature into a human habitation.

Much later, even, when tribes and races had been formed, when peoples had grown in number, when primitive nomads had to find fresh pastures for their herds of domesticated cattle, and more fertile lands for themselves, at the beginning of agriculture, this exploration of an extending environment went on. The migration of peoples opened up new concepts of the earth's surface and new possibilities, until the globe was spanned by the human race along all its perimeters.

When we study the history of the development of geographical knowledge, we shall find that it broadened with the voyages of exploration and, perhaps, conquest, which were undertaken by courageous adventurers. Courage went with military prowess, and a conquest of new territories often implied a conquest and subjugation of the native population. Nevertheless, the more important result was invariably the establishment of communication, largely of a commercial character, with the distant representatives of the human race, and an exploitation of the raw material and staples of the foreign countries.

The old military and trade routes of the Egyptians, Assyrians, Phoenicians, and later the discoveries made by the Spaniards, Portuguese, French, English, and others, opened up the world to the human race. The first maps drawn showed curious limitations. From the Babylonian map, engraved in cuneiform inscription upon a brick about eight centuries before the Christian era; the map drawn by Ptolemy, in the year 150 A. D., and which shows the eternal ocean surrounding the flat earth; and from them through the fanciful geography of the middle ages, to our own maps of the world, there has been a long, tedious and ardous development, all based upon the discoveries of intrepid explorers.

Our own knowledge is, naturally, not based altogether upon personal experience and exploration. We must rely in a large measure upon the tales brought back to us by those who have actually seen. Even now, when international travel is universal, when man has penetrated into most of the "dark continents," the great majority of us cannot see with our own eyes. We must read books of travel, study reports on explorations, commerce, and the like, and fill the gaps of our actual knowledge with material from these sources. When we go back in the history of travel and investigation, we shall soon realize how fanciful these reports used to be in the olden times. Remember the wanderings of Ulysses, the travels of Marco Polo—their stories of strange beings, animals, and plants—and even in our days the fascinating and fantastic tales about the Juju—man in darkest Africa, and the juggling fakirs of Hindustan, and you will admit that even geography has its fairy tales.

But unless we have a basis in our own mind, by personal experience and exploration within the limits of our individual possibilities of cities and their peoples, of rivers, seas, and oceans, of mountains and plateaus, and what not, we would be unable to follow the description of travelers and explorers, to understand the geographical knowledge which is mediated to us by specialists in this field, and to discount with our judgment the impossible tales of romancers. Yet, at best, our knowledge of those lands and peoples regarding which we have to rely upon "vicarious experience" that is to say, the experience of others, will always remain a bit hazy.

Geography and Astronomy.—"Locating" one's self, however, means more than merely to find our place on the surface of the earth. From the early dawn of civilization man has related himself to the stars. The sun, the moon, the constellations of the starry heavens, have played a great part in his conceptions of his place in the universe. Sun and moon were his early divinities, no less than the giant powers of

mundane forces, in ice and darkness, in mountains and seas, in electric storms and floods, and even in the whisperings of the leaves of the trees, or the babblings of a brook or cascade. More powerful than all his earthly divinities were to him the heavenly bodies from whom he felt he depended for his early existence, even though he knew not in what manner, or by what laws. Morning and evening stars, the planets and mysterious voyages across the firmament, appealed to the primitive mind strongly, and ancient observers connected them with individual human fate. Astrology, the precursor of real astronomy, read the destiny of human life in the stars, and to this day, credulous people believe in the superstition of the "horoscope." The underlying fundamental fact is that we are actually "located" in a larger world than merely our globe, which is an insignificant speck in the universe; that our "home" is this gigantic universe with the life of which our life is intimately related—not alone the change of seasons and climates, and sun radiation and moon—caused tides and tidal waves, but probably in much more complicated forms, through the interaction of solar systems upon one another, so that our outlook upon our "environment" is infinite.

Thus, the study of geography is incomplete, without a goodly admixture of astronomical knowledge.

Geography and Human Evolution.—A knowledge of the surface of the earth, in the sense of a description of the earth's opportunities, would, however, be equally incomplete if we left out the human element.

That the evolution of man has been largely determined by geographical conditions, is an established fact. Thus, we must know these conditions to understand and control them, as far as finite human powers can, in the shaping of our own national and individual history.

But the study of our environment does not mean only the study of the physical environment, it includes the study of our human surroundings—of our neighbors in space, in opportunity, and of distant people with whom the common bond of interchange associates us. We want to be—we must be—in touch with all humanity. It is the basis of human intercourse and existence.

To locate ourselves in our environment means, in a measure, to know where we may buy our bread, or find the man who can build our house. We must know something about the flour that comes from the distant city, and wherewith our bread is baked; about the men that raise the wheat, that grind the flour, that ship the bags; about the far-away forests from whence our lumber comes—the iron mines which furnish the nails, with which our dwellings are fastened together, etc.

There is the story, often told in the nursery, of the pie made by a thousand men. When the eager children came to grandfather's house, invited to see and consume that wonderful pie, they were first disappointed seeing only an ordinary apple pie. But when grandfather began to tell where the apples and the crust came from: about the orchards in the West, the wheat fields in the prairies, the flour mills, etc.; how many people had been busy to till the ground, plant the trees, harvest the apples, ship the barrels, raise the grain, make the flour, sell the fruit and the flour, prepare the apples, bake the pie; how many more were needed to make the implements with which the ground was tilled, to run the factories in which the tools were made, man the mines from which the iron for these tools was obtained, gaining the metal from the ore in blast furnaces, build the mills and furnish the machinery, build the stove in which the pie was baked, the house in which the stove stood, lumber the wood which furnished the timber of which the house was built, make the china plate upon which the pie was served, the cutlery with which it was cut and eaten, etc.; not to speak of the building of means of transportation: wagons, trucks, railroads, and of their crews—when grandfather began to open their eyes to the wonder of the thing, to the complex system of human co-operation all over the world in the production of "just a pie," they began to understand. For all they knew, many more than a thousand human beings had been instrumental in bringing it about that they could eat that particular pie at that particular day in that particular place.

The study of geography, meaning the study of how to locate ourselves, is a study of the complexity of human relationship.

How the Young Child Begins to Study Geography.—If we follow the lead of the young child, understanding his natural instincts, we shall find that he sets out precisely as his hoary ancestors did in the exploration of his environment, as soon as he can crawl. Indeed, the curiosity of children antedates their ability to move from place to place. From their crib-cave and in their mother's arms, they explore their surroundings in earliest infancy with eyes, ears and hands. They perceive light, and discover the source of light—a window, a candle, a chandelier. They notice noises and investigate their cause and nature. They grasp what they can lay their tiny fingers on, and will reach for objects on tables, chairs, walls. They will make the acquaintance of their human companions, and learn to "size them up." They will enjoy the sight, fragrance, and feel of flowers and sometimes mistake the painted flowers on the wall-paper for real ones.

But their more actual experience begins when they have the power of locomotion. They are quite fearless and adventuresome in their voyages about the nursery and the other rooms of their home. They locate and identify the pieces of furniture, playthings, windows, and doors. They will soon be dissatisfied to be shut in, and will wish to explore the great world beyond. Apart from their manifold experiments by which they wish to understand the nature of things—experiments which are as often destructive to objects, as they are constructive in mental development—they wish to locate themselves in their wider sphere of environment. Stairs and open places have no horror for them, for they do not know the dangers lurking there. It is a wise parent who knows how far a child should be allowed to extend his voyage of exploration without danger to himself, and without the restriction which would prevent him from learning what he ought to learn.

Some children develop the judgment which warns them of danger quite early. They will never need the protection of gates at the top of stairs, or guards on windows. Others will be reckless. But we must try to check them as little as possible and let them go as far as they can without actual peril. It is a child's birthright to gather experience through hard knocks—he will soon forget the knocks. And if the danger is not to the child but to cherished objects, we may well remember that useless ornaments and gimcracks are not suited to the immediate environment of a young explorer. The articles of actual use, toys and such things, should be of a nature which will make them safe against the exploits of the young vandal. But if many of them should soon become the worse for wear, we ought not to mourn: that is part of their function in the training of a child's experience. The destructive method, if we may call it so, which the child employs is analogous to the analytic method of his elder; construction, synthesis, come later.

From the house, the child will stroll forth, as soon as his legs will carry him, into the yard, the garden, the field, the street. His territory enlarges steadily, and with it his experiences and his eventual dangers. But all this will contribute to the fundamentals of his geographical knowledge.

The educator's function should become a constructive one as soon as the child stores up these early impressions and concepts. Even in the confines of the home, father and mother have endless opportunities for discreet directions and suggestions. But outside of the house, the real task begins.

It is a matter of common practice for parents, especially for mothers, to take their children with them on errands, walks, excursions. Even the child in arms or in his baby-carriage is made to undertake these journeyings. Then the child should not be considered merely as an encumbrance, or an appendage, but as a vital element in the undertaking. Each such trip, more or less extended as it may be, offers chances for new experiences, and for the re-enforcement of old ones, with opportunities for association of one with the other, and a parent should never fail to improve these chances. Trips to the grocer and the butcher, to department stores and restaurants, to resorts and friends, are full of astonishing revelations to the budding mind of the child. Each one of them will assist the child in locating himself in his environment.

Of course, few of these adventures will at once organize themselves into a systematic concept of geographical elements. They will be fragments which the child will gradually learn to piece together to construct a harmonious whole. But he needs a wealth of these fragments, for the world he lives in is a big thing, made up of innumerable single factors. If he has not the material with which to construct his inner world he will never understand his place in life.

He knows only so much of the outside world, he understands only so much of his place in it, as his senses and experiences have communicated to him. His whole world lives exclusively *in his mind*. And if his early impressions lack extent, proportion and accuracy, he will be confined to a world of unreality, of self-deception, and never be able to put himself in proper touch with his environment.

Walks, Hikes and Trips.—Few things have helped children so much in understanding the world about them as the old-fashioned walks which mothers and fathers used to undertake with them, cross-country hikes, and well-planned trips to the woods, mountains, rivers and the shore. Botanizing excursions, fishing trips, observing and gathering butterflies, making mineral collections, and the like, while they add to the

store of nature knowledge in the child's mind, also teach him much about his resources as a geographical center. For each child is the center of his little world. Everything has value only as far as it concerns him—at least in the beginning of his career as a thinking individual. Likewise, ancient nations placed their own homeland in the center of the earth, striking out along various radii towards a periphery encircling this homeland. And the nature lore thus obtained is only part of his geographical outfit.

Eyes That Do Not See.—We must guard ourselves against overrating a child's ability to derive the full benefit of observations without our guidance and direction. While it is true enough that they will observe things in spite of us, they may not always perceive the essential things for the sake of which we have started out. They have "eyes that do not see, and ears that do not hear."

The reason is simply this, that they do not possess a foundation of knowledge which can make them aware of the presence of objects, or phenomena, for which they are not prepared, for which they do not look, which have no meaning to them because they cannot connect them with previous experiences. We understand a thing only when we can link it up with some previous concept.

One of the questions asked of a child in testing his "intelligence" is this:

An Indian visited a western village and saw something which he described to his tribe on coming home as follows: "I saw a man walking along the street sitting down." What did he see? The answer is: a man riding on a bicycle. To the Indian who had no experience of a wheel propelled by a man's feet, the action he observed linked up with "walking," while the seat of the machine suggested a chair. He did *not* observe, in spite of his good eyes, the actual method of locomotion, namely, by turning the front wheel of the machine by means of pedals.

In calling our children's attention to the things we desire them to observe, we shall therefore have to make an effort immediately to connect the new impressions with previous experiences. This alone will give them an interest in the new things; an unrelated new experience makes no appeal to the child at all.

The method of the Boy Scouts, of exploring the country on hikes, might well be copied by the home forces.

The roads traveled, and the geographical facts noted, may well be plotted for future reference, and for the sake of initiating the child into the mysteries of map drawing.

Map Drawing.—This can be commenced, of course, only when the child has learned to use his hands for drawing and modeling. But there are many initial steps which can be encouraged in the home. Anyway, the more formal instruction must be left to the school, even when we are not altogether in harmony with traditional school methods.

The earliest records a child constructs of geographical facts will be merely stored up in his memory. They may be quite disconnected, and refer only to one route of exploration at a time, without connecting by-ways. The network of geographical concepts which can lead up to the formation of the complex picture of the earth's surface will be woven very slowly, out of a mass of isolated threads.

But the child will learn to locate himself, to go to particular places for particular purposes; he will run errands and follow directions given him. What he must develop is the *sense of locality*. Some children have the "bump of locality" as a special endowment; others are slow in making themselves at home in their surroundings. But all, except defective children, can be taught to find places.

One of the earliest and most attractive forms of reproduction of geographical experiences and concepts is found in *sand-pile work*. The seashore, with its great stretches of sand beaches, gives the wider opportunity, and the time may come when our schools and communities will make a systematic use of the vast expanses of beach which our coasts afford, for constructive work along these lines, in what we may foreshadow as "summer play schools" by the sea.

But with the help of building blocks, ordinary rocks and stones, and toys of all kinds, the child will reconstruct his environment. He will place his house and garden, build roads and rivers, span them with bridges and viaducts. He will raise mountains towering over the valleys between them, tunnel them with engineering skill, and lead his teams and railroads through the variegated highroads of his country. He will populate his creations with people—be they mere sticks endowed with imaginary life, or dolls dressed up by him or sister to represent various occupations and different nationalities.

The wonders of the sandtable, or the sandpile, which is better, can hardly be exhausted. No backyard ought to be without its community sandpile, hygienically kept, of course. Incidentally we may be reminded that there is a great and valuable element in the solution of our housing problem. When once our communities will wake up to a full realization of their responsibilities towards their child population, our homes and their backyards will be of a very different kind.

We shall speak later of the *home garden* as another adjunct in geographical teaching.

At first, all these reproductions will be of a more or less fanciful kind, rather unlike the real space relationship of the objects represented. But even on the sand pile, real "maps" can be constructed as soon as a child will understand what is meant by accurate representation.

However, we may not forget that the relative size of objects will be difficult, even impossible, of actual representation. This is realized by the manufacturers of so-called relief maps; on these, mountains and rivers appear on a much larger scale than actualities would justify. This is due to the fact that the actual height of mountains, and the width of rivers, in proportion to the size of the globe, are so very small that they would be hardly noticed at all if we would try to model them to actual scale. Thus we may not criticise the child when he builds his houses and mountains altogether out of proportion to relative size.

This making of *relief maps*, using clay, or putty, or papier mache (mashed paper), with the application of paint to bring out the different parts, is also a fitting transition from sand pile or sand table work to drawing with crayon, chalk, or pencil.

Whatever medium be used, we need not, at first, pay particular attention to the placing of geographical elements, like roads, houses, bridges, etc., according to their actual place in relation to the points of the compass. We shall not even be able to restrict the child to proper measurements. The young child has no idea of scale; besides, we might prevent him from attempting to do anything if we impose upon him adult standards of accuracy. This is

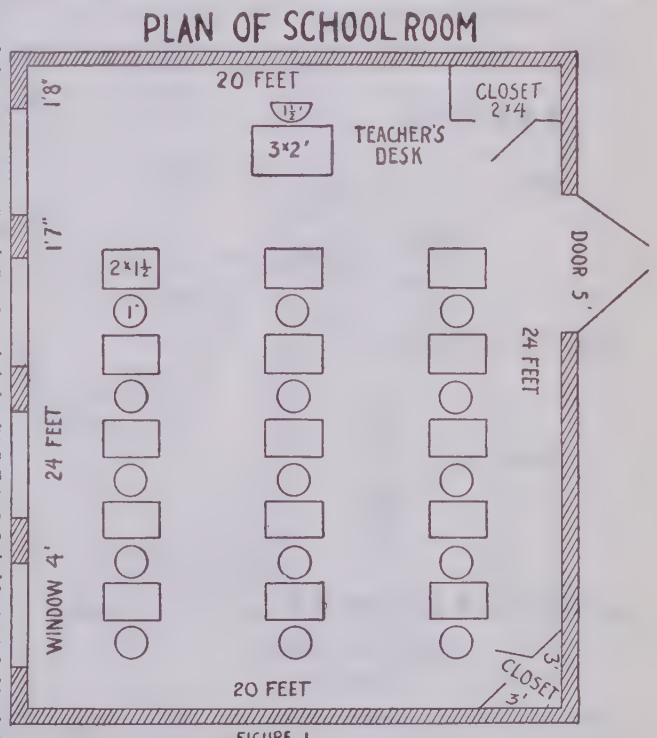

FIGURE 1

play to him, not engineering or surveying. Again, his meagre space allowance might not give him a chance of crowding as many objects in well-balanced scale arrangement as he is interested in.

What we must try to insist on, however, is that the *directions* represented are fairly accurate. That is to say, that the directions of the roads leading away from his house, the cross streets, the store, the butcher shop, the river, the bridge, etc., are so located that they reconstruct his experience in traveling over and to these geographical units.

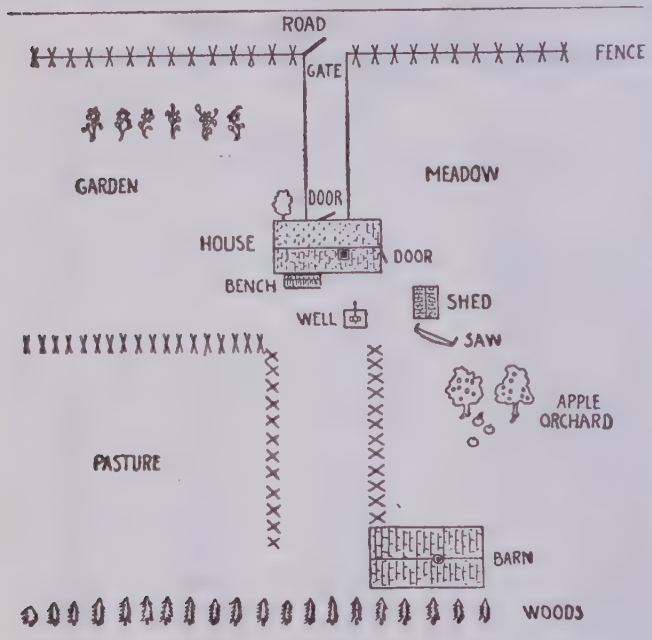
Map construction, proper, be it by way of the sand pile, or relief maps, or drawing (on blackboard, with crayon, on paper, etc.) should begin with a representation of the immediate surroundings. The suggestion has been made, and is carried out in many schools, that the first map should be that of a room, the nursery, or living room, or school room. There is no grave objection

to that, though it may be less interesting to a child than to represent a larger outlook. When, however, actual measurements are introduced, such a method may be well employed. The map of a school room will then look something like that shown in fig. 1.

On the other hand, a map of a farm home, at first attempt at map drawing, may present an appearance such as is shown in fig. 2.

And the immediate surroundings of a city home may look like that shown in fig. 3.

Naturally, the sand pile construction is not confined to immediate surroundings. Neither is map drawing. But it is the sand pile which lends itself more readily to the representation of distant scenes. Here, it is entirely unnecessary to restrict the child to actual measurements or geographical relationship. His constructions must give rein to his imagination. It is enough if he constructs scenes which picture the characteristic essentials of distant and foreign conditions.



motion—there is no end to the fanciful development of such a landscape. In his destructive mood, the child may take the whole thing to pieces, only to build up a scene of Indian life, or of Oriental splendor, of ancient Egypt with its pyramids, or any other scenery which his imagination will suggest.

Map drawing proper is taught in schools so perhaps the home need not consider it. Yet the school has little opportunity of giving the preparatory steps for which the home can so amply provide.

The first maps which were drawn by man were those which travelers made when they explored strange lands. Rough enough they were, and nobody cared as long as they gave the needed information. In this manner even modern African explorers first gave the knowledge they had obtained to the world; the surveyor with his actual measurements came later. But it is not at all out of the way to teach it merely a trip on a trolley car, making the children conscious of the directions and distances traveled, using eventually maps of their home city or district for comparison, explaining every twist and turn in the road.

The Apperceptive Basis.—As said in a previous paragraph, the child cannot understand a new impression without linking it up with a previous one. This linking up process, which leads to real concepts, or ideas, is called "apperception." To apply this principle to geography teaching, I will quote from a previous treatise of mine:*

"From the concrete material in the immediate environment of the child, from the images of his own house and lawn, the trees, hills, rocks, valleys, creeks, rivers,

Map of Farm Home

Figure 2

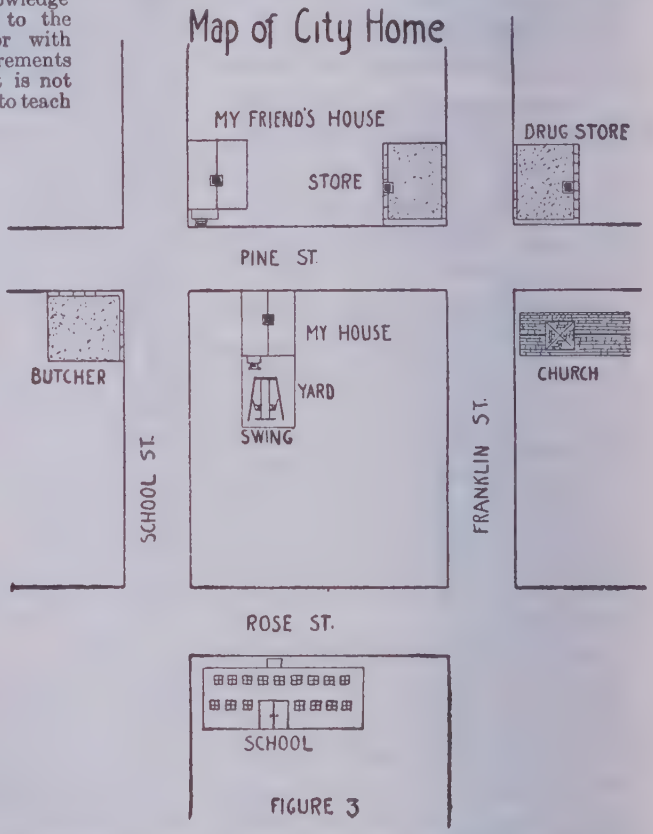


FIGURE 3

During many years of childhood, there is another form of construction which will strongly appeal to the growing imagination of the child. It is a modification of the sand table, where sand may be used to some extent, but where rocks, paper constructions in imitation of rocks, building blocks and "modeling sheets" (for the construction of houses, castles, bridges, windmills, etc.), will predominate. A large, ordinary kitchen table, or boards placed on solid "horses," may be the foundation. On this, landscapes of various kinds may be constructed in the way described. On towering mountain tops may be placed threatening castles; cardboard cities and villages may dot the plains below; a wooden bridge may be swung across an abyss of paper or real rocks, covered with moss; underneath, there may roar a torrent of sand, or of real water, with a fountain in the garden of a villa in the valley; across the bridge, may march a regiment of paper soldiers, carried along by a simple mechanism; water wheels, driven by sand, set mills in

even a young child the rudiments of surveying, with simple, home-made instruments; it will be found quite an attractive game to the child—boy or girl.

The rude sketch maps drawn by legendary pirates to remind them where they had buried their blood-bought treasures (compare the map in "Treasure Island") are examples of the kind of graphic records which represent this stage in the development of map construction. The child's ability to sketch locations is about on the same level, and we should be satisfied with production of this kind.

But all these productions must first be based upon actual experiences. The child must have voyaged through sufficient stretches of land and have charted them, at least crudely, to appreciate geographical symbols in maps and to be able to read, and reproduce maps of distant places. Parents can essentially help their children in acquiring correct concepts by taking them around systematically, giving them opportunities for trips of all kinds, and were

ponds, etc.; of people he knows and occupations he sees carried on; of natural processes like water running down his own hill, of dirt washed down the watersheds of of his own road, of toy boats floating in his gutter, etc., etc.,—from all this he must learn to construct in his mind concepts of things remote, of the Himalayas, the oceans, foreign people, and all the wonderful things that make up the life of nature and man. Words, names, pictures, samples of materials even, maps, and the like, are nothing but symbols, meaningless to him unless he can connect them with real experiences of his own."

(*) "The Career of the Child," The Gorham Press, p. 84.

And he must have these experiences of his own translated into the symbolism of map representations, by charting them, constructing maps of his own, before he will gain the real value of map reading and map drawing as he needs it, in his later, more serious scientific study of geography.

Space and Time.—Geographical relations are, in their essence, space relations, that is to say, geographical units are at different distances from one another, and locating one's self in his geographical setting means to locate one's self in space. Geography implies, therefore, space measurements, such as appear in map drawing, to a scale. But to a child, and for that matter, to the average adult, miles and leagues have very little real meaning. The wild guesses of those who are not used to making such measurements, as to familiar distances, are proof of this. To the child even a yard or a rod,—in his youngest years even a foot or an inch—means as little as a mile does to his elders.

Those who can estimate distances, without actual measurements, have learned to do so by comparing their visual impressions with memories of previous measurements of frequent occurrence. The ability to estimate geographical spaces, not only distances but areas as well, is almost in the nature of a special trade, if it is not a gift of nature. In most instances, space is measured by the experience connected with *traveling* in space—by trying it out through the element of locomotion *through* space: walking, horseback-riding, driving. The effort required and the time consumed in covering distances give the basis for appreciating space. Mere mechanical measurement helps as little as it helps a child to appreciate quantity by merely counting, although the *time* it takes him to count up to a certain number may give him an inkling of the complete quantity.

Thus the child will learn to understand space, distances, and their measurements by actually walking, or traveling in some way. It is therefore quite important to make him conscious of the time and effort he needs to go to a certain place, in comparison with the time and effort it requires to go farther, or less far, to enable him to realize the difference in length of line. It is not so long ago we counted distances, in popular parlance, by "hours" rather than "miles." The very word "mile" is derived from the Latin "mille" (passuum) meaning a thousand steps—plainly a walking method of determining distance.

Young children have very hazy conceptions of space and time. The vast extent of a country like the United States is difficult for them to grasp. What to us are small sizes and spaces, to them appear big. It is a well known fact that the rooms and houses in which we lived in our childhood, if we visit them after a lapse of time, impress us disappointingly, appearing so much smaller and insignificant than when we lived there. The stories of "Alice in Wonderland" and "Through the Looking Glass," among many others, fairy tales with the rest, illustrate the inability of the child to appreciate the true relation of space and time very clearly.

Plays and Games.—There are many so-called geographical games in the market. Some are interesting, others are valueless.

One type represents *cut-up geographical maps*. If these are in the nature of the usual cut-up pictures, they convey little information and inspiration. If they are so cut that the different states of the Union, for instance, appear in their individual shapes, or if the pieces represent mountain ranges, river systems, and the like, they can be put to good use under the suggestions of skillful teachers and parents. The individual shapes of states, or countries, lend themselves to interesting games of imagination. Many of these shapes suggest the shapes of geometric figures (Wyoming, Colorado, Nevada, etc.), others like the Appenine peninsula, which has the form of a boot with spur; suggest the shapes of objects, or animals, or plants. Florida looks somewhat like a thumb pointing downward, on the ordinary map. Mountain ranges call up the serpentine outlines of crawling things; river systems give the impression of branching trees. Innumerable fanciful games can be thus introduced.

There are games which re-enforce the remembering of geographical facts, similar to the game of authors. We must not neglect the memory element in geographical teaching. It is often quite necessary that we should have geographical facts at our fingers ends. While it is well enough to learn how to look up on our atlas the things we have forgotten, we may not always have a map conveniently near, and must rely upon our memory for locating ourselves.

Of course, the sand table, sand pile and landscape table games, described before belong in this class. But they can be much enlarged. The *bathtub* is a not-to-be underestimated place for geographical play. Children will play for hours in the water, swimming their boats, building docks with their wooden blocks, etc. They may imagine at one time that the water in the tub is the Atlantic Ocean, or the Mississippi River, or what not, and organize imaginary journeys from continent to continent, or from city to city. Such *imaginary journeys* may be organized on the *playground*, or in the *woods*, or by the *brook* and *lake*, calling the various units of observation by different names. Even the house itself will give sufficient opportunity, using different rooms for different geographical localities. Many a child has constructed a very satisfactory railroad out of chairs and a stove-pipe. We must not mind it if the children "muss" up things a little once in a while—their happiness is great, and their enjoyment is no less valuable than the lessons they learn in this manner.

Young children may, in the very act of taking a bath, find a stimulation for imaginative play. Dropping their beads in the water they will play they are pearl fishers, or, with their sponges, re-enact an exciting expedition to the strange land where sponges grow in the depths of the sea.

Girls will gladly enter their *dolls* into this sport practice. They are always anxious to make new clothes for them, and to dress and undress them without ever getting tired. They may dress them up in the fashion of a distant peoples, as Indians, Arabs, Hollanders, etc., and make an imaginary setting for them on their *playhouses*. They may construct, with their brothers and boy friends, wigwams, lake dwellings, Bedouin tents, and grass huts, birch-bark boats, and the like. Boys will never tire making ships of all kinds, docks, bridges, windmills and an endless number of similar things, to illustrate foreign lands, or even the near-at-hand geographical facts—the life of the people under various conditions of environment.

Their *dramatic instinct* will furnish another valuable element of constructive imagination. They will play they are Indians and build their wigwams more or less realistically in the woods nearby; or they will be railroad conductors, bakers, firemen, knights rescuing ladies from danger, etc. The *kindergarten games* give a variety of such pastimes for the youngest ones. *Folk dances* will have their part. Gymnastic games, including *archery*, *stone throwing*, *disc throwing*, exercises with the *boomerang*, will bring home to them conditions of the life of people in other lands. There are numerous *songs* which will inspire them with the emotional elements contained in the material which composes their immediate and more distant environment. The Neidlinger songs alone (cf. Collection of Poems and Songs in another part of their book) will furnish abundant selections.

Collections.—Each child is a born collector. At first he will gather things up indiscriminately, and a young boy's pockets will treasure a number of odds and ends, things cast off by original owners, yet having significance of their own to the youthful collector.

This instinct (which almost reminds one of the fetish worship of antiquity) can be put to good account in education. For geographical purposes, there are innumerable ways of utilizing it.

A common desire of children, especially boys, is to collect postage stamps from various countries. If properly organized, this type of collection can be made very helpful in stimulating interest in geography. Of course, here as in all other collections one must guard the child against overstressing—against becoming a collection fiend, as this would defeat the educational purpose of the pursuit. A collection fiend places higher value on the *possession* of a coveted stamp, or whatever the collection may consist of, than on its meaning as a help to broaden his mind. Yet, a mild craze on the part of a child should not disconcert us: no harm need be done by an enthusiasm which steps over bounds occasionally.

It is curious to note how many different things a child *will* discover in all sorts of unthought-of places when once his desire is awakened to make geographical (or any other kind of) collections. He will find samples of raw materials produced by different countries and manufactured goods; curious pipes, knives, and other implements made in foriegn lands; pictures and photographs of scenery, strangely attired people, houses and tree dwellings, boats, etc. Catalogs of dealers, advertisements in magazines, illustrated articles, knick-knacks and curios picked up here and there, will furnish ample opportunities.

He may build little cabinets of his own to store his treasures; and he will start *scrapbooks*, more or less systematically arranged, for his pictures and bits of foreign lore. For he may also pick up pieces of *poetry* and description, to paste in his scrapbooks—girls may indulge in this kind of thing more readily than boys, perhaps. They will collect songs and games, quaint sayings and proverbs, and the like. *Folk songs* of all nations will have at times a singular attraction to growing children, and so have games representing the national spirit of foreign people. Our own country is placed in the position—its population being composed of representatives of all nations on the globe—of offering material of this kind right at hand. The very schoolmates and playfellows of our children are a collection of many nationalities. There are about fifty different languages spoken in this country, each representing a different national spirit, all of them to be blended together in a new national unity.

It is quite well that our children

should make a collection of *languages*, so to speak, in addition to the rest. By that is meant that it would be instructive as well as entertaining—it has been proved to be both—for a child to study and memorize samples of those languages which are the native tongues of his immediate neighbors, and certainly of the languages of the leading nations like French, German, Italian, Spanish, Portuguese. Bits of poetry and child rhymes, simple conversation, etc., will usually suffice, although there is virtue in extended language study where that can be had. This will not only convey to the child a flavor of geographically *distant* people, make him conscious of the human element in this study, mediate to him concepts of the conditions of human intercourse and commerce, but will give him an early training of his speech organs which will stand him in good stead for future possibilities and chances. During the early period of childhood, the "language making" period, when his speech organs are pliable, a child learns half a dozen or more different languages with ease.

Museums.—The collective instinct of the child will make him appreciate the wonderful opportunities which the collections in museums of different kinds offer. Although only the larger cities may afford these opportunities, *in the fullest measure*, organized efforts are being made to establish traveling collections for the smaller towns and rural districts to bring the treasures of the larger museums into distant places, just as traveling libraries have been provided.

But few things will so thoroughly fascinate the normally wide-awake child, or will even stimulate the slower faculties of the sluggard, as a visit to places like the National Museum and the Smithsonian Institution in Washington. The Corcoran Art Gallery there; the Boston Art Galleries; the Metropolitan Museum of Art and the American Museum of Natural History in New York, and similar places.

In the *art museums* the child will not only be impressed by the art spirit manifested through the ages as a civilizing and elevating factor, but he will see human life and its natural setting in foreign lands through the exhibited masterpieces of painting and sculpture. Even the *architecture* of modern and ancient peoples in different parts of the world is represented, often by bits of the originals, or by artificial reconstructions of characteristic types.

The museums of natural history add to this information vast stores of facts about the actual life everywhere on this globe. The flora and fauna of different countries, in different climes and latitudes; the flight of fowl and the singular life in the depths of fathomless oceans, and numerous other things are depicted and exhibited in life-like models. We can study the products of forest and lake, of mountain and valley, the treasures dug from the very bowels of the earth, and the harvests which the waters of the seven seas yield to man's ingenuity, portrayed in convincing representation. More than that: we see man, the man of different color and different race, of different ages and different homelands, at work in his effort to wring the means of existence from the conquered earth. We study his inventions, his implements, his dwellings, his war and peace maneuvers, his domestic life, his hunt, his tilling of the soil, and what not. We circle the globe in a few hours, wandering from exhibit to exhibit, and carry home with us a better knowledge of geographical elements than many a wearisome lesson could have conveyed.

Botanical and zoological gardens are but another form of this museum opportunity. There we see the plants and animals which populate the various places on this earth, in their natural setting, as *living things*. We meet the bison of the western American plains; the elephant of the African jungle; the tiger of India; the deer of the mountain ranges. We see the rice plant growing in submerged fields; we observe the the cocoanut palm bearing its rich fruit. We laugh at the antics of funny monkeys who so look like human caricatures; and we watch the tailor-bird of Java sew together his nest made of the leaves of a strange tree. We get a breath of the icy North when we watch the polar bear, and the heavy fragrance of the sunny lands of the South is wafted to our gratified nostrils when we pass through the vistas of open air gardens or through the sheltered aisles of hot houses.

Another place where children like to visit, for amusement and instruction, is the *Aquarium*, such as the one in Battery Park in New York, where they can see the fish and other animals living in or near the water—like seals, tortoises, alligators—sporting in their native element.

None of these opportunities to make geography a live thing to the growing child shoud be neglected by the parents. They will only add to their own happiness if they lead their children through the treasures thus offered for observation and study, watching their growing interest and delight, and their keen and often unexpected discoveries and remarks.

In a small way, the child can have his own museums and gardens. The collections mentioned before point the way. He may have his own cherished plants *in the home* and takes personal care of them; among them may be exotic ones, like the dwarf plants of China, a lemon tree, orchids. He may have his own little greenhouse; his own botanical garden in the back yard. He may have his pet animals, including perhaps a parrot, he may build his own terrarium and aquarium. All this will stimulate his interest in the various aspects of the world on which he has to locate himself.

Even the most ordinary plants, spices, etc., of which he knows, may be made in-

The Sphinx of Memphis, carved from alabaster and weighing over one hundred tons.

teresting to him by tracing their original homes, in the present and past: the history of wheat, of tea, of cocoa, of coffee, and what not.

Stories and Literature.—Even the young child delights in stories which describe strange and foreign lands and things. Of course, all this appeals to him at first in a fairy-tale manner. He does not particularly care whether the story is true or not. But he delights in the strange coloring, the foreign flavor, which introduces him into a mysterious world different from the one he lives in. This is why stories about Indians, adventure, discovery, the Arabian Fables of Sindbad the Sailor and Aladdin, delight him. The child's ability to appreciate and love these stories antedates by far his ability to read them. Thus *story telling* is an important element in teaching geography at home.

Later on, when he can read, *books of travel and adventure*, the *stories of exploration* and *discovery*, will fascinate him. The literature of all nations is full of these, and it is well for the child to have access not only to books of his own literature, but to classic works of other peoples. Some he may learn to read in the original, others he should have in good translations.

Juvenile books there are in abundance which will satisfy this craving. It is merely a matter of wise selection. And he loves foreign adventures, and the facts of geography when presented to him in story form, linked up with human interests and human lives, will be much more palatable to the child mind than when presented in dry scholastic manner. The historical novel plays its part in geography as it does in history teaching, as it depends invariably upon the geographical setting for its progress.

Reference has already been made to *poetry*. It affords much suggestion and help. Rhymes, usually in jingle form, will assist in impressing geographical facts upon the memory. Winifred Sackville Stoner Jr.'s jingle of "India" ("To India we now will go. To see a monkey show", to the air of "We Won't Go Home Till Morning") is an example. Byron's famous lines:

"Mont Blanc is the monarch of mountains,
They crowned him long ago
On a throne of ice, in a robe of clouds,
And a diadem of snow," etc.,

is an illustration of the serious type of geographical poetry.

Motion Pictures.—It is almost unnecessary to refer parents to the great value of motion pictures in the home-teaching of geography. "Still pictures" have long been used in connection with "travelogues" and home and school lessons of all kinds. Especially when these are colored their value is high, and they will never be altogether replaced by the motion picture. The grandeur of the majestic mountain for instance, in its grand perspective and august repose, will gain little, and may lose much, when presented to the eye as seen from a flying aeroplane.

Nevertheless, it is the moving picture alone which can represent to the student of geography the **LIFE** of nature in different lands, and the life and life conditions of the people who have their being in them. Details as well as the large perspectives can be shown to advantage, and the human appeal can be made irresistible. If we only consider a feat like mountain climbing, if caught by the movie camera and thrown on the screen, we shall realize the untold possibilities of the motion picture show.

Parents will do wisely by following up the program of their nearby theatres to let no opportunity slip for giving their children the benefit of these pictures. These and the still pictures, together with the material gathered together in collections, and visits to museums and botanical and zoological gardens, including attendance at the much beloved circus and its menagerie, are all comprised in the one collective term of *"visual instruction"* which plays a great role in geography teaching.

Earth and Heavens.—The earth is only a part, even though it be the human part, of the child's environment. Whether there is human life elsewhere in the universe we can not even guess. And yet, our lives are intimately interwoven with the life of the cosmos. The child must learn to locate himself in celestial space.

Naturally, this can be done only in an elementary manner, and the child will pass, in a certain measure, through the same stages of mental grasp of the universe as did his forebears through the centuries from dim antiquity.

The first cosmic phenomenon which he will observe, even in his crib, is the change of *day* and *night*. When he grows older, the child will recognize the sun as the spender of light in the day, and the darkness will come to him when the sun hides his face behind the western horizon.

When his age will permit him to think beyond "dividing the light from darkness," when he can be out to watch the firmament and to discover "the lesser light" that "rules the night," his mental horizon will at once be widened. He has no idea of the distance and size of the newly perceived heavenly body, he may stretch out his tiny arms to grasp the moon with his groping fingers. But a new experience is born. And when he discovers his first *star*, and can locate it, perhaps, the following night in the same place, at the same approximate time, there will come to him a new mental light, a new pleasure, which will liberate within his soul strange and but dimly conscious longings. If we only knew it, we might find that the germ of *religious concepts and emotions* was born at that time.

Of course, he has no way of knowing that these heavenly bodies are large; that the sun is many, many times as large as the earth on which he stands. His notions are like the ancients', "geocentric:" his own earth is the center of the universe, and he the center of the earth.

That the earth revolves around the sun, and the moon around the earth; that the stars are either planets somewhat like his own earth, or suns of enormous magnitudes, would of course be entirely unintelligible to him at this stage.

To him the earth will appear as a flat body, as it appeared to the ancients, and it will require quite advanced maturity on his part to wean himself from this notion. It is the experience of those who have carefully tested children's minds that even after a teacher had thought the child had been properly instructed in the nature of the earth as a globe, and of the relation of sun, moon and stars to it, a child would have a mental reservation retaining the old conceptions.

It is very necessary that the child be given ample and early opportunity to observe the *heavenly bodies* in their course. This will be the foundation of his further understanding. There are too many children who have never seen the sun rise. The child should also become familiar with the most prominent *constellations* and watch their revolution in the course of a night and through the months. All this will be basic.

By learning the place where the sun rises, and where it sets, seeing that the moon follows this example, he will become acquainted with the *points of the compass*, and also learn to use the compass itself. This knowledge must be impressed fully, so that the child can locate himself in space, when lost. He may learn, Boy-Scout-wise, to use a pocket watch for determining direction, or, in the woods, the guidance of the moss and lichens which usually grow on the cool or northern side of a tree.

He will now be able to make his map drawing more reliable by doing it in true fashion, placing particulars in the right direction. It is, however, by no means necessary to force him to place "north" invariably at the top of the page. Indeed, he should make the main direction of his plotting, be that north, or south, or west, or east, the basis of his arrangement. This will free him from the bondage of geographic convention without depriving him of the knowledge of how to read the conventional maps.

To make the child conscious of the roundness, or ball-like shape of the earth, is not easy. Not everyone can undertake a trip around the earth to come back to his starting point. One of the best ways is to take him to the seashore where he can observe ships coming "up" from beyond the horizon, and passing "down" it when they recede. Or taking him to wide open prairies where he may observe wagons or horses or trains appear and disappear in the same way, you can give him the same realization of fact which he may compare with the "rising" and "setting" of the sun and moon. He will discover that the top part of a vessel, or wagon, or whatever he observes, always appears first and disappears last.

He may now be led to discover the "North Star" as his guide in the night. It may be easily located as half way between the great constellations of the "Big Dipper" and "Cassiopeia" (the big W). He will observe that these two revolve around the North Star in the course of a day, and rise in different places on consecutive days. This will introduce him to a study of astronomical phenomena.

It requires no emphasis that these observations will open up to him the glory of the universe with all its infinite and divine mysteries. It is not a mere mechanical mastery of "facts" which we must strive to produce in him, but longing for the discovery of the eternal truth behind these facts.

This naturally cannot be accomplished without the parents themselves being fully familiar with the facts of geographical knowledge, so that they may be competent guides to their children; and without their being aware of the spiritual truths behind them. They themselves must have the consciousness of the divine.

NATURE STUDY

Nature Study and Geography.—Nature study is really only an element of the larger interest in the study of geography. In one sense, it is but another name for geography. For it deals with the things which make our earth a living organism, fit to be the abiding place of living beings. More than that, it deals with the very life

conditions of the human race, with our own human organism. It treats of our own human anatomy and physiology no less than of that of animals and plants; botany and zoology are nothing but studies of the structure and biology of living beings closely related to our own structure and biology. It deals with the composition of the soil in which and on which living organisms live—this soil and its mineral constituents, however, are but mutations of living things, life in a state of transformation. Life itself is greatly dependent upon the actions and reactions of elements which we study in chemistry, and upon the force revealed by the science of physics. Human society and intercourse would be impossible without the tremendous development of these sciences: the steam-engine, the railroads and ocean-crossing greyhounds, the telegraph and telephone, aircraft and submarine—all these modern fundamentals of civilization are gifts of nature study.

Nature study, consequently, is a part, and an important part, of the study of our environment. It simply concentrates our attention upon the various single elements of this study, now on our physical environment, then on the flora, and again on fauna of this environment. By thus singling out part after part, it allows greater intensity and singlemindedness—it leads, in the larger sense of scientific pursuit, to a division of labor among scientific men. But we must recognize the essential coherence of the subject matter, and must insist upon the interdependence of even one factor upon the other. There is no plant life possible without chemical and physical interaction; animals need plants for sustenance; and human existence is closely linked up with all manifestations of natural forces.

Nature and the Young Child.—It may seem preposterous to give this all-embracing outlook upon nature study when we are dealing with the young child. As a rule, nature study for the child is a very circumscribed thing. It deals with a few plants and animals, perhaps some special minerals; in later school grades there is added a smattering of physiology and hygiene and some chemical and physical experiments. It is only in the high school, so-called, that some real science is introduced, that biological experiments are being conducted, and that a larger view is obtained.

Nature study is still considered by many old-fashioned teachers and by many "practical-minded" parents as one of the unnecessary frills of school education. This is unfortunate.

For nature study furnishes the basis for a real understanding of human life and its problems. It appeals to fundamental instincts in the child. He is much more interested in bugs and flowers, in the moon and stars, in dogs and cats, in horses and cows, in pumps and waterworks, in rain and snow, in brooks and ponds, in frogs and fishes, in lightning and thunder, and in the thousand and one phenomena of nature about him than he is in reading that "a cat sits on the mat" or in writing laboriously a letter to a spurious "friend" or making out a "bill" for groceries.

The arts of the "three R's" have their place, as valuable tools for the management of knowledge and human intercourse. But they are not the fundamental things. The child is first interested in, and needs to know about, the world of facts and truths around him, the things he may later read and write about, and the numerical qualities of which he may later determine for the purpose of "precise" cognition.

As long as the schools employ the child's time in the lower grades for the teaching of formal arts to the practical exclusion of real life experiences in field and forest, in street and factory, in the star-lit night and the natural laboratory of day light life—or wherever and however Nature can speak to the child her own language—parents should utilize their various opportunities to give their children this knowledge and inspiration.

That means that they must themselves be students and lovers of nature. In hardly any other branch of human knowledge will the child ask so many questions as in this. Nature is full of riddles and mysteries to the child before he finds his place in life, and the thoughtful child will never outgrow this thirst for knowledge about the vast expanse of the unknown. For Nature does not give only knowledge, it gives a longing for knowledge. It gives the inspiration to fathom the depths of the mysteries of the universe, to explore infinity, to find the mainsprings of life and existence—to go even beyond the limits of the knowledge and to speculate about the unknowable, the divine.

True, to the young child this great mystery will not come as a complete revelation. He will see only bits and fragments of the universe, and it will require many experiences and many years before he can piece them together into something like a harmonious whole. But, nevertheless, it is in childhood that the right attitude towards these riddles is built in the child's soul. It is the parent's privilege to cherish this attitude, to express it in his or her own reverential conduct towards human life and the hidden forces of the universe.

Even the young child will understand that there are forces beyond human conception, and he will personify them under the name of God. He will gladly accept the statement by those who teach him that the unexplainable—at least to him unexplainable—phenomena are the work of God, the supreme, mysterious force, more than human. Life in all its forms will hardly ever be understood, or conceived, in any other manner. Even when the child learns, in subsequent studies, to appreciate the medianism of natural phenomena, and to reduce it to "laws," so that he will rationalize and follow up the complex manifestations in a truly scientific sense, he will approach the problem of life itself with reverence.

A little boy of three who had lived much in the open and had, in his own way, looked upon the flowers and rocks and sunsets and stars as wonderful things which appealed to his heart, was once confined to his room in a sea-side hotel for several days on account of continuous rain. When the sun shone again one morning, he rushed to the porch, opened his little arms wide, and, lifting his eyes and face to the glorious light, called out: "I thank you, dear God, for the sunshine!" He had not been taught religion in any set form—with the worshipful attitude his parents had towards the forces of the universe, religion had come to him in a natural way.

Nature, Symbolism and Religion.—As the child repeats, in his individual experience and consciousness, the mental stages through which the human race has passed, it is natural that his first conception of nature should be unscientific, if we may call it so, and more or less poetic, or mythopoetic, as the term is applied. That is to say, strict facts, in close organization of cause and effect, do not appeal to him; he can hardly differentiate between possibilities and impossibilities. This is the reason why our forefathers have indulged in so many myths and legends, so many superstitions in connection with the phenomena of nature. Many do still, and we have almost a revival of the ancient belief in the influence of the stars upon human destiny—just look at the books which are sold over the counter of numerous stores; birthday books, individual horoscopes, etc. Should we wonder that children have similiar inclinations!

To tell them fairy tales, which are nothing but the last chords of ancient melodies—the final form in which the folk mind has preserved the legends of the gods of nature—is perfectly legitimate. They represent the symbolism of the race; the abstract truths had to be personified; the events in the life of the earth and the heavens were to the ancients but events in the life history of their gods.

It is the Sungod who, when the mild spring zephyrs drive away the cold blasts of winter, fights the giants of Niflheim, girt in their armour of ice, and slays them with his invincible sword, the ray of sunlight, awakening the earth with his kiss and freeing her from bondage. As the spring showers descend, so he gives to his bride the new motherhood of flowers and fruit. The stories of Wodan, and of Siegfried, Bruenhild and the Walkyries, reappear in the tales of Thornrose, the Sleeping Beauty and many others. There is a wealth of poetic charm in these tales, and they are deeply significant. The skilful parent will turn them to good account in the teaching of nature to his children.

All folk literature is replete with stories of this kind. Greek and Roman literature, and the Norse legends, are hardly superior to the tales of ancient India or of the North American Indians. The likeness of so many of them has been proof to the research worker that the human race, in its earliest beginnings, has sprung from a common stock; or, if there were different human families, rising from the darkness of prehistoric times, that the human mind conceived nature in the same manner everywhere and at all times.

Even in minor matters, the personifying spirit of childhood may be satisfied. There is an Indian legend of the Hobyas, a strange little people, living in caves and dark places, and trying to capture children and grown-ups for evil purpose. They represent the powers of illness, spread by darkness and dirt. Children will be quite ready to keep themselves clean, brush their teeth, wash their faces, if they feel then that the Hobyas, lovers of dirt, will not come near them. Crude fancy, perhaps, but childhood's fancies cannot represent the highest form of poetic imagination. Just the same our disease germs are rather well symbolized by these Hobyas, and the latter are more intelligible to the young mind than microscopic cells.

In the same way, the seasonal changes are well illustrated by the tales of Proserpina, Ostara, Old Mother Frost, the Christ Child and Santa Claus; these will have their share in the emotional education of our children. Nature interest in its primitive stages is nature worship, and out of a true nature concept will later arise a new form of worship, that of the divine in nature.

Not that the young child objects to experiments and concrete experiences. His powers of observation need training from his first years of life, and he will delight in the discoveries he makes. Gradually he will build up a concrete apperceptive basis, a knowledge of actualities which will lead him to later rational understanding. But the symbolic mythical elements precede the strictly rational. We must not impose adult standards upon the immature child. What appears a superstition to us is a mythopoetic conception from the standpoint of the undeveloped, primitive mind—in the race and in the child. Such a view degenerates into a superstition only when it persists in defiance of maturer knowledge. It is doubtful whether a child whose attitude is rationalizing from the start can be considered a pleasing and wholesome creature. There is danger that such a child will never grow to have idealism, or, for that matter, genuine science and philosophy Without imagination, there can be no science or philosophy. As a matter of fact, it can be shown that those people who had least of this mythopoetic conception of nature in their early history, have never developed higher standards in science and thought, have never become leaders in mental progress.

Sentimentalism in Nature Study.—We should not confuse a wholesome symbolism with the spurious kind so often met with in some primary work. In the older practice of the kindergarten, not altogether outgrown, there is a symbolism rampant which must be considered objectionable. I refer mainly to the geometric symbolism based upon the three fundamental forms of the sphere, cube and cylinder which to Froebel and his followers meant to represent the principal forms of life: the sphere as the prototype of all bodies and all forms, from the cell to the universe; the cube an embodiment of all resting, immovable things, like the minerals; and the cylinder as a mediate form, in which all growing things, like plants are symbolized. The abstruse philosophy which, through these three forms, is taught the pre-school child, is so foreign to the child mind that it can only injure, not favor, the natural, mythopoetic symbolism which is characteristic of this period.

Again, the songs and poems presented in the kindergarten and primary school often breathe such a sentimental spirit that they have a weakening effect upon sturdy childhood. Fortunately not all of them can be so characterized. Those games and songs that dramatize as well as symbolize Nature and personify her forces, will establish a personal, sympathetic relation between the child and the so-called dumb creation. This corresponds with a natural instinct. Thus, the rain comes down to the great brown house where the flowers dwell; or the alder by the river shakes out her powd'ry curls; the pretty little violets are waking from their sleep; the child asks of pussy-willow, the pretty little thing, where it comes from, how it grows; he sympathizes with the chilly little chickadees buried in the snow; and after an imaginary walk through field and lane, the little boy runs home to mamma to tell her: I saw so many things!

Likewise, the children will play that they are animals, and by personifying them, will learn much more about them than by merely "studying" about them. Profs. Hall and Allin wrote this in the "American Journal of Psychology," IX, 1: "The antics of animals are a source of great amusement to children . . . . .They pull down the corners of the eyes and pull the mouth open, put their hands to their ears, crawl like snakes, root like pigs, fly like birds, swim like fish, catch and devour prey, make faces, wear animal masks, form shadow pictures, watch animals and laugh at and perhaps imitate their every movement, personate trick animals . . .Some children desired to be, and others thought they were becoming some favorite animal. They play that they have claws, trunks, tails, tusks, big teeth and eyes, drink or sleep, walk, play like animals. Games that involve catching or grabbing are often very mimetic of animals, and are always hilarious . . . The wearing of animal masks of great variety has always been a source of great pleasure for children, and even plays a very important part in the games and ceremonials of the Chinese, in most European folk-lore and amusements, in medieval revels, and in savage dances. Pinning on tails, ears, horns, feathers, manes, wings, going on all fours, enacting the animal poses that have come down to us . . . .from remote antiquity, with the aid of these accoutrements suggest . . . . that children must approximate the animal consciousness by these devices. On the other hand, the long struggle of man with the other animals for survival and supremacy, the history of domestication, the folk-lore and religion of totemism show us what a role animals have played in human fear, reverence, and even love in the past."

This reflection shows that the child at this stage represents a particular stage in mental development which corresponds to an epoch in the history of civilization when our race was just emerging into the light of civilization.

But there is an over-sentimentalism and a sickening mushiness in some forms of symbolistic nature study. From this we must save our children. Personification can be carried too far, and to ascribe without qualification human feelings and emotions to plants and animals leads to a misconception of man's place in the world.

The objectionable process can be best illustrated by a story which Horace H. Cummings tells in the Preface to his valuable books, "Nature Study by Grades." He says:

"While trimming a young orchard at his home, the author was once accompanied by his six-year-old daughter. With evident uneasiness she watched the clipping off of the small branches for a time and finally asked, 'Papa, why do you cut off these limbs?' 'So the tree will have a proper shape and grow to give us fine fruit,' was the answer 'Well, you ought not to do that, for it hurts the tree. How would you like your arm cut off?' Suspecting the source of this error, the father asked, 'Who told you that it hurts a tree to cut off one of its branches?' 'My teacher said so,' she replied confidently. 'I think you must have misunderstood your teacher. It hurts the tree no more than it hurts you to have your hair or nails trimmed.'

"Two years later the father was trimming the same orchard, and again the little girl was with him.

"Recalling the former incident, and to test the effect of the child's wrong teaching and his effort to set it right, he asked: 'Norma, do you think it hurts the trees to cut off these limbs?' 'Yes, papa,' she replied promptly. 'Who told you so?' asked the father. 'I don't know, but it hurts them,' she emphasized with unshakable credulity. 'Did your teacher tell you so?' 'No,' she answered.

"It was evident that the source of this error had been forgotten, but the *effect* remainded undimmed by the lapse of time or by the father's original effort to explain it away. Who can say how long this error will cling to that child and unnecessarily disturb her sensibilities? This pernicious result no doubt came from a constant use of personification and allegory, without leading the child to differentiate in thought or feeling between figures and the reality."

This story is very significant—that is the reason why I quoted it extensively. It is particularly significant as it is told by a father who is himself a teacher of nature. If he had such an experience, what can we expect of those among us who have not his equipment?

Everything at the right time, and in the right manner. As the race, with its horizon growing in extent, and its mind clearing away the cobwebs of error, mastered the riddles of the universe one by one, rising in its consciousness far above the aboriginal superstitions, without losing in this process altogether a sincere reverence for the inscrutable mysteries of creation—so we must (in due time) lead the child out of the far light of a mythopoetic fairyland into the sunshine of truth. Just the same, the child may remember the beauties of his early dreams, and he may, and must, recognize the truth behind the facts—such a truth as is expressed in the immortal lines of Tennyson:

"Flower in the crannied wall,
I pluck you out of the crannies,
I hold you here, root and all, in my hand,
Little flower—but *if* I could understand
What you are, root and all, and all in all,
I should know what God and man is."

The Wonders of Nature.—Among the less known stories from the pen of Edgar Allen Poe there are two which may not only be read to, or by young children, to stimulate their interest in nature, and give them valuable knowledge, but which prettily illustrate a manner of presentation quite fascinating, and rather fit for the home fireside. One is entitled, "The Thousand-and-Second Tale of Scheherazade," the other, "The Sphinx." Under the title of the first the whimsical author has quoted the old saying, "Truth is stranger than fiction." He tells in his inimitable, humorous way how the Sultan's Queen tells him another story of Sindbad the Sailor, introducing the most astounding adventures and observations. As a matter of fact the wonders which she describes are actualities in nature, only so disguised that they seem like fiction; what she tells as pure inventions, absurd as these incidents are on their face, is readily believed by the Sultan, who scorns the tales of fact. Sindbad tells of an island in the middle of the sea, many hundreds of miles in circumference, but which had been built by a colony of little things like caterpillars. Also of another island where the forests were of solid stone, so hard that they shivered to pieces the finest tempered axes with which the voyagers endeavored to cut them down. Then he describes a cave that ran to the distance of thirty or forty miles within the bowels of the earth, and that contained a greater number of far more spacious and more magnificent palaces than were to be found in all Damascus and Bagdad. From the roofs of these palaces, there hung myriads of gems, like diamonds, but larger than men; and in among the

streets of towers and pyramids and temples, there flowed immense rivers as black as ebony, and swarming with fish that were blind. "We then swam into a region of the sea where we found a lofty mountain, down whose sides there streamed torrents of melted metal, some of which were twelve miles wide and sixty miles long, while from an abyss on the summit issued so vast a quantity of ashes that the sun was entirely blotted out from the heavens, and it became darker than the darkest midnight." He also tells of a terrible bird, bigger than the caliph's biggest domes. This bird had no head that the voyagers could perceive, but was fashioned entirely of belly, which was of prodigious fatness and roundness, of a soft-looking substance, smooth, shining, and striped with various colors. In its talons, the monster was bearing away to his eyrie in the heavens a house from which it had knocked off the roof, and in the interior of which they saw distinctly human beings, who, beyond doubt, were in a state of frightful despair . . . . . .Of course, Poe describes some of the wonders of the world as he knew it: a coral island, the petrified forests in the south of the United States, the Mammoth Cave in Kentucky, the eruption of the volcano, Hecla, in 1766, and of the other volcanoes, and finally the latest wonder of the time, a flying balloon with its gondola.

In "The Sphinx", Poe tells of himself as visiting a friend who has a summer house on the east side of the Hudson, near the mountains. He sits by the window, looking idly across the river at a mountain on the opposite bank, when all of a sudden he is startled by seeing a prodigious monster crawling up the mountainside. Frightened, he tells his friend, who can see nothing. The next time the apparition is repeated, he calls his friend, who discovers that right before his visitor's eyes, on the window itself, there was a harmless moth capering about, a "sphinx", "of the family Crepuscularia, of the order Lepidoptera, of the class of Insecta"—a schoolboy's account of which he reads. The nearness of the little object had made it appear to be of gigantic proportions, as projected by the unsuspecting eyes of the visitor upon the distant mountain.

This is a lesson in proportion. What is small and what is big? A child will be fascinated by imagining the insect world enlarged a thousand times, and himself reduced in size correspondingly. What a new world he would discover! The life about him, in all its forms, will take on a new significance to the searching mind. In the stories of "Alice in Wonderland" and "Through the Looking Glass," this play of fancy is employed to produce a charming tale, one which is suited most admirably to the mind of the young child.

If parents would see the wonderful perspective of nature's creations in the manner of Poe, if they would introduce them to the eager child in a similar fashion, would not the interest of the child be aroused to fever heat? This way of teaching nature is different from the type of routine instruction, when the child is asked: What is the size of an apple? What is its form? Its color? With what is it covered? etc., etc., ad nauseam.

The Seven Wonders of the World.—The seven wonders of the world, which were praised in classical antiquity as the most astounding and magnificent of man's power, skill and perseverance, were the Pyramids of Egypt, the Hanging Gardens of Babylon, Temple of Artemis at Ephesus, the Statue of Zeus (Jupiter) at Olympia, the Mausoleum at Halicarnassus, the Colossus at Rhodes, and the Lighthouse on the island of Pharos, near Alexandria. For their time they showed indeed man's progress in science and art. It is interesting to note, however, that they were all products of constructive art.

If we would wish to compare modern wonders of this kind with the creations of the ancients, we could point not only to a much larger number but to much more gigantic proportions. Modern man has mastered nature and her forces to such an extent that the wonders of the old world are like a child's dreams. It is well to introduce children to such contemplations. Every handbook or encyclopedia, even ordinary yearbooks and almanacs, give lists and descriptions of our great creations, like the Brooklyn Bridge, the skyscrapers, the mountain tunnels,—really so countless that there is no place here for even a scanty record.

What must be pointed out is that this progress, this perfection has been made possible only by the astounding steps the race has taken in studying nature and in applying scientific facts to the development of technical sciences. A number of discoveries and inventions, which sharpened the service of the human senses to an extraordinary degree, led the way. It is these inventions and discoveries the value of which the child ought to learn about, quite apart from any logically organized course in nature study. It is well to remember that children do not learn in a logical way, as we understand it, but along the road of interest which twists and bends unexpectedly in all directions.

The first of these important inventions is the watch or *clock*. Its perfection has enabled scientists to measure the most minute fractions of time, and consequently the most infinitesimal fractions of space in astronomical calculations. Incidentally, the watch can be used for determining the points of the compass. The invention of the *compass* itself was the next step in using science to benefit man in his conquest of the earth. Almost at the same time as the compass (1300), the *glass lens* was invented, first merely for use in spectacles. Two hundred years later, this invention led to the construction of the first *telescope* and of the *miscroscope*. It is unnecessary to dwell upon the vast significance of these two inventions in the furtherance of science; indeed, our knowledge in astronomy, biology, and kindred sciences would have remained very fragmentary without them. More than that, they gave so tremendous an impetus to nature study that we may date from them the beginnings of modern science.

Other inventions of a scientific character which made human civilization something essentially different from that of antiquity, were the *barometer* and the *airpump*; the *thermometer;* the discovery of *chemical elements*, of the laws of *magnetism* and *electricity*, of the power of *steam*, and other physical forces. What a great change in the daily life of all of us has been wrought by the invention of so small a thing as the *match* for starting fire and light, and by the introduction of modern methods of *illumination* and *heating*! When we compare the enormous aqueducts of ancient Rome with our modern pipe lines and reservoirs, we shall also see at once what transformation has taken place in the supply of drinking *water* to the huge populations of our big cities.

An ancient visiting a city of sky scrapers like New York, with its subways and elevated railroads, its bridges and tunnels, its telephone systems and wireless connections, its electric signs and its home comforts, would find in it all his own "seven wonders", surpassed to an incredible degree. It is well to make our children conscious of this fact. They have been born and are growing up in a world of wonders which they take as matters of fact, without much wonderment. It is one of the purposes and objects of nature study to arouse in them a proper estimate of the civilization they live in, which has been created out of a better knowledge and mastery of nature and her forces.

Nature Games and Occupations.—A systematic study of nature in its various aspects may be left to the school. That does not mean that parents should be indifferent to the method of school teaching and the subject matter offered in the school. Much of what is being done there is fragmentary and psychologically questionable. But that is another matter.

With even the youngest child *games* will introduce nature study proper. The kindergarten games offer some material, as has been pointed out before. But many of the ordinary games of childhood can be utilized for a better appreciation of nature facts. These may be mentioned, among many others: "Fox and Geese", "Bull in the Ring", "Cat and Mice", "Moon and Morning Stars", "Beast, Bird or Fish", "Flower Match", "Leaf by Leaf", "Planting a Garden", "Farmer in the Dell." Various song books for children contain such an abundance of material that parents will never be embarrassed by lack of it. While we must not spoil the children's interest in these games by trying to make them too conscious of the didactic element therein contained, parents would lose valuable opportunities if they would not introduce the real things of nature—flowers, animals, etc., as far as that is feasible, as factual counterparts of the symbolic elements of the games.

As Jessie H. Bancroft, in her book, "Games for the Playground, Home, School, and Gymnasium" (The Macmillan Co.) puts it:

"Games have a positive educational influence that no one can appreciate who has not observed their effects. Children who are slow, dull and lethargic; who observe but little of what goes on around them; who react slowly to external stimuli; who are, in short, slow to see, to hear, to observe, to think, and to do, may be completely transformed in these ways by the playing of games. The sense perceptions are quickened; a player comes to see more quickly that the ball is coming towards him; that he is in danger of being tagged; that it is his turn; he hears the footsteps behind him, or his name or number called; he feels the touch on his shoulder; or in innumberable other ways is aroused to quick and direct recognition of, and response to, things that go on around him."

This is true of all games; it is particularly true of nature games. *Training in sense perception* is indeed one of the objects of nature study—without the stimulating power of quick and correct observation nature study would be defeated of its purpose.

We may therefore include in this part of our study all those *games and occupations* which train the child's senses. Here again, the kindergarten games and occupations, and some of the Montessori materials have

their value. In the "Timely Games and Songs for the Kindergarten", by Reed-Brockunier, there are some good song-plays, like "The Bell-Ringer" (sense of hearing); "Two Little Windows" (vision); "The Mystery Man" (touch); "The Wonderful Bag" (taste); and "The Surprise" (smell).

In connection with this work, there must be a careful training in the perception of *color* and *form*, with parquetry, colored papers, paper-cutting and pasting, painting, etc. This will lead to an early discovery of eventual color-blindness which is capable of partial correction, to avoid observational mistakes. Recognition of different *temperatures* and of *weights* is an important part of sense training. Objects and materials must be recongized by direct, or by indirect touch; the differences between rough, smooth, silky, woolen, velvety, etc., should be marked. Special training is needed in developing the sense of *location* and *self-direction*. Motor impulses must be controlled; manual exercises of all kinds will be in the nature of experiments with natural material and its yielding to manipulation with hands and tools, preparing the child for an understanding of the development of the technical sciences out of nature knowledge.

Even primitive folks had a sort of geometric symbolism in nature representation. They "conventionalized" leaves, flowers, even animal forms, like snakes. Such designs are common among the ancient Greeks and Romans as well as they are among the relics that have come down to us from Babylonian and Egyptian antiquity, and from our North American Indians. So *art work*, connected with nature work, can well introduce such geometrically conventionalized nature forms. But a great deal should be done in free color representation, with washes and paints. Also free hand cutting of leaves, grasses and flowers. Modeling offers many varieties of representation, naturalistic and conventional, in designs, borders, etc. Leaves can be traced on paper, and colored. Artificial flowers can be made from tissue paper. Animal forms may be cut, painted, modeled.

Grasses and leaves may be arranged in pretty designs and used in blue printing. Or leaves may be lightly fastened to some background, paper or other material, as a pattern, to be painted around, so that the leaf design remains when the leaf itself is removed. This may then be filled in with other colors, or by drawing in the veins, etc. If this work is done on wood, very pretty effects can be produced by using a toothbrush instead of a paintbrush, squirting the water color on the wooden background by holding the toothbrush in the left hand, and scratching the bristles with a small stick of wood held in the other. Groups of leaves and grasses can be used in this way, first removing one layer, and then another; thus various grades of shading can be effected, making the design stand out in relief.

All this work will strengthen the child's interest in nature forms.

Riddles and Puzzles.—A child's interest can always be aroused by puzzles and riddles. They can therefore be pressed into service for the fixing of nature knowledge. Of the ordinary riddles which ask for nature objects by description, syllabication or letter combination, every magazine is so full that it is unnecessary to give examples.

To illustrate some forms of these puzzles, the follwing may be introduced:

Chaotic Words

These puzzles are in groups. Each has 5 horizontal lines of letters, and contains 5 words. The letters are also arranged in vertical rows. Group A has the word "antelope" in marked letters to show how to do them.

A. The Happy Family; Animals.—

J A O P A R
A E C **E** H **O P** T
K L E K **L** R O O
E A **T** P A A N
L **N** N G A L D **E**

Other words: Jackal, Kangaroo, Elephant, Leopard.

B. A Bouquet of Flowers.—

S Y R I T H T M
H O E L I O O A K
G A A A N P U D
M E L C Y I L C S
H W R E G N E H

Words: Sweet peas. Hollyhock, Geranium, Marigold, Hyacinth.

C. A Cage of Birds.—

S I T T C R
W I O E O O D
B O G L A R C
P U Y D E N N
B K S T A R R K

Words: Skylark, Woodcock, Bittern Pigeon, Bustard.

For somewhat more advanced children, the puzzles of hidden words may be suggested.

Hidden words in words.—Find a mineral in a small country of eastern Asia. C (ore) a.

Hidden Trees.—Example: "That *opal* must have been stolen." (Palm.)

Since Darius returned he has grown.
Mamma, please, may I go?
Ethel may go to school.
The fashions often change.

Hidden Insects.—

The rifle and dog are mine.
He briefly replied.
State your wants.
It was papa.

It goes without saying that one of the greatest delights of children will be to invent their own puzzles of this nature which will stimulate their interest in study most decidedly.

Dropped-letter sentences, dropped-words sentences and paragraphs, and similar puzzles will have their share in these games.

The toy stores also offer a great number of dissected pictures and other nature toys and games which can be used to advantage in the nursery and around the family table.

Scientific Tricks.—In line with the puzzle interest of children is their great pleasure in magic tricks. This is perhaps a reverberation of the emotional state of man in witnessing the performances of the ancient conjurer, magician and necromancer. The fear of these, the great awe inspired by them, was at one time in the dim past among the most influential elements of religious worship and mythical lore. The child shares with primitive man this state of mind. But what was once a fearfully solemn ritual, has become a pleasant entertainment.

Magi were the priests of the Babylonians; the priests of all ancient religions practiced "sorcery" of some kind at all times; they were skilled in secret knowledge, as it was called—and quite able to perform what seemed to be miracles to the awe-stricken populace. They made speech come from the mouth of their monstrous deities as represented in stone or bronze images of huge size; they made them appear as bleeding from imaginary wounds, etc. The Hindoo fakirs and the medicine men of the North American Indians belonged to the same class. During the middle ages, witchcraft and sorcery were firmly believed in; the faith in magic, conjuring, enchantments, the black arts, exorcisms and soothsaying was common, even among the so-called educated. These old notions and superstitions have not died out altogether in the modern world.

No wonder that our young have a deep interest in all conjuring and that, while it inspires them at times with a strange feeling of fear and misgivings, especially when they see the performances of our modern "magicians," they take an almost inordinate delight in all matters of magic.

Many of the medieval magicians, like their ancient predecessors, were not merely jugglers and deceivers. They were advanced scientists. Indeed it was their premature knowledge of scientific facts—far in advance of their times—and their serious scientific researches which gave them the power to impress the multitude in which the scientific sense was wanting. Both the great Nostradamus and Paracelsus were physicians and alchemists, as well as necromancers; the latter is important in the history of medicine on account of the impetus he gave to pharmaceutical chemistry.

Likewise, in the harmless tricks which our children may learn to play there is often hidden a great deal of real science—in chemistry and physics. A few of these may be here described to make our meaning clearer.

Put some snow, mixed with salt, on a plate; on top of this set another plate in which there is a mixture of cold water and snow. When both are set upon the warm stove, the salted snow in the lower plate will melt, causing so much abstraction of heat from the upper plate that the water in it will form ice.

A magic lantern will give not only a great deal of amusement to children, but will illustrate to them the principle of the refraction of light. A much simpler form can be made at home without a lens, using a mirror, so that inverted pictures of the bright scenes outside can be observed in daylight (Camera obscura).

Refraction of light is also demonstrated by the simple trick of holding a stick slantwise in a bowl of water.

Another trick with heated and consequently rarified air is performed with a soup plate and an empty glass. Pour some water into the soup plate. Then heat the air in the tumbler by holding a candle under it, the tumbler being held in an inverted position. As soon as the air in the glass is sufficiently heated (and thinned out), set it quickly into the water in the plate—the water will rise immediately in the glass occupying the space left empty by the cooling and therefore contracting air. The opposite phenomenon can be illustrated by the following experiment: When you place an empty glass into water, face down, it will be noticed that the level of the water within the tumbler is lower than that of the water surrounding it, owing to the presence of air in the glass. This fact can be utilized to demonstrate the principle of the diver's bell. Place a cube of sugar in the centre of a large enough

and flat disk of cork, floating in the water contained in a deep soup plate. If now you place an empty glass, bottom side up, quickly over the float until it touches the bottom of the plate, the float will be seen swimming on the lower level of the water inside the glass, the lump of sugar being untouched. If you remove the glass carefully you will find the sugar absolutely dry.

Tricks with magnets are numberless. The blowing of soap bubbles is really a scientific experiment. There are numerous balancing tricks, exhibiting principles of statics.

There are hundreds of other tricks affording entertainment and instruction to the children. Care must be taken, on the one hand, not to introduce them in too dry and didactic a manner; on the other, to impress upon the children the wonderful laws of nature which are demonstrated by these tricks—which are not tricks at all, but real experiments, leading over to more serious and orderly work with the forces of nature.

Many children will delight in organizing these tricks into the form of "public performances" given for the benefit of their friends; this also satisfies their dramatic instinct and should be encouraged. Parents ought to take themselves a lively interest in these activities, and be helpers and advisors, without attempts at dictation.

Outfits for young magicians can now be bought for small sums in the toy stores.

Cooking and Domestic Work.—Still on the order of more or less unsystematic work—and of a kind which can most easily and attractively be done at home—are cooking and other domestic work. Lessons in this field, when given in school, partake of the nature of school routine and often lose much of their spontaneity and interest.

Not only the little girl but even the young male scion of the house will be greatly attracted by mother's preparation of meals. There is first the multiplicity of supplies—the meats, the vegetables, the spices, the fruits, the nuts, the milk, cream, and butter, tea, coffee, etc. To the mother who understands her educational functions these supplies alone will afford an endless opportunity for imparting nature knowledge to her children in an entertaining as well as instructive manner. Where does the meat come from? What kind of meat is it? What cuts? Meat, fish, or fowl? The entrails and general anatomy; kinds of fruits and where they grow—is it necessary to enlarge upon this vast field of information of the most fascinating kind?

There was a little book published years ago which illustrates precisely the kind of information which can thus be imparted: "Aunt Martha's Corner Cupboard," by Mary and Elizabeth Kirby. It introduces two lively, mischievous boys who spent their vacation with an elderly aunt in whose old-fashioned house there was a corner cupboard of the old English type. "It seemed to Aunt Martha" (for she was a lady of a lively imagination) "as if everything in that cupboard—her china, her tea, her coffee, her sugar, even her needle,—had a story to tell, and a most entertaining one, too. Had not many of the things been in foreign parts where are great palm-trees, and monkeys, and black men, and lions, and tigers?" And so she tells about tea-cups and pottery, tea and botany, as well as gardening and agriculture, sugar and sugar-mills, coffee, salt, caravans, birds, and what not.

Modern parents might well make their *kitchen cabinets* and *pantries* inexhaustible mines of material for nature study to their children.

Then there is the *cooking* itself. The boiling of water in the tea-kettle alone will furnish inspiration for many a home lesson in science. Did it not give James Watt his first idea of the steam engine? And has not steam changed the face of the earth and made modern civilization possible?

In the boiling of milk or eggs other natural laws are impressed. Really, every dish made in the home kitchen by baking, boiling, broiling, roasting—whatever it be—is full of suggestions. Chemical and physical facts, even anatomy, physiology, and biological conditions, can be brought forth. Chickens and their eggs may be made to serve the need of a practical knowledge of embryonic life. *Carving* is dissection.

In the caring for the home there are many other occasions for nature study. *Cleaning* and *dusting* suggest proper methods of cleanliness and the learning about the meaning of sanitation, personal and household habits, health and disease.

The study of the composition of dust brings to the child's consciousness many microsocopical facts of organic and inorganic matter. There is the problem and meaning of *fresh air* and *sunshine*, of proper methods of *ventilation*—much of chemistry and physics can be introduced in this manner, quite informally. The chemistry of *soap* and *hot water*, of dirt and washing, of drying and bleaching, is another interesting topic. The hygiene of *dress*, and the various *dress fabrics* form other themes of discussion.

Further comes the *supply of water;* the hydraulic principles of supplying each household with running water, and the hygienic principles of purity of the supply. Even very young children will be fascinated to follow up the water-pipes in the plumbing arrangements and in the disposition of sewerage. Likewise, they will wish to know about the method of *lighting* and *heating*. There is the gas supply, and the chemistry of gas manufacture and gas light and heat. A study of the composition of the flames will absorb a child's attention. Then we have the modern installation of electric light, with all its ramifications. The electric current is a most important subject of study. A child will be interested in father's attempts to detect the cause of the electric doorbell not ringing, or of its persistence in ringing without stop. The distribution of light in the room, the proper position of the light for reading, writing, and working, matters of kerosene lamps and candles will suggest further lessons in principles of vision, the care of the eyes, the manufacture of candles, the science of petroleum.

The *kitchen stove* and the *furnace* open up another chapter. The lighting of fire, the history of the hearth, the invention of matches, the proper use of coal and wood, the origin of fuel, the trick of draughts, etc., give occasion for another long series of observations and practical experiments.

One point in the preparation of foods may be added: the matter of *diet*. It is quite feasible to give even a young child some ideas of the relative values of different foods, of their digestion, and of their effects on health and disease.

It is not intended to make any of these lessons, if we may be justified in calling them so, cumbersome and technical, or to shoot beyond the mark. While all of these opportunities make for nature study they need not be given in the pedantic way of science teaching. They will be incidental and informal, amusements rather than lessons, tricks rather than experiments, spontaneous rather than set. But we must give the mind of even a young normal child credit for being able to absorb and understand many more things than are usually placed within his reach. Most child minds are actually starved from lack of opportunity.

Gardening Outdoors and Indoors.—One of the primitive occupations is digging, planting, harvesting. A child revels in such work. Only one caution is needed: it is natural to the child to be easily tired, not so much physically as mentally. To force him to sustain attention and effort beyond his fatigue point is a great error. Such forcing will inevitably make him unwilling for, and incapable of further effort.

But within his limits the child is very happy when he can dig and plant. His garden beds may not look very orderly, and we may have to refrain from forcing him to comply with adult standards; his results may be questionable as far as crops are concerned—yet the mental crop may be abundant. When the play spirit enters into his gardening, the child may be found to be absorbed in his horticultural and agricultural pursuits. School gardens are now a recognized part of the curriculum in many places; there are also community gardens. Every backyard can be utilized for some work of this kind.

The child will learn much of the nature of the soil when he works it and when he discovers its yield. He will learn about the weather, about sunshine and rain, and wind and seasons. He will understand better what growth means and the difference between living and inorganic things. He will learn more about seeds, fertilization, germination, and flowers—wild and garden varieties—about vegetables and grains. He will appreciate the work of the farmer and truck gardener, and the influence of climate and temperature, drainage and irrigation. All these things will in the early stages be somewhat hazy and indefinite, perhaps, but his practical experience will give him a basis upon which he can build his later, better organized and more clear-cut knowledge. What he needs to develop now is his faculty of observation, the ability to see with his own eyes, to draw conclusions, to store up facts, such as later will be woven into the fabric of his world conception.

In the house, there can be much work of a similar nature. He may learn to rejoice in the gift of a flowering plant, or a dwarf shrub, to be taken care of in his room; or he may be appointed guardian of the home conservatory. There is the watering, and the removal of dry twigs and leaves; the care of the soil in which the plants grow, the temperature which must be maintained to preserve them, their place in the sun. He can build his own miniature greenhouse, to grow mosses and ferns, and populate the little world with insects, frogs, and lizards, studying their habits and life conditions.

Outdoor Studies.—Professor Preyer, in his studies of the development of the child mind, said that "a child in the first three or four years of his life learns as much as the student in his entire university career." If this is true we need not fear that the suggestions made in these lines are exaggerated demands. What is pleaded for is merely opportunity for the child from in-

fancy up. That is why he should not be imprisoned between home and school walls, but needs the freedom of field and forest to develop the health of his body and the sanity of his mind. The fettered child is the one who is more apt to play truant, to become disgusted with "learning" and "book study", than the one who roams in the open as his birthright. The "wanderlust" of the race is inborn in the normal child, and unless it is satisfied in a normal manner, will tempt the active child to find an outlet for his cravings in an "illegitimate" way by playing truant. Well may Whittier's "Barefoot Boy" be quoted who gains—

"Knowledge never learnt of schools,
Of the wild bee's morning chase,
Of the wild flower's time and place,
Flight of fowl and habitude
Of the tenants of the wood;
How the tortoise bears his shell,
How the woodchuck digs his well;
How the robin feeds her young,
How the oriole's nest is hung;
Where the whitest lilies blow,
Where the freshest berries grow,
Where the groundnut trails its vine,
Where the woodgrape's clusters shine;
Of the black wasp's cunning way,—
Mason of his walls of clay,—
And the architectural plans
Of gray hornet artisans!
For, eschewing books and tasks,
Nature answers all he asks;
Hand in hand with her he walks,
Face to face with her he talks,
Part and parcel of her joy,—
Blessings on the barefoot boy!"

It is obvious that this craving of the boy—and the girl—must be gratified if we wish to avoid mischief. And it is good nature work if we yield to these natural promptings. The old-fashioned walks of parents and children, their hikes through country and woods, have fallen into disuse in the large cities with their magnificent distances. Yet, it is being demonstrated by the Boy Scouts and the Camp Fire Girls movements that it is perfectly feasible to adapt the needs of children to modern life conditions. It should not be necessary for parents to leave all this rich life of childhood to strangers; they should take some of their own deepest joy in sharing it, in organizing those expeditions which will acquaint their sons and daughters with life in the open—with woodcraft, wild life and tentcraft.

If parents are at a loss as to where to find instruction for themselves, let them study the handbook of the Boy Scouts of America. There they will find most of what they need.

The essential point is to make the children conscious of the natural conditions of life; to have them learn to adjust themselves to nature in the rough, to re-experience the experience of the race in developing civilization from the first primitive attempts to differentiate the human from the lower creation to modern time. In other words, to reconstruct the world in which they live from its rudiments and fundamentals. They must learn to understand the world they live in, to locate themselves in their natural setting.

Just to give a brief survey of what children may learn in this manner, I will suggest some of the things which may be imparted to them:

How to use the compass, or how to find the directions with the use of an ordinary pocket watch.
How to measure heights and distances.
How to find your latitude by the stars.
How to make fire.
How to know the stars.
How to know the birds.
How to know shells, reptiles, insects, butterflies, beetles, fishes.
How to know rocks and minerals.
How to know mushrooms from toadstools.
How to know trees, shrubs, wild flowers.
How to know about the wild animals in the woods and fields.

These are only a few of the many valuable lessons the children will learn on their hikes and camping expeditions.

To send children to camps in the summer has become a habit with many of the well-to-do parents, and for the less favored there are community camps and other provisions. At least a beginning of this practice has been made. But the question arises whether it would not commend itself to have the parents themselves get into the habit of camping out with their children at different times of the year, not merely in summer, but also during the winter months, whenever occasion arises. Fathers will go on hunting or fishing trips; mothers will spend their time at fashionable hotels in so-called resorts, either sending their children away among strangers or taking them with them into the strenuous life at such resorts. The natural and most helpful arrangement would be to organize opportunities for a healthy outdoor life in which the entire family can partake.

Collections.—From these hikes, walks and camping expeditions, children may bring a number of things back home with them which will not only be souvenirs of pleasant times spent in communion with nature, but which may be further objects of study.

They may make for themselves *herbaria*, that is to say, collections of dried and well-preserved leaves, seeds, samples of bark and wood, and other botanical material. These specimens they will learn to identify and classify, adding notes as to where they found them and what their life conditions are.

In connection with these actual specimens they may collect *pictures* of trees, shrubs, weeds, wild flowers, for comparison. A knowledge of the most common trees is unfortunately so rare at the present time that such studies should be distinctly encouraged.

To this kind of collection should be added specimens of the life among the plants that grow on the ground and among the branches of the trees that reach up into the air. Collections of *beetles*, *butterflies*, and other *insects* should be made. Here is also an excellent opportunity for teaching the young proper consideration for life. No wanton distruction, without a real object of study, should be allowed, and in preparing beetles, bugs and butterflies for the preserving box, cruel killing should be avoided, chloroform or other painless methods being employed. Respect for LIFE and its sacredness must be inculcated in the young; their natural recklessness and their desire for mastership over the dumb creation—quite a primitive trait—can thus be turned into constructive channels. For when they learn to connect their collecing instinct with the study of life, and with scientific knowledge, they will assume a different attitude towards the helpless creatures they catch with net and cunning.

Some living things—like turtles, lizards, small snakes, frogs and fishes,—may be among the results of their hunting. These they may place in *terrariums* and *aquariums*, with sand and soil, rocks and plants so arranged that they will represent an imitation of the natural environment.

To catch wild birds for the purpose of keeping them in cages should be discouraged. There are many birds to be bought in the bird stores, like canaries, parrots and the like, that were born in captivity and may serve to teach children the care of our feathered friends, as far as that is necessary. Our zoological gardens exhibit a sufficient number of birds, placed in an environment which most nearly resembles the natural conditions, so that it would seem superfluous to subject birds to the tender mercies of our immature children. But it is well for children to know birds and to distinguish their various songs, also to study their habitations. It is equally well to inform them of the vast service they render man by the destruction of harmful insects. Collections of *bird pictures* will be welcome.

Of living animals, again we must discourage the catching of jolly wild fellows like squirrels. Dogs and cats offer much opportunity for the study of animal life. To those children who have occasion to raise guinea pigs and rabbits, these animals may soon become great pets. Then we have in many instances horses and cows, eventually goats and kids for the home menagerie.

Collections of *grains*, of *seeds*, of *mineral*, of *shells*, and what not, may complete the home museum.

Museums and Public Collections.—It needs to be said only in passing that children take great delight in visits to museums of natural history, to botanical gardens and zoological collections in aquaria and menageries. While these may be found only in the larger cities, the circus brings at least some of the strange animals in which children are interested, like elephants, lions, tigers, foxes, giraffes, to the smallest village.

For the little ones, *picture books* representing the treasures of nature will be most valuable.

Advanced Work.—All these things can be made of interest even to little tots and can be adjusted to the needs of the growing mind.

But there is a great deal that children will like to do at home even after they have begun to study science in earnest in school.

Attention may be called to the sets of *chemical* and *physical* apparatus which can be had for little money in the toy stores. Children may learn to build aeroplanes, submarines, to arrange electric bells through all the rooms in their homes, to construct telephones and telegraphs, wireless apparatus and other electric appliances. All these efforts afford outlets for their natural activity and inventiveness and will lead their restless minds into constructive channels.

Graphophones, with the wonderful reproduction of tones and voices, are another attraction to the child. While even the youngest child may learn to manipulate them, the older boys and girls may be induced to study the laws of nature which made this great invention possible. They will, of course, connect it with the principle of the telephone.

Then there is *photography*. Cameras are now so cheap that every child may have one. But the children ought to be taught

to take and develop their own pictures. In this wise they will learn much about the chemical action of light.

If you can give your older children a *microscope*, it will arouse their interest in the vast realm of minute life—a new world to them, which, however, will introduce them into the science of the invisible forces, so dominant over the visible world. Such an instrument affords them a great deal of highly instructive entertainment.

What Parents Should Know.—As said in an early paragraph, parents who realize the wonderful opportunities which they have for their children's nature study in the home will feel that they must themselves be properly informed. Or else they should at least study *with* their children—thus inspiring them with the sense of comradeship. The parents' interest will be the greatest incentive to the child's attitude.

There are many publications which will give those parents who had no previous advantages the desired information and suggestions. They will find them if they look for them. It may not be amiss to refer once more to the very helpful three-volume work by Horace H. Cummings, NATURE STUDY BY GRADES, published by the American Book Company, New York.

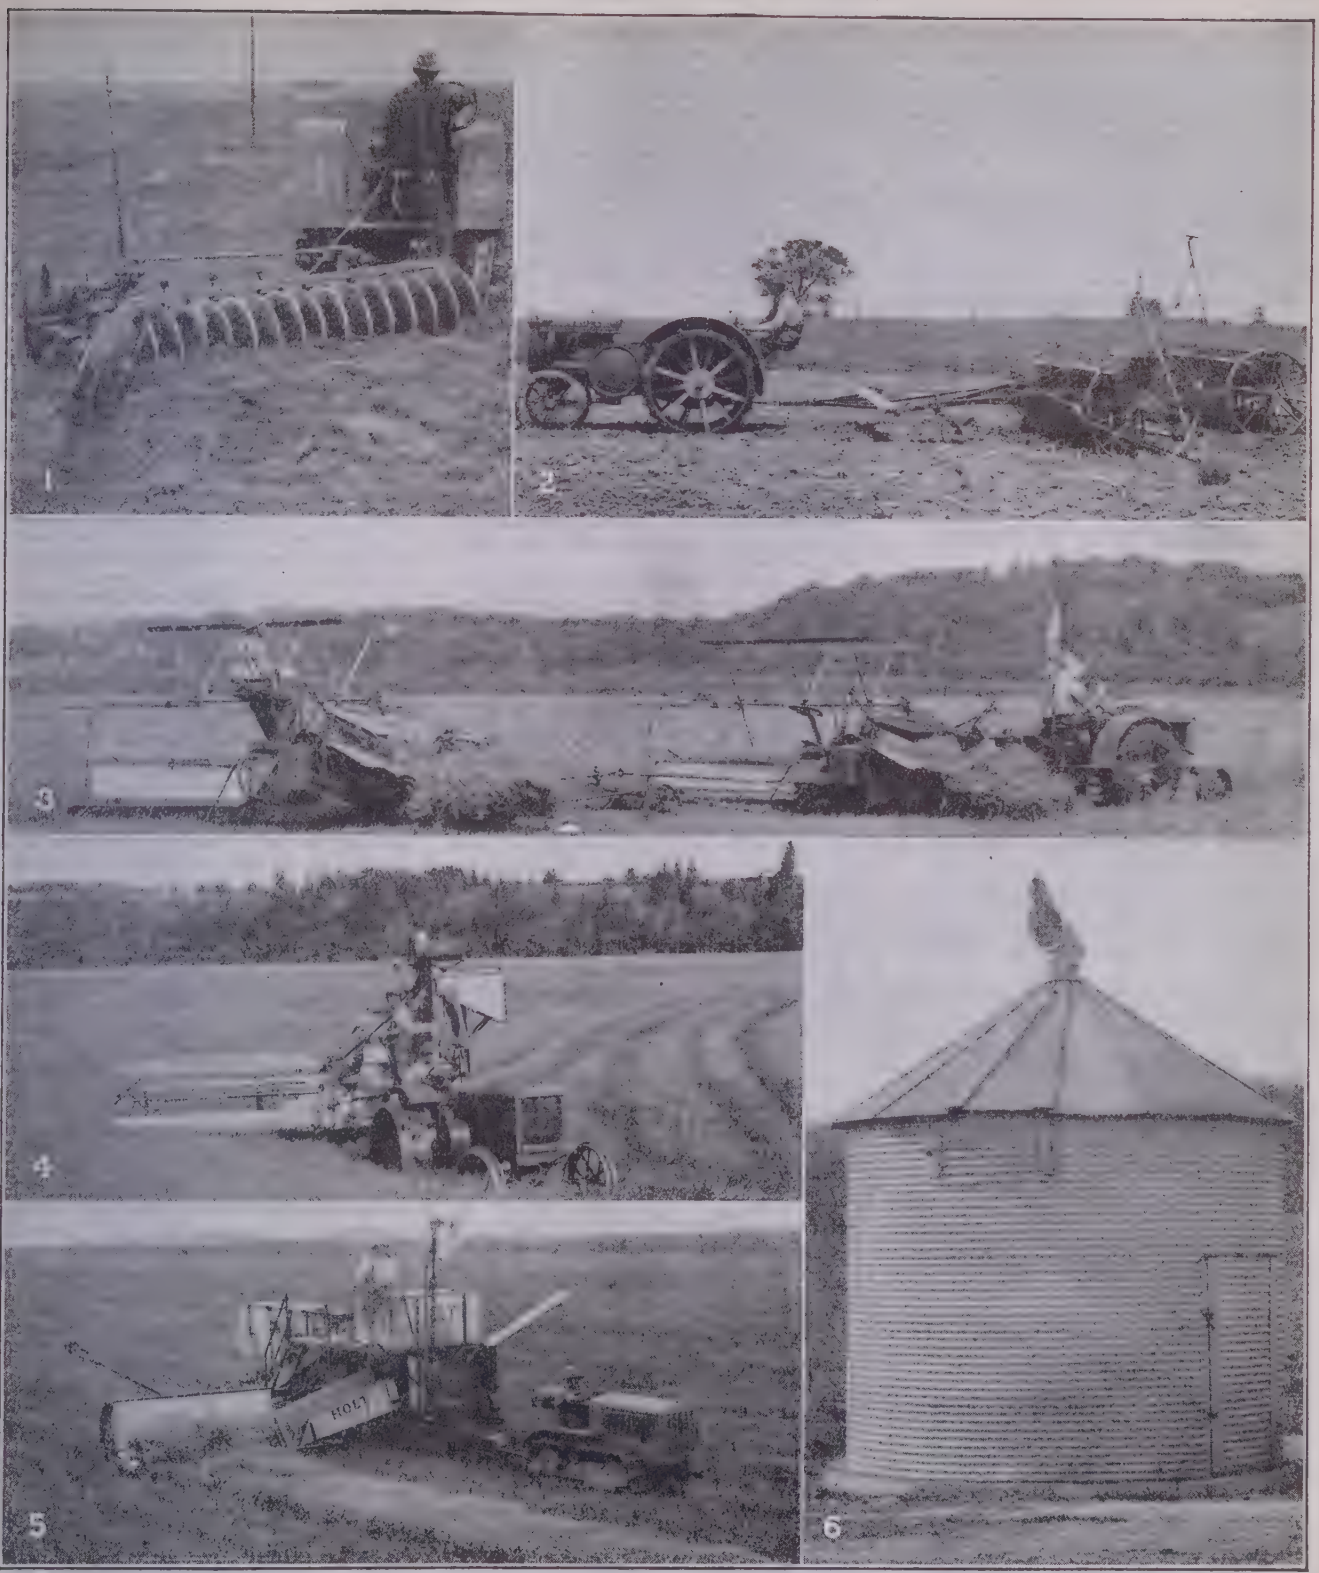
ECONOMIC GEOGRAPHY

The study of geography was formerly regarded as a description of the earth with special emphasis on the physical features and political divisions of the various countries of the world. To-day geography is more concerned with the effects of physical features of land upon the activities of mankind. In this section we study geography from an economic viewpoint; we study the world as a place for trading, and also the adaptation of man to his environment in using the land for trade and commerce. As in general geography, we study land forms, soils, climate, raw materials, distribution of animals and plants as well as trade routes, countries and cities. Our study, therefore, will consist first of a study of a few of the more important raw materials of commerce, and second of a study of the economic geography of each country will be made.

PART I.

Wheat.—Undoubtedly the greatest need of man is food, and since the very earliest times cereals have been important foodstuffs. Of all the cereals, wheat is by far the most important both as a food and as a commodity for international trade.

Wheat grows in many and widely scattered lands, but does not thrive well in very hot or very cold regions. A double climatic requirement is essential to its best development. It needs a cool moist period for germination and a sunny and preferably dry weather for its maturity. Warm regions of heavy rainfall in summer are not productive of the greatest yield or the best quality.



This double requirement of a moist formative period and a sunny ripening period helps us to understand why wheat from Texas, Kansas, Nebraska, the Dakotas, Minnesota and Canada is bright, plump, and valuable.

The soil should neither be too sandy nor too clayey, but loamy and well drained with a surface suited to modern plowing and reaping machines. Most of the best wheat lands of the world are found near the edge of very dry or desert regions. The best wheat lands in the United States, Canada and Argentine are very close to the section of little rainfall. Wheat lands also border on the cooler edges of the deserts in Australia, South Africa, the Nile River, Mediterranean countries, China and India.

Differences in soil and climate tend to produce different kinds of wheat, and are usually classified as spring and winter, hard and soft, red and white. In general the soft kinds contain a large proportion

Courtesy American Museum of Natural History

These views show some important phases of the modern industry of wheat production. 1. The one-way disk plow has nearly replaced the moldboard plow in some sections of the wheat area. The one-way disk plow does not penetrate as deep as the moldboard type but makes a wider cut and leaves the soil in better condition to resist soil blowing. 2. Tractor pulling two wheat drills. This conserves both man and tractor power. 3. Two harvesters (binders) powered by a shaft from the tractor power take-off; this does away with slipping on wet soil. 4. Combined harvester and thresher in operation on a 500-acre farm in Alberta, Canada. 5. Combined harvester and thresher on an Iowa farm, showing operation of pick-up attachment which gathers the cut grain from windrows. 6. Wheat storage bin, of steel construction and ventilated by a suction ventilator attached to tubes which penetrate the wheat. This type of bin holds from 500 to 1000 bushels of wheat. It is recommended by government experiment stations.

of starch and are used for the manufacture of flour. The hard varieties are used more for the manufacture of macaroni. There is no real seasonal classification in the various types of wheat, for a winter wheat may be sown in the spring, and a spring wheat may be sown in the fall, with good results.

Europe as a whole produces more than half the wheat crop of the world, but with the exception of Hungary, Roumania and the black belt of Russia, there is no surplus to export. The density of the population of Europe makes it imperative to keep the grain home for the purpose of food. This density of population causes the European farmer to rotate his crop in order to yield the maximum number of bushels per acre. The average yield of wheat per acre in some of the most densely populated countries of Europe where land rents are high is much greater than that of the less thickly populated cheap lands of newer countries.

AVERAGE YIELD OF WHEAT PER ACRE
1910-1914

Great Britain	33	bushels	per	acre.
Germany	40	"	"	"
Belgium	34	"	"	"
France	21	"	"	"
Hungary	19	"	"	"
Russia	10	"	"	"
Roumania	13	"	"	"
United States	14	"	"	"
Argentine	11	"	"	"
Australia	12	"	"	"

Density of population also affects the yield of wheat per acre in the various states in the United States. Some of the older states, like New York with an average yield of about 22 bushels per acre have, through care, a higher wheat yield than the plain states where the yield averages from eight to ten bushels per acre.

The states in the United States which produce the greatest number of bushels are Kansas, Minnesota, North and South Dakota. The total yield in the United States averages 850,000,000 bushels per year. The countries of Europe which, during normal times produce the greatest number of bushels are Russia, France, Germany, Hungary and Rumania. The Soviet Union (Russia) leads in production, as would be expected from its vast size and favorable geographical location. Other great exporting nations are United States, Canada, Argentine, Australia, British India and Rumania.

GEOGRAPHIC DISTRIBUTION OF WHEAT

Wheat is grown principally for flour, and hence the international trade in this commodity is large. The great milling centers of the world have grown up near the sources of raw materials and power. In Europe the highest fame and skill in the making of flour have been reached by Hungarian millers at Budapest. In this country the greatest flour manufacturing city is Minneapolis. Here the Falls of St. Anthony in the Mississippi River and a location near the great wheat fields afford the double advantage of cheap power and economy of time and expense in the assembling of the wheat from the fields of the United States and Canada.

The world's greatest exporting countries of wheat and flour are the United States, Canada, Argentine, Australia, British India, Roumania and Russia. Most of these nations are new or else agricultural. As the United States fills up with people it will undoubtedly enter into the export trade of these commodities less and less. The center of wheat production has steadily moved westward with the taking up of the cheaper lands by people from the east. As time goes on and population grows most of the wheat grown here will be needed for home consumption. The probable granaries of the future are Argentine, Australia and Siberia, especially the plains to the southeast near the Manchurian border.

The development of long-distance carriage will affect the area of production. The railways of the Northwest and the steamships of the Great Lakes make possible the wheat harvests of that region. The profits give a wide range of desirable things to the grower, and the cheap transportation gives white bread to many among the poor of Europe to whom it was once a luxury. New facilities in transportation will increase the importance of wheat in Canada, Russia and Australia. The wheat lands of Argentine and Russia are nearer the sea than those of the United States, and this will favor them as competing grain producers.

Corn.—Corn is one of America's contributions to the grains of the world. When the first settlers came to this country the Indians presented them with this grain. Owing to the fact that corn will grow on very rough land where other grains will not do as well has caused this grain to be

GEOGRAPHIC DISTRIBUTION OF CORN

cultivated in the back or isolated sections of the country. Hence in that rough section of the Appalachian Plateau, including many thousand square miles of Kentucky, Tennessee and West Virginia, corn as a food and staple of trade is of great importance.

Corn will grow and mature in any section that has a five month growing period. The prime grades of corn thrive best where there are sufficient rains with warm sunny weather during the growing season, and in rich, well drained soils. Hence it does not thrive as well in those countries that have cool summers like England, Scotland and Canada, nor does it thrive to good advantage in sections of intense heat as in our southern states. Corn requires warm nights as well as warm days, and this fact accounts for the reason that corn does not grow to advantage in some of our southern states like Arizona, New Mexico and Nevada. These sections with their very cool nights hinder the full development of the grain.

The chief regions of production of corn are the central Mississippi Valley, the plateau sections of Tropical America, the Black Sea region, the Mediterranean countries, southeastern Asia, and Argentine. Of all these regions the richest and most productive is the central Mississippi Valley. The corn belt here is just south of the wheat belt and includes the states of Iowa, Illinois, Missouri, Indiana, Kansas and Nebraska. Here we have one of the finest farming sections in the world. Indeed, this is often called "the heart of America." The average yield of corn per acre in this section is about 25 bushels, and with careful selection of seed and tillage this can be increased to 50 bushels per acre. The five year average, previous to 1914 was about 2,700 million bushels. The European War making it necessary to increase the food supply in all lines of agriculture, encouraged the farmers of the west to greater tillage and more careful cultivation. The corn crop now averages about 2,750,000,000 bushels per year.

Corn is used largely as a supply crop and hence is not used as an article for export. The relatively low price of the commodity compared to its bulk weight does not make it a profitable article for export. Most of it is used near the place where it is grown, so that most of the American corn is consumed at home in the cattle belt which is very close to the corn growing section. Corn is used also as a breadstuff, in the manufacture of syrup, starch, glucose and other products such as corn flakes, corn oil, soap, alcohol, oil cake and meal.

Cotton.—The most imperative need of civilized man, next to food, is clothing. For many hundreds and thousands of years his clothing consisted largely of the skins of animals. Later as the art of making cloth developed in the silk and flax fibers the wealthy and aristocratic classes could wear garments of cloth. Cotton has of course been used for clothing for many hundreds of years, but until the invention of the cotton gin in 1793 the poor man had to depend on wool, linen and leather for his clothing. The invention of the cotton gin made cotton the leading vegetable fiber, and the trade in cotton and cotton manufactures is perhaps the most important branch of international commerce.

GEOGRAPHIC DISTRIBUTION OF COTTON

The cotton of commerce is the fiber which surrounds the seeds of the cotton plant. The usual height of the cotton plant is from three to five feet and is perennial in regions which are free from frost. The plant is often regarded as a tropical plant but the most important

regions of its growth are in the subtropical regions of both the northern and southern hemispheres. Nearly all the cotton is raised between 40 degrees north latitude and 20 degrees south latitude. The principal cotton growing countries are the United States, India and Egypt, although it is found in considerable quantities in central Asia, Peru, Brazil and many of the South Sea Islands.

Cotton was first grown for the market in this country in Virginia. The leading states today in the production of cotton are Texas, Alabama, Mississippi, Georgia, South Carolina and Arkansas.

The chief varieties of cotton are the ordinary American upland cotton, the Sea Island, the Egyptian and the Peruvian. The value of the fiber and the uses to which it is put depend on its length, strength and fineness. For this reason, Sea Island cotton is by far the most valuable, for it is characterized by a long, fine, silky fiber. This type of cotton thrives best near the ocean, partly because of the high humidity. Sea Island cotton is also grown some distance inland in southern Georgia and northern Florida.

The cotton plant is not cultivated alone for its fiber, but as in other fields of economic activity, the utilization of the by-products obtained from the parent plant has become very important. The cotton seed is used for fertilizer and oil, stock food, paper, soap and cellulose. The stalk is also important commercially in the manufacture of paper and in some sections it is used as a fuel.

As an article for export trade, cotton holds a high rank. Approximately two-thirds of the home crop in the United States is sent abroad. The great industrial countries of England, Belgium and Germany have for the last hundred years been largely dependent on the crop in the United States. How dependent Europe is on American cotton was illustrated during our Civil War in 1861-1865 when many of the mills were closed down and thousands were thrown out of employment because of the blockade of the southern states. Also during the late European war, Germany felt the need of cotton from America. The bulk of our crop goes to England. The three chief cotton ports in the United States are Galveston, New Orleans and Savannah. New Orleans and Galveston are strategically located, the one being the natural outlet of the Mississippi Valley and the other as the end of railway trunk lines connecting with the various plantations in Texas and Oklahoma.

The economic value of cotton is felt everywhere. As an article of international trade it holds a high place. Certain it is that the opening and extension of cotton growing in America and in other sections of the world, together with the invention of the cotton gin and spinning machinery, have been important factors in cheapening clothing for the world. The market for cotton goods is worldwide. The great potential market for the American cotton manufacturer is the great oriental section of Asia bordering on the Pacific Ocean, where more than one-third of the human race resides.

Forest Products.—The forests of the United States throughout the entire history of the country have been one of its great sources of wealth. From the early days of settlement, when the raw material of the forest was used for building the homes of the pioneers, to the present moment, when forest products are the basis of extensive manufacturing, nationwide industry, and domestic and international commerce, the timberlands of the country have contributed largely to both the happiness and the financial well-being of the people.

Of the 26,000,000,000 cubic feet of timber (not including firewood) annually consumed by the world, three-fourths comes from softwood or conifer forests, comprising such species as the pines, spruces, firs, hemlocks, larches, cedars, sequoias and cypresses. With a few exceptions, the softwood forests are confined to the cooler regions of the Northern Hemisphere. The principal softwood or conifer forest regions are (1) North America, including Canada, Alaska, western, northeastern, and southeastern United States, and the Sierras of Mexico; (2) northern Europe; (3) central Europe; (4) Asiatic Russia, Manchuria, and part of Japan. North America has about two-fifths of the world's conifer area, Europe another fifth, and Asia one-third. These three continents of the Northern Hemisphere embrace 95 per cent of all softwood forest land. Of the area of Temperate Zone hardwoods, Asia has nearly one-half, North America one-fourth, and Europe one-sixth, the three continents containing 87.8 per cent of such hardwoods. Of the area of tropical hardwoods, Asia has 17.5 per cent, Africa 21.2 per cent, and North America has 3 per cent. South America contains more than 50 per cent of the world's total.

In the United States, the sections that have successively predominated in lumber production are the Northeast, the Great Lakes section, the South, and the Pacific Coast section.

The lumber production of the United States in 1928 totaled more than 34 billion board feet, more than 28 billion feet of which was softwood. Two western and two southern states led in production in the following order: Washington, Oregon, Mississippi and Louisiana. These four states produced nearly half of the total for the country. Southern yellow pine contributed 31.1 per cent of all lumber and Douglas fir 24.8 per cent.

The forests of the United States support industries giving employment to more than a million people and turning out each year products valued at more than two billion dollars.

The value of exports of forest products in 1929, including logs, hewn timber, railroad ties, piling, poles, firewood, sawmill products, wood manufactures and paper and paper manufactures, totaled $211,000,000. In the same year the value of imports of wood, including logs, railroad ties, sawmill products, wood manufactures, pulpwood and wood pulp, and paper and paper manufactures, amounted to $377,000,000.

The demand for lumber for building purposes, for the manufacture of furniture, agricultural machinery, railroad ties, vehicles, and the amount of wood required for tools, equipment, utensils used in shops and mills and on farms are enormous. An ever-increasing demand is made upon the forest for pulpwood for paper and cellulose products. The value of paper and paper boards manufactured in this country is rapidly approaching the billion dollar mark, and the industry has now entered twenty-three states, with an output of more than 10 million tons, and employs more than 100,000 persons in paper mills and 27,000 persons in pulp mills. Spruce and hemlock still lead as pulpwoods, but southern yellow pine ranks third, and poplar, balsam fir, jack pine, and yellow poplar each furnish more than 100,000 cords to this use. Rayon, much of which is manufactured from wood pulp, increased in domestic production from 320,000 pounds in 1911 to 116,000,000 pounds in 1929.

Turpentine and rosin are also important forest products, derived from certain species of pine native to our southern states. The United States leads the world in the supply of these commodities, valued at many millions every year.

Forestry.—The 469.5 million acres of forest land in the United States, according to estimates made in 1920, was made up as follows:

	Acres	Acres
Virgin forest		138,100,000
Second-growth of saw-timber size	113,800,000	
Second-growth, small	136,400,000	
Not restocking	81,200,000	
		331,400,000
Total		469,500,000

Nearly four-fifths of all forest land in the United States is privately owned. About one-half of this is owned by large operators and holders. One-third is owned by farmers. National forests contain one-sixth of the forest area of the country. A small amount (about one-twentieth) is in national parks, military and Indian reserves, state, county, and municipal parks, and the public domain.

It is significant in its bearing upon a continued supply of raw material in the lumber industry that our estimated present annual forest growth of six billion cubic feet of wood of all sizes and qualities is less than one-fourth of the total drain upon the forest, including loss through insects, diseases and windfall. The enormous waste of the past has been due to several causes, among which may be mentioned the great abundance of virgin forests, which until recent years seemed inexhaustible; the desire to clear the land for agricultural purposes; the low prices of the best grades of lumber, which led to excessive use and overproduction; the tannery industry which led to cutting certain species only for the bark, leaving the timber to rot on the ground and wasting millions of feet of choice timber; wasteful methods of logging and turpentining; and, perhaps most important of all, the waste and retardation of growth due to forest fires.

In 1891 a law was passed providing that national forests could be set aside from public lands covered wholly or in part with timber or undergrowth. Many million acres of land were set aside from the public domain of the West and put under national forest administration by authority of this law.

Under the provisions of an act of March 1, 1911, the Weeks Law, and of an act of June 7, 1924, the Clarke-McNary Law, lands valuable for the protection of the headwaters of navigable streams and for timber-growing are purchased by the government and organized as national forests. More than four million acres have been purchased, chiefly in the White Mountains, the Lake States and the southern Appalachians. Today there are 149 national forests in the United States with an aggregate net area of 160 million acres. The Forest Service of the United States

Department of Agriculture has charge of these forests, which are located in twenty-eight states, Alaska and Porto Rico.

The Federal Government now coöperates with state and private agencies in giving fire protection to private forest lands under the Clarke-McNary Law, contributing proportionate funds for this purpose in addition to the amounts expended directly by the United States Forest Service in protection of the national forests. Many of the states and Hawaii and Porto Rico, receive coöperation from the Federal Government under the Clarke-McNary Law not only in protection of private forest lands from fire, but also in the distribution of trees for farm planting, and in assistance to owners of farms in establishing, improving, and renewing shelter-belts and windbreaks, and in growing and renewing useful woodland timber crops.

Present major activities of the United States Forest Service for perpetuation and improvement of our forests include: (1) leadership in developing forestry principles and practice; (2) coöperation with the states in forest protection, care and management of farm woods, and distribution of forest planting materials; (3) continued acquisition of forest lands for public forest purposes, including watershed protection, demonstration of timber-growing methods, recreation and wild life conservation; (4) administration and protection of the national forests; (5) continued research and investigation in the protection, management and utilization of forest resources and products, including forest-fire studies, naval stores investigations, soil-erosion studies, timber-growing studies, range investigations, forest-taxation studies, forest-insurance studies, regional forest surveys and forest-economic studies.

Thirteen regional forest and range experiment stations, located in various parts of the country and a Forest Products Laboratory at Madison, Wisconsin, are maintained by the United States Forest Service to facilitate forest research.

Geographic Distribution of Coal

Coal.—Coal is the modern genie which man has summoned from the interior of the earth to perform the labors of industry and trade. It has become essential not only for the production of heat, energy and light, but also for our very existence under present conditions. Hardly any modern civilized nation would be able to support its present population without coal. Many of the wonders and even the very existence of our civilization are due to the finding of large stores of potential energy which have been handed down to us from the ages before history began.

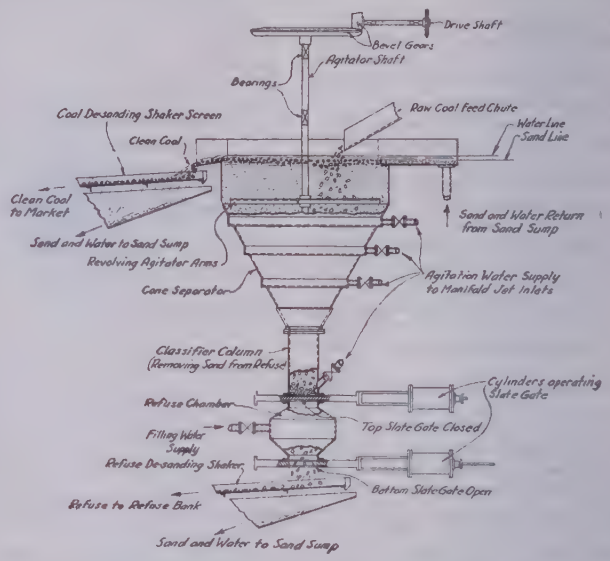
The principal coal fields in the United States are located along the great Appalachian Mountain system. In the eastern section, which comprises the state of Pennsylvania, is contained practically all the hard coal in the United States. This territory of a little over 500 square miles supplies the demand for anthracite in the United States, Canada and Europe. The presence of this great coal field in a measure accounts for the fact that the bulk of manufacture, trade and commerce is north of the Potomac and Ohio rivers and east of the Mississippi. Other soft coal fields of various grades exist in Illinois, Indiana, Michigan, Missouri, Oklahoma, Texas and in states of the Rocky Mountain region. In fact the Pacific slope is the only part of the United States that suffers for lack of coal. This reason partially accounts for the lack of manufactures and railroad development on the coast. The importance of coal is shown by the fact that the production in the United States has increased from 240,789,310 gross tons in 1900 to 508,471,300 in 1928. The state of Pennsylvania has held the lead since the beginning, and in the year 1928 produced 124,720,000 tons of soft coal and 74,552,312 tons of anthracite.

A great deal has been written about the large Alaskan coal fields, but owing to lack of transportation facilities, and inaccessibility of the mines no extended development has been made. Valuable coal veins do exist in this territory, and the small sections that have been worked are estimated to be worth millions of dollars.

Coal underlies three different sections of Canada; the eastern in Nova Scotia, the central on the eastern slopes of the Rocky Mountains, and the Pacific coast and islands. Canada is richer in coal than Europe, but her production is very small. The Canadian coal fields cover an area of over 97,000 square miles, but the St. Lawrence Valley, which is in other respects best adapted for manufactures is entirely lacking in coal.

In the old world England is the leading nation in the production of this most valuable mineral. It was English coal, coupled with English inventive genius, that enabled this nation to lead the world in manufactures and commerce after the beginning of the nineteenth century. The principal coal field is that of Newcastle in the northeastern section, while in the middle section and the territory around Manchester another extensive field is found. There are also large fields in southern Wales and Scotland.

Of the other countries in Europe, Germany ranks next to England, although by the terms of the Versailles Treaty much of her valuable coal fields have passed to France, especially along the Saar. France also has extensive coal fields, located in the northern part of the country near the great industrial section of southern Belgium. For the rest of Europe coal deposits are very insignificant. In Asia some coal beds are worked in the Empire of Japan, and it is known that vast coal fields also exist in China. It is, therefore, quite easy to see how the world may be affected when once the Chinese shake off their ancient customs and prejudices and take part in the activities of modern commerce and trade.



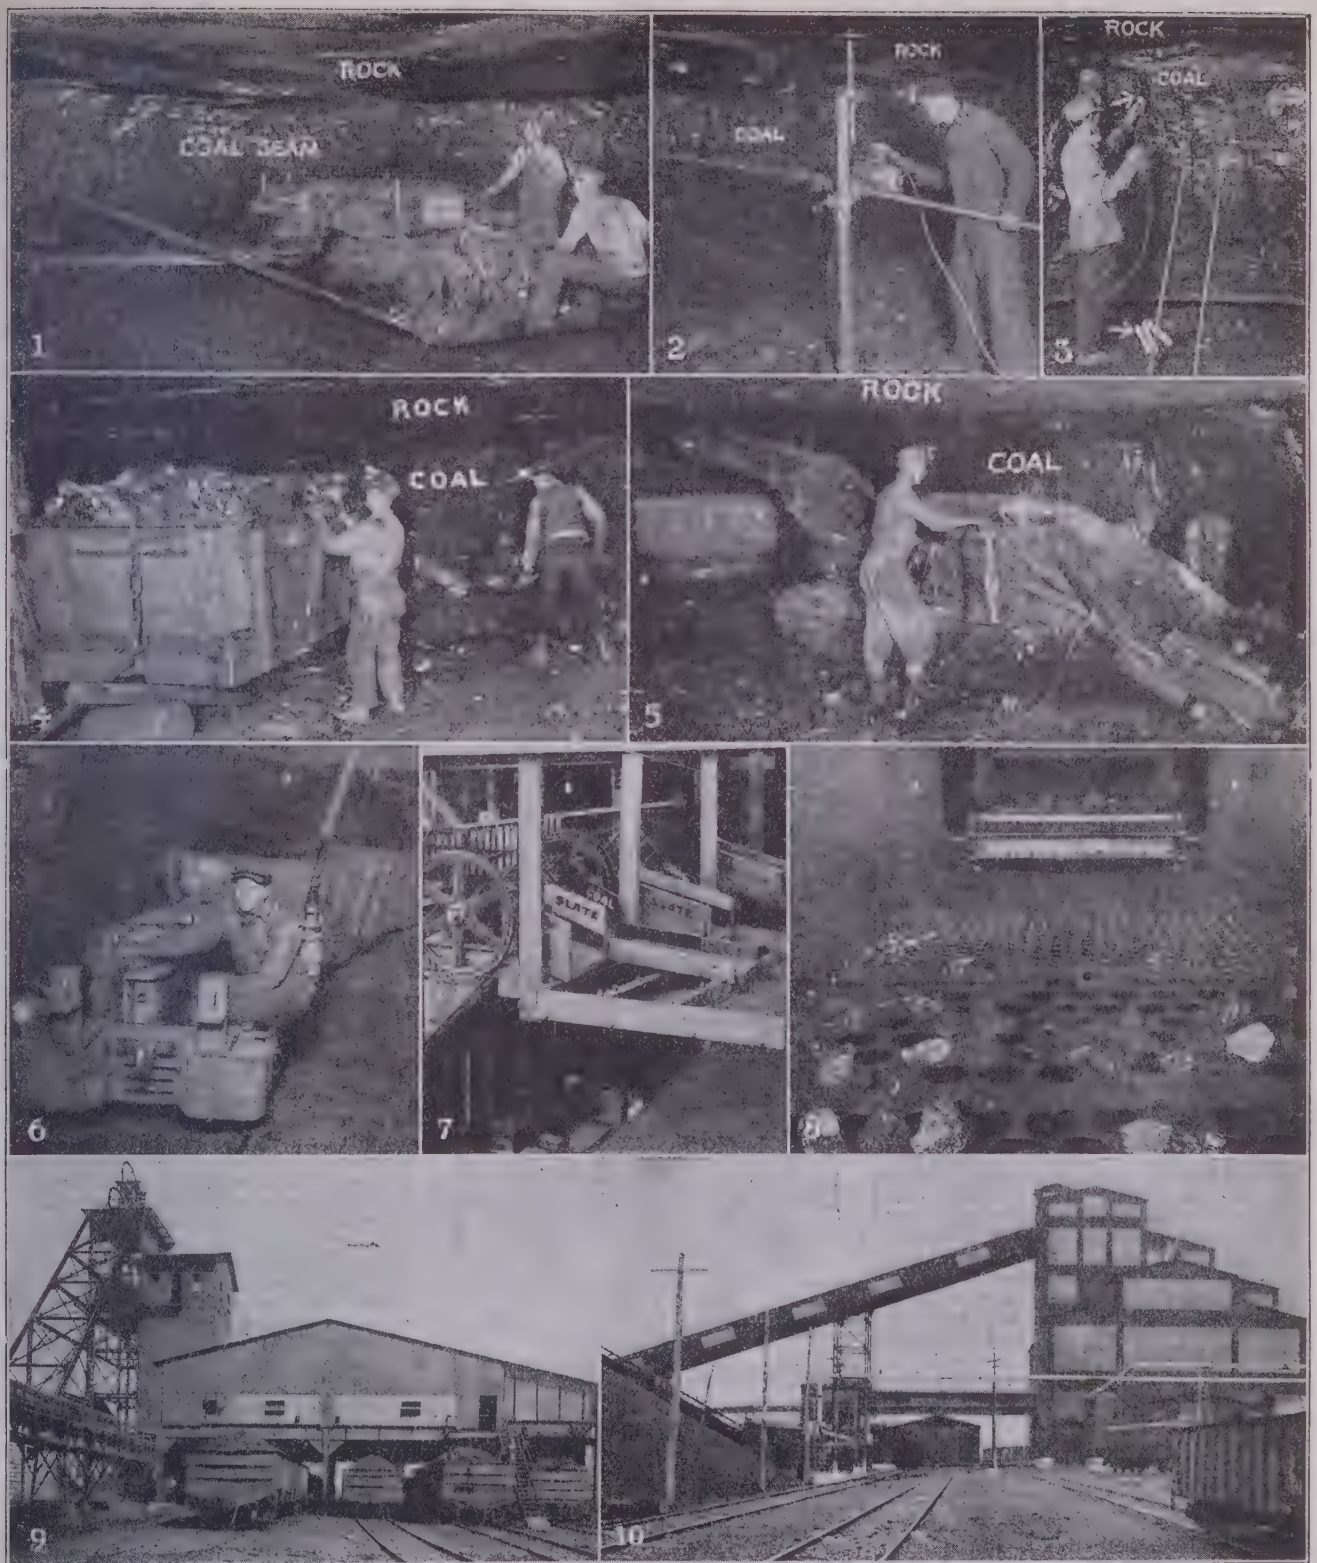


Diagram of Sand Flotation Coal Washing Unit

A modern method for performing the essential work of cleaning coal and separating it from slate is illustrated in the Chance cleaner illustrated above. Size, shape or surface condition of the coal does not affect the efficiency of the separating action. A mixture of sand and water is used, and this mixture when agitated makes a fluid in which the slate sinks while the coal floats at the top thereof. The action in this apparatus is far more positive than in methods depending on hydraulic classification, as in jigs and launders. In the Chance process of direct gravity separation the refuse sinks quickly to the bottom of the separator and the clean coal automatically floats out through a weir upon desanding, dewatering and sizing screens.

The by-products of coal are but of little less value than the mineral itself, and so far as their place in modern economic development is concerned they are of equal importance. The principal products of coal distillation are gas, ammoniacal liquor, coal tar and coke. Coal tar products have become a most important part of the by-products. Coal tar produces naphtha, benzene, aniline dyes, creosote, phenols and pitch, for roofing, as well as many acids.

Coal Mining Methods.—The term "mining method" as used here refers to the manner in which coal is broken down in the mine and not to the system of mining as by room and pillar or long wall. In the mine the coal is either blasted from a solid face—shot from the solid—as in hard-rock mining, or is shot loose or otherwise broken down after a preliminary cut into the coal has been made. This cut may be made by hand or by machine. Underground methods are therefore classified as shooting from the solid, mining by hand, and mining by machine. An increasing quantity of coal is being recovered each year by stripping the

1. Undercutting coal seam with electrically operated machinery which cuts beneath seam and back to a depth of six feet. This is done to assist in blasting, making it possible to loosen the coal with light charges of explosive. 2. Boring hole with electric drill, preparatory to blasting. Holes are drilled about six feet deep. 3. Placing explosive. Arrow indicates roll of powder being inserted. Other rolls lie on the floor. 4. Loading car by hand. 5. Loading car with electrically operated pick-up machine. 6. Electric locomotive hauling cars into mine. 7. Conveyor lines convey the coal and slate up from the jig tank (J) and deliver coal and slate into separate discharge chutes. 8. Screens grade the coal to commercial sizes, as lump, egg, nut and range. 9. Tipple at head of bituminous coal mine shaft. Here the coal is screened and prepared for the market. 10. Anthracite breaker. Coal from the mine enters the breaker through the inclined elevator at the left. (*Photographs by courtesy Peabody Coal Company and Anthracite Bureau of Information.*)

cover from the bed in open pits by steam shovels. The bed thus exposed is for the most part shattered by powder and the coal is shoveled into cars by hand, although in places it is picked up directly by small steam shovels.

Opposition to shooting from the solid has arisen because it is injurious to the mining property in that the heavy charges of powder weaken the roof and pillars, thus increasing the danger of falls of roof and coal—the most prolific cause of fatal accidents to coal miners. Another objection to this method is that the heavy charges of powder required to blow down the coal where it has not been previously undercut result in the production of a much higher proportion of fine coal and render the lump so friable that it disintegrates in handling and transportation. With the growing use of mechanical stokers and of powdered coal the latter objection is losing much of its force, but the danger has been in no wise diminished, and the method is forbidden by law in some of the coal-mining states.

Ages and ages of time were required to produce a bed of coal—some scientists say 20,000,000 years may not be far from a correct estimate. The locations where coal is now found were once in tropical climes, where vegetation grew even more profusely, perhaps, than it does today in our warm parts of the earth. Tree ferns grew to great heights—we know that from microscopic examination of coal; lesser fernlike plants, rushes twenty to thirty feet high, and club mosses in great profusion lived their day and decayed. Water covered them and in time they were buried under later accumulations. The mud in which they lay hardened and became land, and on this other dead vegetable matter was deposited. These processes continued through the ages.

Iron.—Iron is distributed widely over the surface of the earth. About one-twentieth of the earth's crust is iron. Most of it is scattered among the rocks and soils, giving them a reddish color. Iron seldom occurs in a metallic state, but usually in combination with some other element or elements. The important ores in use at the present time are: hematite, magnetite, siderite and limonite.

Next to coal, no other mineral is so important to our modern civilization. In fact it is an essential part of the nation's wealth. It has been said that the standing of an industrial people is exactly registered by the amount of iron it uses. The making of and consumption of iron for each individual in the United States amounted in 1820 to about 40 pounds. This rose to 175 pounds in 1870, 400 pounds in 1900, and to a little over 1,400 pounds per capita now. The graph on the opposite page shows the annual production of iron ore, pig iron and steel in the United States since 1870.

With the exception of Australia, every continent has a good supply. The Ural and Caucasus Mountains of Russia have the best quality of European ores. China is said to have extensive deposits, while smaller quantities are to be found in India and Japan. Africa has large beds of valuable ore, but the greatest amount of iron is produced in the three great industrial countries of the world, the United States, Great Britain and Germany.

In the United States iron ore is now mined in 26 states. Most of these states produced ore for flux only or for blast furnaces. The rank of the three states producing the largest quantity of iron ore is: Minnesota, Michigan and Alabama. The Minnesota ranges are producing more iron than all the rest of the states together, having furnished about 60 per cent of the total for the United States in recent years. The ranges in Minnesota and around Lake Superior are the Marquette, Menominee, Gogebic, Vermillion, Mesabi and Cuyuna ranges. The total quantity of iron ore mined from this Lake Superior district is about 59,000,000 tons per year. The Mesabi range alone produced 65.3 per cent of the entire production of the United States.

GEOGRAPHIC DISTRIBUTION OF IRON ORES

Forty years ago Pennsylvania produced more than any other state, but dropped to sixth place now. It must not be forgotten, however, that while losing rank as a mining state it still holds first place in iron making.

New York State produces over 900,000 annually. Wisconsin, Virginia and Tennessee also produce over 1,000,000 tons every year. Alabama is the chief iron producer in the Appalachian district for both mining and manufacturing. Alabama produces over 5,000,000 gross tons of iron ore each year.

Iron making does not center always in the region of ore production. Fuel has been the great factor that has determined the location of the iron and steel industry. The transportation of ore is much cheaper than the transportation of fuel, hence the lake and river ports located near the great bituminous coal fields have been the scenes of iron industry. Pittsburg is the chief of these as it is near the Lake ports and

GEOGRAPHIC DISTRIBUTION OF GOLD ORES

in the center of great deposits of coal. Allegheny County, in which Pittsburg is located, produces the larger part of iron and steel used in this country. Many ports on Lake Erie and Michigan have developed this industry of late years, particularly Buffalo, Cleveland, Gary, Joliet, South Chicago and Toledo. These cities have the advantage of being at the end of transportation of ore, thus saving the expense of reshipment, and are also but a short distance from coal fields. In the south, Birmingham in Alabama has a most strategic position, being near to both fuel and ore. Other centers in the south are Chattanooga and Knoxville.

The process of making iron as practiced by the ancients was slow and costly, but the principle was essentially the same as that of modern methods. They used a small forge through which air from a bellows was forced. Thus by heating the coal in these primitive forges to a temperature not reached by the ordinary burning of coal they succeeded in reducing the ore so as to obtain metallic iron. The blast furnace, however, worked a revolution in the iron industry; the once precious metal losing its value as its production was increased. The blast furnace is made up of a huge tower with a bulge at the bottom to permit expansion of the molten metal, a hopper at the top through which ore, coal and limestone are admitted, and an outlet at the bottom through which the air or blast enters and and another through which the spongy iron is drawn off. Iron prepared in the blast furnace contains small amounts of carbon, sulphur, silicon and manganese. This type of iron is known as cast iron and has the characteristic of great brittleness.

Another variety of iron is known as wrought iron. It is the purest variety of commercial iron, and is made from cast iron by burning out the impurities which the latter contains. This burning out of impurities is called puddling. Puddling is carried out in a puddling furnace which is lined with an oxide of iron; a flux is added and heat applied. The cast iron is soon melted and the impurities pass off in a gaseous form or in slag. Owing to its higher melting point, the remaining mass becomes pasty and in this state forms small lumps which are raked together into one larger one. The lump is then removed from the furnace and rolled or hammered into bars, the remaining slag being squeezed out in this process.

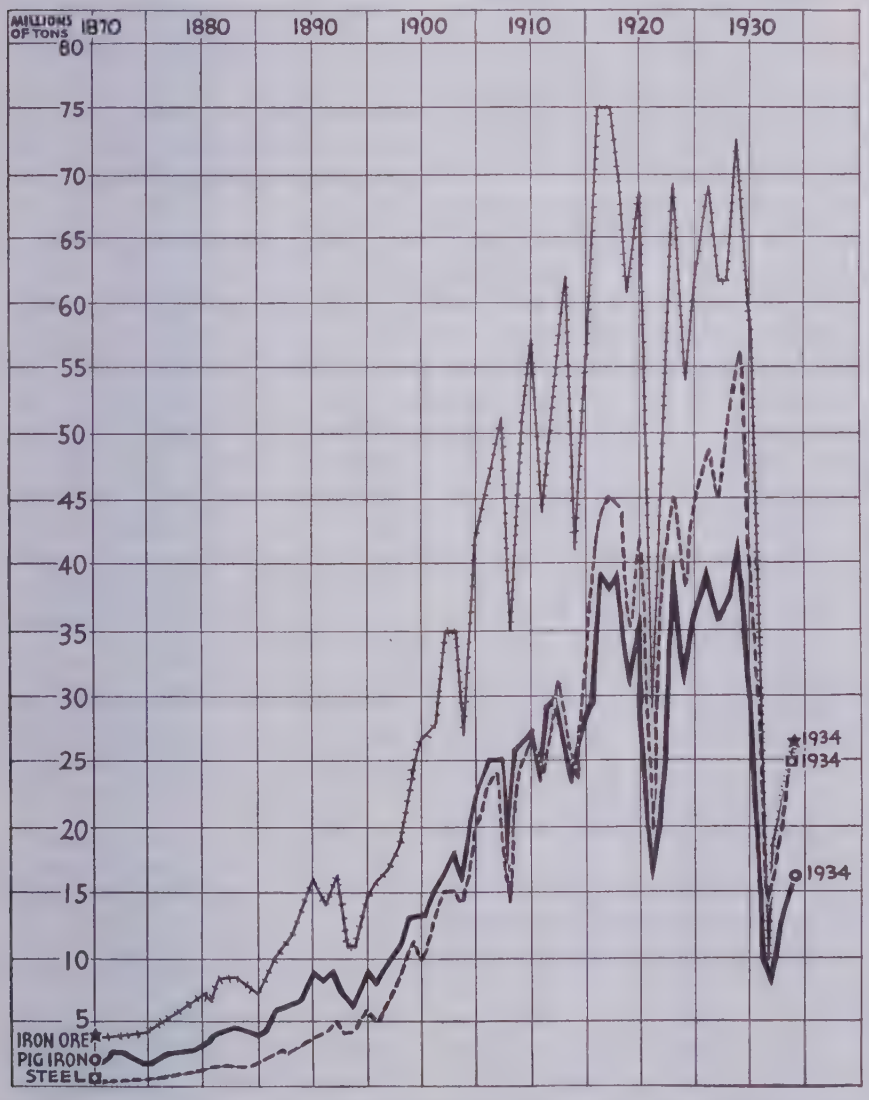
Closely allied to iron is steel, a product of far greater importance than iron itself. It is prepared chiefly by the Bessemer and open hearth processes, although recently the electric crucible gives a very high yield of the tool steel.

The Bessemer process is usually carried out in connection with the blast furnace since this saves many dollars in labor and fuel. The molten cast iron is run into a huge crucible, which can be tilted to receive the iron. The crucible is lined with silica and at the bottom it is perforated so that an air blast when turned on furnishes the necessary oxygen to combine with the impurities and pass off in a gaseous state. When the impurities have been burned out (and this can be determined by noticing the character of the flame issuing from the mouth of the converter) the desired amount of carbon in the form of high carbon steels or spiegel is added and given a sufficient length of time to dissolve in the molten metal. The steel is then drawn off into molds and the ingots so formed are hammered or rolled into rails and other objects.

But by far the most important process in the United States is the open hearth. It is by this method that the largest amount of steel is produced in this country. This kind of steel is made by putting molten iron in a basin and letting the gas flames beat over it for about ten hours. The flux and lining of the furnace play the same parts as they do in the Bessemer process.

For high grade tools a better quality is needed and this is met by the electric crucible process. Scrap steel usually serves as the raw material, being placed in a large egg shaped vessel. An electric

current is turned on and heat is generated sufficient to melt the scrap. A flux serves to get rid of the dirt. The desired alloy is then added and the steel is run into molds.



The properties of iron or steel determine its uses. Cast iron is hard and brittle and melts at about 1100 degrees Centigrade. It is rigid but not elastic and its tensile strength is small. It is used in making castings and cheaper grades of tools. Wrought iron has a fibrous structure, being composed of fibers of pure iron separated by slag. It is soft, malleable, and ductile.

While its tensile strength is greater than cast iron, it is less than most steel. Its melting point is much higher than cast iron. This variety is used considerably in the manufacture of horse shoes. It has a wider range of uses than cast iron, but is largely replaced by the cheaper grades of steel.

The properties of steel vary in its composition. A soft steel containing very little carbon and a hard one containing a great deal of that substance. Of course there are intermediate varieties accompanied by the alloyed steels which are almost infinite in number. It seems that whenever there is a need, the ever watchful chemist brings forth a new kind that will fit the particular need.

Steel has a very wide range of uses, but the principal ones are in ship building, bridge making, locomotive construction, and for frame work of large buildings.

What the future has in store for the iron industry is uncertain. It is known that iron ore is everywhere present. Probably the era of cheap iron is past and that only the fullest utilization of resources will keep it within the means of the rich and poor alike. The United States has much larger reserves of both iron and coal than any other country in the world, but the distances of transportation both for raw materials and finished products are usually greater. For example, ore, coal and flux are close at hand in the southern Appalachian district but the greater markets are far distant from this region. Only through the development of the southern states can the fullest utilization of this district be realized.

Annual Production in Long Tons, of Iron Ore, Pig Iron and Steel in the United States since 1870

Iron ore is both exported and imported from and to the United States. The quantity of ore imported into the United States per annum is about triple the amount of iron ore exported by us. As to the source of the imports, Cuba produces about 80 per cent of the ore, Canada nearly 15 per cent and small quantities come from France and the United Kingdom.

Of the iron ore exported by the United States the largest quantity is shipped to Canada and large shipments are made to England and Italy. The following table shows the amount of steel produced by several leading countries in the world in 1934.

	Metric tons
United States	26,055,000
Germany	11,740,000
Russia	9,246,000
United Kingdom	8,860,000
France	4,182,000
Belgium	2,900,000
Alsace-Lorraine	1,895,000

Petroleum.—Of the mineral fuels there is none more important than petroleum. Next to coal and iron it has probably contributed more than any other commercial commodity to the spread of civilization. In the early days it revolutionized the method of making light for the household. To-day the heavier part of this fuel is used for moving the machinery of the world and the lighter part for moving the gasoline automobile.

This important foundation to modern industry and commerce was first discovered in this country in southwestern New York and northwestern Pennsylvania in 1859, but is now found over a wide area throughout the world. For a long time the Pennsylvania fields were the most productive in this country, but oil is now found extensively in Oklahoma, California, Kansas, Texas, Illinois, Ohio, Louisiana, Wyoming and Kentucky. The rank of the various states in production in 1934 is shown by the following table:

GEOGRAPHIC SOURCES OF PETROLEUM

	Barrels
Texas	381,516,000
Oklahoma	180,107,000
California	174,305,000
Kansas	46,482,000
Louisiana	32,869,000
Pennsylvania	14,478,000
Wyoming	12,556,000
Arkansas	11,182,000
Kentucky	4,860,000
Illinois	4,479,000
Ohio	4,234,000
West Virginia	4,095,000
New York	3,804,000

Crude oil is used for fuel and for the prevention of dust on roads. From crude oil various oils are manufactured for lighting and other purposes. The principal products from the distillation of crude oil are naphtha, gasoline, kerosene, paraffin, white oils, gas oil, fuel oil, grease stock, pitch, asphalt and wax.

The United States leads the world in the production of crude petroleum. The countries of the world in order of their

production, according to statistics available recently are: The United States, Russia, Venezuela, Roumania, Iran, Mexico, Dutch East Indies, Colombia, Argentina, Peru, Trinidad, India, Poland, Germany.

Natural Gas.—Natural gas is perhaps the most perfect fuel that can be obtained. The country having the greatest known supply is the United States, and it is found in more than half the states in the Union. This commodity, like petroleum, is rapidly becoming exhausted and by some authorities it is believed that the present supply cannot last more than twenty or thirty years. In spite of this fact many hundreds of thousands dollars worth of gas goes to waste every year. The principal states in the production of natural gas are West Virginia, Oklahoma, Pennsylvania, Ohio, California, Louisiana, Kansas, Texas, New York, Arkansas, Illinois, Kentucky and Colorado. Gas is piped from many of the wells in the interior to many of the great industrial cities like Pittsburg, Toledo, Cleveland, Indianapolis, Detroit, and even to Baltimore.

Copper.—Another mineral which has a large place in commerce and trade is copper. Until the development of electrical work this mineral played a small part in the industrial and commercial world. Copper has been known for many centuries and was used principally for making of coins, but the universal demand for copper in electrical work has caused a greatly increased use of this metal in the past forty years. This great demand has caused the production of copper to be increased about threefold each decade since 1880.

Nearly sixty per cent of the world's supply of copper comes from the United States and is found in considerable quantities in Alaska. The states producing the most copper are Arizona, Montana, Michigan and Utah. Copper is also found in large quantities in California, Colorado, Idaho, Nevada, New Mexico, Oregon and Washington. The total amount produced in the United States is about 1,900,000,000 pounds per annum.

In South America the desert region north of Chile has a number of copper mines, making that country the largest producer on that continent. Peru is also an important copper producer as are Bolivia and Venezuela. These latter countries have not developed along this line to any great extent largely because they have depended so long upon pack trains to carry the raw material to the coast. The building of a railroad into the Andean Plateau will do much for this section.

In the old world Spain led in production of this metal usually producing over 99,000,000 pounds, while that of Germany was estimated to be about 88,000,000 pounds. Other countries that have considerable production in copper are Italy, Norway, Sweden and Russia.

PART II.

In this section discussion will be on the geographical influences of the various nations of the world. An attempt will be made to show that the economic development of nations has been largely affected by their geographical environment. Nations are great from the standpoint of commerce according to their facilities for the production and distribution of commodities. Nations that have productive soil, wealth of territory, favorable climate, raw materials and transportation facilities are most favored when they are populated by an energetic people. In fact, man is a most important factor in the study of economic geography for it is he who must take advantage of the gifts of nature in order to allow for the production and distribution of commodities.

The United States.—Perhaps the most important geographical fact relating to the new world is that it was discovered from the east rather than from the west. The Appalachian Ridge is a relatively low barrier and hence has been much less a hindrance in crossing than the Rocky Mountains would have been if the early settlers had landed on the Pacific coast.

In order to understand properly the geographic causes that have affected the full development of this country a brief study of the dominant surface features of the United States will be made at this time. The settlement and development of these sections have been greatly influenced by the topography of the land as well as this character of the soil.

(1) *The Atlantic Coastal Plain.*—This feature of the United States extends from southern Texas northeastward to Kentucky and then southeastward through Alabama, Georgia, and along the Atlantic coast to New York City and Cape Cod. In the southern portion of this section most of the cotton in the United States is grown, and here also is the densest negro population. The rich soils of this southern section had much to do with the aristocratic type of farming, in that it led to the plantation type of agriculture rather than the small farm type of the more rugged New England. It is not inconceivable that the roots of the Civil War were imbedded in the soil. The genial climate and rich soils of this region allowed slavery to exist here long after it was found to be unprofitable in the hilly and less fertile regions.

Further north along the Atlantic coast this region becomes a sandy plain, where there are extensive marshes and the soil is almost too wet to cultivate. Where the soils are better drained as in Maryland and Delaware we find this section given over to gardening and fruit growing, especially where there is plenty of marl and limestone.

(2) *The New England Hills.*—Here we find a hilly, rugged region sloping gradually from the Canadian border to the sea. The only lowland in this section is the Connecticut Valley where are to be found the richest soils. Most of this region has a thin and poor soil due largely to glacial action. No single staple crop was discovered for export from these parts, and hence the people turned at a very early date to manufactures and fishing in order to make a livelihood.

(3) *The Piedmont Plateau.* — The word "Piedmont" means foothills. This section comprises the hilly section immediately in front of the Appalachian Mountains. The higher lands have a relatively poor soil, and to-day this region is the center of fruit growing and mixed farming. Along its eastern edge many cities have grown up because of the power furnished by water. Cities like Atlanta, Columbia, Raleigh, Richmond, Washington and Trenton mark the passage from the smooth coastal plain to the foothills of the Appalachians. This line is often called the Fall Line and extends in a more or less distinct manner from Atlanta to Haverhill, Mass.

(4) *The Appalachian Mountains.*—This range of mountains extends from the borders of the Hudson Valley, in southern New York, to Georgia and Alabama. It contains many very fertile valleys because of the presence of a large amount of limestone in the soil. During the time of the Civil War, the confederacy depended upon some of these rich valleys for its supply of grain. A peculiar feature of this region is an almost continuous valley from New York State to Alabama. This is called by many geographers the Great Valley. This section was one of the first areas west of the Piedmont region to be settled. Here also are vast forests and much of the future supply of hardwoods come from this region.

(5) *The Cumberland or Alleghany Plateau.*—Just west of the Appalachian Mountains is a hilly and much dissected plateau. It extends from the Helderberg mountains of New York State in a southwesterly direction through southern New York, western Pennsylvania, West Virginia and southern Ohio and the larger part of Kentucky and Tennessee. The eastern section of this plateau is sparsely settled, except where minerals have attracted settlement.

(6) *The Lake and Prairie Plains.*—This region includes most of the area north of the Ohio River and east of the Mississippi River. Here is the most important agricultural territory in the United States. No other region is so rich in soils, or is so splendidly adapted to the needs of commerce. The navigable rivers and generally level country afford excellent facilities for transportation by water and rail, thus making this section one of the most accessible regions in the United States.

(7) *The Great Plains.*—Beginning at a point where the Missouri River turns east towards the Mississippi River there is a gradual rise in the elevation of the country until the Rocky Mountains are reached. This is the area of little rainfall and agriculture in many places has to depend on irrigation or on the cultivation of drought resisting plants like durum wheat or kaffir corn. This section is important as a grazing center.

(8) *The Rocky Mountains.*—This region covers for the most part the states of Idaho, Montana, Wyoming, Utah, Nevada, Colorado and parts of Arizona and New Mexico. Here agriculture does not flourish to any great extent due to the great height and steepness of the slopes. Perhaps it will best be noted for its fruit-bearing possibilities.

(9) *The Pacific Ranges.*—This region like that of the Rocky Mountains contains many rich valleys suitable for fruit growing. All parts, except Oregon and Washington, depend largely on irrigation.

The above divisions of the United States from the standpoint of the distribution of soils, will help us in the study of the various political divisions, for it is these political divisions that enable the student to understand the economic development of the people. The ordinary political divisions are usually classified as (1) North Atlantic States; (2) Southern States; (3) Northern Central States; (4) Western States.

THE NORTH ATLANTIC STATES

This region includes the New England and the Middle Atlantic States of New York, Pennsylvania, New Jersey, Delaware and Maryland. In this region flourish most of the manufacturing, trading and commerce of the United States. They contain about 28 per cent of the population of the entire country and produce about 50 per cent of the manufacturing, while their area is only about 5 per cent of the whole country.

Let us inquire into the reasons why this region is so largely devoted to manufacturing. Before the Revolution all of the thirteen colonies were agricultural, but as the population grew the soil of New England was not sufficient to support its increasing numbers. The fact that not more than one-third of New England is fit for the plow made it imperative that people turn to some other activity than agriculture for a livelihood. The broad continental shelf which reaches out into the Atlantic Ocean from the North Atlantic coast afforded an excellent fishing ground. Here the herring, halibut, lobster and cod thrive in abundance. The necessity for food and the presence of so rich a fishing ground naturally turned the attention of the people to this business. The most important oyster beds are in Long Island Sound and the Chesapeake Bay. The cod and the oyster are the most important fishery products in this section. The cities leading in the commerce and trade of fish are Baltimore, Boston and Gloucester.

Manufactures took root in this section for an economic and a geographic reason. In the first place there are too many people to feed from the products that the soil of this section can produce. The geographic reason for the concentration of manufacturing in this region is the presence of abundant mechanical power. Most of New England slopes from the Canadian border toward the Atlantic, causing its rivers to be swift, forming rapids and waterfalls in many places. The same is true of the streams in the states between the Hudson and Potomac rivers. The most important of these waterfalls is the great falls of Niagara. This great fall will be a potent factor in making Buffalo a great commercial center in the future. The great amount of water power in New York State is one of its most valuable assets. The Hudson, Mohawk, Genesee, Black, Seneca, Chemung, and Alleghany rivers afford a constant supply of water that can be harnessed for industry when coal has become exhausted or becomes too expensive for economic use in industry.

Perhaps the chief reason for manufacturing in this section is the great supply of coal, especially in Pennsylvania.

Types of Manufactures

Textiles.—It was but natural that the cotton and woolen mills should seek out this section because in the early days water power was the most important factor in determining their location. Of special importance in this industry are the cities of Fall River, Manchester, Fitchburg, Lawrence, Lowell, Pawtucket, Woonsocket, Providence and Philadelphia. Also such cities as Cohoes, Amsterdam, Little Falls and Utica in New York State. Fall River has the most advantageous position of any city in the country because it has both water power and ocean transportation which probably goes a great way toward making it the greatest cotton manufacturing city in the country, if not in the world. The center for woolen industries is Lawrence, Mass., but carpets are largely made in Philadelphia, Yonkers, Morristown and Camden, New Jersey.

Silk.—The center for silk manufacturing in the United States is Paterson, New Jersey. This industry centers here because power is derived from the falls of the Passaic and also because it is near to the greatest silk market in America, namely New York City. Another potent reason for this industry locating here is because in the early days some Italian silk workers settled in this district and followed the trade they had learned in the old country. This industry is, however, quite widespread throughout the entire north Atlantic region, and especially near the city of New York. Other cities that manufacture considerable quantities of silk are Hoboken, Jersey City and Philadelphia.

Boots and Shoes.—The presence of so great a forest in the early colonial days furnished bark for tanning leather. The state of Massachusetts leads all other states in the manufacture of boots and shoes. The two cities of Brockton and Lynn together produce as many shoes as any two states outside of Massachusetts. Haverhill and Boston are also important cities in this field. There is a gradual western tendency in this trade and some cities in New York, like Rochester and Binghamton, hold an important place in the manufacture of shoes. The tanning of leather is largely carried out in such cities as Philadelphia, Salem, Peabody, Woburn and Boston. Boston is the greatest leather market in America.

Gloves.—Another important leather industry in this section is that of making gloves. For no other reason than that the industry had an early start in this section, Gloversville and Johnstown in Fulton County, New York hold first place in the United States. From these two cities, lying so close together as to form a unit, is furnished more than fifty percent of the gloves manufactured in the United States. The impetus of an early start due to the fact that some Scotch glovemakers first settled here was the chief factor causing this industry to locate in this section. The fact that skilled labor and capital interested in this industry are settled here, is the main cause for keeping the industry in these cities. In no other manufacturing city is the whole life given over to a single industry as much as in Johnstown and Gloversville. On almost every street in these cities are factories, some large and many small. Every householder who has a barn or outbuilding utilizes it for the manufacture of gloves.

Collars and Cuffs.—In the city of Troy in New York State is another illustration of an extreme concentration of one industry in a city. According to government reports about 75 per cent of the collars, shirts and cuffs manufactured in the United States are made in Troy. There is no geographic reason why this industry should locate here, but the fact that the labor and capital necessary for this industry are here in abundance is the chief factor in keeping Troy supreme in collar making. It is said that detached collars and cuffs were first invented in Troy, and on a house in third street, Troy, is a tablet bearing this legend. "In this house probably before 1827, detachable shirt collars were first made, and the collar industry originated, by Hannah Lord Mantague 1794-1878. (Mrs. Orlando Montague-inventor-manufacturer.)" So prominent is Troy in this line of work that even the names of laundries in other towns are called Troy Laundries. Glens Falls, a little farther north on the Hudson, also manufactures collars and cuffs to some extent.

Clothing.—This industry has centered in the north Atlantic region largely because of the fact that most of the largest cities in the United States are in this section. To be sure, there is a tendency westward in this industry, but New York City will long hold predominance in this article. The presence of a large supply of cheap labor, recently immigrated from Europe and used to a lower standard of living, makes New York a most favored place from the standpoint of the manufacturer. There is also another advantage in locating the clothing industry here, namely, nearness to a market. In the country as a whole New York stands first; Chicago, second; Philadelphia, third and Baltimore, fourth. Another city in the east that holds an important place in this industry is Rochester, N. Y.

Mineral Industries.—New England is the center for much of the building stone used in this section. Granite is quarried to a considerable extent around Quincy, Mass., and marble is found in abundance at Proctor, in Vermont.

Special Manufactures.—New England is sadly lacking in coal, but in many lines of manufacture, she owes her predominance to experience, skill, and the presence of capital. In many of the industries in this section the labor enters into manufacturing more than nearness to raw materials. Hence we find such special machinery as bicycles centering in Hartford, Conn., firearms in New Haven and Springfield, machine tools in Worcester, ammunition in Bridgeport, brassware in Waterbury and Ansonia, plated silverware in Meriden, watches in Waltham and cutlery in Walden, N. Y. These lighter wares are more dependent on skilled labor, needing very little raw material; hence nearness to coal and iron is not so importnat a factor as in the making of steel.

Gas, Oil and Coal.—The supremacy of this region in population, manufacturing and commerce is due for the most part to the fact that they are near to the great natural fields of mineral fuels. A glance at the map of eastern United States will show that the leading cities of this country owe most of their growth to their accessibility to the coal and oil fields of Pennsylvania. The great city of Pittsburg, no doubt, owes its position to the fact of the junction of two rivers, the Alleghany and Monongohela, but its growth is due to the presence of the great field of bituminous coal. As stated elsewhere, this mineral is a potent cause in the making of Pittsburg a great iron and steel manufacturing city. The district including the cities of Alleghany, Newcastle, Youngstown, Buffalo, McKeesport and Wheeling leads in the production of iron and steel in the country. Iron is also an important item of manufacturing in the cities of Trenton, Allentown, South Bethlehem, Harrisburg, Steelton and Reading.

The oil and gas fields of this section have for some time given first place to the wells of the west, but in the early days these important mineral fuels played an important part in the development of the states of New York, Pennsylvania, Ohio and West Virginia.

Seaports.—One of the most important physical features that a country can have is a wealth of coastline. The Atlantic seaboard, expecially that of the northeastern section of the United States is well favored. Here is a broken coastline affording not only excellent harbors, but also opening into the interior through the medium of navigable rivers. The Middle Atlantic states are better favored by nature than New England, in fact this region is more favored than any other in the United States in this respect. Along the New England coast we find innumerable

harbors affording good sites for cities. However, the cities of New England, like Portland, Boston and Providence, do not have the commercial importance of New York, Philadelphia and Baltimore. This is due in no small measure to the fact that the direction of the valleys in New England is north and south rather than east and west. This territory is a natural outlet for much of the region in the St. Lawrence Valley. Portland, Maine, and Providence, Rhode Island, are the natural seaports of Montreal and Quebec, but an artificial international boundary line prevents these cities profiting from a natural geographic location.

Of the cities in New England, Boston is the most important. It is the principal seaport of New England. In the early days there were other cities of more importance in New England than Boston. Salem for some time was considered the more important city, but due to the deep harbor at Boston and the fact that later Boston became the terminus of the railroads running to the west, thus giving this city a share of the western trade, enabled her to surpass other New England cities. This city has now become the financial center for most of the New England mills. It is also a great leather and wool market, and despite the fact that it is located far from the stock raising regions there is considerable slaughtering of meat animals. In the matter of foreign commerce Boston ranks fourth, handling little over five per cent of the foreign commerce of the United States. The barrier of the Berkshire has turned much of the east and west trade from Boston thus limiting the hinterland of this city almost wholly to New England. Fine metallic goods, such as tools, watches and jewelry, are the manufactures appropriate to this old and conservative city. As a business center Boston includes many cities lying close by, such as Somerville, Cambridge, Quincy, Charlestown and Everett. Were these cities to combine into one great city as have the municipalities near New York and Chicago, Boston would without doubt rank as the second city in population in the United States.

The other seaports of this region are not important commercially but are rather given over to industry. The principal ones are Providence, Fall River and New Haven. Portland should also be mentioned in this connection. These cities have excellent harbors and are located at the mouth of large streams, but due to the size of their tributary areas and the northern direction of the valleys their growth and economic importance has been much slower than the more favored cities to the west of the Berkshire Hills.

Crossing the Berkshires we come into the Hudson Valley through which one of the most magnificent rivers in America flows. At the mouth of this river is a site unequalled for the location of a large city by reason of a large, deep harbor offering hundreds of miles of wharfage. It is of easy access to the interior of the continent. Here is the natural focusing point of the commerce of both land and sea. It is but natural then that a great commercial metropolis should grow up in this region and that New York City is the largest city, on this continent. The Hudson-Mohawk depression leading north and west into the heart of the continent gave New York the best natural connections with the interior, and after the opening of the Erie Canal in 1825 added the Great Lakes region to its local hinterland, enabling it thereby to surpass the cities of Philadelphia and Boston, which up to the beginning of the nineteenth century were considered the most important, in size and commercial activities. It is now the greatest commercial port in the western hemisphere if not in the entire world. According to latest reports over fifty per cent of the commerce of the United States passed through New York. The lowest pass in the Appalachian barrier is located on the Hudson-Mohawk route at Rome, New York, which has an elevation of only 445 feet above sea level, thus affording a cheaper route for the construction of railroads and canals to the interior. The supremacy of New York in trade and commerce is due not only to the fact that it has an excellent harbor but also to the economic fact that it is the point located where the cost of shipping from the interior is lower. Comparing the summit elevation of the New York Central route of 445 feet with that of the Pennsylvania and Baltimore & Ohio railroad elevations of over 2,000 feet, the reader can easily visualize the fact that the Hudson-Mohawk route is called the eastern gateway of the continent, affording a line of cheaper cost of transportation.

New York City is a center of general industry. However, because of its varied interest New York is also the leading financial and banking center of the entire country. Its manufactures are many and varied, although clothing manufacture is perhaps the leading one. The output of clothing in New York City amounts to over half a billion dollars yearly. Printing and publishing hold an important place in this city. In fact no other city approaches New York in this respect. New York is also a great retail and wholesale trade center. Geographically New York includes all of the urban population of northeastern New Jersey, Long Island and Westchester County. Tunnels connect the island of Manhattan with New Jersey and Long Island so that now the Pennsylvania Railroad runs its trains into and through New York proper to Long Island. This has enabled the railroad to compete with the New York Central which for many years was the only western trunk line entering into the heart of the great city.

The second seaport of importance in this region is Philadelphia. This city, although located on the Delaware River, is virtually a seaport, and in colonial times was the metropolis of the country. With the coming of the era of railroads, the mountain barriers to the west, cost it its preeminence as a metropolis as well as a leading commercial city. Another factor that has caused this city to be second to New York as a foreign trade center is that the harbor is not always ice free as is the case with New York harbor. The interests of Philadelphia are, therefore, industrial rather than commercial. Here we find large textile industries. This city is now the greatest textile manufacturing city in the country. The refining of sugar and petroleum and the manufacturing of locomotives and shipbuilding also hold a large place, and are characteristic of this city. It has also an advantage in being connected by a great railroad with Pittsburgh and the west thus attracting to it some of the trade of that region. According to the last census reports only a little over four per cent of the commerce of the country passed through Philadelphia.

Baltimore also has the advantage of deep tidal waters and is a seaport of considerable importance. It has the advantage of being the port nearest to the upper Ohio Valley, but mountain barriers lower the value of this proximity. As in the case of Philadelphia, the hinterland of this city is limited to portions of southern Pennsylvania and Maryland. It is a manufacturing city of considerable volume. Typical industries are tobacco, the canning of fruit fruit and vegetables, and oysters.

Transportation Routes.—People, like rivers, seem to search for a way to the sea. Since the very early colonial days the settlers have gradually sought out the best routes for reaching the interior and finally of reaching the western seacoast. The earliest routes were of course the Indian trails which in the main followed the valleys and streams. The building of roads followed somewhat these old trails, although some of the great east and west turnpikes ignored the valleys and easier routes and were built in an almost direct east and west direction over hills and down valleys, with no thought of seeking out a level route. The Mohawk route, though the more level route, was not the one followered by many settlers from New England in the early days. The more popular routes of those days were Cherry Valley and Skaneateles Turnpikes through south central New York. Another route was from the Susquehanna west to Pittsburg at the junction of the Alleghany and Monongahela Rivers. Later came the era of building canals which became important factors in the development of the regions affected. The principal canal today, however, is the Erie Canal through New York State. This has lately been enlarged and though still unused to any extent could play an important part toward the lessening of freight rates in the carrying of such commodities as coal, lumber, wheat and salt. This canal was a potent cause in the growth of many of the now large cities in New York State, especially Schenectady, Utica, Rome, Syracuse, Rochester and Buffalo, although their rapid development and growth is due more to the building of the railroads.

The railway routes of this region present an interesting study of attempts to search out the lowest passes to the west. The New York Central route has the advantage over all the other eastern railways in this respect. This low pass through the Appalachian Mountains enables this road to lead in the carrying of passengers and freight. Also it is freer from curves and grades, which gives it better profits from its carrying trade. A close competitor of the New York Central is the Pennsylvania Railroad system. This great system has branches in nearly all parts of Pennsylvania and western New York. Its main line, however, running from New York, Philadelphia and Pittsburgh to Chicago, enables it to tap the very region sought by the New York Central. Perhaps the third important line of this region is the Baltimore & Ohio which finds its way through the passes near the Potomac River. Other important railroads of this region are: The Delaware & Lackawanna connecting New York and Buffalo, running through New Jersey and northeastern Pennsylvania to Binghamton and the west; the Lehigh Valley, connecting New York and Buffalo in almost a parallel route with the Lackawanna; the Ontario & Western,

running from Weehawken north to Cornwall and then in a northwesterly direction to Oswego on Lake Ontario; while the Erie connecting New York with Chicago, finds its way through the valleys of the Delaware and Susquehanna rivers and then through the Chemung Valley of southern New York. Most of these last named roads are not important as passenger carriers but do play an important part in the carrying of freight. All of them pass through either rich farming sections or through mining sections.

Erie Canal.—The Erie Canal (commonly known as the Barge Canal), extends across the state from Troy to Buffalo. Officially the route commences at Congress Street, Troy, and follows the Hudson River through the United States Government lock to Waterford, where the westward turn is made. A land cut of two miles in length is utilized to the Mohawk River, into a pool created by the construction of a fixed concrete dam. The Mohawk River at the canal channel entrance is at an elevation of 169.5 feet above the surface of the Hudson River at Waterford and is 184 feet higher than sea level at Albany. From this point navigation is carried through the canalized Mohawk River, with short land cuts at intervals, to Frankfort; thence through an artificial channel paralleling the Mohawk River to Rome and, crossing the divide, enters the Oswego watershed, ten miles west of Rome, and following Wood Creek for five miles, reaches the eastern end of Oneida Lake. This lake is the largest natural body of water in the canal system, the channel stretching across it a distance of twenty-one miles to Brewerton at its western end. From Brewerton, the Oneida River is followed to its junction with the Seneca River at Three River Point; thence through the Seneca River to the Clyde River, through the Clyde River to the foot of Lock No. 27 at Lyons. Here the bed of the Ganargua Creek is utilized with frequent land cuts, to Palmyra, from which place the channel lies in the former Erie Canal, widened and deepened, to a point just west of Pittsford.

An artificial channel extends to the Genesee River, which is crossed about two miles south of the Rochester terminal on a pool created by a movable dam, and traffic enters what is locally known as the 60 mile level, consisting of an enlargement of the former Erie Canal to Lockport.

At Lockport, by means of two combined locks, navigation is raised 50 feet to the elevation of the Niagara River, and thence an artificial channel is utilized to Tonawanda Creek. The canalized creek is followed to its junction with the Niagara River at Tonawanda. Through the Niagara River traffic passes to Lake Erie at Buffalo, the vessels being raised to the level of the lake by the United States Government lock at Squaw Island.

The distance from Congress Street, Troy, to Lake Erie at Buffalo is 355 miles, of which 215 miles lie in natural waterways and 140 miles through artificial channels. Sixty municipalities are touched on the line of this improved canal, while forty-four others located on the Hudson below Troy have the benefit of its service.

The canal has been deepened to a depth of twelve feet. The width of the new canal varies according to the section traversed. Through the canalized rivers and lakes the channel is at least 200 feet wide. Through rock cuts in land lines a minimum bottom width of 94 feet has been provided, and through earth sections 75 feet.

No fixed bridges have been constructed over the new canal channel at less than 15 1-2 feet above the level of the water when at its highest ordinary navigable stage.

The dimensions of the new locks on all improved canals have been made identical so far as practicable. The length of the lock chamber from the lower gate to the breast wall is 310 feet, which, considering the operation of the gates, will permit the locking of a barge 300 feet long. The width of the lock chambers has been planned at 45 feet, and this has practically been accomplished. The width of the United States Government lock at the eastern terminus of the canal system at Troy is 44.44 feet, and this must govern.

To maintain an adequate supply of water to support canal navigation many sources are utilized. From Lake Erie and the Niagara River the water finds its way through Tonawanda Creek (whose natural flow has been reversed) into the canal channel, and as far east as Lock No. 29, at Palmyra. Thus, navigation is dependent solely on the Lake Erie supply.

At Palmyra the channel lies in the bed of the Ganargus Creek, whose line is approximately followed to Lyons, where the western feed is supplemented by the discharge from the outlet of Canadaigua Lake.

At Lyons, the Ganargua Creek and the Canandaigua Lake outlet unite to form the Clyde River, which is canalized to its junction with the Seneca River just east of Lock No. 25 at May's Point. Through the Seneca River come the waters from the great natural reservioirs, Cayuga and Seneca Lakes.

The line of the Seneca River is then followed easterly, utilizing Cross Lake, to Three River Point, where it meets the Oneida River to form the Oswego River flowing northly to Lake Ontario at Oswego. Broadly speaking, it may be said that at Three River Point the flow of water used for canal purposes changes from an easterly to a westerly direction, and navigation passes thence through the Oneida River upstream to Oneida Lake, which in itself affords a splendid highway for traffic.

East of Oneida Lake is reached what is known as the summit level, extending from Lock No. 21 to Lock No. 20 at Whitesboro. The channel between the locks named is at an elevation of 420 feet above sea level, as compared with the Niagara River which is at an elevation of 560 feet.

In this section exists the most difficult problem from the standpoint of water supply, and to insure an adequate boating depth in the areas to be served four systems of reservoirs have been created. These are located in Madison, Onondaga and Oneida counties, as well as in the Adirondack Mountains. The enlargment of the canal channels made necessary the construction of two new reservoirs, namely, those at Delta and at Hinckley. The Delta Reservoir, located about four miles north of Rome, covers an area of 4 1-3 square miles and has a storage capacity of over two billion cubic feet of water. The Hinckley Reservoir is situated near the village of Hinckley, in Herkimer County. When the water is at the crest of the dam an area of about 4 1-2 square miles is covered, providing a storage capacity of approximately 3,445,000,000 cubic feet.

From the standpoint of water supply and probable number of lockages which would be required with maximum use, the capacity of the improved canal system is estimated to be sufficient for the transportation of 20,000,000 tons per season. The movement of freight by water is the cheapest method of transportation and it is of the highest interest to trade and commerce that so great a competitive influence as the New York State Canal system should be maintained. Water transportation furnishes trade to the surest regulatory influence on freight rates.

THE SOUTHERN STATES.

South of the Potomac River, extending westward, including the States of Oklahoma and Texas, is the region usually called the the southern states. No other region of the United States has been so little affected by immigration from Europe. Here we find a larger percentage of people who are directly descended from the first settlers than in any other section. This region includes the broad coastal plain stretching from North Carolina around through Texas and even north to the junction of the Ohio and Mississippi Rivers. The early settlers of this region were mainly of the English gentry stock, with sprinklings of Scotch-Irish as well as some Spanish and French. No doubt the racial characteristics of these early settlers have had much to do with the economic development of the southern states. Some other factors that have played an important part in this development are as follows: soil, surface, forests and climate.

Soil and Surface.—The soil of the southern lowlands near the sea is of a sandy variety and is the region of much of the lumber industry of this section. Tobacco has also been an important product. The soil of the Mississippi is very low and has a very high fertility. This great plain is over six hundred miles long and thirty to sixty miles wide. In the uplands we find a soil much less fertile, with the exception of portions of Kentucky and Tennessee. As a consequence, slavery never had the strong hold upon this section that it had in the less fertile regions of the southern states. Hence this lower region became the section of large plantations where the soil's fertility made slavery a possibility, whereas in the higher and less fertile regions it proved to be uneconomic long before the civil war.

Climate.—It is commonly supposed that the southern states have a very warm climate, and in the early days it was thought that no white man could endure toil in such climate. As a matter of fact the south has nearly every variety of climate from the subtropical variety of Flordia and the Gulf Coast to a temperate climate in the uplands. The climate of New York state reaches down into the high lands of Georgia and the grains and fruits of the more northerly states flourish in abundance in this southern upland. This upland south is fast becoming an industrial section, rather than purely agricultural, and it has long been demonstrated that even in the lower south the climate is not as enervating to the white man as was orginally supposed. To-day much of the rice and sugar of Louisiana and Texas is raised by white men. Most of these men, however, are Italians, former residents of a warm, sunny region in Europe.

Forests of the South.—The timber belt of this region shows two distinct divisions. In the first place the yellow pine and cypress trees are found on the sandy plains and the swampy lands along the rivers. On the slopes of the Appalachian ranges is to be found the largest body of merchantable hard wood in the United States. The chief varieties growing here are oak and poplar, chestnut, sycamore, hickory and

black walnut. One would look for some city in the near vicinity to be the chief port for lumber and to a certain extent this is true, for Memphis is now one of the principal centers for hard wood lumber as well as Newport News and New Orleans.

From the distillation of sap of the long leaf pine trees of this region are obtained two valuable by-products, namely turpentine and rosin. These products are very important in the manufacture of paints and varnishes. By a further distillation of the wood there is produced a kind of tar, which when further boiled down produces pitch. Over 63 per cent of the world's supply of turpentine is produced in this country.

Cattle and Swine.—The upland region where corn is raised in large quantities is also the region of swine raising. From this section the variety known as the "razor back" has developed on account of the fact that it has wandered in a semi-wild state, getting its food in the woods and fields.

Two sections of live stock raising are to be noted. The upland valleys of Tennessee and Kentucky raise many cattle, but have long been noted as the favorite breeding place of race horses. The second region is on the plains of Texas where the former long-horned steer has been largely replaced by the better varieties of the short-horned species. The vast grassy plains of this semi-arid region afford an excellent pasturage for cattle. This is another example of how climatic and topographic features affect the activity of a given region.

Tobacco.—The early colonists of the southern states had no staple product which they could export to England in return for other goods. Nor was power to be had in their streams for the development of manufactures which they might export. The mother country wanted nothing that could be raised at home, and as a consequence the Jamestown colony was about to fail because of its inability to secure a money crop. The crop that saved New England was corn which could be grown even on the thin, poor soil of that region. The southern settlers like the New Englanders had to learn from nature how to thrive in the climate and surroundings of the new world. It was early discovered that this region would grow tobacco, which crop was beginning to be in great demand among Europeans. This crop, which is indigenous to America, is one of the three contributions in the agricultural field that America has given to the world. It soon became evident that the growing of tobacco would furnish a valuable money crop, and for almost two hundred years after 1620 tobacco was almost the sole commercial crop of this region. It is still the chief crop of the upper south and the lower boundaries of the south. Tobacco growing is by no means confined to the south, for there are many profitable regions to be found, especially in the Connecticut Valley, southern New York, Pennsylvania, Ohio and Wisconsin. No plant is more affected by the soil and climate than this one. Each district seems to produce a distinct quality and hence we come to know of the various tobaccos as Virginia leaf, Connecticut leaf or Kentucky leaf. The United States is the greatest grower of tobacco in the world. Over one billion pounds were grown in this country yearly. The increase in the use of tobacco has been most surprising. At the present time, next to the Belgians and Dutch, Americans are the greatest consumers of tobacco. As Professor Smith says in his Industrial and Commercial Geography: "Its use has spread faster than any language or religion, and is found throughout the realms of civilization and barbarism."

Despite the fact that this crop has been an important money crop, it has been most injurious to the soil. Because of the large and profitable returns to be obtained, farmers have continuously planted the same field year after year to this crop until the soil has been exhausted. This fact accounts for the poor condition of much of the soil in Virginia and North Carolina. The practice of crop rotation, as is done in regions of mixed farming, would do much to restore the fertility of these worn out tobacco farms. This has been done in some of the northern states, notably in southern Pennsylvania, where splendid crops are grown on small farms. The principal states in the production of tobacco in the southern states are in the order named, Kentucky, Virginia and North Carolina. Louisville in Kentucky, located near the tobacco fields, is the greatest tobacco market in the world. In the eastern section of the southern states markets of considerable note are Richmond in Virginia and Winston-Salem in North Carolina.

Cotton.—The cultivation of cotton was begun in the United States during colonial times, but owing to the slow method of separating the seeds from the fiber the commodity was too high to be used for the manufacturing of cloth for the millions. However, after the invention of the cotton gin by Eli Whitney in this country, and of spinning machinery in the old country this crop began to increase. The work of the cotton fields was simple and required no skilled labor of any kind and almost no tools. This made it adaptable to slave labor and completed what tobacco had started by firmly establishing in the south the plantation system of agriculture and the employment of slave labor. These two factors tended to create an aristocratic type of society based on the land, and also became dominant factors in the economic and political life of the south. It has been said that the causes of the civil war were rooted in the soil and climate which separated the interests of the southern people in many ways from those of the northern people. In an economic way we can note that their ideas are vastly different, for the New England cotton manufacturer demands a tariff on imported goods to protect himself against the European manufacturer, while the southern planter, who buys his manufactured goods, is injured by such tariff and naturally opposes it. The soil, climate and social conditions also have had much to do with the maintenance of the so-called "solid south" in the political field.

The United States is to-day by far the largest producer and exporter of cotton and cotton products of any country in the world. Over 65 per cent of the world's supply of cotton is produced in the United States. Cotton grows in all of the southern states from Texas to Virginia. The leading states in point of production are Texas, Mississippi, Alabama and Georgia. The principal ports for the shipping of cotton are Galveston in Texas and New Orleans in Louisiana.

Cotton is the one crop that is still largely cultivated by hand. Great improvement has been made in the growing and harvesting of such crops as hay, oats, wheat and corn by the aid of mechanical improvements. At the present time man can grow more cotton than he can pick. There have been attempts to invent a cotton picking machine but up to the present it has not proved to be a practical device. If this machine should be perfected its economic effect could be but little less revolutionary than that of the invention of the cotton gin in 1795. In addition to increasing the area of cotton production and the consequent cheapening of clothing, it would drive to the city the negro, who would then be of less use and demand on the cotton plantation. It might perhaps change the complexion of the famous "black belt."

Other Agricultural Products. — Everywhere in the south corn is grown largely as a supply crop. In the uplands this has long been used as a staple food crop, and the term corn-fed has long been applied to the sturdy mountaineers of these sections. Near the coastal plain sweet potatoes grow in abundance especially in those regions in the eastern section that are frost free. Peaches are to be found in abundance in the Piedmont Plateau in Georgia and the Ozark mountain region of Arkansas. Sugar cane is a tropical and subtropical plant. Its cultivation is confined largely to the gulf states, and Georgia and South Carolina. It has been the leading crop in Louisiana for over a hundred years. Louisiana grows almost 90 per cent of the total crop of sugar cane in this country, producing yearly over 700,000,000 pounds.

Peanuts grow over a wide range of country in the southern states. They are found as far west as Texas, but Virginia leads in the amount produced. Norfolk, Virginia, is the leading market for peanuts. Orange growing has been carried on with some success in Florida, though the cultivation of this crop is much more precarious in this state than it is in southern California, where there have been but two frosts in the last twenty years. Florida also produces other sub-tropical fruits in the shape of pineapples and even the cocoanut and banana will mature in the southern section of this peninsula. Perhaps one of the most important commercial products grown in this state is the grapefruit. This has become a most important part of the breakfast menu.

Minerals.—Aside from the coal deposits in the Appalachian Ranges the supply of minerals in the southern states is not very large. Iron is mined and smelted at Birmingham in Alabama. This city has a double advantage over other smelting centers in that it is located in the fields of ore as well as fuel.

There is, however, one important mineral product in the south which is of considerable economic value, namely phosphate. This mineral is one of the three most sought after minerals. Without phosphate, potash and nitrate it would not be long before the soils of the agricultural sections of the world would become exhausted. In the southeastern section of this country is the greatest known deposit of phosphate rock, and because of its vital importance in the fertility of the soil these deposits are one of the most important mineral resources of the country. The states of the south having the greatest deposits of this mineral are South Carolina and Florida. It is also found in considerable quantities in Tennesee and Arkansas. According to data and figures obtained from the Bureau of Mineral Resources this section of the United States produced nearly three million tons of phosphate in the year 1920, which is considerably over

50 per cent of the production of the entire world.

Texas, California, Louisiana and Utah are the leading states in the production of sulphur.

The United States produces annually about 1,600,000 long tons.

In the matter of mineral fuels the states of Texas and Oklahoma hold an important place. Next to the state of California the state of Oklahoma produces more petroleum than any other state in the nation. There are also large areas of oil fields in Texas which have brought considerable prosperity to that great state.

Manufactures.—While the south has been backward in the matter of manufacturing, it is slowly beginning to develop along that line. The south has been distinctly agricultural and is so to a large extent to-day. However, there are in the south to-day two very important factors in the development of manufacturing, namely plenty of raw materials and power in the shape of fuel and water. The great cotton fields of the south can furnish abundant material for the factories right at home, and thus save considerable in the matter of transportation; lumber is also to be found in abundance. The coal of the mountain ranges and the water falls of the uplands and Piedmont sections will be a source of power for years and years to come.

The manufactures of the south, therefore, are for the most part concerned with raw materials of local origin on which freight charges would be high if shipped to any great distance. Thus we find the lumbering industry located near the forested regions centering in Little Rock, Arkansas and Montgomery in Alabama as well as Memphis in Tennessee; leather goods at Waco in Texas and packing-house products at San Antonio and Fort Worth, all of which cities are located near the great pasture lands of Texas; sugar refining is carried on in New Orleans; the iron industry at Wheeling in West Virginia and Birmingham in Alabama; tobacco at Key West in Florida, Richmond and Petersburg in Virginia and Winston-Salem and Durham in North Carolina.

It is in the cotton industry that the south should have its greatest opportunity. Here we have the center of location of raw materials, plenty of power and a supply of cheap labor. With the building of railroads north and west and the increase of her own population, the south is no longer isolated, but is also near to the great markets of the east and middle west. These advantages should go a long way toward shifting the center of cotton spinning and manufacturing from the northeastern section of the United States to the southern section. Many cotton mills are already established on the Fall line, where the water falling from the Piedmont Plateau to the low coastal plain furnishes abundance of power. Thus we find the industry developed in such cities as Columbia, South Carolina; Raleigh, North Carolina and Augusta and Atlanta, Georgia. These mills have a further advantage in being able to draw on a cheap supply of labor from the poorer uplands of these states. According to latest statistics the Carolinas ranked next to Massachusetts in cotton manufactures.

Cities.—Because of the agricultural tendencies of the south, the population remained almost stationary during the nineteenth century. The cities of the south have been slow to feel the impulse of the new development which took hold of the rest of the country during the middle decades of that century. Affected so little by immigration the cities of this section were of slow growth and of a very conservative type. Another factor that has left the south behind is that the movement of peoples has been east and west, and with the large numbers of Europeans coming to this country very few found their way into this section. Then, too, the Appalachian Mountains in this region are a more formidable barrier, affording fewer passes that can easily reach into the interior. This fact is a vital one, and accounts for the reason that Savannah, Atlanta and Richmond are not the important commercial centers that New York, Philadelphia and Baltimore have become.

Then, too, the coast of this section is not so advantageous to commerce as that of the more northern section. Most of the coast line is straight and is fringed in many places with sand bars and reefs which make it impossible or difficult to find a landing place. Hence no harbor such as the northeastern section shows has developed.

The rural character is further shown when it is pointed out that there are only seven cities in this entire region having a population of over 100,000. Compare this with the fact that in New York State alone there are 7 cities of over that number. Furthermore, of the cities having a population of 25,000 or over Texas has eight; Tennessee and Georgia, four each; Virginia, two, and the others, with the exception of Mississippi, only one.

The metropolis of the South is New Orleans. This city holds a unique place among the American cities in that it is a river port and a seaport at the same time. Its elevation is only about ten feet above sea level, and is below the top of the levee. Here is an example of how man has mastered an unfavorable natural location and made it a fit place for a dwelling. The river at this point is about one mile wide, affording an excellent harbor with plenty of wharfage. The city owns and controls the docks and terminals.

New Orleans holds one of the most strategic positions of any of the cities in the United States. It is the natural outlet of the entire Mississippi Valley, and in all probability had it not been for the fact that the western section of this valley was in the possession of a foreign nation at the time of this nation's birth, New Orleans would have become the most important shipping center in the country. Even in the early days statesmen and politicians, especially of New York city, saw that New Orleans was its natural competitor for the trade of the then great unsettled middle west. This fact was a potent reason for the building of the Erie Canal, which tended to turn the trade away from the river to the lakes and canal to New York.

The port of New Orleans is accessible to the largest steamships. The fact that it is farther from Europe than New York mitigates somewhat against its taking any great share of that trade. However, its position with reference to the West Indies and South America is most favorable and with the further development of trade with those countries, this city will hold a most important place. According to statistics from the Bureau of Census, New Orleans carries about 6 per cent of the foreign commerce of this nation and ranks third in that respect. It is the largest exporter of cotton. Sugar, wheat, corn and tobacco are also important items of export every year. The chief imports are coffee and bananas.

The second city in size in the south is Galveston. This city, though an important port, is almost without a harbor. It was only by building jetties far out into the gulf that anything like a harbor could be made. At present the harbor is a very excellent one, having a channel of about 28 feet in depth. Galveston is an outlet for Texas and the southwest as far north as Denver. Because of the rail lines connecting this port with the interior and also the wealth of resources in the shape of raw materials of the great state of Texas, Galveston is a close rival of New Orleans for the carrying of commerce and shipping. At the present time she has a very slight lead over New Orleans in the actual amount of foreign commerce carried. According to the report of percentages of foreign commerce handled, Galveston handled about 6.3 per cent, while the figure for New Orleans was 6.1 per cent. This city also has the same advantage in respect to trade with South America as has New Orleans.

Going farther east, the next most important city is Atlanta, in the state of Georgia. This city, located near the end of the Great Valley of the Appalachian Ranges and near the easy east and west passes, is called the "Gateway of the South." Norfolk, in Virginia, is the Atlantic port of Louisville and Cincinnati. In Florida the city of Tampa on the west coast is located near the large deposits of phosphates, and is the only deep water harbor for hundreds of miles along the gulf coast. Jacksonville is probably better known than any other city of the same size in the country. It has become a famous winter resort for northern tourists, and is the terminus of important coastline railways. Key West should also be mentioned. It is the most southerly city in the United States. It is the city nearest to Cuba, the Panama Canal and South America.

Railroads.—The South has been slow in the matter of railway development. Most of the lines have been short and many have been put through poor sections which give very little revenue. The greatest single system in the south to-day is the Southern Railway. This system reaches nearly every important town from the Chesapeake Bay to Florida and from the Atlantic Ocean to the Mississippi River.

A second very important line is the Illinois Central, running from Chicago and paralleling the Mississippi River to New Orleans. This river taps the great central west and does much to bring a considerable portion of the nation's trade to New Orleans. This railway is also a potent factor in destroying the old-time through river traffic.

The Louisville & Nashville road connects St. Louis and Cincinnati with Memphis, Atlanta and Mobile. Two very picturesque roads are the Atlantic Coast Line, skirting the Piedmont Plateau from Chesapeake Bay to Jacksonville, and the Florida East Coast Line. The latter road connects the city of Key West with the mainland, being built one hundred miles out into the sea by means of the various small islands off the Florida coast.

THE CENTRAL STATES.

This section is often called the middle west, especially by those dwelling east of the Appalachian Mountains. Here is truly the very "Heart of the Republic." This section comprises about 25 per cent of the

area, 33 per cent of the population and 58 per cent of the agricultural area of the nation. The percentage of improved land in this section is higher than that of any other section in the country. The states of Kansas, Iowa, Illinois and Missouri contain more acres of improved land than any other states in the nation. The physical nature of this section naturally turned the attention of its settlers to farming. The level and rolling prairies with a deep rich soil have been an attractive magnet to the farmers of the stony and hilly farms of New England and the Atlantic States. Most of the population of this section came from the older states, especially Massachusetts, Connecticut, New York and Virginia, and nowhere will the traveler find the democratic traditions of American life more carefully preserved than in this section. This section is also fast becoming a leading manufacturing section. With the development of the automobile and new machines for agriculture, most of this work is done in the central west.

Forests.—A portion of this section of the United States was almost treeless, but there were sections where lumber was in abundance. Today in the eastern and southern sections some hardwood trees remain; principally of oak, ash, basswood, birch and maple. From the central part of Michigan north through Minnesota and Wisconsin there was orginally a great forest of white pine, hemlock and spruce. This region has become almost exhausted and no longer holds the supremacy in production.

DRESSING SHEEP

Typical scene in a great packing house in the stockyards district of Chicago, the center of the meat packing industry. The methods of slaughtering and dressing sheep and cattle are similar. Before releasing the meat for sale, the stamp of the United States inspector must be affixed.

Agricultural Products.—It is in farming products that this section has acquired and held first place in the nation. The level prairies have offered a fine field for the use of the most improved types of farm machinery, and because of the climate and soil, grain is the principal staple crop of this section like cotton and tobacco of the south. The nature of the soil in this section caused wheat and corn to grow as it never had grown either in the south or in the northeast section. Wheat grows mostly in the northern sections, especially Minnesota and the Dakotas, while corn is the staple product in the south. Here corn is used largely as a supply. The principal region for corn growing is in the belt from central Ohio to central Kansas and from the Ohio River to Wisconsin. Corn from this section goes to the market in a more condensed form of beef, pork, mutton and horses and mules.

Another commodity of this region is the sugar beet. This is one of the few commodities in which there is competition in production between temperate and tropical regions. The sugar beet belt is just north of the corn belt and runs somewhat into the wheat belt. Thus we find that it rarely competes with corn for it requires a great deal of hand labor; hence in those regions where corn will mature the farmer gets the greater return per acre from corn rather than from the sugar beet. Sugar beets, therefore, are usually cultivated in those regions where it is too cool for corn to mature. As a result of the labor and climatic requirements this industry was late in development in this country. Here in 1890 was produced only about 3,000 tons, but due to tariffs this crop has increased until in recent years it amounts to nearly 1,000,000 tons.

Cattle and Meat Products.—It is difficult to refrain from speaking in superlatives when one is talking of the various products that come from the middle west. The cattle industry and meat packing play an enormous part in the economic life of the people of this section. Cattle raising is a frontier industry and before the days of the railroad and refrigerator car its volume was limited and the markets had to be near at hand. Today with the development of transportation and refrigeration the pastures situated a long distance from the markets are under no handicap. As settlements advance the land rises in value and cattle must seek new pastures farther on. So that while cattle raising is more largely carried on in the states farther west, the center of the meat packing industry is in Chicago. Because of the corn and grain lands, cattle raising has centered near the central states, and because of transportation facilities the meat-packing industry has centered in Chicago. More than one-half of our meat comes from the central states. In point of production Illinois is first and Kansas second. This industry has also extended to South Omaha, St. Joseph, Sioux City, St. Paul, Indianapolis, St. Louis and Cincinnati.

Meat packing is a splendid example of how modern methods and inventions have envolved a large number of by-products. These by-products, as in many other lines of industry, afford the major portion of the profits. What was formerly thrown away and wasted is now utilized for the benefit of both manufacturer and consumer. In the early days the chief products of meat were beef, hide and tallow. Today, in addition to the three products mentioned above, we have combs, hairpins, brush backs and scoops from the horns, the handles of toothbrushes, razors and knives from the shin bones, in addition to such articles as buttons, felt, soap, glue, pipe stems, chessmen and fertilizer from other portions of the animal. Even glands are used for medical preparations.

Manufactures.—The center of general manufactures in the United States is a little west of central Ohio, and about one-third the value of manufactured products comes from the central states. As in the east there is abundant fuel and also plenty of water for power, while from the standpoint of transportation facilities the middle west is unexcelled. Here we have the great inland seas which reach far into the interior with an outlet into the ocean either through the St. Lawrence Valley or the Erie Canal, while in no other section of the country is there such a dense network of railways. These factors, coupled with the increase of the population, promise to make this section one of the greatest manufacturing districts on this continent.

The lumber industry has of course centered around the Great Lakes and Duluth, Saginaw and Bay City are noted for the production of lumber. Because of the power of the rivers and the presence of wood pulp the paper mill district is around Green Bay in Wisconsin, Duluth and Sault Ste. Marie. Furniture making which formerly centered in Grand Rapids because of nearness to the raw material is still a prominent industry in that city. This industry is held there largely on account of the capital and skilled labor that are already there. Other centers of furniture making are found in Sheboygan, Wisconsin and Rockford, Illinois.

The largest single industry with the exception of the manufacture of automobiles is the making of agricultural implements. That this industry should center here near the great farm lands of the nation is not surprising. While this industry is dependent on a supply of hard woods, in the main it has followed the western movement of agriculture. In the early days this center was in New England; later it was in New York state and Auburn of that state was long a prominent center for the manufacture of agricultural implements. The center for this industry is now in Chicago, while Moline, Illinois; Springfield, Ohio; St. Louis, Missouri; Racine, Wisconsin, and Peoria, Illinois, are large manufacturers of these commodities.

Since the beginning of the twentieth century the automobile industry has grown more rapidly than any other industry with the possible exception of the moving picture. Automobile manufacturing has centered largely around the Great Lakes, especially such cities as Detroit, Cleveland and Toledo. The growth of these cities has furnished an ample supply of labor, while the wealth of the population has furnished an ample market for this mode of transportation. The middle west with its rolling level country has developed the building of roads, so that almost all towns of any size are reached, and in many cases the only mode of reaching them is by the use of the automobile.

Other large industries in this section are the manufacture of rubber goods in Akron, Ohio; cash registers in Dayton, Ohio; leather goods in St. Louis; tanning in Milwaukee and ready made clothing in Chicago.

Minerals.—The principal minerals of this section are gold, iron ore, copper and coal. The gold of this region is found largely in the Black Hill district in South Dakota. The iron ore of this region is a most important mineral for it contains a small amount of impurities. The ore in this section contains as high as 80 per cent pure metal in many cases. The principal fields are in northern Michigan, along the shores of Lake Superior, northern Wisconsin and Minnesota. Here are found the largest beds in the world. The beds furnish more than four-fifths of the ore used in this country, and in bulk it exceeds that produced by England and Germany. In fact Minnesota alone furnishes more ore in a year than any foreign country. Most of

this ore, as we have seen, is smelted in Pennsylvania but a large number of blast furnaces are to be found along the great lakes, where the ore can be dumped from the barges direct to the plants.

The iron industry naturally gives rise to much of the iron and steel manufacturing of this section. In such cities as Chicago, Toledo, Detroit, Cleveland, Dayton, Canton and Elgin iron and steel are important products.

There are also beds of gypsum to be found from Kansas to Iowa, while the abundance of salt in the region about Detroit is one of the causes that have favored the growth of a large chemical industry in that city. In East Liverpool and Cincinnati, near the large clay deposits of southern Ohio, are found extensive pottery works.

Water Routes.—It is in the wealth of her natural water routes that the west has an advantage in the carrying on of commerce. In fact its rapid development during the nineteenth century was aided largely because of these waterways. The great Mississippi River system, reaching from the far-away Rocky Mountains across the continent into New York via the Alleghany River, encouraged the pioneers to push farther and farther into this section to find homes. In the memory of men now living large portions of this country were a wilderness. The level nature of the country and the wealth of its waterways made possible its settlement at a very early date. During the early part of the nineteenth century steamboat traffic started upon the Ohio and Mississippi Rivers and continued to develop in a remarkable degree, until the era of railroads cut into their revenue. The Missouri has never been used to the same extent as have the other streams on account of the fact that this region furnished no staple commodity that needed to be carried into the interior, and by the time settlers were ready to settle this section the building of railroads had begun so that water transportation was not so necessary.

The Mississippi River system which embraces the great central part of the United States is connected by canal with the Great Lakes along four routes. A canal connects the Wisconsin with the Fox River, another canal connects the Illinois with the Chicago River, the Ohio River is connected with Lake Erie and the Illinois River with the Mississippi at Rock Island. These connections furnish a through water route from the far interior to the great seaport of the east. The recent agitation for the St. Lawrence Canal on the part of the western farmers, is actuated by a desire to find a more direct and cheaper route to the sea. The minds of many western farmers and financiers are fired with the thought of making many of the inland cities virtually seaports and thus causing a great reduction in freight rates. Most of these canals are too shallow to compete successfully with the railroads. There is really only one deep water canal—the great Chicago Drainage Canal. This canal is 24 feet deep and over 300 feet wide. The most important factor in the matter of water routes in this section is the Great Lakes. These great inland seas, the like of which is found in no other country, are able to carry ships of ocean types and can carry freight at about one tenth the cost of carrying it by rail. By means of the use of the Welland Canal in Canada cargoes can go without change of load from Duluth in Minnesota, nearly two thousand miles inland to the open sea. The full utilization of the water ways in this section, as in any other section, will go a great way in the cheapening of rates and making possible the development of the industries of the country.

Illinois.—Twenty-third state in area and third in population lies in nearly a central position in the great Mississippi Valley. For about 50 miles in its northeast corner it touches Lake Michigan, and there the world's fourth city, Chicago, is the world's greatest railroad center. The Mississippi River extends along the entire western border, and it separates Illinois from Iowa and Missouri. On the east are Indiana and Kentucky, and part of this boundary is formed by the Wabash River. Kentucky and Missouri are on the south, with natural boundaries in part formed by the Ohio and Mississippi rivers. The area of the state is 56,665 square miles, of which 622 square miles are water. Population, 1930, 7,630,654. The capital is Springfield.

Illinois is one of the prairie states; the surface is largely level, but in the northwest, near the Mississippi River, the land is hilly. The elevation ranges from 279 feet at Cairo, in the extreme south, to 1,241 feet in the northwestern county (Jo Daviess). The climate is continental, little influenced by local conditions, except along the shores of Lake Michigan, where the lake tempers the severity of winter and cools the air in summer. Throughout the state the winters are cold and the summers are hot as a rule.

There is an excellent drainage system. The bordering streams, the Mississippi, Wabash, and Ohio rivers, have been mentioned. Running southwest through the state is the Illinois River, which for a part of its course is navigable; it is destined to be an important waterway.

Chicago.—No other city in the world located a thousand miles from the sea has so favorable a situation for commerce. This city is virtually a seaport situated as it is on one of the great inland lakes of the middle west. That a town should grow up here was seen by many in the early days of the last century. It is a well known fact that wherever people are compelled to pass, or there is a break in the transportation facilities, at that spot a town or city is likely to develop. The southward extension of Lake Michigan right into the center of the middle west compels the east and west traffic to go around it, and this simple geographic fact makes a great lake port near its head a necessity. Other facts that have helped in the growth of the city are its location in the midst of a rich grain center, near the stock belt of the United States, and also the fact that it is about midway between the Atlantic and Pacific oceans. Such a spot, marking the place where all lines of trade and commerce naturally converge, gives Chicago an unrivaled opportunity for trade and commerce. Also the supplies of timber, coal, iron and copper within easy reach of the city of Chicago, make it a seat of manufacturing as well as trade. This city is a typical example of a city created by economic forces.

The real site of Chicago was determined largely by the mouth of the Chicago River, which offers an easy portage to the Mississippi. It has spread out now so that it borders the lake shore for about forty miles. Although it has an artificial harbor, it is one of the largest shipping ports in the world. Some one has said that Chicago is the western terminus of the Erie Canal. Thirty nine railway lines enter Chicago, making this city the greatest railway center in the world. A glance at a railway map shows a great convergence of lines into this city. This fact, together with the lake port facilities, makes Chicago a great distributor of commodities and in part accounts for the fact that it is the greatest grain and meat market in the world. The leading industry of slaughtering and meat packing yields nearly one-fourth of the total value of the manufactured products in this district. Of the industrial manufacturing some of the larger are clothing, foundry, machine shop products, printing, iron and steel cars and agricultural implements. The great rolling mills at South Chicago and the blast furnaces and steel mills at Gary, only fifteen miles away, are among the largest in the whole country.

Detroit.—The second city of rank in this district is the city of Detroit. Its growth has been the most remarkable during the last decade, and to-day it ranks as the fourth city in size in the whole country. This city was originally established by the French as a military post and also for trading purposes. Although located on a river, it is virtually a lake port, and has exceeded in growth the other cities in this region with the exception of Chicago. Located in the eighty-mile gap between Lakes Huron and Erie, permitting the passage of railroads which connect the middle west with Canada, Detroit is primarily a crossroads city where the lake route is crossed by the east-west trunk lines of railways. This city is a typical example of a city growing up where there is a break in the mode of transportation.

The largest city of Michigan and the fourth city of the United States, population (1930) 1,568,000, was founded by Cadillac in 1701. The harbor is the finest on the great lakes, the Detroit river offering anchorages comparable to those of the Golden Horn at Constantinople. The city and its residence suburbs of great beauty extend for 30 miles along the river down to lake Erie. Opposite the city lies Windsor, Canada. The streets and avenues are generally of notable width and it is a common sight to see a double row of automobiles parked in the center of a great business street.

Many splendid buildings and parks adorn the city, the greatest of the latter being Belle Isle, an island of over 700 acres in the river. The water works, valued at over $5,000,000.00 are owned by the city and have a daily capacity of 250,000,000 gallons. The electric light plant is also municipally owned. The system of public schools has few rivals in America.

In recent years Detroit has become one of the manufacturing wonders of the world. Its automobile industry, embracing every grade of cars, employs scores of thousands and sends the name of Detroit to every corner of the earth. Adding machines, stoves, furnaces, ships, and many other products make Detroit notable.

The leading manufactured output of Detroit is the automobile. In fact, Detroit surpasses all the other cities in the country in the manufacture of this commodity. This city, with the city of Cleveland, together produce over one-third of the entire output of the United States. The value of the output in Detroit alone has caused rapid growth and high wages. It is but natural that this industry should

concentrate in the cities of the middle west, for this section in the earlier days was the center of carriage making, and when this new mode of transportation developed it was easy to change to this type of vehicle.

The other manufactures of Detroit are of a wide variety, but the following should be noted: cars, ships, stoves, drugs, alkalies, tobacco and matches.

In shipping Detroit rivals the greatest Atlantic ports. The annual tonnage passing Detroit is nearly 101,000,000 tons, a tonnage greater than that of New York. The annual tonnage of the Detroit River is more than double that of the Suez Canal. In addition to its great water system of transportation, Detroit is one of the great railroad centers of America.

Cleveland.—This city is not favored with a good harbor, nor is it located on a large stream. The Cuyahoga River is but a small stream and does not do for Cleveland what the Chicago River does for Chicago. However, its position with respect to other cities and localities has had much to do with its growth and development. A glance at a map will show that Cleveland is located on a direct line between the great ore mines of Lake Superior and Pittsburg. In other words, it is the point on the Lakes nearest to Pittsburg which makes this a natural transfer point. Also its relation to Atlantic ports in distance, as well as its railway connections, are so advantageous that a large portion of freight is unloaded here and transferred from lake vessels to cars. Five great east-west railroads run through this city, making it a prominent railway center. Also there are numerous electric lines connecting this city with the suburban sections in northern and central Ohio. Its prominence as a shipping port is shown by the fact that its lake trade amounts to over 1,300,000 tons annually. Cleveland, however, is the chief manufacturing city in Ohio, and its manufactures show the effect of the transportation which bring to it coal and iron. Thus the more important manufactures include iron and steel, automobiles, steel bridges, metal-working tools and machines, carriage and vehicle hardware and gas stoves and ranges. The refining of petroleum is another large industry made possible by being in the neighborhood of a great oil-producing region and favored by pipe-line transportation of the crude oil and water carriage of the refined products.

Cincinnati.—County seat of Hamilton County, long the largest city of Ohio, now the second city with a population (1930) of 451,160. Beautifully situated on hills rising in three terraces to a height of nearly five hundred feet above the Ohio river, Cincinnati occupies a commanding commercial position half way between Pittsburg and Cairo. Her public educational system embraces every development from the kindergarten to the specialized departments of the municipal university. Three inclined plane cable lines elevate cars and passengers from the lower business levels to the beautiful residence districts on the hill tops. Cincinnati owns its water works and the Cincinnati Southern Railway, which extends to Chattanooga. The value of the municipal property approaches $130,000,000. Five bridges spanning the Ohio bring a number of Kentucky cities, including Covington and Newport, within Cincinnati's immediate district. Machinery and machine tools, iron products, meat packing and the manufacture of shoes, clothing, and pottery are a few of the more than 4,000 industries that make Cincinnati one of America's greatest cities. The city was named in honor of the Society of American Revolutionary officers—The Cincinnati.

Other Lake Ports.—In this connection two other cities of some prominence should be noted. Toledo, Ohio, although located on the Maumee River is virtually a lake port. It has an excellent harbor, the river gradually widening out into the Maumee Bay gives abundance of room for shipping and wharfage. Toledo has the disadvantage of being located off the main direct route between the east and west. It is not on a direct line between Chicago and the east, and also, ships from Chicago or Duluth and Detroit do not stop here on their way to Cleveland or Buffalo. However, it may be reached by large vessels and is a favorable point for future connection of Lake Erie with the Ohio River. Thirteen steam roads and ten electric lines give this city unusual advantages for trade and commerce. The principal manufactures are the refining of petroleum, flour, automobiles, plate and cut glass besides many machine shops and foundries. Perhaps this city is more distinguished on account of its glass works. Here some of the finest material of its kind in this country is made.

The other lake port of importance in this section is Duluth. From the standpoint of natural location, few cities have a better site. Located at the end of a great lake and in the midst of a great grain, ore and lumber country, this city should be one of the most prominent and populous cities in the nation. However, the proximity to the Canadian boundary causes Duluth to lose much of the advantage gained by its location, for this turns much of the Canadian commerce from the natural line of least resistance. Were it not for this fact, Duluth would be a second Chicago. As it is, Duluth is a shipping port for iron ore, grain and coal, while lumber, flour and steel mills are typical industries.

Another lake port that should be mentioned is Milwaukee. This has grown up to be a large center of general industry, although as a shipping point it has never gained prominence. It is an outlet for the great state of Wisconsin. Its chief industries are leather and iron.

River Ports: St. Louis —A city near the confluence of three great rivers, the Mississippi, the Missouri and the Ohio, is a result of natural causes. Here must be a meeting place of traffic from the east and west and north. This point became a focus for exploration and trade where water routes from the Appalachians, the Great Lakes, gulf and Rocky Mountains meet. As a result St. Louis has been the metropolis of the Mississippi Basin since the very early days. From the advent of the steamboat in the early decades of the nineteenth century until the Civil War this city enjoyed great prosperity and rivaled Chicago. The closing of communication with the southern seaboard, the extension of railways reducing the traffic by water to small importance caused this city to lose much of its importance of early days. However, the extension of the railways to the Pacific Coast has made St. Louis a railroad center second only to Chicago. The terminals of over twenty lines are in this city. It has, therefore, become a great distributing point for the west and southwest not only for its own products but grain, livestock, cotton, hardware and agricultural implements. Its manufactures include slaughtering, meat-packing, boots and shoes, tobacco, clothing, iron and steel, chemicals, furniture and paints.

Minneapolis and St. Paul.—This city with its twin—St. Paul—located across the river was located at this point on account of the falls and rapids in the Mississippi River. Later the railroad connections and settlement of the wheat lands to the north and west led to the commercial and industrial growth of these two cities. Nine railroads connect these two cities with Chicago, St. Louis, Lake Superior, the Pacific Coast and Canada, giving these cities access to the great markets of the east. Minneapolis is the greatest flour manufacturing city in the world. The tremendous horse power of the St. Anthony Falls and Taylor Falls in the St. Croix afford abundant power for these mills, which have a capacity of from 80,000 to 90,000 barrels daily. The natural resources of this section for production and the power from the rivers for preparation of the products of flour and other commodities in close proximity is another example of how the geographic environment of a locality affects its economic development.

Kansas City.—At the eastern bend of the Missouri, where it comes down from the north, is another break in the mode of transportation. In the early pioneer days this was the river terminus for the overland stages. Its growth, however, is due largely to the development of the railroads. This district is second only to Chicago in the matter of livestock and in the value of its meat products.

Other cities located on rivers are *Omaha* and *Cincinnati*. The former is noted particularly as a meat-packing center, while the latter has a wide variety of manufactures like clothing, boots and shoes, wagons, soap and artistic pottery.

Of the cities that are strictly inland, the most important is Indianapolis, the capital of Indiana. This city was located largely by act of the legislature, being about the center of population for the state. This city has neither waterways nor power, but has the advantage of being located near the coal region and in the midst of a very rich agricultural region. Perhaps the factor that has developed Indianapolis more than any other is the railroads. About fifteen steam and twelve electric lines radiate from it. In no other state does its capital have so great an economic influence as does Indianapolis in the state of Indiana.

THE WESTERN STATES

In discussing the economic geography of the western states it is perhaps best to consider all the territory lying west of the 100th meridian of longitude. This is a gradually rising plain which extends some twelve hundred miles to the Rockies, and after that range comes a series of ranges and narrow valleys until the coast is reached. All of this section, with the possible exception of the strip along the northwest coast of the United States might be called the land of little rain, for the most of this section has less than 20 inches of rainfall per year, and in some areas it is under 10 inches per year. The high altitude and lack of rainfall, coupled with high winds, make a large portion of this region a virtual desert. The climate of the eastern section of this area is of an extreme continental type, very hot in summer and cold in winter. In the extreme northwest one finds a comparatively warm climate both winter and summer. The climate of this region more nearly duplicates that of the British Isles than

any other section of continental United States. Southern California, however, has a sub-tropical climate with almost rainless summers. In fact irrigation is needed for most of the farming done south of San Francisco.

In the eastern section and on the high plateau of this region are the great sheep and cattle ranges of the country. Cattle raising has been somewhat curtailed by the westward movement of sheep raising. The close cropping of the grass by sheep does not leave enough for cattle to subsist upon, and in many instances has changed a grass growing region into a sand blown region. This is at least one reason for a decline in the matter of cattle raising, and perhaps in the rise of the price of meat.

In the northwest region dairying is carried on to a considerable extent, especially in sections of the country near the large cities where land is not fertile enough to make the growing of staple crops more profitable than this type of farming. Farther south, along the Pacific Coast, near San Francisco, is the greatest poultry district in the world, while still farther south, ostrich farming is carried on to great advantage.

Irrigation.—The climatic conditions in this section of the country have been serious drawbacks in the development of agriculture. Most of this region has been considered too dry to attempt to raise crops of any kind. In fact the thing that attracted the early settlers to this region was its mining resources. As the country began to grow more populous, the necessity of growing more food in this section became more and more apparent. The thing most needed to make gardening and agriculture possible was water, hence the process of irrigating the land has developed in this region to quite a wide extent. Here is a great opportunity for it, as it is estimated that at least fifty millions of acres, situated in valleys and along the foot of mountains, can be irrigated. When one stops to calculate that fifty million acres of land would be a region about the size of the state of Missouri it is not easy to exaggerate the wealth it will add to the country.

Irrigation, or the application of water to land, has been practiced since very ancient times by peoples dwelling in dry lands. The Indians of Arizona and New Mexico practiced it in this country before the advent of the white man. The first white people to practice irrigation in this country were the Mormons in Utah. Here conditions were very ideal for this method of watering the land as there is an inexhaustible supply of water furnished by the melting snows from the mountains, while the topography of that region afforded a level area suitable for bringing water to it.

While wind movement and relative humidity are a factor, the largest influence in determining the necessity for irrigation is the amount and seasonable distribution of precipitation, particularly rainfall. The arid and semi-arid territory of the United States is included in the states of Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming. Irrigation is practiced to a greater or less extent in all of these states and also in Arkansas and Louisiana, in which, together with eastern Texas, it is confined mainly to rice growing. In the eastern states it is practiced over small areas for the growing of fruit and truck crops.

In that part of the United States lying east of the arid and semi-arid states named above, the normal annual precipitation exceeds twenty-five inches and is so distributed throughout the year as to provide sufficient moisture for the growing of general crops. While droughts of short duration occur in this section sufficiently often to make desirable the irrigation of such crops as truck and small fruits, which may be seriously damaged by lack of precipitation at certain periods, it is not a general practice. General crops sometimes suffer from insufficient moisture but these conditions do not occur often enough to warrant the expense of irrigation.

The forty to fifty inches annual rainfall in Arkansas, Louisiana and eastern Texas is sufficient for all crops except rice, for which the ground must be kept under water during the growing period. Irrigation is practiced in this region to supply the rice fields.

The states of North and South Dakota, Nebraska, Kansas, Oklahoma, western Texas, Montana, Wyoming, Colorado and New Mexico lie in the so-called semi-arid region. They have a normal annual precipitation which varies from about fifteen inches on the west to about twenty-five inches or more at the eastern boundaries. In the eastern part of this section, the precipitation varies from year to year and irrigation advances eastward in dry years and recedes to the west in years of plentiful and well distributed rainfall. On the high plain of the western part of this section, crops are grown without irrigation but it is generally practiced in the valleys. On the high mountains of the main ranges of the Rocky Mountains which extend thru this section, precipitation in the form of snowfall is heavy.

Just west of this section lies the real arid region of the United States. It extends between the Rocky Mountains and the Sierra Nevada and Cascade Mountains from central Idaho to the Mexican boundary line. The normal annual precipitation in the region varies from about two inches in southwestern Arizona and southwestern California to about eight inches in southern Idaho. In the larger parts of Arizona, Nevada, and Utah, and considerable parts in California, Oregon, Washington and Idaho, practically no crops can be grown in the valleys without irrigation. On the higher lands in all of these states except Nevada and California, the precipitation is greater and some grain and forage crops are grown without irrigation.

West of the Sierra Nevada and Cascade Mountains the precipitation varies. It is less than the amount considered necessary to mature crops in the southern part of California; it is equal to the greatest precipitation of any place in the United States in Washington and Oregon. But even in Washington and Oregon there is a dry period in the late summer when irrigation is desirable for growing crops and it is used somewhat for pastures, vegetables, and fruits. This same condition obtains in northern California. However, although the annual rainfall in the southern part of the state is less than is normally required to mature crops (since most of the precipitation occurs in the winter and spring) it is possible to grow crops without irrigation.

Painted Desert. Twilight in Canyon de Schelly. An area of tablelands in north central Arizona, deriving its name from the array of colors displayed in the rocks.

Streams are the chief source of the water used in irrigation in the United States—83 per cent of irrigated areas receive the entire supply from this source and 2 per cent additional receive part of the supply from streams. The streams in the western states have one common characteristic — they are mountain streams or have their origin in the mountains and are subject to heavy floods in the spring and early summer, and become very low in the late summer. This condition makes it necessary to store a part of the flood flow for use in the late summer if the entire water supply is to be used. The situation of this territory, according to the various drainage basins, is as follows:

1. The drainage basin of the Missouri and its tributaries. The northern half of the Great Plains, extending from the

Rocky Mountains toward the Mississippi River, is drained by the Missouri River and its tributaries. In most of this area some crops can be grown without irrigation, and the irrigated land is confined almost exclusively to the stream valleys. The Missouri itself is not very largely utilized, and many of its tributaries are in the same condition. Storage has been provided for only a small part of the flood flow of the main stream and its tributaries north of the Platte, and there is in these streams a large supply of water available for future development in Wyoming, Montana, and the Dakotas. Included in this basin is the Shoshone project in northwest Wyoming. The water supplying this project is furnished by the Shoshone River which runs through a deep and narrow canyon into the Big Horn River, a tributary of the Yellowstone River. On this river is constructed a huge masonry dam over 328 feet high. This project serves about 100,000 acres of land. Another notable development is located on the Cheyenne River and its tributaries (including the Belle Fourche). This project irrigates over one hundred thousand acres of land in western South Dakota. The location is splendid in regard to markets, located as it is near the mining towns of the Black Hills as well as within striking distance of the great cities of Omaha, Minneapolis, St. Paul and Chicago.

2. The North Platte supplies large areas of Colorado, Wyoming and Nebraska. Its low-water flow is largely utilized and storage has been provided in the Pathfinder Reservoir in central Wyoming for a large part of the flood water of this stream. But there is a considerable supply of additional storage, which would make it possible to extend the area irrigated. Because of the level nature of the land, the farms are divided into holdings of about eighty acres. This is larger than the average irrigated farm, which seldom runs over ten or twenty acres on account of the rugged nature of the surrounding country which limits the amount of available land.

3. The South Platte waters a large area of land in Colorado and a small area in Nebraska. The low-water flow of these streams is fully utilized. Most of the flood water and winter flow of these streams is stored in many small reservoirs rather than in one large reservoir. Yet there is some water available for further development of the same kind in the lower part of the stream. Water stored on the North Platte can be used on the main Platte in Nebraska and there is water from floods, winter flow, and return seepage that could be stored on the main stream if the demand for water justified the expense. Uncertainty as to the need for irrigation and as to the water supply have retarded development in this section.

4. The central part of the Great Plains is drained by the Arkansas River and its tributaries. The Arkansas waters a large area in Colorado and a small area in Kansas. The low-water flow of the Arkansas is all used, and a large part of the flood water is stored in small reservoirs; but there is still some water available for storage on the main stream and its tributaries.

5. Practically all of the land used for rice growing in Arkansas and a considerable part of that in Louisiana and Texas is watered from wells. There is nothing to indicate that the water supply is not sufficient for a large expansion of the rice-growing area, if other conditions justify it. The rice grown along the Gulf coast in Louisiana and Texas is supplied principally by pumping from streams entering the Gulf. These streams are so nearly at the Gulf level that heavy pumping at times causes the salt water of the Gulf to enter the streams. The supply of fresh water is limited unless storage is provided. This has not been done. In Texas, water for rice is taken from streams at higher levels, and here the supply is insufficient in some seasons, but there is plenty of water for storage purposes. Streams flowing to the Gulf of Mexico supply scattered areas throughout central Texas, and in the northern section the water is supplied from wells to a considerable area. The water supply is sufficient for a large extension of irrigation from both sources, if other conditions justify it.

6. The Rio Grande and its tributaries drain south central Colorado, most of central and eastern New Mexico, and the southwestern part of Texas. This large

COOLIDGE DAM AND LAKE

Built by the United States, Department of the Interior, for irrigation purposes. The height above bedrock is 250 feet. The total over-all length of the structure, including spillways is 920 feet. The reservoir capacity is 1,200,000 acre feet. This dam is the first multiple dome project ever built.

area lies largely in Colorado and Texas with a considerable portion in New Mexico. The Rio Grande is subject to heavy floods and at times is dry or nearly so, and storage is necessary for permanently successful irrigation. The river is dammed near Eagle, New Mexico, forming the Elephant Butte Reservoir, which has sufficient capacity to store the flood water and to regulate the flow of the stream below. Water from this reservoir supplies about 180,000 acres of land in a strip forty miles wide on both sides of the stream in New Mexico, in Texas, and in Mexico. There is little opportunity to use water from the Rio Grande below the El Paso Valley in Texas, except near the mouth of the river where a large area is irrigated. The lower part of the river receives much of its water from tributaries in Mexico below El Paso and is not dependent on storage in Elephant Butte Reservoir. Most of the water used for irrigation in this section is pumped from the river.

At times the supply is low, but there is a good supply for storage, although reservoirs have not been built. The question of providing storage on this part of the Rio Grande is complicated by the fact that the river forms the boundary between the United States and Mexico, and until some agreement is reached between the two republics for the equitable division of the water supply, the extent of safe irrigation development on either side of the river can not be determined. The Pecos, a tributary of the Rio Grande, drains a large part of southeastern New Mexico. It is subject to heavy flood periods and periods of very low discharge. Storage has been provided for part of the flood flow but there is opportunity for further development and larger storage. There are many flowing wells in this valley.

7. The Colorado River system drains all the land west of the Rio Grande drainage area to the California boundary and extends northward to northern Wyoming. It supplies water to land in Wyoming, Colorado, Utah, New Mexico, Nevada, Arizona and California. In the upper states the areas of tillable land in the valleys of the tributaries of the Colorado are limited and much of the low-water flow of these streams is not yet utilized, while there is very little storage. The Gunnison project is in western Colorado and a large supply was obtained by tunneling under a mountain range 2,000 feet high to feed the Uncampahgre valley. This region opens for productive agriculture over 140,000 acres.

Near the mouth of the stream very large areas are irrigated in Arizona, California, and New Mexico. The Numa project has a most favorable situation. It is situated on the delta of the Colorado River in the states of Arizona and California. The soil of this region is very rich in plant food and will prove one of the richest projects. It is estimated that a farm of ten acres will be sufficient to support a family. On account of the warm climate of a sub-tropical nature, and the fact that this section is practically frost free, more than one crop can be raised, thus doubling the income per acre. Over one hundred thousand acres of land are under irrigation. The low-water flow reaching this portion of the river is just about sufficient for the land irrigated. Any considerable extension of the area watered will necessitate storage. A very large volume of flood water is available for storage, and Federal and local agencies are studying the possibilities of storing these flood waters. A compact between the states interested for the control of the river has been provided for by state and Federal legislation.

Gila River (which is a tributary of Colorado River) and its tributaries drain a considerable part of western New Mexico and most of southern Arizona. All of these streams are subject to heavy floods and to periods with practically no discharge. Consequently, storage is necessary to make them reliable sources of water for irrigation. Little storage has been provided except on Salt River, where the Roosevelt Reservoir has sufficient capacity to store the entire flow of the stream above the reservoir. The Roosevelt Dam is located just a little south of the central part of Arizona. It is 284 feet high, 1,080 feet long, and 170 feet thick at the base. The water is easily distributed over the entire section, which comprises between 250,000 and 300,000 acres. The climate of this section is very

favorable to the growing of grapes, almonds, dates and other warm country products. Tributaries reaching the stream below the reservoir are subject to violent flood conditions but storage for this surplus water has not been provided. In the irrigated section of the Salt River Valley, ground water has come near the surface making drainage necessary. Both wells and open ditches have been installed for the purpose of lowering the ground water and supplying additional water for irrigation. There is opportunity for more work of this kind.

Boulder Dam which was completed in 1935, is 727 feet high, 1,180 feet across at the top, and 650 feet thick at the bottom, and the greatest dam in the world. It supplies a tremendous quantity of water to California, Arizona, Nevada, Colorado and Utah.

8. North and west of the Colorado River basin lies the Great Basin, which has no outlet to the sea. This basin includes small parts of Wyoming, Idaho, Oregon, and California, and most of Utah and Nevada. It really consists of several independent drainage basins, one with the Great Salt Lake as its low point, another entering in the "sinks" in western Nevada, and a third, consisting of the Sevier River drainage in southwestern Utah. There are also small basins in northern California and southern Oregon.

The Great Salt Lake receives almost its entire inflow from the mountains lying to the east of its basin. Jordan River carrying the discharge of Utah Lake, enters at the south end, Bear River enters at the north end, and between these there are also several short streams entering. These are typical mountain streams with flood conditions in the spring of the year when the snows on the mountains are melting and diminishing and almost disappearing in the late summer or early fall. Water is stored in Utah Lake for use in the Jordan Valley and in Bear Lake for use in the Bear River Valley. Water stored in Strawberry Reservoir, in the Colorado River basin, is brought into this basin through a tunnel discharging into Spanish Fork River, a tributary of Utah Lake. The low-water flow of all the streams in this drainage basin is used, but there is opportunity for much additional storage.

The "sinks" in western Nevada receive water from both east and west. Humboldt River and its tributaries drain most of the eastern slope of this basin. The Humboldt has a flood period in spring and most of the irrigation along this stream consists in damming the stream so that it will overflow natural meadows on its bottom lands during its flood. A much larger use of the stream could be made if a part of the flood water were stored for use in the late summer.

Walker, Carson, and Truckee rivers flow into the "sinks" from the west. These streams rise in California in the Sierra Nevada Mountains. Carson and Walker rivers water considerable areas in both states. Truckee River is the outlet of Lake Tahoe, which lies on the border between California and Nevada. Plans for using Lake Tahoe for a storage reservoir have been made, but litigation has prevented its use to any large extent. Water from both Truckee and Carson rivers is stored in Lahontan Reservoir in Nevada. There is opportunity for additional storage on all of these streams.

Throughout the Great Basin there are large valleys which have no surface water supply. In some of these a good supply of ground water has been found. It is probable that large areas can be supplied from wells, when this becomes economically feasible.

9. North of the Great Basin and extending from western Montana and Wyoming to the Pacific Ocean is the Columbia River Drainage basin.

Clark Fork of the Columbia and its tributaries, the Bitterroot and Flathead, water lands in western Montana. Water is stored in Flathead Lake for lands near the lake. There is opportunity for storage on the other tributaries.

Snake River rises near the headwaters of the Missouri and Colorado in northwestern Wyoming and waters land in Idaho, Oregon, and Washington. Its low-water flow is all used, and storage has been provided for much of the flood water in Jackson Lake in Wyoming and in reservoirs in Idaho. The American Falls Dam of the Snake River, an important project completed in 1927 at a cost of $3,060,000, is 4,971 feet in length.

The Columbia River itself is not extensively used for irrigation. Throughout its course it is so far below the level of the surrounding land that extensive and expensive pumping operations would be necessary, but some water is pumped from the river. It carries a large volume of water that could be used if it were economically feasible.

In Washington the tributaries of the Columbia coming from the Cascade Mountains supply the water for the irrigation in that state. The low-water flow of these streams is utilized and storage has been provided for part of the flood water, but there is opportunity for further development of the storage projects.

The tributaries of the Columbia supply a large part of the water for irrigation in Oregon. Irrigation has not been developed to the stage of storing water and there is opportunity for a much wider use of irrigation.

West of the Cascade Mountains the rainfall is heavy and there is no need for irrigation except during the dry period in the late summer. Some irrigation is practiced during this time and there is abundant supply of water for a very large extension of the irrigated territory.

10. A large area is included in irrigation enterprises on Pacific coast streams other than the Columbia and Colorado rivers.

In northern California the dry season in summer is more pronounced than it is in Oregon and Washington, and at that time there is little water in the streams.

Sacramento River waters a large area, and the summer flow is fully used. The stream is subject to very heavy floods.

Publishers Photo Service

The Grand Canyon of Arizona. A patchwork of color embracing all the colors of the spectrum. A telephoto view from the El Tovar hotel grounds. The Grand Canyon is without question the hardest task for a photographer. The purple and blue haze that fills every shadow, mingles with the red of the rocks, and the immense distance across makes it a real task. Then even if one gets perfect results the diminutive reproduction makes one sick at heart.

New Mexico. The Cliff Dwellings. Many of these rooms have communicating passages. Some of the smaller openings served as chimneys to the fireplaces, the remains of which are still quite traceable and in a few instances in fair condition.

The San Joaquin and its tributaries supply water to the larger part of the irrigated land in California. The low-water discharge of these streams is all used.

In the San Joaquin Valley irrigation has brought the ground water near the surface and a great many wells and pumps have been put in, in some instances to furnish a supplemental supply of water when streams are low, and in others to provide the entire water supply.

The coast streams south of San Francisco Bay are torrential in character. On some of these streams reservoirs have been built to store flood waters, but on many reservoir sites do not exist and large quantities of flood water are lost to the ocean. In the valleys of these streams there are many wells, both flowing and pumped, and the heavy draft on the ground water has lowered its level. In the absence of reservoir sites, the flood water is spread over the gravelly soil where the streams emerge from the mountains in order that it may enter the soil and replenish the ground-water supply. There is a large supply of flood water in southern California for which there is a large demand.

Taking the western part of the United States as a whole, with few exceptions, the low-water flow of the streams is exhausted, but there is a very large supply of flood water available for storage. There is no lack of tillable land on which this water can be used. Future extension of irrigation depends on whether economic conditions are such that the value of the crops which can be produced will justify the expense of storing the flood waters. The same may be said of the use of ground water. The extent of the supply of ground water is not so well known as the amount of flood water, but there are many places where water can be obtained from wells when the expense of pumping is justified.

Many different crops will grow on these irrigated lands illustrating the varied climate of the United States. For example, hay, grain and vegetables will be the staple crops of the northern enterprises, especially in Montana, Wyoming, the Dakotas and Nebraska. In Idaho, Washington, Oregon and California the principal crops are apples, peaches, pears and plums, while in the warmer southwest the sub-tropical fruits can be grown to profitable advantage. The high value of the land will encourage intensive tillage, and the ever present problem of labor supply will tend to make most of these farms small enough for one man to work. In the orchard-growing sections the holdings of each individual does not run over five or ten acres per man. This will mean a more dense rural population, especially for the irrigated lands, and will perhaps overcome the distaste of many to take up agriculture on account of the isolation which it has always meant. It is thought by many that irrigation of lands may have the effect of building up farm villages patterned somewhat after the old manorial villages of England and the Continent minus the allegiance to some overlord. Thus farmers can congregate in one place where schools, stores, medical attendance and churches can be maintained on a high level, while the outlying land could be worked during the day by the individual owners.

California.—Second state in size, is one of the most rapidly growing sections of the American Union; in 30 years (1900 to 1930) it rose from twenty-second in population rank to sixth. The Pacific Ocean forms its entire western boundary (949 miles, excluding islands); the states of Oregon, Nevada, and Arizona are on the north and east, and Mexico's Lower California is south. The area of the state is 158,297 square miles, of which 2,645 square miles are water. Population, 1930, 5,672,009. The capital is Sacramento.

There is a narrow coastal plain extending along the Pacific shore. This widens at San Francisco and joins the Great Valley, which extends through two-thirds of the state. Again the coastal plain widens in the southwest, in the vicinity of Los Angeles and Long Beach. The highest elevations are east of the Great Valley, where towers Mt. Whitney, 14,496 feet elevation, the highest point in continental United States. Mt. Shasta, in the north, rises almost as high (14,161 feet) and several others tower more than 13,000 feet. California has the distinction of having the highest peak in the United States, but possesses the lowest spot on the continent as well, for Death Valley, in the southeast, is 276 feet below sea level. About 100 miles south of Death Valley, in the region of the Salton Sea, in the Imperial Valley, is another depression which is below the level of the sea. Nearly a third of the state has an average elevation of more than 5,000 feet.

The Great Valley is about 400 miles in length and averages nearly 40 miles in width. It is well watered, especially in the northern part, and is the most fertile section of the state.

Everywhere except in the high altitudes, live stock may find sustenance all the year, and in nearly all the state flowers bloom every month. Rainfall varies in extent. In the north it averages more than 50 inches; at San Francisco, 24 inches; at Los Angeles, 15 inches; at San Diego, 10 inches. In the Great Valley there is an average of 30 inches through most of its extent, but in the southeastern desert region, there is only an occasional rain, and over a good part of southern California irrigation is practiced. Except in the mountains snow is almost unknown, though in January, 1932, Los Angeles was blanketed with a fall of two inches—the first in 50 years.

In the great length of California every product of agriculture and horticulture flourishes remarkably well. All the cereals are grown in the north; barley is the largest crop there, followed by hay and corn. The Great Valley is famous for its fruit, and throughout the south the citrus crop—oranges, lemons, etc., are a vast source of wealth. It is the greatest vegetable and fruit state of the Union, and only Texas exceeds it in the total value of products of the soil. California boasts that it supplies 70 per cent of America's oranges and nine-tenths of its grapes. More dates, prunes, figs, and apricots are grown here than in any other state.

Its mineral wealth originally gave California the name of "the Golden State". It was here that gold was discovered in 1848. For many years the output of this precious metal exceeded in value $50,000,000 a year, but the supply declined slowly, and now the gold mines yield about $8,000,000 every year. Other minerals and metals taken in paying quantities are copper, silver, lead, and mercury. The petroleum output is tremendous, ranking California with Oklahoma and Texas as one of the three greatest petroleum states. The wells of the state have produced nearly 300,000,000 barrels a year. Natural gas exists in quantities which bring more than $30,000,000 per year. The entire mineral production is worth more than $400,000,000 in average years.

Oregon.—The ninth state in size and thirty-fourth in population, is located in the Pacific Northwest, between Washington on the north and California and Nevada on the south. Idaho is east, and the Pacific Ocean extends along the entire western side of the state. The scenic Columbia River forms nearly all of the boundary between Washington and Oregon. The area is 96,699 square miles of which 1,092 square miles are water. Population, 1930, 953,786. The capital is Salem.

The state lies to the west of the Continental Divide, and its general slope is from east to west. In the east, where the Snake River forms a part of the boundary, the valley of that stream has an average elevation of about 1,400 to 2,000 feet, with higher ground immediately west. Probably a sixth of the state is 4,500 to 5,000 feet above the sea; in the south and east, dryness prevails.

The Cascade Range crosses from north to south, west of the center of the state, and on each side there are also elevations of 4,000 to 5,000 feet; then as one travels westward there is found a decline to heights of less than 1,000 feet, then to 500 feet, in the valley of the Willamette River. Nearer the ocean is the Coast Range, 2,500 to 3,500 feet in elevation, and along the Pacific is the low coastal plain. There are peaks of far greater heights than any that have been named, for Mt. Hood, the highest point in the state, rises to 11,253 feet.

The various elevations assure to Oregon every variety of climate found in the temperate zone. There is cold on the mountains in winter, but at the same time roses are blooming in Portland, for the Japan Current carries warm breezes to the coastal plain and the river valleys. On the highlands in the east it is cool, even in summer, and frosts may occur at any time.

The broad and deep Columbia River widens to an estuary at its mouth. By canal construction around rapids, it is navigable for 200 miles, and light-draft steamers go up the Columbia and the Snake rivers as far as Lewiston, Idaho, more than 450 miles from the ocean. The scenery along the Columbia is magnificent, and travelers may enjoy its scenic glories in comfort along the great Columbia River Highway.

The Snake is the largest tributary of the Columbia, and it is also a bordering stream, for it marks more than half of the boundary between Oregon and Idaho. It flows through a highland section, and thus is in sharp contrast to the Willamette, which runs north through a remarkably fertile valley between the Cascades and the Coast Range. This section is the garden spot of Oregon. The only other stream of importance is

the Deschutes, which has its source in the Cascade Mountains and its outlet, after a course of about 200 miles, in the Columbia.

Washington.—The nineteenth state in size and thirtieth in population, is in the northwest corner of the Union, facing the Pacific Ocean on the west. It is deeply indented by Puget Sound, which separates the state from Vancouver Island, a part of British Columbia, north of Washington. Idaho is east, and Oregon is south. The Columbia River is between the state and Oregon along three-fourths of the southern boundary. The state, roughly triangular, is 300 miles long from east to west and extends 240 miles from north to south. The area is 69,127 square miles, of which 2,291 square miles are water. Population, 1930, 1,563,396. The capital is Olympia.

Publishers Photo Service

The Grand Canyon of Arizona. Fantastic cliffs of yellow and white rising out of abyssmal depths, a striking contrast to the purplish lines of the distance.

The Cascade Range, identified in parts of the state by local names, runs from the north through the west-central section. East of these mountains is the northern part of the Great Basin, with average heights of 1,500 to 2,500 feet, but exceeding 5,000 feet in numerous places. Here, however, the valleys of the Columbia and Snake rivers are lowlands. On this eastern plateau there is much arid land, much of which irrigation has reclaimed.

The garden spot of Washington is in the valley leading northward to Puget Sound; it has become the center of population of the state and the home of most of its industries. More than 500,000 acres are under irrigation, and on these lands immense crops of wheat are grown on large ranches. In many parts of the state apples are a phenomenal crop, and the soil and climate are as well suited to peaches, pears, apricots, and similar fruits. Winter wheat is the chief source of agricultural wealth, followed by apples, hay, spring wheat, corn, barley, and potatoes, but the second asset of the farms in money value is cattle.

Dry Farming.—In places where irrigation by water stored up in reservoirs cannot be used, either because of distance from the supply or cost of such a project, and where there is at least ten inches of rain fall per year a different type of farming has developed. This is known as dry farming and the crops of this type of agriculture are naturally of a drought resisting species, especially Kaffir corn, sorghum, alfalfa and durum wheat. This latter crop is of special importance and forms a considerable part of our wheat crop.

This type of farming is carried on by storing the rains of two winters in the soil. In the region west of the Rockies the rain falls chiefly during the winter season. The soil of this region is underlaid by clay which is almost impervious to water. The rain of a winter is allowed to fall on the land and then to prevent evaporation during the following summer the entire plot is covered with any kind of material which will keep the wind and sun from reaching the soil. At the beginning of the second winter this covering is removed and another season's rain falls, thus the land has the larger part of two season's rain stored and is ready for cultivation the following summer. Under such conditions it is possible to grow the durum wheat, and some other staples like alfalfa, which has a long root running far down in the soil, in a section of the country that has only about ten or twelve inches of rain per year. Dry farming is another excellent example of the effect of land and climate on the nature of products grown.

Agricultural Products of the West.—This region cannot be called very important economically as a farming section. The ruggedness of the soil and the climate have been barriers that have been difficult to overcome. The fact that mining has paid larger returns also helps to account for the unwillingness of individuals to take up agriculture. Hence we find that very little is exported from this region except fruits and hops. The farmers on all parts of the Pacific slope have turned their attention largely to fruit-farming, so much so that the apples and other fruits of Washington and Oregon are considered to be unequalled in the markets of the east. The different climates of this region enable the farmers to grow both temperate and sub-tropical fruits. Peaches, pears and plums from the temperate regions and oranges, olives, lemons and figs from the southern sections.

Considerable grain is grown on the Pacific slope, especially in the states of Washington and Oregon. The dryness of the summers in this region enable the farmers to cut, thresh and sack their grain on the same day. However, very little of the grain in this region is exported, largely because of the high freight rates on such heavy commodities as wheat.

Mineral Products. — It is in mineral products that this western section abounds. In fact it was the cause of its first settlements. Man will go anywhere for gold, from the cold bleak mountain passes of the Arctic Klondike region to the hot burning plains of Australia. It is the one magnet that will attract him to the most uninhabitable regions of the earth. This Rocky Mountain region never could compare as a dwelling place with the rich farm lands of the middle west or even the farms of the east. The only reason that settlers first came to this region was the search for gold. Gold is still the principal mineral of the Pacific Slope and is to be found principally along the foothills of the Sierras.

Coal is scattered throughout this region, principally in Washington and Colorado. There are also beds of anthracite coal in Colorado and New Mexico. Lead and zinc are mined to considerable extent in Idaho. Copper is also found in abundance in the states of Arizona, Montana and Utah. Butte, a city in Montana, is the greatest copper center in the world. Iron ore is widely distributed in Colorado. In the matter of smelting iron ore, Colorado is the leading state west of the Mississippi.

Important fields of petroleum have been discovered in the extreme southwest. The fields of southern California are among the most productive in the world. The principal center is around Bakersfield, in that state. The importance of this fuel is shown in that it affords a fuel for the railroads which are located so far from the coal mines. The output of this mineral fuel in California is now of greater value than the output of gold.

Of other important minerals mention should be made of the asphalt beds in California and Utah; salt from the dried sea regions of California in the Salton Sink; borax from the Death Valley in the Mohave Desert. Even precious stones like turquoise, sapphire and topaz are found in New Mexico, Arizona and Montana.

Forests.—A great part of the wealth of this region is in its forests. This section has in the main supplanted the Michigan field as the source of supply of much of our timber. The yellow pine of the country furnishes for the most part the timber for use in the various mines. In the Puget Sound region is the center of the Douglas fir and cedar. The northern Pacific slope contains the largest body of standing coniferous woods in the United States.

Manufactures.—One does not find in this region manufacturing of a national type. Most of the products manufactured here are for home consumption. There is plenty of power and raw material, but the supply of labor is lacking and the markets are too remote for industry to develop on the same large scale as in the middle west, south or east. Such manufacturing as one finds here is largely of articles for the smelting of ores which is prominent in Butte and Seattle, steel and iron in Colorado, shipbuilding in San Francisco and mining machinery in Los Angeles and Denver. Lumbering is of course the chief industry in Tacoma, Portland and Spokane, flour milling in Stockton and Sacramento, and the refining of Hawaiian and California beet sugar is carried on in San Francisco. The fact that this region is somewhat isolated, due to the high cost of shipping, enables the industries here to compete, with the industries of the east.

Railroads.—The commercial development of the west is due in a great measure to the railroads that have found their way through the passes and over the mountains to the coast. These roads in fact have been the very life of this section in connecting it with the eastern sections. Were it not for the railroads this region would not have been settled until a much later date. Its very topography is such that railroad building is an expensive operation, a fact which accounts for the small number of roads as compared with the more level sections.

Six transcontinental railroads now connect the Mississippi Valley with the coast. These lines are the very life of the commercial development of the west. The first line to be built was the Union Pacific, built in the sixties, from Omaha in Nebraska to Sacramento. The Missouri Pacific joining with the Denver & Rio Grande and Western Pacific offers a connected route from St. Louis to San Francisco. The longest line to the west is the Santa Fe, which follows the old Santa Fe trail through the southwest to San Francisco. The shortest of the Pacific lines is the Southern Pacific, running from New Orleans to Los Angeles and San Francisco. This is the one line that enters the city of San Francisco proper. All other lines have their terminals in the cities across the bay from Frisco. Two great railroads parallel each other in the north. One of these is the Northern Pacific, which connects Minneapolis and Duluth with the west, and the other is the Great Northern.

Cities.—The natural economic condition in the interior of this western region is unfavorable to the existence of very large cities. With the exception of Denver and Salt Lake City, most of the large centers of population are on the Pacific slope. In this entire section there are only eight cities which have a population of more than 110,000. These are namely, Los Angeles, San Francisco, Seattle, Portland, Denver, Oakland, Salt Lake City and Spokane. In four of the states there is no city of over 50,000 population, namely Nevada, Wyoming, Arizona and New Mexico. This small population is due in part to the inaccessibility of the region and to climate, especially in the dry regions. Without doubt lack of water will be a barrier to this section in becoming as populous as those regions to the east and south. The density of the population varies from less than two per square mile in a state like Nevada to from 45 to 90 per square mile on the Pacific slope.

In the interior the city of Denver is the most prominent commercially. This city originated as a placer mining camp and is now the chief commercial center for the entire Rocky Mountain region. It has a population of over 200,000; nine railways enter it, three of which are transcontinental. It is a market for grain, slaughtering, meat packing and the smelting and refining of lead.

Publishers Photo Service
Yosemite Valley. General View showing El Capitan

Another city of the interior is Salt Lake City. This is one of the few artifically founded cities in the United States. Its origin was due to a religious movement. It had the good fortune, however, to be located on the direct line followed by the gold seekers in the middle of the last century, and hence it became a center for outfitting these adventurers. Its population to-day is about 140,000 and it is the business center for the irrigated region of this section. It is also the market for the sheep husbandry of the Great Basin.

Another city of some industrial importance is Butte, in Montana. This city owes its prominence to its copper mines and smelters. It is said to be one of the richest cities, per capita, in the United States.

It is on the Pacific slope where we must look for the largest cities. This region, with greater accessibility from the west and a better rainfall, is a more popular habitation for man. The metropolis of the coast is the city of Los Angeles. This city has grown remarkably in the last twenty years. Its splendid climate and clear skies have made it an attractive place to man. It is the fruit center of southern California, the country around being irrigated by means of artesian wells. Another industry that has centered in and around this city on account of its climate is the moving picture industry.

San Francisco, the second city in size in this region, is located on an excellent harbor, but unlike New York its hinterland is limited by the mountain barriers only a few miles to the east. However, ten railway lines reach the bay, and here as in New York we find regular steamship lines to foreign ports. The principal lines on the ocean run to Mexico, South America, Hawaii, the Philippines, Japan, China, Australia and New Zealand. The commercial possibilities of this city should become greater if the far eastern people should ever develop to the extent of the Europeans who are opposite our Atlantic shore.

Going farther north we come to a rapidly developing section around the Puget Sound. The metropolis of this section is Seattle which bids fair to become a vigorous rival of San Francisco in the struggle for supremacy in the trade with the Orient. Seattle is forty-eight hours closer to the Orient than any other port in the United States, thereby having a large exporting and importing business. It is well called "The Gateway to the Orient." Located near the great lumber camps, the manufacturing of lumber and timber products exceeds all other industries. Feed and cereal mills, machine shops and fishing industries have attained great proportions. Eighty per cent of all manufacturing in the state is in Seattle.

Tacoma, also located on Puget Sound, shares with Seattle some of the advantages above mentioned. Located near the coal fields which furnish the necessary fuel, its principal industry is the smelting of ores.

Portland, on the Willamette River, is the largest city in Oregon and has transcontinental connections with the east. It is the commercial center for the Oregon forests and the Columbia River fisheries.

Spokane, an inland city, is in a center of grain growing. Two great continental lines converge in this city, giving it excellent transportation facilities.

Only a small portion of the foreign commerce of the United States goes through the Pacific coast. According to statistics recently available only about 6 per cent of the nation's commerce reaches this side of the country, and of that about one-half goes through the city of San Francisco. The tonnage of the Puget Sound ports is greater, but it is less in value than that of the more southern port. However, trade is certain to increase on this coast as it faces an ocean around which half of the people of the world live. As western ideas of trade are more fully adopted and the wants of the people of the Pacific increase, the commerce of this section of the nation may not be inferior to that of the eastern seaboard.

Below are listed the cities of the United States with a population of over 100,000 according to the census of 1930.

New York, N. Y.	6,930,446
Chicago, Ill.	3,376,438
Philadelphia, Pa.	1,950,961
Detroit, Mich.	1,568,662
Los Angeles, Cal.	1,238,048
Cleveland, Ohio	900,429
St. Louis, Mo.	821,960
Baltimore, Md.	804,874
Boston, Mass.	781,188
Pittsburgh, Pa.	669,817
San Francisco, Cal.	634,394
Milwaukee, Wis.	578,249
Buffalo, N. Y.	573,076
Washington, D. C.	486,869
Minneapolis, Minn.	464,356
New Orleans, La.	458,762
Cincinnati, Ohio	451,160
Newark, N. J.	442,337
Kansas City, Mo.	399,746
Seattle, Wash.	365,583
Indianapolis, Ind.	364,161
Rochester, N. Y.	328,132
Jersey City, N. J.	316,715
Louisville, Ky.	307,745
Portland, Ore.	301,815
Houston, Tex.	292,352
Toledo, Ohio	290,718
Columbus, Ohio	290,564

POSSESSIONS OF THE UNITED STATES

Alaska.—This great territory in the northwestern part of North America has a wide range of climate. In the interior are found such extremes of temperature as—60° in winter and 90° in summer. But along the coast, due to the warm Japanese Current, the thermometer rarely goes below zero in winter, and in summer the highest is around 80°. The average winter temperature of Sitka is practically the same as that of Richmond, Virginia.

In area Alaska is nearly the size of the United States east of the Mississippi. Its coast line is longer than that of the continental United States.

Alaska has long been noted for its furs and the fur industry continues to be important; but it is now more scientifically carried on than ever before in history, for it was seen that the supply of fur-bearing animals would soon be extinct if the wasteful methods of hunting and trapping of the nineteenth century should be followed. As a result many fur farms have been established, especially farms breeding different varieties of foxes. Excellent facilities for this type of farming are to be found on many of the islands off the coast, especially on the Pribilof Islands.

No waters are more abundantly supplied with fish than the waters of the Alaskan rivers and coasts. From the standpoint of value these fishing grounds are among the most valuable in the world. Here is a section from which we receive over fifty per cent of the salmon used in the United States. Huge canning factories of salmon form an important industry along the sea coast. Other fish caught in large quantities are the halibut, the cods and the herring. Fishing is Alaska's most important industry, with 800 vessels and 21,695 men engaged in it in 1933. The value of the salmon pack for 1933 was $28,376,014.

Another of the rich resources of this region is its supply of timber. Most of the heavy forests stretch along the moist coast line of the southeast. This region is really an extension of the forests in British Columbia and is well supplied with coniferous trees. Some timber is found in the interior, especially along the water courses. The lower courses of the Yukon River are almost all wooded. This timber, however, is too small for lumber and has no great value except as it is available for use as paper pulp. The forests of this region are not as fully developed as they could be largely on account of their inaccessibility, many of the best sources of supply being located too far away from water transportation. Only those that are located near ports that can be reached by boats have real commercial value.

As in the case of California and other western states, the supply of gold in Alaska was the cause of attracting most of the early settlers. The rush to the Klondike and Alaskan fields in the years from 1897 to 1899 was equalled only by the rush of gold seekers to California in 1849. The precious metal is scattered over a wide area. Placer mines are located in western Alaska along the Yukon, the Tanana and the Kuskokwim and their tributaries and in the Seward Peninsula near Nome. The principal gold-quartz mines are located in southeastern Alaska.

Copper is found in the watersheds of the Copper River and along Prince William Sound. In fact, so much copper has been found, and mining it is so profitable that the value of the copper output has in recent years exceeded that of gold.

Large amounts of silver are secured from the copper ore; some silver comes from silver lodes. Large coal fields are still almost untouched. Some petroleum is taken and explorations for new deposits are being carried on. Among the other minerals are lead, tin, garnet, gypsum, platinum and quicksilver.

The commercial value of Alaska is many times the price paid Russia for this territory. Her wealth will be in her raw materials for many years to come. Her exports of salmon, minerals and furs will constitute her chief source of wealth for some time to come. Agriculture will probably never develop beyond the home consumption stage. An important industry has arisen there that may prove to be a most important factor in increasing the supply of food for this region as well as furnishing an excellent article of export. On the barren moss grown tundra or plains the government placed a number of reindeer some few years ago. The reindeer can thrive in this locality and is not only important as a food supply but can be used as a beast of burden. In 1930 there were 110 herds containing about 712,500 deer, valued at $18,000,000. About two-thirds of the reindeer are owned by the Eskimos.

By Army and Navy installations of cable and radio, supplemented by private installations, almost all of Alaska, with the exception of a few of the Aleutian Islands, is in touch with the outside world.

Lack of transportation facilities has held back the development of Alaska. Coastwise steamers provide uninterrupted service between the ports of southern Alaska and Puget Sound, but such northern points as Nome are reached only from July to September. In the summer river boats ply on the Yukon River for more than 2,000 miles.

The Alaskan Railroad, a government undertaking, is 509 miles in length, counting its branches. It runs from Seward on Prince William Sound to Fairbanks in the interior. A privately owned line, 190 miles in length, runs from Cordova to Kennicott. It is used especially to bring out the copper ore. A railroad extends from Skagway to the Canadian border and thence to White Horse in the Yukon region 1930 population increased to 59,278.

The cities of Alaska are small in number as well as in population. The 1920 census showed a decrease from the figures of 1910, due largely to the World War. The war took away many men, not only those who enlisted but also many who were attracted by the high wages of the shipyards.

The principal towns are those along the coast. Starting at the southeastern part and going up the coast there are the following: Ketchikan, Wrangell, Petersburg, Sitka, Juneau, Cordova, Valdez, Seward, Kodiak (on Kodiak Island) and, far to the north, Nome. Juneau the capital and largest town, has a population of 3,058. Fairbanks, the largest town in the interior, has 1,155 inhabitants.

In proportion to the number of people Alaska is said to have more nationalities than any other section of the world. Among the whites the Scandinavians are most numerous. There are about 13,600 Eskimos, who live along the northern coast.

Porto Rico.—Porto Rico is an island about ninety-five miles long and about thirty-five miles wide. It is somewhat smaller than our state of Connecticut, and because of its rich fertile soil is one of the most densely populated islands in the West Indies. The climate is tropical, though the elevation in certain portions furnishes a climate that makes an excellent dwelling place for the white man. The chief commercial products of this island are coffee and sugar cane. For a long time coffee was the principal crop, but of late years there has been a tendency to grow more and more sugar cane by planters who buy up vast tracts of land and allow it to be worked by a plantation system with negro labor. The growth of sugar cane farming has had a tendency to squeeze out the small white farmers and increase the negro, or black population. The chief exports of this island are sugar

and coffee. Its chief manufactures are limited to the refining of sugar cane, the manufacture of cigars and cigarettes and Panama hats.

The Philippines.—This large archipelago of over three thousand islands near the coast of Asia forces the United States to take a keen interest in the affairs of the far east. About 100,000 square miles of land was added to the soverignity of the United States when these islands were purchased from Spain, and while most of the islands have a tropical climate unfit for the white man, yet in the northern section, especially on the island of Luzon, the climate is temperate and here we find most of the tilled land and large cities. The principal commercial products are its raw materials, the chief of which are sugar cane, tobacco, coconut and the famous Manila hemp. This latter product is used in the making of ropes. Over half of the land in these islands is covered with forests of many valuable tropical woods. Of chief commercial importance are rubber and gutta percha, dye woods and bamboo.

This latter tree is used largely for building purposes.

These islands are also rich in mineral resources. In the northern islands we find gold and copper in considerable quantity. Here also are rich iron deposits located near coal that has attracted a considerable number of people to this region.

Like Alaska, this region lacks transportation facilities. As a consequence most of the people are near the coast. Some building of railways has been carried on since American occupation which already has brought considerable wealth to the people in the interior. As transportation facilities are provided more sugar and coffee can be raised; the rubber districts can also be tapped; and these commodities which are

Bringing the coconuts from the interior of the Philippine Islands to the market. As there is no train service to most of the interior of the country the nuts are stacked as large rafts and brought down the river the same as lumber is shipped down the rivers of our country.

in so great a demand in this country will bring a vast amount of wealth to these islands. The bulk of trade is carried on with this country. About one-half of her exports come to the United States. Manila, situated on the northern island of Luzon, is the principal port for foreign trade. It has an excellent harbor and is in the path of many commercial routes from North and South America to the Orient.

Hawaiian Islands.—Located far out in the Pacific Ocean at the crossroads of ocean traffic this little group of Hawaiian islands forms a most important possession for the United States. It not only furnishes an important mid-ocean supply station but in a sense is the western gateway to the Panama Canal. The population of these islands is largely Asiatic, due largely to the demand for cheap labor in the sugar plantations. The great commercial crop of these islands is sugar, which is grown everywhere on the lower elevations. Sugar forms about 87 per cent of the entire exports of the islands, and represents a value of over $39,000,000 annually. Other prominent

HAWAII—An unusual photograph of the pineapple industry.

commercial crops are pineapples, cocoa, bananas, vanilla and rubber, which are found in the moist regions, while coffee and tobacco grow in abundance in the higher and drier regions. Pineapples are a most important crop for export. Over 1,500,000 cases of this fruit were exported to the United States in 1920. Some of the largest canneries in the world are located on these islands, consuming many hundreds of tons of fruit per day.

Other Possessions of the United States.—In the far away Pacific Ocean there are two groups of islands belonging to this country. They are not important commercially except that they lie in the way of many of the commercial routes in the southern Pacific. The islands are Tuituila, in the Samoan group, and Guam. They are important as coaling stations for the navy.

In the Carribean region a recent possession of the United States, are the Virgin Isles just to the east of Porto Rico. These are important mainly as coaling stations and as the eastern gateway to the Panama Canal.

Another possession of no small importance is the Canal Zone on the Isthmus of Panama. Here the United States has control over a strip of land ten miles wide on each side of the Panama Canal. It would be hard to overestimate the commercial value of this strip of land to the United States. In the first place it has shortened the distance between New York and the Orient. New Orleans and other ports also receive the same benefit. It also means that the western coast of South America is brought many thousand miles nearer the Atlantic ports of the United States. This means that freight costs are appreciably lessened. The bringing of New York and the Atlantic seaboard nearer to the Orient means also that these cities are in a better position to compete with London and the other cities of Europe for the trade of the Far East.

THE CENTRAL AMERICAN STATES

In this division should be included Mexico as well as the small states comprising the regular section called Central America on all political maps, for geographically and climatically they are about the same. In both sections the coast is low and unhealthful, while towards the interior the land rises to a high plateau, making it more habitable for men. These countries are rich in natural resources. One of the greatest oil tracts in the world is in the district around Tampico, in Mexico, on the gulf, while this country has some of the richest silver mines in the world. Other minerals occurring in large quantities are zinc and lead and copper. Mexico ranks next to the United States in the production of copper. Gold and silver are found in paying quantities in several of the small states in Central America, particularly Nicaragua and Honduras. There is also iron in abundance in Mexico. Most of the natural resources of this region are poorly developed on account of poor transportation facilities as well as on account of the backwardness of the people. Here we find a strange mixture of white, Indian and Negro with the Indian predominant. In the state of Mexico the Indian represents about 40 per cent of the entire population, which goes far towards explaining the unstable political conditions in that country.

One of the vast untouched resources of this region is its wealth of forest materials. Here along the Caribbean Sea are dense forests producing mahogany, rosewood, cedar, logwood and rubber. The cultivated products of this region are of every variety from tropical to temperate according to the elevation cultivated. The most distinctive crop is coffee, which is grown from southern Mexico into Central America on the Pacific slope. Tobacco and cotton are of some importance especially in Mexico.

PHILIPPINES—Opening Coconuts. The natives use a large and heavy steel knife for splitting the nuts. The external husk of the coconut yields the coir fibre with which are made fabricated ropes, cordage, brushes, etc. The nut is then broken up into small pieces and dried for making coconut oil.

The manufacturing of this entire region is largely of the handwork type. The economic development of the race shows its influence to a marked degree. As in the Orient, so we find here the making of hand carved and inlaid woods, pottery, jewelry and leather working. Another factor that has hindered the factory type of manufacturing is the lack of fuel. While this region is rich in precious metals, iron and oil, it is lacking in coal. However, there are a few blast furnaces in the vicinity of Monterey which is located near coal fields of some value.

The principal commercial centers of this region are located along the eastern coast. Vera Cruz is the principal commercial

port, being the natural outlet for most of the plateau region of Mexico. The fact that it is connected with the interior by rail has helped this city to keep a primary place as a commercial center. However, Tampico, a little farther north, has a better harbor and an easier entrance to the plateau. On the western shore of Mexico is the harbor of Acapulco the first harbor on the Pacific coast of any importance south of San Francisco. Here are good shipping facilities. The only thing lacking is better transportation facilities to the interior. The mountain ranges come close to the coast, forming a difficult barrier to overcome. This harbor has an important location in that it is in direct line with the shortest route from the Panama Canal to the Hawaiian Islands and the Orient.

This entire region, which is so rich in precious metals, tropical fruits, forest products and cattle, is nevertheless comparatively poor. One of the reasons for this poverty we have mentioned, namely the predominance of an inferior race, the Indian. Other reasons that are equally potent are that owing to the scarcity of water much of the interior is given over to stock raising, an occupation affording few comforts; also the fact that much of the land is held in the hands of a few wealthy men, forming an aristocratic class, while the common people who are compelled to work on these lands are little more than slaves; and last of all, the lack of railroads and navigable rivers from the interior have done much to retard the development of these countries.

CANADA.

Area and Population.—The great Dominion of Canada extends from about the latitude of the North Cape to Rome. It is about thirty times the area of the British Isles and even exceeds that of the United States, Alaska, Hawaii, Porto Rico and the Virgin Isles combined. Its total area is 3,603,900 square miles.

The population of Canada was officially estimated in 1931 to be 10,376,786. The population, omitting the little explored northwest territory, is only a little over 3 per square mile; in other words, just about one-tenth of the population per square mile of continental United States. This country consists of nine provinces and two territories with populations as follows:

	Population 1931
Alberta	731,000
British Columbia	694,000
Manitoba	700,000
New Brunswick	408,000
Nova Scotia	512,000
Ontario	3,431,000
Prince Edward Island	88,000
Quebec	2,874,000
Saskatchewan	921,000
Northwest Territory	9,000
Yukon	4,000
Total population	8,835,102

Here then is a vast unsettled country with resources enough to support at least fifty million or more people. The character of the people and the climate of the country are such as to make Canada the one serious rival of the United States in this hemisphere. At the last census the percentage of Canadian born population was 64.49, British born 17.82 and foreign born 17.69. The foreign population is largely in the prairie provinces and to a considerable extent is composed of immigrants from the United States who have been attracted to these provinces on account of their cheap and highly productive lands.

Canada is rich in natural resources, the chief of which are agriculture, forests, mining and fisheries. The long hours of sunshine, which lasts from sixteen to nineteen hours daily, and the warm winds coming in from the Pacific push the limits of grain growing and forests over a thousand miles north into Canada. The broad plains in western Canada are more favorable to agriculture than the plains just to the south in the United States. This is due primarily to the fact that rains reach the Canadian plains in greater amount than in this country, and also to the fact that evaporation is much less.

Argiculture is now the leading industry in this country, and wheat is the chief money crop of Canadian farms. Agricultural products represent the largest share of Canadian exports. Oats, hay, potatoes, apples and barley are also important crops in this section. The greatest wealth, however, comes from its wheat crop, which averages about 400,000,000 annually. Canada ranks fifth in the list of wheat-producing countries of the world. Most of this crop is grown on the great plains in the west where climate and soil are so splendidly adapted to this crop. In the St. Lawrence valley, which has a shorter growing season owing to the colder winters, the principal crops are hay, oats and potatoes. In southern Ontario we find much of the climate and soil of western New York and Michigan duplicated. Here is the principal apple and small fruit growing region. From southern Ontario also come most of the dairy products of Canada, which is the greatest cheese making and cheese exporting country in the world. More than 125,000 pounds of butter and 160,000,000 pounds of cheese are marketed annually. The Dominion's entire revenue from agriculture is nearly one and one-half billion dollars. Cooperative marketing has aided Canadian agriculture greatly.

Mineral Resources.—Like the United States, Canada has a large variety as well as a large extent of minerals. Throughout the length and breadth of the country minerals in paying quantities exist. Very little is known of the possibilities from a mineral standpoint of the practically unexplored northwest territory. It is calculated that deposits of gold, copper and nickel exist here in considerable quantities. Here is one of the largest areas of oil-bearing countries yet unexplored. Already oil fields have been found and the country gives every promise of having a much larger supply.

Gold, copper and iron are known to exist in paying quantities in four different sections. Gold is found in the Yukon territory, copper in the mountain region of British Columbia, and iron in the region about Lake Superior and also in Nova Scotia. Canada has virtually a monopoly in the production of nickel, the mines around Sudbury being the most productive in the world. Canada also has large deposits of mica and furnishes the market of the United States with practically the entire amount that is consumed here. Canada also produces between 80 and 85 per cent of the world's entire supply of asbestos. The principal mines of this mineral are located in the province of Quebec.

Canada has also large fields of coal but their location is such that the best advantage and use cannot be made of them. The great populous St. Lawrence Valley is almost devoid of coal, and has to import much of this mineral from the United States. The coal mines of Canada are known to extend over an area of more than 111,000 square miles, and may be conveniently divided into the bituminous coal fields of Nova Scotia and New Brunswick, the lignite fields around Manitoba and Saskatchewan, and the anthracite and bituminous fields in British Columbia, Vancouver Island and Queen Charlotte Island. It will be a great many years before this great western field will be fully developed. The lack of natural waterways and railroads will hinder the full development for some time to come. The cost of transportation of coal by rail for the eastern provinces is prohibitive and accounts for the fact that Canada has been importing from the United States over 20,000,000 tons of coal yearly for the last three years. The greatest asset of Canada is perhaps its forests. The total area covered by forests is estimated to be between 500 million and 600 million acres. Over 50 per cent of this area is covered with timber suitable for sawing into lumber. A large part of the remaining acreage is covered with timber suitable for use as paper pulp. From the standpoint of lumber resources Canada ranks third in the world. The principal varieties are spruce, Douglas fir, white pine, cedar; also hardwoods such as oak, ash, hickory and several varieties of the maple. There is also an abundance of hemlock, the bark of which gives rise to the tanning industry, which is especially prominent at Quebec. The yearly output of lumber and wood pulp is about $220,000,000.

Fisheries.—Canada also possesses some of the most extensive fishing waters in the world. Nearly four-fifths of the fishing waters of the north Atlantic region belong to Canada. Then there is the great Hudson Bay and the Pacific Coast. As in the case of the fishing waters in the United States, the principal variety of fishes are cod, haddock and halibut on the Atlantic coast, and salmon on the Pacific coast. The total value of all fish products marketed averages about $44,000,000 per year.

Fur.—Fur-bearing animals abound in considerable number in the vast sub-arctic forests of Canada, and fur trading has been an important part of Canada's activities since the earliest days of the French regime when that trade was monopolized by large proprietary companies. In this section are found furs of great value, including the beaver, sable, marten and black and silver foxes. An important fact to note in connection with the fur trade is that Canada no longer depends for its supply of skins on the trapping of wild animals, but is now breeding various fur-bearing animals on farms. Large farms are now given over in Canada to the breeding of foxes, Persian lamb, raccoon, mink, marten and skunk. The leading section in the matter of fur farming is found in the province of Prince Edward Isle. The export value of furs from Canada averages about $13,000,000 per year.

Manufactures.—The industrial development of this country is very small when compared with the resources that are capable of development. This is undoubtedly due to the fact that Canada is relatively a new country. Immigration from Europe has gone through the ports of the

southern Atlantic seaboard, while Canada has been out of the line of march. Three important factors have hindered manufacturing in this region, namely, the lack of a supply of labor, lack of adequate transportation facilities, and a small market for its product. In the matter of wealth of raw material and power, Canada is only equalled by the United States. However, Canada has made great strides in manufacturing development in the last thirty years. In 1892, according to statistics for that year, the value of the manufactured products amounted to something over $300,000,000. Now the value of all manufactured products averages in excess of $3,500,000,000 annually. There is a distinct movement among the people of Canada to build up the industries of that country in such a manner that all wants along the lines of manufactured products can be supplied at home. The "Made in Canada" movement is daily gaining strength. Some of the industries have a distinct advantage due to the cheapness of the raw materials, and hence we find that lumbering, grain and dairy industries are developed to a high degree. Also the pulp mills in the east have the advantage of location near the supply of spruce. The iron and steel industry is carried on in Nova Scotia in a small degree. The city of Sydney is the principal center, being located near supplies of coal, iron and limestone. There are also important steel works along the shore of the great lakes, especially at Toronto, Hamilton and Sault St. Marie.

Transportation Routes.—No country has more magnificent waterways than Canada. Here we find four great rivers; the Yukon, Mackenzie, Saskatchewan and St. Lawrence. All of these reach far into the interior and should be natural routes of trade. With the exception of the St. Lawrence none of these is of much commercial importance. All of the rivers are icebound a considerable portion of the year, which prevents the full utilization of these streams. The fact that the St. Lawrence is icebound a portion of the year causes much of the trade to turn from its natural channel and seek an ocean port that is ice free, like New York City.

In the matter of railways Canada has a greater mileage in proportion to the population than any other country. According to latest statistics the total mileage of Canadian railway lines is over 40,000 miles, or a little over forty miles of railroad to every ten thousand inhabitants. Three transcontinental roads connect the Atlantic and Pacific, namely the Canadian Pacific, Grand Trunk and the Canadian Northern.

Cities.—The commercial capital of Canada is Montreal. Although this city is a thousand miles inland it is a seaport. Geographically it has a better location than New York for it is nearly three hundred miles nearer Liverpool than New York and is also on the natural outlet for the Great Lake Basin of the United States and Canada. Ice is the factor that prevents it from seriously competing with New York and becoming the metropolis of the new world.

Quebec was formerly the most important city. It is the oldest city in Canada and has become prominent as a manufacturing rather than a commercial center. The building of a railroad bridge at Quebec has helped this city considerably in connecting it with the Atlantic ports of the maritime provinces.

Two other cities of importance should be mentioned, namely Halifax and St. Johns. Both of these cities are located on ice free harbors and are railroad terminals for trunk lines to the west.

The second city in size in Canada is the city of Toronto, located in the midst of a rich hinterland in the Ontario peninsula.

Going farther west we come to the city of Winnipeg on the prairies north of the Great Lake region. This city has become a railway center for the transcontinental roads of Canada and is located in the midst of the world's richest grain fields. No other city in the world has so large and undisputed a hinterland as Winnepeg. Were it not for the international boundary line this city would be a serious rival of Chicago.

Edmonton, a town a thousand miles north of the southern boundary of Canada is important principally as a fur depot and as the center for outfitting hunters and trappers and miners.

In General.—Commercially the Dominion of Canada is the best customer of the United States. Over 62 per cent of its imports come from the United States. We need her goods and she needs ours. When the time comes that this nation must become an importer of wheat and other raw materials, which may not be far off, it is then that we shall have to look to Canada as the great supplier of wheat. We need her wood pulp and lumber, and she needs the products of our sub-tropical regions as well as our machinery. Geographically the country is an extension of the United States, and the fact that people of the same language and race are on both sides of the boundary line does much to make each country the complement of the other.

SOUTH AMERICA

North America and South America are similar in shape, each having the form of a triangle. Each continent is widest in the northern section and narrows down towards the southern end. Each has a lofty mountain range on its western border; the Andes correspond to our

© Publishers Photo Service

ARGENTINE—Sheep dipping.

Rocky Mountain system, while the eastern range of mountains of the coast of Brazil corresponds to the Appalachian Ranges and the highlands of Guiana resemble somewhat the Laurentian highlands in northern Canada and Labrador. Furthermore the desert plateaus of the Salt Lake region correspond to those of Bolivia in the region of Lake Titicaca. The resemblance between the two continents is still further exemplified by its river systems. Each continent contains two great river systems. In South America the great Amazon system compares in position with the St. Lawrence system of North America, draining the northern part of the continent, while the great Parana and its tributary, the Paraguay, conform to the Mississippi and Missouri rivers of North America, and like the latter, run from north to south-draining the great interior of the continent. Again, the warm coast of Peru and Ecuador is a reproduction of that of western Mexico, and the heavy rainfall on the coast of North America is represented in South America by the region in southern Chile with its archipelagos covered with a large virgin forest. South America, then is a continent with large river systems, an abundance of fertile land and mountains, containing a vast wealth in minerals, that still remains in an almost natural condition, despite the fact that the white man discovered and settled in this region long before he settled in North America.

From the economic point of view the development of South America is very backward. With the exception of the coast regions it is almost uninhabited. This is especially true of the great interior. This is due largely to climatic conditions for about three-fourths of the continent lies in the tropical zone and is therefore not well suited to emigrants from temperate lands. Another factor that hinders development is that of race. Here is a continent, which with the exception of the basin of the Parana and Plata rivers and the valleys of Chile, is dominated by an inferior race. Probably more than 75 per cent of the population of northern South America is pure Indian, mixed Indian or Negro. Even the descendants of the early Spanish and Portuguese settlers in the tropical region lack the energy of their forefathers due to the enervating effect of climate.

Other geographic factors that have hindered the economic development of South America may be briefly mentioned as follows: This continent is far removed from other developed parts of the world. Like Australia it is off the main lines of travel. For ages the movement of temperate zone peoples has been east and west, and South America, facing Africa the most backward continent of the old world, has not had the benefit of being on the line of travel as in the case of North America. Another geographical factor that hinders development is that there ar no deep indentations on the coasts such as are found in all other continents except Africa and Australia. This fact alone makes travel into the interior very difficult. The economic wealth and development of North America and Europe is in part due to their extent of coast line. No continent has more magnificient rivers than South America and for the most part they are navigable for great distances. However it is not always easy for boats to use them because of rapids and falls, while in the vast forest regions railroad building is difficult owing to the luxuriant growth of tropical vegetation.

Natural Regions.—Most of the wealth of South America is derived from its mountains and plains. This country, like all new countries, is still in the extractive stage of commerce in that most of its trade and commerce has to do with agriculture, mining and the products of the forests.

From a commercial standpoint the plains of South America are among the richest in the world. The great plains in this continent extend north and south over a distance of four thousand miles through

the interior. These plains are divided into three sections, called the Plains of the Orinoco, Plains of the Amazon and Plains of the La Plata. The plains of the Orinoco are for the most part in Venezuela. The climate here is very warm, but despite the heat and long periods of drought the grasslands of this plain are admirably suited to cattle raising. A little farther to the south the plains of the Amazon are found. These plains are covered with an abundance of vegetation and occupy about half the area of Brazil, as well as portions of Colombia, Ecuador, Peru and Bolivia. The great wealth of this plain is in its forest products, and is only very slightly developed for want of transportation facilities. No other part of the world offers so large a variety of valuable woods. Here is found the famous Para rubber tree which gives a great deal of wealth to the country of Brazil. The high temperature and heavy rainfalls of the region along the Amazon River are specially adapted to the growth of this tree. According to the variety of vegetation the plains of the Amazon may be divided into belts, each belt showing a different variety of products. The Palm Tree Belt occupies a region lying along both sides of the Amazon for almost its entire distance. Here we find the rubber and ebony trees as well as a variety of tropical fruits such as bananas, dates and cocoanuts from the higher slopes to the west. Another belt is known as the region of virgin forests and has an immense wealth of gums, rosins and medicinal plants, as well as cabinet and dyewoods. This region extends south from the mouth of the Amazon to Bahia, in Brazil. Farther south in the uplands of this valley is the coffee, tobacco and sugar region. Here is grown about four-fifths of the coffee that is consumed in the world. Coffee is Brazil's most important and valuable export. In this same region cotton is also grown to some extent.

The plains of the Parana, or the Plata, as the estuary is called into which the Parana system flows, are noted for the hardwoods of the northern section and the great wheat and pasture lands in the southern section. Along this river in Paraguay grow the hardest woods known, namely the lapacho, nandubay and quebracho. These hard woods rival teakwood in durability. However, it is in the southern section of these plains that there has been the greatest development. Live-stock raising and agriculture have been developed to such an extent that Argentina is to-day one of the great grain growing and meat producing countries in the world. East of the 64th meridian of longitude we find a climate somewhat like that in our states west of the 100th meridian. This section is of great importance as a future supplier of wheat. Only a small portion of the land is under direct cultivation but despite this fact over 5 per cent of the world's supply of wheat and corn come from this region.

Live-stock raising is also an important activity in this region. The great fertile pasture lands furnish an abundant supply of food. According to the latest figures Argentina has thirty million head of cattle and sixty-seven million head of sheep.

Along the entire western section of the continent the Andes Mountains extend their lofty peaks and high plateaus. Here is a region which in the torrid zone has every phase of climate from frigid through temperate to tropical. On the warm and calm coasts of Ecuador grows the famous cacao tree which produces the cocoa of commerce. Another important product from the Andean valleys of this region is quinine. This is the region of minerals, rubies and emeralds from the northern section. The silver mines in Peru and Bolivia have been worked for centuries and still have vast supplies of materials. Further south in Chile we come to the famous nitrate producing section which is so important an item in the commerce and trade of Chile. Over 85 per cent of the exports of Chile consist of nitrate products. Here also is the principal copper producing section of South America, while coal mines and fields are to be found in the section of Coronel, which is the chief coal port on this continent.

Manufacturing.—In the torrid zone the principal type of manufactures is that of articles made by hand. Thus we find in this region considerable work in pottery and leather. In Ecuador is the chief center for the making of the famous Panama hats, so called largely because of the fact that these hats are shipped into this country through the Panama Canal region. There are also some cotton mills in Brazil and Peru, especially wherever there is an abundance of water power to be had. In the temperate region manufacturing has made more progress. For example, the country of Uruguay has large trade in beef extract, while the making of flour, the refining of sugar and tanning of leather are activities largely carried on in Brazil and Argentina. Chile ranks high as an industrial country, having large steel works and smelteries of copper. Another very important industry of high rank in this country is the production of iodine. Next to nitrate and copper production this is a close competitor.

Cities.—The most important city in South America is Buenos Aires, in the Argentine Republic. This city has a population of 2,042,889 (1928) and next to Paris is the largest Latin city in the world. It is the natural outlet of almost the entire continent, and with the completion of railways connecting this city with Santiago, in Chile, and the Bolivian plateau it will no doubt be the leading commercial city of this continent, as New York City is of the northern continent. Buenos Aires has the advantage of being located in the temperate zone and in the midst of a fertile land. The temperature is such that the people from Europe and other temperate regions seeking a home quickly adapt themselves to this locality.

Rosario, a flourishing city of 265,000 people, located on the Parana river, is in the center of the wheat growing section and because of its accessibility to ocean vessels it has become the port for the exportation of wheat in this region.

Tucuman, in the center of Argentina, is in the sugar producing region and its industries consist largely of sugar refining.

Mendoza, located in the western part of Argentina, is in the center of fruit growing and wine making. Because of its climate and products this region is often called the California of Argentina. On the Pacific coast most of the commerce of Chile passes through the Ports of Iquique, Antofagasta and Valparaiso. Neither of these cities has a good harbor. Iquique is the chief nitrate port. Here is a city that has grown up in a most forbidding place. Water has to be brought to it from the mountains over seventy miles away. The city is the result of the great deposits of nitrate in the Atacama Desert. Antofagasta is the chief port of the Bolivian plateau for goods sent towards the Pacific. Valparaiso is important as the port of Santiago and the terminus of an east and west railroad connecting the Atlantic and Pacific oceans.

In the tropical zone a few cities may be mentioned as being of commercial importance. Rio de Janeiro, a city of a 2,004,000 (1929 est.), is the chief port of tropical South America. It has an excellent harbor and is an important coffee exporting port. Other cities that are important are as follows: Santos, in Brazil, is in the center of the coffee growing section; Para and Manaos, on the Amazon, are chiefly important as rubber ports; Potosi, in Bolivia, is remarkable for its silver mines; Guayaquil is important only as being the port for Quito. The chief cities in the north are Bogota, the capital of Columbia, Barranquilla, the outlet for the Magdelena River valley, and Caracas, the capital of Venezuela.

Foreign Commerce.—The bulk of imports to these countries in South America consists of manufactured products. As a result these nations buy largely from Europe. This is due in part to the fact that South America is near the ports of Europe and also that the people of this country favor Europe as a place to buy their products. From the standpoint of exports the bulk of her raw materials goes to the United States. The three great commercial nations of this continent are Argentina, Chile and Brazil. According to figures last obtainable the average annual exports of Argentina in animal and meat products amounted to over $161,000,000; the exports of Brazil show an annual shipment of coffee amounting to over $180,000,000, while rubber amounts to about $83,000,000 annually. The chief export of Chile is that of mineral products, sending out on an average of over $109,000,000 worth of these products.

From the standpoint of balance of trade the United States has suffered a great deal in its dealings with South American countries. This country has failed to make the headway that the merchants and traders of England, France, Germany and Italy have. This has in a large measure been due to the faults of American business methods. The following list of some of the measures that would aid in extending trade in the United States was printed in a pamphlet issued some years ago by the Pan-American Union.

1. The appointment of men of culture, tact and energy as ministers and consuls.
2. The sending of business representatives who are gentlemen and who speak Spanish, Portuguese or French.
3. The manufacture of articles to suit the local Latin American trade.
4. The giving of credit to reliable purchasers as is done by European shippers.
5. The use of greater care in packing goods for the long distance to be traveled and for the severe changes in climate.
6. The opening of North American banks in the principal cities of South America.
7. The investment of North American capital in South America.
8. The popularizing in our schools and colleges of the study of the Romance languages, history and institutions.

Trade Routes and Transportation.—As stated elsewhere, a serious drawback in the commercial and economic development of

South America has been its lack of transportation facilities. The continent has many large rivers but the lands about most of them are so impenetrable that no habitation is found any distance from the river banks. As a result, the ports along these rivers are usually small and concerned solely with the raw materials to be found close at hand. While the Amazon and the Parana systems can be likened to the St. Lawrence and Mississippi systems of North America, yet the former valleys are in no sense settled, unless we except the region near the mouth of the La Plata. Vast territories in central and western Brazil are without human habitation of any sort, either savage or civilized. The water sheds between the Orinoco, Amazon and Parana systems are very low and during the period of heavy rains the waters of the three systems mingle together. A dream of many South American engineers is a continuous waterway from north to south, by means of canals, to join the rivers together. This would make a short route from Panama and the ports of North America to Buenos Aires. However, due to the vast wilderness and lack of cities along the route such a waterway would probably be too expensive to build and maintain.

In the matter of railroad building there has been considerable development in the republics of Argentina, Chile, Uruguay and Brazil. There are two interoceanic railroads; one from Buenos Aires to Valparaiso and another from Bahia Blanca to Zapala, at the foot of the Andes, to be extended to the Pacific, at Valdivia. A line connects Montevideo and Rio de Janeiro which will be extended up the coast to Bahia and Pernambuco, where it will connect with Atlantic steamers from Europe and the United States, thus shortening the time from these ports to the ports on the La Plata river. A new line has been completed across Brazil from Corumba, a port on the Paraguay, eastward to Rio de Janerio. Chile has a railroad running from Tacna and Iquique south to Port Mont. This road is intersected by a number of short lines running east and west, touching the coast at various points. The topography of the country in northern Argentina lends itself readily to the building of roads, and hence we find a net work of roads in this section more dense than in any other country in South America. In addition to the two continental roads mentioned above there are routes tapping the Bolivian plateau, besides a number of short lines running between Bahia Blanca and Buenos Aires. Railroad building in Peru, Ecuador and Columbia is an expensive operation. Hence we find here only a few short routes. The same is true of the northern republics, as the topography and climate of these regions make the building of long railways unprofitable. Most of these lines run for only a short distance, affording an outlet to some port nearby. The highest railroad in the world is in Peru. It is at an approximate elevation of 16,000 feet above sea level.This road is only profitable because it can handle the ores from the Cerro de Pasco mines. Another interesting road is the line from Quito to Guayaquil. This road opens up no new trade routes but is located in the region which is rich in tropical fruits and cocoa. It will probably do a great deal toward stimulating the commerce of the city of Quito which, though located on the equator, is a thriving city with a temperate climate.

Another dream of railroad builders is a road connecting the two continents running from New York and Chicago to Santiago and Buenos Aires. This road would undoubtedly do a great deal toward opening up and developing the interior along the route but the jungle nature of much of the country through which it would have to pass lessens somewhat its practical value.

EUROPE

In General.—No other continent in the world has had more influence on the development of art, trade and science than the continent of Europe. The word "European" is synonymous with civilization. In fact civilization as we know it came from this continent. It was from this continent that sailors and merchants eager to find new markets finally circumnavigated the globe. Why has Europe played so important a part in the world? There are of course many answers to this question, but geography has played an important part in causing this continent to be a leader.

NUREMBERG, GERMANY

The city of Nuremberg is situated on the little river, Pegnitz, in south central Germany. It is noted for the manufacture of toys and electrical machinery. The building shown is typical of the medieval appearance of Nuremberg.

No other continent in the world has so many miles of sea coast. In no other continent are there so many deep indentations which bring all the different parts of the country within easy communication. In fact no part of Europe,with the exception of the eastern section, is more than a thousand miles from the sea, and much of the more important part of the continent is within five hundred miles of salt water. This factor alone had the tendency of encouraging trade and travel in the middle ages, and did much to bring the people of the various parts of the continent into touch with each other. This fact is an important one in that when people travel they discover new needs for themselves and this is the foundation of trade and commerce.

Another factor that has helped Europe maintain its leadership is the climate. According to its latitude, Europe should be frigid to a large extent; as a matter of fact it is temperate. For example, the British Isles are in about the same latitude as Labrador, while most of Europe is north of the latitude of New York City. Because of the east-west trend of the mountains the prevailing westerly winds can carry moisture and warmth far inland over the great European plain. This makes a most agreeable climate which is highly favorable to agriculture and other human activities.

THE BRITISH ISLES.

No other nation in the world has profited more from her geographical position than England. During ancient times and even down to the discovery of America, these islands were on the fringe of the world. But after the discovery of America these islands found themselves in the middle of the world with lines of trade coming to them from the western hemisphere, and at the same time facing the broad open European plain on the east. This position therefore, has made the British Isles the great distributors of commodities and England the greatest commercial nation in the world. Her insular position has also had much to do with her development, for being entirely surrounded by water, England has been less subject to invasion by foreign armies, and hence her resources have been preserved from the wastes that invading armies cause in an enemy country.

The supremacy of the British people in manufacturing trade and commerce is due in the main to the following factors:

1. Their insular position.
2. Their central location in relation to Europe and the Americas.
3. The deep harbors making nearly every section accessible to the sea.
4. Abundant supplies of coal and iron.
5. A favorable climate.
6. A heterogeneous race; Celt, Saxon, Dane and Norman.
7. Inventive genius.
8. Freedom from foreign wars.

Agriculture.—In the middle ages the population supported itself by growing its own products. To-day the entire group of islands is largely dependent on other nations for its supply of food. The limited area of land surface, and the owning of large estates by aristocratic families has forced the agricultural industry to be largely of the small farm type. The climate of this region is more favorable to cattle and sheep raising than to agriculture, and for centuries, England and the other countries comprising the British Isles, have been famous as growers of cattle and sheep. Cattle and sheep are even now fairly numerous. The principal crops are barley, oats, potatoes and flax, the latter being a product of Ireland.

Minerals.—It is from their mineral resources that the British people have gained their greatest advantage. England is the largest producer of coal in the world, and the British coal fields exceed in area those of the rest of Europe. The principal fields are located in northeastern England, southern Scotland and southern Wales. In normal times the British Isles produce over 300,000,000 tons annually. Much of this is exported to other countries, colonies and naval stations, but a large part is used to run the huge factories that turn out the world's greatest supply of manufactured products.

Manufactures.—Because of the presence of coal and also because of improvements and inventions, especially in the spinning and weaving of cloth, England was able at the beginning of the nineteenth cen-

tury to outstrip all rivals. With plenty of fuel and machinery that could be operated by cheap labor she was able to strengthen her place in the industrial world. As a result we find industrial England located in the north near the coal fields and also near the former pasture lands of sheep. Wool was the first industry of prominence in this locality. Here we find the woolen industry in such cities as Leeds, Bradford, Halifax, Huddersfield and Leicester. Leeds is one of the greatest industrial cities in England and is first in the manufacture of wholesale clothing and is also a large manufacturer of iron and steel.

FAIR MAID'S HOUSE, PERTH, SCOTLAND

Perth is an ancient and historic city which has become a modern industrial center. The old tavern shown in this picture is typical of early England.

The cotton industry is located on the western slope of the Penine Range, where the moisture from the ocean winds is very favorable for the spinning of cotton. This industry centers largely in Manchester and the surrounding cities of Oldham, Bolton, Blackburn, Burnley and Preston. The raw material has to come from across the seas to these huge factories, most of the cotton coming from the United States.

Other types of manufacturing are to be found in large quantities, such as shipbuilding in Glasgow, Newcastle and Belfast. Tin is still obtained from the mines of Cornwall after centuries of production. Lead, zinc and copper are smelted at Swansea near the Welsh coal fields. Blast furnaces for smelting iron ore are found chiefly in Middlesborough, while special types of hardware and cutlery are made in Birmingham and Sheffield.

Cities.—The largest city of the British Empire is the city of London. That a large city should grow up at this point on the Thames was determined by its geographical location. The Thames River is an estuary for a considerable distance and faces two great rivers, the Rhine and the Scheldt, which invites commerce to, and from across the channel. Its position as the gateway of southern England and opposite the mouths of continental rivers has made this city one of the principal distributing centers in the world. English vessels bring the wares of the various countries of the world to London and then again reship them to other ports. It is today the world's greatest market for tea.

The principal city and port on the western coast of England is Liverpool. This city situated on the estuary of the Mersey river has become the great port for ship lines from America. Through this port most of the cotton, wheat, meat and tobacco is received.

Other ports of importance are Cardiff, the chief port for exporting anthracite coal; Manchester, which is reached by canal with the Mersey River; Hull, located opposite the Weser, Elbe and Kiel Canal; Glasgow, in Scotland, and Belfast, in Ireland. This city is the center of the flax growing region, the manufacture of linen as well as large shipbuilding works. Another city in Ireland which is of some commercial importance is the city of Londonderry. This city has been called the "Troy of the old World" in that it is a great center for the manufacture of shirts, collars and cuffs.

FRANCE

France has the advantage of fronting on two large seas. These two fronts, the Atlantic Ocean and the Mediterranean Sea, are factors that have done much to determine the political, religious and commercial life of this country. The broad level plain to the north, with the ports of Havre and Bordeaux opening toward England and America, have given France a share in the world's international trade, while the Mediterranean front has made her a potent factor in the trade with Africa and the Orient.

Agriculture.—On account of the excellent climate and splendid soil France is able to grow a large amount of agricultural products. The crowded condition of the country has made intensive farming a necessity. The small farms of France yield more wheat per acre than any other country, except Belgium, where like crowded conditions prevail. About one-half of the country of France is under cultivation, the principal crop being wheat. The general average yield of wheat is from 21 to 25 bushels per acre. This yield compared with the yield of 12 to 15 bushels in the United States and 10 bushels per acre in Argentina is an example of what intensive tillage would do towards increasing the supply of food in the newer countries.

Next to cereals, the most characteristic French crop is fruit. Because of the mild climate the grape can grow in all sections of the country. The principal region, however, is in the north of France in the Champagne district. Other sections where grapes are grown in considerable quantities are in the Rhone district and around Bordeaux, along the Garonne River.

Minerals.—France is relatively poor in minerals as compared with the other great nations of the world. Her largest deposits are in the northen provinces. The recent acquisition of Alsace-Lorraine and the Saar Basin have increased the area of coal fields to a considerable extent. Here also are large deposits of iron ore. The mineral resources of the country west of the Rhine have been one of the causes of much of the strife between the German and French nations for many centuries.

Manufactures. — French manufactures reflect in a great measure the temperament of the Latin races. Here manufacturing does not concern itself so much with quantity and bulk but more with artistic designs and value. Hence we find that the characteristic French manufacturers are for the most part concerned with the making of silk fabrics, china and glassware, scientific instruments, jewelry, embroideries, wines and the canning of sardines and the small patotoes that are used in the high class restaurants of the large cities of the world. Another industry which is typical fo the French nation is the manufacture of the fine kid glove. The glove industry at Grenoble, in southeastern France, has for many centuries been most prominent. Nature placed the raw materials close at hand where hundreds of thousands of wild goats used to pasture on the mountain side. Nowhere in the world are kid gloves made that are of finer quality than the gloves of Grenoble, in France.

Transportation Routes.—France was one of the first nations to become a united country during the middle ages, and later became one of the leading commercial nations. A geographic factor that has favored the political and commercial unity of this country is its splendid system of rivers which radiate from the central portion of the country, thus making all parts of the country accessible. Almost all of these rivers are navigable and the various systems are connected by a system of canals which makes it possible to reach all points on the various river systems by boat. In the early days this was an important factor toward uniting the people. The chief rivers are the Seine and Moselle, in the north; the Loire and Garonne, in the west, and the Rhone in the east and south.

The Rhone is of the least value of all these routes largely because of its swift current and poor outlet to the sea.

France has a number of important railways leading into the surrounding countries. The most prominent are the routes from Paris to Berlin, Paris to Vienna and Paris to Turin, in Italy. The first two follow either the plain or pass through the low mountains to the east. The road to Italy reaches that country through the famous Mt. Cenis tunnel. A line also reaches around the end of the Pyrenees to Barcelona, in Spain, making that port virtually a French port.

Although France has a favorable position for commerce with excellent river and railroad systems and a coast facing on two seas, yet it is almost stationary in population and trade. The coast has no natural harbors. The principal harbors are Havre, Bordeaux, Dunkirk and Marseilles. Out from these ports goes a large amount of exports of small value, but because of the importation of very few raw materials the ships returning to France are not usually loaded, as is the case with ships returning to Great Britain. This in a measure accounts for the fact that France is not able to compete with England as a commercial nation.

GERMANY

In General.—Since 1871 Germany has made remarkable developments in commerce and industry, and previous to the Great War in 1914 was easily the greatest competitor of Great Britain in the matter of trade. Even to-day Germany possesses much of the natural resources that she had before the war, and the nature of the climate, soil and people is such as to warrant their playing an important part in the commerce and industry of the future.

Agriculture.—Because of the limited area of German territory and the sandy structure of the soil, which requires constant attention and the application of fertilizers, it is but natural that scientific farming should develop to a high degree in this nation. Here the worn out and old lands needed to be made sufficient to feed a fast increasing population. The prosperity of German agriculture rests upon the science of chemistry. While wheat is grown to some extent, the limited size of farms

and the cool and moist summers make the growing of root crops, such as sugar beets and potatoes, more profitable. Rye and oats are other staple crops of importance. However, sugar beet growing is the chief agricultural crop. This crop can be grown with profit on account of the supply of cheap labor, which is most essential to enable this crop to yield the greatest returns. In recent years Germany is one of the largest exporters of beet sugar in the world.

Minerals.—In proportion as nations have been able to utilize their mineral wealth, especially coal and iron, have they secured a leading place in the commerce of the world. For this reason England, the United States and to some degree France were early in entering into competition for world commerce. Up to 1871 Germany was a rural nation of small farmers. It was only after she utilized the mineral resources at her command that this nation became a rival for world trade, and became one of the great industrial nations of the world. Great deposits of iron, silver and lead are found in the Harz and Erzgebirge mountains. Coal is scattered over a wide field, though some of the best fields are in the Saar Basin which is now under the control of the French. The need for new fertilization of the soil was instrumental in the development of the great potash fields.

Industries and Manufactures.—Iron and steel industries form the major portion of German manufacturing, especially the manufacture of machinery and scientific instruments of great value. Textiles also hold a prominent place in manufactures, especially cotton, woolen and silk. Beet sugar refining, and the making of chemicals play a large part in the commercial and industrial development of the land. It is interesting to note that there was an apparent relation between the chemical and munition plants. The fact that dye factories could be changed into munition plants accounts in a measure for the keen interest the German government and people took in the dye industry. The chief centers for the manufacture of iron and steel are Dusseldorf, Essen, Stettin and Kiel; silk goods at Kiefeld; cotton goods at Munchen; dyes at Elberfeld; chinaware at Meissen and the manufacture of toys and electrical machinery at Nuremburg.

Transportation Routes.—In the matter of railway communication Germany was in the lead of other European countries in mileage. Like the railways of England and France, which center in London and Paris, the railways of Germany center in its capital at Berlin. A net work of lines run out from this city to all the chief ports and other points in the interior. Lines run to Rotterdam, to Switzerland, Italy and Constantinople. Five great rivers enter the sea from the interior, which with the canals joining them give over seven thousand miles of water navigation. The rivers are the Rhine, the Ems, the Elbe, the Weser and the Oder. Three of these rivers—the Rhine, the Ems and the Weser—flow into the North Sea; the others flow into the Baltic. The great German port before the war was Hamburg. This port, located on the Elbe River, is one of the natural gateways from England and America for goods entering Europe. It is the only natural Atlantic port that Germany possesses. Next in importance to Hamburg as a seaport is the city of Bremen, on the estuary of the Weser.

Although Germany is surrounded by other nations, still her position for commerce is far from unfavorable. Occupying a large portion of the northern plain in Europe it is in the pathway for routes following the lines of least resistance. In one sense, Germany is at the crossroads of commerce. By her system of canals and railways she is able to attract commerce from the Mediterranean countries as well as a share in the commerce moving east and west. With settled political conditions and a resumption of her former scientific practices in agriculture and industry, Germany will soon be on its feet again as a commercial nation.

BELGIUM

Belgium has a better geographic location for commerce and trade than any other continental country in Europe. It has the advantage of being directly opposite the great ports of the greatest commercial and industrial country in the world. This position, therefore, makes this country commercial rather than agricultural. The presence of iron and coal near by, together with markets in abundance, are further reasons why this country turns to manufacturing rather than to agriculture. This country is the most densely populated country in Europe, having about 659 persons to the square mile. This dense population could not possibly get its food from the soil and hence has to turn to some other activity to gain a livelihood.

Belgium is a great hive of industry, the chief, of which are linen, carpets, lace and diamond cutting. Belgium is the greatest lace manufacturing country in the world. Steel works abound in this country, especially near the iron and coal fields of southern Belgium. Glass working is another special type of manufacture based on the mineral close at hand.

The industrial centers are as follows: lace and carpet manufacturing center in Brussels; the woolen industry in Verviers; linen centers in Ghent; the making of steel and smelting of zinc in the Liege district; glass manufacturing in Charleroi.

The great commercial city of Belgium is Antwerp, the city of which Napoleon said "it held a dagger pointing toward the heart of England". This city lies some miles up the Scheldt River, and boats to reach it must first pass through Dutch territory. However, Antwerp is one of the great ports of the world, being a close rival of New York, London and Liverpool in the matter of tonnage clearances. In this city the diamond industry of Belgium has centered.

HOLLAND

Another small country which is very important commercially is the little kingdom of Holland. This country, with rich colonies in the East Indies, has become commercial rather than industrial. Since the sixteenth century Dutch traders have brought to Europe the spices and fruits of the Far East. Because of this fact Holland imports and exports the same commodity. A glance at her imports show that spices, coffee, sugar, tobacco and indigo hold a prominent share of that trade, while at the same time these same goods enter into her export trade in nearly the same quantities Holland, therefore, is a great distributor of goods and from her position on the North Sea and at the mouth of the Rhine and Scheldt she becomes a natural gateway to the plains of Europe.

The people of Holland have long been noted as breeders of dairy cattle. This is the home of the famous Holstein-Friesian cow which to-day holds a leading place as a milk producer. The abundance of rainfall makes this country an excellent pasture for dairy stock. The Dutch have also become famous as horticulturists and growers of vegetables. The tulip and hyacinth have been among the chief flowers for the markets of England and France. England is the great market for most of the vegetables of this country.

GREECE

Greece occupies the southern peninsula of the Balkans extending down into the Mediterranean Sea. Although its industries are chiefly agricultural, only one-fifth of the land can be cultivated. The remainder is rugged and mountainous territory surmounted by Olympus, famed peak of the ancients, 9,800 feet high.

The important products include cereals, tobacco, currants, figs, raisins, wine, olives and olive oil, nuts and silk. Minerals are abundant, including iron ore, chromite, magnesite, zinc, lead ore, lignites and salt. Shipbuilding and shipping are important industries.

A Relic of Ancient Greece

The Porch of the Maidens of the Temple of Athena. In Greek mythology, Athena is said to have sprung from the head of Zeus.

Athens, the capital, is the chief city. It is a commercial and industrial center, although most of the manufacturing plants are at Piraeus, its port. Saloniki, another old city, has an excellent harbor and is a port for the shipment of Bulgarian and Yugoslavian goods.

ITALY

During the thirteenth and fourteenth centuries Italy was the leading commercial nation of Europe. It was the center of the civilized world and the point of convenience of all trade routes from the Orient, Africa and northern Europe. Since the discovery of America and the rounding of the Cape of Good Hope, the country has lost much of its ancient importance as a commercial center.

The chief industry of Italy is agriculture. Cereals constitute the leading cultivated crop. Large acreages are planted to wheat, corn, oats, barley, beans and potatoes. Livestock raising includes sheep, cattle, horses, mules, pigs and goats. The chest-

nut is an important nut crop. Large areas are given over to olive trees which are raised chiefly for the oil, and to vineyards which produce wine. The climate is well adapted to the growth of the mulberry tree, on which the silk worm thrives. Silk cocoons

ATHENS, GREECE
A bird's-eye view of Athens as seen from the Acropolis

average annually 155,716,000 pounds. Lemons, oranges and figs are important products.

Italy is not rich in minerals, and especially is lacking in coal. Hydroelectric power is being developed. The production of iron and steel and zinc is on the increase. In the former Austrian territory north of Fiume are the rich quicksilver mines, which make Italy the world's largest producer of that metal. Sulphur is an important product, the output being more than 300,000 tons annually.

Northern Italy is the most productive region. It is also the most important manufacturing section. Milan, second in population, is noted for its silk and furniture and for printing. Genoa, in the northwestern portion, has varied manufacturing and produces many works of art. Our illustration shows Santa Margherita, a beautiful scenic suburb of Genoa. Turin, north of Genoa, leads in the motor industry.

Rome, the capital, is not a great commercial city, but it is the railroad center of the country. Naples, the largest city, has an excellent harbor. It is an important port and has many industrial plants.

Switzerland is a land-locked republic, without seaports or rivers that run to the sea. It is mountainous and only a small portion of the country lends itself to cultivation, and yet it is commercially important.

More than one-third of Switzerland is devoted to meadows and the chief agricultural pursuit is dairying. Great quantities of condensed milk and many forms of chocolate are exported. There are rich forests and their products contribute to the industries. Hydroelectric power makes up for the lack of coal.

Clocks and watches from Switzerland and fine Swiss embroideries are known all over the world. Wherever handwork enters into the value of a product the people of this mountain republic excel other Europeans. The centers of industry are Zurich, Basel, Geneva and Berne, the capital.

Switzerland has an important industry in the tourist trade and hotels employ about 65,000 persons. This "playground of Europe" with its superb scenery affords rest and sport to millions of visitors from all over the world.

SANTA MARGHERITA, ON THE ITALIAN RIVIERA
This scenic suburb, a few miles to the east of Genoa, is a favorite beach resort for the Italian public.

Spain occupies all of the Iberian Peninsula in southwestern Europe, with the exception of Portugal on the west and the British fortified station of Gibraltar on the extreme southern tip. On the north the high Pyrenees separate Spain from France.

The interior is largely made up of tablelands cut by irregular ranges of mountains. Rainfall in the interior is slight, but on the northern coast occurs the heaviest rainfall in Europe. The southern coast has an extremely warm winter climate.

The mineral wealth is great, including rich deposits of iron, coal, lead, copper, tin, manganese, silver, salt, phosphorus and sulphur. Recently platinum has been discovered.

An important forest product is cork, the bark of the cork oak, which flourishes in the northeastern section of the country. Spain is a leading producer of olives and olive oil and of grapes and wine. Nuts and oranges are valuable exports.

The leading industry is agriculture, including the raising of cereals, vegetables, hay and fruits. A quarter of the area is devoted to grazing. Many cattle, sheep, pigs, horses, mules and goats are raised. The Merino sheep originated in Spain.

Madrid, capital and largest city, is on a high plateau. It has long been a center of culture and in recent years has become important industrially. Barcelona, a Mediterranean port with an excellent harbor, is in a rich fruit section. Other cities of importance include Valencia, Seville, Malaga, Bilbao and Granada.

The Scandinavian Countries include Denmark, Norway and Sweden. Greenland is a Danish colony. Iceland is a sovereign state, having the same king as Denmark. Norway is largely a maritime country. Denmark and Sweden are principally agricultural, although much of Sweden is mountainous.

Denmark is largely a sandy, level plain, almost entirely surrounded by the sea, and as a result the entire country has

much raw and rainy weather. Farming is therefore one of the principal occupations of the country. Hence we find hay, oats, beet sugar, butter, cheese and eggs large items in the matter of export. Dairying is without doubt the chief specialty of the farmers of this country.

Denmark has one large city—Copenhagen—which is excellently located as a distributor of goods. It is situated on a water pathway leading into the central-eastern part of Europe.

Neither Norway nor Sweden is very rich in minerals, though we do find some iron, copper and a little silver. As in the case of Denmark, the great handicap is a lack of coal. Norway is more of a commercial nation than Sweden due to its geographical position on the ocean and its many good harbors. This fact has enabled Norway to have a relatively large share in the carrying trade of the world. Fishing is an important industry in both countries; the Norwegians are sailors by tradition and the fishing industry has had a tremendous influence in the life of the people.

Both Norway and Sweden have considerable forest lands; those of Sweden being larger and of greater value. Considerably more than one-third of Swedish exports consists of forest products. In Norway the principal forest products consist of pulp and matches.

Both of these countries have the advantage of having ice free harbors. Bergen and Oslo are now the chief commercial and industrial centers of Norway, and Stockholm and Gothenburg are the chief trade centers of Sweden.

Russia.—European Russia may be compared geographically with Canada. In both countries we find vast rich plains suitable for the growing of wheat and other grains; both have a forest belt of great size and value, while in the northernmost sections are barren moss grown tundras, or frozen plains.

Nearly 40 per cent of Russia is heavily forested and therefore ranks as one of the foremost countries in the world in forest resources. Most of the forest land was owned by the state under the old regime and development was necessarily slow.

Though Russia is a land of peasants and agriculturists, yet in the main the land fit for cultivation is relatively limited. This is due to the large areas of tundras, forests and salt marshes in the southeast and the swamps in the west. In the Ukraine districts and extending eastward, is the famous black earth belt and the chief section for the growing of wheat. Wheat is exported while rye is largely used in bread for home consumption. The soil of Russia is especially suited to the growing of sugar beets. Lately over one million acres of land were devoted to the cultivation of this crop.

Next to the United States, Russia is the greatest producer of petroleum. Most of the supply is found in the region of Baku, on the Caspian Sea. Outside of this region petroleum has been found in small quantities in the Urals and in Turkestan. Russia is also rich in many minerals, especially platinum, gold, coal and salt. Before the Great War about nine-tenths of the world's supply of platinum came from this region. As a producer of gold Russia formerly ranked high. Most of the gold in Russia is found in the Ural Mountains.

Russia has developed very slowly, and because of political conditions, is still in a chaotic condition as far as trade and commerce are concerned. Much of this lack of development may be ascribed to its geography. Here is a vast level country with extremes in climate tending to hold back full development in any land. Then, too, Russia has no deep seaport that is ice free. The search for warm waters actuated the Russian political policy for the greater part of the nineteenth century. From the interior of this broad and level plain arise the great rivers, the Don, Dwina, and Volga. The really great river—the Volga—loses its commercial importance due to the fact that it flows into the Caspian Sea. Most of the other rivers are ice bound for many months of the year. Its principal seaports are Archangel, on the arctic White Sea, and Odessa, on the Black Sea.

From the commercial viewpoint Russia was chiefly important as a producer of foodstuffs and raw materials. This makes her a desirable neighbor of Germany, who has an abundance of manufactured products to sell in return for the wheat and lumber of this region. Fully 50 per cent of her imports came from Germany before 1914. In fact most of her manufactured imports came from Germany. It was only in the field of special machinery that the United States found a market in this country.

ASIA

Asia is not only the largest continent in the world, but in many repects it is the grandest and most interesting of the main divisions of the globe. Here we find the oldest nations in the world, the highest tableland and mountains on the globe and the most sparsely and densely populated sections in the world. Its commercial backwardness is in a large measure due to its geography. Here we find a huge continent, the large part of which is inaccessible. The east-west trend of the mountains causes great difference in climate between the middle northern section and the south. The change in climate between lower and western China and India is most marked. The great open, high plains, which are an extension of the fertile European plain, is largely a desert owing to the fact that the rains have become exhausted in their long march from the Atlantic. Civilization never went forward here in the same way it did in Europe except in sections where navigable rivers made trade possible, hence we find the Tigris and Euphrates valleys and the river valleys of China and India as the only seats of a form of civilization which existed in ancient times.

China.—The country of China includes the province of Mongolia, Manchuria, Kashgaria and Tibet. Here is a nation a third larger than continental United States, with a population of over 400,000,000, living under conditions which would be impossible for any other race. This country extends from the latitude of Jamaica to that of Labrador and has a corresponding variety of climate.

The most prosperous part of China is the eastern section where the valleys open toward the ocean, allowing the rain-bearing winds to go into the interior. This section is made up largely of three great river valleys, the Hwang-ho, the Yangtze-Kiang and the Si-Kiang. These river valleys contain very fertile soil, though in the Hwang-ho valley there is much loose soil which is destroyed by floods and earthquakes, thus making agriculture a hazardous undertaking. This is particularly true of the upper regions of this river.

The principal food of the Chinese is fish and rice. Every inch of available land is stripped of forests in order to prepare it for cultivation. The great demand for food and the fear of wild beasts have been the potent causes for the stripping of the forest lands in China. The principal agricultural region is in southern China. Here rice is the most important food crop. The Si-Kiang valley is the home of sugar and cotton, for the ancient traders had heard that in this far away land of "a reed that bore wool without sheep, and honey without bees". The principal hill products are silk and tea, the two commodities which originally opened China to foreign commerce.

In northern China and Manchuria the principal crops are beans and wheat. The city of NeuChang, on the Gulf of Liaoting, is the greatest bean market in the world. Manchuria, together with the province of Mongolia, rivals the United States and Canada in the amount of land adapted to the growing of spring wheat. Much of this region is pasture land where herds of cattle are kept. Here, as in Canada and the Argentine, is a future granary for the world. Aside from poultry and swine there are few domestic animals in China. This is largely due to an over-crowded condition and lack of food. However, farther west in central Asia one finds sheep, goats, horses and camels.

It is believed that some of the greatest fields of coal in the world may be found in China. Already vast deposits have been discovered in the province of Shansi. It is claimed that this region contains twenty times as much anthracite coal land as the United States. Other valuable anthracite deposits are known to exist in the province of Hunan. Bituminous coal is found in many of the other provinces, and in Manchuria. These coal fields lie mostly in horizontal seams, making it possible to mine the coal under more favorable circumstances than in the United States. Then, too, these fields are conveniently located near iron. These two minerals are near each other in the Shantung Peninsula.

Other minerals of considerable quantity and value are to be found in the southwestern province of China on the plateau of Yunnan. Here silver, lead, tin, gold and sulphur are mined. These same minerals are also found in the Shantung Peninsula, and in the Shansi Mountains.

The characteristic type of Chinese manufactures is of the handwork variety The Chinese have been very slow to take on new ideas. Religion has had a most marked effect on the commercial and industrial development. The old Confucian motto, "Walk in trodden paths" has kept this race from trying new ideas in all phases of life. However, modern machinery has been introduced, especially in the cotton mills. The making of India ink, the carving of wood and ivory, the manufacture of paper, matting, bamboo, fans and fireworks are the chief products of Chinese industry.

Another great handicap to the development of China is the lack of transportation and communication facilities. Most of the transportation is carried on by river boats. The great rivers afford excellent facilities, but can only reach the sections contiguous to them. On land most freight is carried by wheelbarrow. This mode of trans-

portation is due mainly to the absence of good roads. For some reason it seems never to have occurred to the Chinese to repair their highways, and hence most of the roads are little more than paths. A great deal of carrying is done by porters, and in China man power is cheap. In Manchuria horses and camels are used to some extent. The caravan trade across Mongolia to the west is carried by camels. Much of the tea for Europe goes this way, and it is said that ocean traveling injures the flavor of the tea. There are less than half as many miles of railroad in all of China as in Illinois. An important line built as a joint enterprise with Russia cuts across Manchuria.

Shanghai, Hankow, Peiping (formerly Pekin), Hangchow, Canton, Tientsin, Chungkin, Soochow and Nanking are some of the large cities of China. The Nationalist government has set up a new capital at Nanking. Shanghai, the largest city and chief port, is the outlet for central China. Hankow is at the head of navigation on the Yangtze River. It is an industrial city which has been likened to Chicago. Peiping, formerly the capital, on the Gulf of Chihili, an inlet of the Yellow Sea, consists of an inner and an outer city. Every form of transportation is seen on the streets, from jinrikishas and camels to bicycles and automobiles. The famous Temple of Heaven is in the city. Canton is the leading city of southern China. It is an important port and has extensive manufacturing interests. Many of the inhabitants live in houseboats. The island of Hongkong is owned by Great Britain. It contains one of the best harbors of China.

Japan, like Great Britain, is an island kingdom off the coast of a continent, and likewise it is a great commercial nation. The Japanese Empire consists of a string of islands extending along the coast of Asia from the peninsula of Kamchatka to the Philippine Islands. Most of Japan is mountainous and only a small part responds to cultivation. About one-sixth of the land is fit for the plow, and in their eagerness for soil the farmers terrace the hills and mountains. Farms are small and most of the work is done by hand. Rice is the leading crop and most of it is raised in the lowlands where plenty of water is obtainable. Wheat, barley, millet, rye, buckwheat, corn, beans, potatoes, tobacco and tea are other crops. Mulberry trees are extensively grown for their leaves on which the silkworms feed. The export of silk in 1927 was valued at $352,675,000.

More than half of Japan is forested, the trees including bamboo, cypress, fir and cedar. In the island of Taiwan (Formosa) grows the camphor tree which is commercially very valuable. In the north great oak forests are found. The bamboo, included in the forest trees is in reality a grass that grows rapidly to the size of a tree. It has a variety of uses and is one of the valuable plants of the Orient.

Fishing is an important occupation in Japan, and fish takes the place of meat in the ordinary diet of the Japanese. Minerals are not abundant, although considerable deposits of coal provide all that the country requires and allows some for export. Petroleum is the second most important mineral, with iron third.

Japan is a manufacturing nation, and products are made not only in factories but in the homes. The textile industry was greatly stimulated during the World War and has suffered a decline. Cotton goods are the principal textile exported. Toys form a large item of the exports. Other manufactured goods include iron products, chemicals, fiber products, glass and earthenware. Shipbuilding was enormously stimulated during the World War and has suffered a depression since. Bonuses have been given workmen to reduce actual distress.

Japan is fairly well equipped with railroads, though the total number of miles is less than in some states of the United States. The standard gauge is being adopted. Electrification is taking place rapidly on many roads.

COLOMBO, THE CAPITAL OF CEYLON
Queen Street, showing the entrance to Government House, also the Colombo lighthouse and clock tower.

Tokio and Osaka are the largest cities. Tokio, the capital, is on a shallow bay and hence does not have an especially good harbor. It is a modern manufacturing city. Osaka is a leading port and great manufacturing city. With its many bridges spanning canals it has been likened to Venice. Kobe is a port and the center of the silk industry. The beautiful city of Kyoto in the interior is much sought by tourists and is noted for its porcelains, brocades and toys. It is the seat of an imperial university. Nagoya, east of Kyoto, is a railroad center. Nagasaki and Moji are ports in the south. Yokohama is the leading port for the trade of Tokio. It has developed rapidly and recently and is a leading shipping port for silk.

Taiwan (Formosa), an island about the size of Massachusetts, was ceded to Japan by China in 1895. It is the world's greatest source of camphor. Oolong tea is a product of Taiwan.

Chosen (Korea) was annexed by Japan in 1910. This ancient kingdom is mountainous and has immense forest areas. It is rich in minerals which Japan lacks. Seoul is the capital and chief city.

India is a country consisting of British provinces, in area as large as the United States east of the Rocky Mountains, and with a population well over 300,000,000. India is tropical and sub-tropical in climate, but in the northwest portion high mountains give a cool climate. The great mountain wall is useful in shutting off the cold winds from central Asia, in providing summer resorts and in furnishing water from many streams which originate in the snows of the mountains. In southern India are great plateaus with lowlands along the coast. Along the Indus and the Ganges rivers are extensive lowlands.

About one-fifth of India is forested. Among the important trees are the teak, sandalwood, ironwood, deodar, date palm, coconut palm, banyan and acacia. The principal industry is agriculture, and more than two-thirds of the people derive their living from the soil, and from livestock and forest products. Large areas are irrigated. Crops include rice, wheat, sugar cane, rape and mustard seed, linseed, cotton, jute, tea and rubber. Livestock includes oxen, cattle, sheep, goats, horses, mules, donkeys and camels.

India has rich mineral deposits. Coal production was over 22,000,000 long tons in 1927. The ores of iron, manganese, tungsten, gold, copper, lead and silver are abundant. Petroleum production in 1928 was 8,300,000 barrels.

Railroads are largely owned by the government. The development of railroad transportation is hampered by the fact that several different gauges are used. Navigable waterways total 4,000 miles and there are 200,000 miles of highways.

The chief city and principal port is Calcutta, on the Ganges River. Bombay is the leading port of western India, and because of its nearness to England it is sometimes called the "Gateway to India." The capital, Delhi, is accessible to all India and is a railroad and trading center. Other important cities are Benares, Madras, Rangoon, Hyerabad, Lahore and Ahmedabad.

The island of Ceylon, south of India, is also a British possession, about as large as West Virginia but with a population almost as large as that of Australia. Ferry boats ply between India and Ceylon. Most of the island is covered with jungle and the people live on about one-sixth of the land. Tea, rice, rubber, cacao, cinnamon, cocoanuts and graphite are important products. Colombo, the capital has a good harbor and is an important world port.

Turkey is mainly in Asia, though this new republic still has some land in Europe. The capital is now at Angora, in Asia Minor, as the southwestern part of the continent is called. Turkey in Asia embraces 273,808 square miles, while the European portion is now reduced to 8,819 square miles. Since the World War the total area of Turkey has been materially reduced.

Herding and farming are the principal occupations. Agriculture is carried on in a crude fashion measured by Western standards although under the new rule modern machinery is finding its way into the country. Products include tobacco, wheat, barley, rye, grapes, olives, cotton, silk, figs and nuts. Large numbers of sheep, goats and cattle are raised. Mineral resources

are vast but still largely unmined. Transportation and communication are poor, and good hotels almost unknown. Travelers are often forced to carry their supplies with them in making extended journeys.

The chief city of Turkey is Constantinople, in Europe. Smyrna is an important seaport of Asia Minor. Angora, the capital, is in a region noted for its Angora goats, whose long silky hair is the mohair of commerce.

Persia.—The kingdom of Persia has long been a part of Asia Minor. It has an area of 628,000 square miles and an estimated population of 10,000,000. It is a mountainous region, shelving into great plateaus and with narrow lowlands near the sea. The climate is warm and the rainfall light, resulting in much arid and unproductive territory.

Only in favored spots where water may be obtained is the soil productive. Crops include cotton, tobacco, rice, fruits and nuts. Persian rugs have been famous from time immemorial, the hair and wool coming from the flocks tended by nomadic tribesmen.

Although rich in minerals, little has been taken out. An exception is found in petroleum. The oil export in 1926-27 was valued at $63,868,000. Teheran is the capital and largest city. Tabriz, Ispahan and Mesnad are next in importance.

Afghanistan is a mountainous country peopled with a fiery warlike race of Mohammedans. Fertile valleys cut the mountains and the products include dairy products, grains and fruits. The fat-tailed sheep is native and of great value to the natives who eat the meat, use the fat as a butter substitute, and use or sell the wool and hides. Kabul is the capital and leading city.

French Indo-China is controlled by the French. The British control the Malay Peninsula. The East Indies are under the rule of Great Britain and the Netherlands. All of this general area is productive and yields in abundance in response to the heavy rains that occur throughout the region. Great rubber plantations have been developed. Spices, cotton, sugar, tobacco, rice, tea and coffee are some of the products. The island of Java produces much of the world's supply of quinine, which is obtained from the cinchona tree.

The immense expanse of northern Asia, Siberia, is a part of Russia (Union of Socialist Soviet Republics). The southern boundary is about the same latitude as the northern border of the United States and the northern coastline is beyond the Arctic Circle. Vast forests of evergreens stand largely untouched because of poor means of transportation. A railroad runs across Siberia, connecting Vladivostock on the east with Europe on the west. The country is rich in minerals, largely untouched. Vast acreages of farm land await development.

HARVESTING WHEAT IN AUSTRALIA

Wheat is the leading crop of Australia. More than 12,000,000 acres are grown annually. The illustration shows a combined harvester and thresher in operation.

Other Countries and Divisions of Asia.—Palestine is a land with a long history, and today is a mandate of Great Britain. Some of the land is very productive; other portions lack rainfall, and in the east is a part of the great Arabian Desert. Grazing is important, and crops include cotton, grapes, citrus fruits, olives and figs. Jerusalem is the capital and leading city. Bethlehem is held sacred by Christians as the birthplace of Jesus. Jaffa and Haifa are important seaports.

The Arabian Peninsula includes several countries. This great area is about the size of the United States east of the Mississippi River, but it is thinly populated and much of the land is desert. Many of the natives are nomadic and rove over the country with their herds of sheep, goats, horses and camels. Mecca and Medina are leading cities. Products include dates, wheat, barley, fruit, hides, wool and coffee.

Iraq, formerly called Mesopotamia (a word meaning "between two rivers"), has products similar to those of Arabia. The country is rich in petroleum. Baghdad is the chief city and a trade center. Basra and Mosul are other cites of importance.

AUSTRALASIA

Australia is a term used to denote that part of Oceania which lies between the equator and the latitude 47° South. By extension it is sometimes used for all of Oceania.

Australia is the world's largest island, and because of its size it is considered a continent. It is about 2,100 miles long and 1,000 miles wide and is almost as large as the United States without Alaska. Tasmania, a large island across Bass Strait from the southeastern corner, is considered a part of Australia and is one of the states of the Commonwealth.

The coastline is very uniform and there are few good harbors. A ridge of mountains, plateaus and hills fringe most of Australia, preventing easy access to the interior. The trade winds bring abundant rain to the northern, eastern and part of the southern coast areas, but the interior is dry and fully one-third of the continent is desert. More of the land is adapted to grazing than to farming. The pastoral products are therefore more important than the agricultural. Australia is the world's largest producer of wool, the clip in 1928-29 being estimated at 950,000,000 pounds. Sheep and cattle are raised in large numbers and the meat is exported as frozen beef, frozen lamb and frozen mutton. Dairy products are also exported. Agricultural products are similar to those of the United States, and include wheat, oats, barley, corn, hay, potatoes, sugar cane, cotton and fruits.

Gold mining has declined in importance though it is still an important industry. Gold is found in the eastern mountains and in the plateaus of Western Australia. Desert conditions in the western part have impeded mining. Coal occurs in abundance in the southeastern region. Other minerals, including tin, silver, lead, zinc, iron and copper are present in smaller quanities. Much of the continent has remained unexplored for mineral resources.

Manufacturing has more than doubled since the World War. It is largely concentrated in New South Wales, where ample coal supplies are a stimulus. Most of the manufactured products relate to the pastoral and agricultural industries and the manufactured goods are chiefly consumed at home. Fishing has never become important. Pearl fishing has been followed along the northwestern coast for many years.

Transportation is a serious problem. The railroads use several gauges of track, necessitating frequent changes in traveling or shipping. A proposed railroad has adopted the standard gauge. Motor transportation and more recently air travel have aided the development of the interior. The streams are not navigable for any considerable distance. The Murray-Darling system is too shallow for navigation for a large part of the year.

More than two-fifths of the total population live in the cities and their suburbs. Sydney is the metropolis and chief port, and its harbor is one of the finest in the world. It is a beautiful modern city with large manufacturing interests and with splendid streets and parks. Melbourne is the second city and a leading port. It has some manufacturing and is a railroad center. Brisbane, Adelaide and Perth are other cities of importance. Darwin is a port on the northern coast and Fremantle is on the western coast. Hobart is the principal city of Tasmania. The federal territory of Canberra, containing the capital, is located between Melbourne and Sydney and has a corridor to the harbor on Jervis Bay.

New Zealand consists of two large islands and many smaller ones. The length of the two main islands is more than 1,000 miles and the maximum width is 200 miles, narrowing to as little as six miles. Thus surrounded closely by the ocean, the climate is not subject to extremes of temperature. The summers are not hot and the winters are mild. High, snow-capped mountains, volcanoes, geysers and hot springs provide interesting scenery. Two-thirds of the land is tillable and responds well to cultivation. Stock raising and dairying are the leading occupations. More than ninety per cent of the total exports are pastoral products. Farmers have learned how to work together and a large proportion have their coöperative companies and receive monthly checks for their produce. Periodically extra checks in the form of bonuses are paid, representing surplus returns.

WELLINGTON HARBOR, NEW ZEALAND
Panoramic view of Wellington, the capital, from the hills of North Island.

SYDNEY HARBOR, AUSTRALIA
Sailing in the fine harbor of Sydney, capital of the state of New South Wales.

New Zealand was originally peopled by the Maoris, a brown race of intelligence. Some 65,000 remain and they have representatives in Parliament and participate in the affairs of the Dominion. The settlement of the islands has been chiefly by the British and by the white race exclusively. The former vast forests have largely been wasted and now a program of reforestation is making rapid progress. With the decline of forests, the bird life has suffered. The moa, now extinct, was a giant running bird, standing higher than a man. No land mammals were native to the islands, but they have been brought in and today the wild dogs and wild pigs are found as descendants of animals imported long ago. There are no snakes.

The leading farm crops are wheat, oats and barley. Fishing has not been extensively followed. Manufacturing is largely confined to food products. Auckland is the chief city and an important port. Wellington, the capital, is a trade center. Dunedin and Christchurch on South Island are important cities.

AFRICA

In General.—Africa is the second largest continent, ranking in size next to Asia. It is in the general shape of a triangle, south of Europe and southwest of Asia, about 5,000 miles long and 4,650 miles in breadth. It is in reality a huge platform of land rising from deep seas with a narrow continental ledge. The average elevation is 2,130 feet. In the northwest the Atlas Mountains have elevations as high as 14,000 feet. In Ethiopia are extensive highlands. At the head of the Gulf of Guinea are the Kamerun Mountains. In the south and southeast are ranges of mountains. The highest peaks, Kibo and Kenya are not parts of ranges. The Ruwenzori group culminates in the peak of that name. Mountains over 6,000 feet high run from northwest to southeast in the eastern part of the Sahara Desert. The Congo Basin is a great hollow in the central plateau and was formerly a lake. The southern plateau is higher than the northern, ranging from 3,000 to 4,000 feet.

The coastline is very regular affording few good harbors. The climate of the entire continent is warm, and in many places too hot for comfort. The central portion along the equator has heavy rainfall. On either side of this belt the rainfall is lighter, and farther on either side come the great deserts with little or no rainfall. In the path of the heavy rainfall are dense jungles which are the homes of such animals as monkeys, gorillas, snakes, crocodiles and hippopotami. Elephants, buffaloes and other large animals frequent the regions where the jungle is not so dense. Away from the tropical jungle come immense savannas, areas of grassland. Here are antelopes, giraffes, zebras and other herbivorous animals. Preying on them and associated with them in the same region are the flesh-eating lions, leopards, hyenas and cheetahs.

Africa remained for many years unexplored. The desert and the jungle were forbidding until man began to seek out the wealth of what was often called the "dark continent." Today practically all of Africa has been explored, following the lead of such pioneers as Livingstone and Stanley. However, because the climate is hard on the white man, it is probable that thousands of square miles will ever remain the haunt of wild animals and of the black race. The white race has settled principally in the southern portion where the climate is more nearly like that of Europe.

Africa has great rivers but because of the tablelands these streams are not navigable for long distances. Frequent waterfalls are encountered. In some instances railroads are being built to go around the falls and rapids. Africa has a series of Great Lakes second only to those of North America. Victoria is next to Superior the largest fresh water lake in the world. Tanganyika is the longest lake in the world. Chad doubles in size during the rainy season.

Africa has suffered from the lack of transportation. Much of the continent is practically impenetrable. The Cape to Cairo Railroad, conceived and begun by Cecil Rhodes, provides an almost continuous line of rails from north to south. A small part of the route uses steamer, pack train and automobile transportation. In the Union of South Africa railroads connect all important cities. At various points on the coast railroads have been built for short distances into the interior.

Africa is rich in native tropical products. Cotton and tobacco are valuable crops and rubber plantations are becoming of value. Gold was a lure that brought many and the discovery of rich diamond fields brought others. Copper is present in abundance.

The Sahara Desert covers an area almost as large as Europe. Here the camel has for ages provided the only transportation across the sandy wastes. Recently the railroad and the automobile have come in and have succeeded in materially reducing the time of travel. Much of the desert would produce crops if there were water. In much of the Sahara rain never falls. There are many fertile spots, or oases, sometimes covering large areas. Here the date palm grows and yields commercially important crops. Oases serve as valuable supply stations for travelers.

A MONUMENT OF OLD EGYPT
The Obelisk of Heliopolis is the finest one left in Egypt.

Egypt is a productive country, but only where the influence of the Nile River is felt. Water for irrigation and for drinking purposes and a highway for commerce are provided by the Nile, which rises in the lake region of central Africa where the rainfall is heavy. The fruitfulness of the Nile valley is due to the yearly overflow of its banks and the consequent rich deposits of silt. Egypt's principal crop is cotton, long famous for its fine long fiber. About one-third of the world's production is from Egypt. Over 4000 years ago the papyrus plant was grown and provided paper. Today Egypt imports all her paper.

Egypt has many monuments which tell the story of ancient achievements. Obelisks, pylons, stone monuments, culminating in the Pyramids, considered one of the Seven Wonders of the Ancient World (see page 1226), tell of early days. Thebes was the capital of Egypt in the sixteenth to twelfth centuries and was completely destroyed 27 B.C. Remains still stand of the Colossi at Thebes.

Cairo is the chief city of Egypt and the capital. It is located about 100 miles up the Nile from the Mediterranean. The largest Mohammedan university of the world is in Cairo. Alexandria, near the mouth of the Nile, is the leading seaport and chief trading center of the country. Port Said, at the north entrance of the Suez Canal, is a coaling station. The canal is about 100 miles long and is large enough to take all but the largest ships. It is controlled by the British and about half of the ships passing through belong to Great Britain.

THE COLOSSI AT THEBES

The Great Colossi at Thebes, Egypt, were once the main entrance to the ancient City of the Hundred Gates.

Ethiopia, formerly called Abyssinia, is a mountainous highland country in eastern Africa, with lowlands near the coast but having no seacoast. The rugged nature of the country has helped the Ethiopians to maintain their independence when almost all the rest of Africa has passed into the control of Europeans. Coffee was first grown in Ethiopia and from there was introduced to the world. Other products include sugar cane, tobacco, barley, corn, millet, wheat and bananas. Many of the natives are nomads and follow their herds of sheep, goats, horses and cattle. Addis Abeba, the capital, is not in reality a city but a group of villages. A railroad connects the capital with the coast in French Somaliland. Became Italian Province, 1936.

Liberia is an independent country on the southwest (Guinea) coast. It was founded in 1882 by freed negroes from the United States and today is a negro republic. It has rich forests whose timber is largely unused due to lack of suitable transportation. Coffee, oils, nuts and ivory are exported. Recently rubber plantations have been developed. The capital is Monrovia, named after an American president.

The Union of South Africa embraces the Cape of Good Hope, Natal, Orange Free State and the Transvaal. Adequate railroads and good highways have been developed. There are vast mineral deposits, and mining operations are revealed in the mineral output which is annually valued at $300,000,000. Rich fields of diamonds and of platinum have recently been discovered. The government maintains a strict supervision of diamond production. Agriculture, dairying and the raising of livestock are important occupations. The wool clip averages per annum 282,000,000 pounds.

Johannesburg, the metropolis and leading railroad center, is a flourishing, modern city. Cape Town is second in size and has a fine harbor and extensive shipping. It is the legislative capital. Pretoria, in the Transvaal, is the administrative capital. Durban and Port Elizabeth are important ports. Kimberley is in the heart of the diamond country.

EASTERN HEMISPHERE

Copyright, 1931, by Educators Association

THE EARTH — Shape and Size of the Earth—The Earth is very nearly an oblate spheroid, whose shorter axis coincides with its axis of rotation passing through the two poles. It rotates at a velocity of 15 degrees an hour (about 17,366 miles a minute at the equator); 1 degree is therefore equal to 4 minutes.

The circumference of the globe is about 24,855 miles, and the diameter about 7,900 miles. More exactly—

Earth's equatorial semidiameter equals 3,963.296 miles.

Earth's polar semidiameter equals 3,949.790 miles.

Earth's mean semidiameter equals 3,958.794 miles.

Earth's oblateness equals $\frac{1}{300}$.

One degree of latitude at pole equals 69.407 miles.

One degree of latitude at equator equals 68.704 miles.

The temperature increases on an average about 1 degree F. for every 64 feet descent. But this amount is variable according to the locality, geological formation and dip of strata.

Chemical Composition.—By combining a large number of analyses of rocks of all sorts, F. W. Clarke has estimated the relative amounts of elements in the crust of the earth:

	Per Cent		Per Cent
Oxygen	47.02	Phosphorus	0.09
Silicon	28.06	Manganese	0.07
Aluminum	8.16	Sulphur	0.07
Iron	4.64	Barium	0.05
Calcium	3.50	Strontium	0.02
Magnesium	2.62	Chromium	0.01
Sodium	2.63	Nickel	0.01
Potassium	2.32	Lithium	0.01
Titanium	0.41	Chlorine	0.01
Hydrogen	0.17	Fluorine	0.01
Carbon	0.12		
			100

The Magnetic Poles.—The geographical poles of the earth are the extremities of the imaginary line passing through its center of gravity and about which it revolves, and are therefore symmetrically located with regard to the equator.

It is common to speak of the magnetic pole in the northern hemisphere as the "north" magnetic pole and the one in the southern hemisphere as the "south" magnetic pole, but the scientist who speaks with greater accuracy will tell you that the north pole of your compass needle will be attracted only to a south magnetic pole and his explanation is this:

If a dipping needle is moved along a long bar magnet, the north end of the needle will dip down vertically when it is directly over the south pole of the magnet. North and south poles attract each other. Two north poles repel each other. The law of magnetic poles is the same when the earth is one of the magnets and a compass or dipping needle is the other. It follows then that near the north geographic pole of the earth there is a south magnetic pole. This is beneath a point where the needle dips 90°. Tests have located this place approximately in King William's Land, Canada, in about 95°30′ west, 70°30′ north and covers considerable area. Over the south magnetic pole the north end of a dipping needle points downward.

The position of the north magnetic pole in the southern hemisphere has been located approximately in latitude 71° south and longitude 150° east by Mr. E. N. Webb who went on an expedition led by Sir Douglas Mawson in 1912. Here the south end of a dipping needle points vertically downward.

The earth is a huge magnet surrounded by lines of magnetic force which enter the south magnetic pole in the northern hemisphere, and come out of the north magnetic pole in the southern hemisphere. It is these lines of force which direct a compass needle.

By reason of the annual variation of the magnetic needle, it is believed that the magnetic poles are not stationary, but have a slow motion around the geographical poles.

The Land.—The superficial area of the Earth is 196,950,000 square miles. The land area is 57,510,000 square miles.

Heights and Depths.—The mean height of the land has been estimated at 2,440 feet; the mean depth of the sea, 11,470 feet(Karstans); the greatest depth of the ocean as yet discovered (in the Pacific, between Guam and Midway) is 31,614 feet. If the whole of the solid crust of the earth were to be leveled, so as to form a spheroid, it would still be covered by an ocean of a uniform depth of 8,000 feet (Prof. Penck).

THE OCEANS.—The oceans, including the inland seas connected with them, cover 139,440,000 square miles. Murray states the greatest depth of the Atlantic Ocean at 27,366 feet; Pacific Ocean, 30,000 feet; Indian Ocean, 18,582 feet; Southern Ocean, 25,200 feet; Arctic Ocean, 9,000 feet. The Atlantic Ocean has an area, in square miles, of 24,536,000; Pacific Ocean, 70,000,000; Indian Ocean, 17,084,000; Arctic Ocean, 5,500,000; Southern Ocean, 30,592,000.

Antarctic Ocean.—Situated about, or within, the antarctic circle. The great Southern Ocean is that part of the ocean which surrounds the world between the latitude of 40 degrees south and the antarctic circle. The northern portions of this band are often called the South Atlantic, South Indian and South Pacific, while the southern portions are usually called the Antarctic Ocean. The average depth of the continuous ocean which surrounds south polar land is about two miles; it gradually shoals toward antarctic land, which in some places is met with a short distance within the antarctic circle. Life is abundant in the surface waters, and at the bottom of the ocean.

Arctic Ocean.—Lies to the north of Europe, Asia, and North America, and surrounds the north pole; it is usually defined as the water area within the arctic circle. Physiographically, the Norwegian Sea and Greenland Sea, situated between Norway and Greenland, belong to the same basin as the Arctic Ocean. If the Arctic Ocean be regarded as lying wholly within the arctic circle, then it is almost land-locked, between that circle and the parallel of 70 degrees north. It communicates with the Pacific by Bering Strait, and with the Atlantic through Davis Strait and the wide sea between Norway and Greenland. The area of the ocean is about 5,500,000 square miles, and into it there drain about 8,600,000 square miles of land.

The coasts of Europe and Asia are low, with several deep indentations, the principal being the White Sea and Gulf of Obi. The shores of North America are skirted by a most irregular assemblage of islands, forming numerous gulfs, bays, and channels.

The Atlantic Ocean.—The Atlantic Ocean separates the Old World from the New, and has been likened to a longitudinal valley divided by a series of submarine plateaus into an eastern and western half. Upon these plateaus there rise volcanic islands. The ocean, including the Mediterranean and other inclosed seas, covers an area of 34,301,400 square miles. Its greatest depth has been sounded to the north of the Virgin Islands, and has been named the "international deep."

The currents are primarily originated by the wind. The trade winds, which blow from the northeast and southeast toward the equator, give rise to the northern and southern equatorial currents, which are deflected on reaching the coast of the New World, a portion of the water returning toward the Gulf of Guinea (Equatorial Current or Guinea Current), a portion following the coast of Brazil, and another portion entering the Caribbean Sea and the Gulf of Mexico, whence it issues as the Gulf Stream. It is to the warm waters of this stream that western Europe owes its mild climate and freedom from icebergs. The cold currents flowing out of Baffin Bay, southward along the coast of North America, and from the cold Southern Ocean along the east coast of South America and the west coast of Africa, produce a corresponding lowering of the temperature.

Islands in the Atlantic.—*Iceland.*—39,709 square miles, population 94,690. The island consists in the main of a plateau, from which rise glacier-girt mountains (Juköd) including twenty-nine volcanoes. There are few trees, and the habitable part of the island does not exceed 16,200 square miles. Climate comparatively mild and equable. The fisheries and sheep-breeding are of importance. The exports include dried fish, wool, blubber, tallow, eiderdown and ponies. Capital is Reykjavik, population 17,678.

Bermudas (British).—A group of coral islands in the northern Atlantic. Area 19 square miles, population 20,127. Staple exports onions, potatoes, bulbs, nearly all being exported to the United States.

Azores (Portuguese).—A group of volcanic islands in the North Atlantic, mountainous (Pico, 7,710 feet), but fertile. Area 922 square miles, population 242,613, mostly Portuguese and Roman Catholics. The exports include oranges, wine and cereals. The islands form an integral portion of Portugal. Capital is Angra.

Madeira (Portuguese).—An island of volcanic origin, belonging to Portugal. Climate equable. Area 314 square miles, population 170,000, mostly Portuguese. Exports wine, sugar. Capital, Funchal, population, 50,192.

Canaries.—A group of islands of volcanic origin near the African coast, mountainous (Pico de Teide, on Tenerife, 12,190 feet). Area 3,342 square miles, population 506,414. Staple exports vegetables, bananas, cochineal. The islands form an integral portion of the kingdom of Spain.

Trinidad (British).—1,862 square miles; population, 381,753; exports asphalt and crude petroleum.

Ascension.—A British island of volcanic origin, rising 2,740 feet. Area 34 square miles, population 200. Sanatorium and coaling station. Celebrated for its turtles. Capital, Georgetown.

St. Helena.—A British island of volcanic origin, rising 2,700 feet. Area 47 square miles, population 3,747.

Indian Ocean.—That great body of water which has Asia on the north, the East In-

dies and Australia on the east, Africa on the west, and the Antarctic Ocean on the south. The Cape of Good Hope and the southern extremity of Tasmania may be considered its extreme southern limits on the west and east. Its length from north to south somewhat exceeds 6,500 miles, its breadth varies from 6,000 to 4,000 miles.

It is traversed by the equatorial current flowing east to west, and its navigation by sailing vessels is more or less modified by the periodic tradewinds and monsoons. Its chief arms are the Bay of Bengal on the east of India, and the Arabian Sea on the northwest, extensions of the latter being the Persian Gulf and Red Sea.

Islands.—Some of the most characteristic coral atolls and islands are to be found toward the central part of the Indian Ocean, such as the great Maldive group, the Chagos, Diego Garcia, and the Keeling Islands. Almost all the tropical shores are skirted by fringing and barrier reefs. Christmas Island is an upraised coral formation. St. Paul's, Mauritius, Rodriguez, and others are of volcanic origin, while Madagascar, Ceylon, and Socotra are typical continental islands.

Pacific Ocean.—The largest of the great divisions of the ocean, occupying about one-half of the water-surface of the globe and more than one-third of the area of the world. It is almost landlocked toward the north, communicating with the Arctic Ocean by the narrow (40 miles) and shallow Bering Strait, whereas it opens widely into the deep Southern Ocean. Its length from north to south is about 9,000 miles; its greatest breadth, at the equator, is over 10,000 miles; its area is approximately 70,000,000 square miles. The average depth of the Pacific appears to be greater than that of the Atlantic, and its bed more uniform. Recent soundings between the Friendly Islands and New Zealand gave depths of from 5,022 up to 5,155 fathoms (nearly six miles).

In the Pacific the tides never attain the maximum heights for which some parts of the Atlantic Ocean and the Indian Ocean are celebrated. On all the west coast of America the rise of the tide is usually below 10 feet, and only in the Bay of Panama does it vary from 13 to 15 feet.

The trade-winds of the Pacific are not so regular in their limits as those of the Atlantic, and this irregularity extends over a much wider region in the case of the southeast trade-wind than in the case of the northeast. The cause of this is the greater number of islands in the south Pacific Ocean, which, especially in the hot season, disturb the uniformity of atmospheric pressure by local condensations. The northeast trade-wind remains the whole year through within the northern hemisphere. The southeast trade-wind, on the other hand, advances beyond the equator both in summer and winter, still preserving its original direction. In the region stretching from New Guinea and the Solomon Islands southeastward there are no regular winds. The zones of the two trade-winds are separated by regions of calms and of light winds, the limits of which vary of course with the varying limits of these zones. In the Chinese seas the terrible typhoon occasionally rages, and may occur at any season of the year.

Islands.—The Pacific Ocean is remarkable for the innumerable small islands and island groups which stud its surface, but the area occupied by the truly oceanic islands is very small; they are principally congregated toward the central and western portions of its basin, while the eastern portion is comparatively free from islands. The larger islands—including Borneo, New Guinea, Celebes, Java and Sumatra—are continental. The oceanic islands—including the Hawaiian Islands, Ladrones, Carolines, Gilbert, Solomons, Fiji, Friendly and Samoa—are all either of volcanic or coral origin, the volcanic islands within the zone of coral-reef builders being fringed with coral reefs, while many are entirely of coral formation.

Early Navigation.—The Portuguese were the first Europeans who entered the Pacific, which they did from the east. Balboa, in 1513, discovered it from the summit of the mountains which traverse the Isthmus of Darien. Magellan sailed across it from east to west in 1520-21. Drake, Tasman, Bering, Anson, Byron, Bougainville, Cook, Vancouver, Laperouse, and others, traversed it in different directions in the seventeenth and eighteenth centuries.

ANTARCTIC EXPLORATION

Commander	Nationality	Date	South Latitude	Longitude

Amundsen	Norwegian	1911	Reached	pole Dec.14
Scott	British	1912	Reached	pole Jan.18
Byrd	American	1929	Reached	poleNov.29

POLAR REGIONS.—Antarctic—Rear Admiral Richard E. Byrd, U. S. N., gave the world the first extensive knowledge of the south pole and lands in the antarctic circle. In 1928-30 Byrd explored Little America, Ross Shelf Ice, Queen Maud Range, King Edward Land, Rockefeller Mts.; in 1933-35, Marie Byrd Land, Edsel Ford Range, Bernt Balchen Glacier, Haines Mts. and Leverett Plateau. Much knowledge was gained of the antarctic. Valuable coal fields and plant bearing sandstone holding numerous fossils have been discovered. A large plateau lies to the east and south of the Edsel Ford Range. The temperature is from 20 above to 72 below zero around the pole.

Arctic Regions.—The regions around the north pole, and extending from the pole on all sides to the arctic circle. The arctic or north polar circle just touches the northern headlands of Iceland, cuts off the southern and narrowest portion of Greenland, crosses Fox's strait north of Hudson's bay, whence it goes over the American continent to Bering strait. Thence it runs to Obdorsk at the mouth of the Obi, crosses northern Russia, the White Sea, and the Scandinavian peninsula, and returns to Iceland.

Valuable minerals, fossils, etc., have been discovered within the arctic regions. In the archipelago north of the American continent excellent coal frequently occurs. The mineral cryolite is mined in Greenland. Fossil ivory is obtained in islands at the mouth of the Lena. In Scandinavia, parts of Siberia, and northwest America, the forest region extends within the arctic circle. The most characteristic of the natives of the arctic regions are Eskimos. The most notable animals are the white bear, the musk-ox, the reindeer, and the whalebone whale. Fur-bearing animals are numerous. The most intense cold ever registered in those regions was 74° below zero. The aurora borealis is a brilliant phenomenon of arctic nights.

Islands.—Within the arctic circle, as far as discovered, islands cover an area of 1,233,000 square miles. The more important of these islands are:

Greenland.—827,300 square miles of which 717,000 are within the arctic circle. The interior, a lofty plateau, is covered with a cap of ice, from which glaciers descend into the sea. Only 34,000 square miles are described as habitable. Population 13,459. Of trees there are only dwarf willows and birches, and a juniper tree in the extreme south. Fishing and hunting are the principal occupations. Exports are blubber, cod-liver oil, sealskins. Capital is Godthaab.

ARCTIC EXPLORATION

Commander	Nationality	Date	North Latitude	Locality

Roald Amundsen	Norw.	1926	90°	Reached the pole May 12.
Umberto Nobile	Italian	1928	90°	Reached the pole May 23.

Arctic Islands of America.—529,000 square miles (432,000 square miles within the arctic circle). At most a thousand inhabitants. All the other islands within the arctic circle are uninhabited.

Svalbard (Spitsbergen).— 25,000 square miles, a group of mountainous islands, accessible almost throughout the year along its western shore. There are reindeer, ice bears, foxes. The island is frequented by sealers and whalers, but has no permanent inhabitants.

Nova Zembla.—(New Land) 30,000 square miles. Samoyed fishing settlement.

Franz Josef Land.—7,400 square miles as far as known. Uninhabited; difficult of access. Renamed *Fridtjof Nansen Land.*

The Anjou Islands.—10,800 square miles, off the coast of Siberia, including New Siberia. Uninhabited.

Wrangel Land.—1,800 square miles. Uninhabited.

Ellesmere Island.—76,000 square miles, west of northern Greenland, largely covered with glaciers. Uninhabited.

Baffin Land.—211,000 square miles. Inhabited by a few Eskimos.

COUNTRIES OF THE WORLD.—TABLE 1.—GOVERNMENTS AND RULERS

Country	Capital	Form of Government	Title of Ruler	Present Official Head	Born	Began Rule	Population
Afghanistan	Kabul	Kingdom	King	Mohammed Zahir Khan	1911	Nov. 8, 1933	6,330,500
Albania	Tirana	Kingdom	King	Zog I	1894	1925	1,003,068
Argentina	Buenos Aires	Republic	President	Augustin P. Justo	1876	1932	12,372,965
Australia	Canberra	British Empire	Governor	Lord Gowrie	1872	1935	6,724,000
Austria	Vienna	Republic	President	William Miklas	1872	1928	6,759,062
Belgium	Brussels	Kingdom	King	Leopold III	Nov. 3, 1901	Feb. 23, 1934	8,213,449
Bolivia	LaPaz	Republic	President	Col. David Toro	.....	1936	2,974,000
Brazil	Rio de Janeiro	Republic	President	Getulio Vargo	.....	1930	45,332,660
Bulgaria	Sofia	Kingdom	Czar	Boris III	Jan. 30, 1894	1918	6,067,000
Canada	Ottawa	British Empire	Governor General	Lord Tweedsmuir	1875	1935	10,376,786
Chile	Santiago	Republic	President	Arturo Alessandri	1869	1932	4,287,665
China	Nanking	Republic	President	Lin Sen	.....	1931	404,987,418
Colombia	Bogota	Republic	President	Dr. Alfonso Lopez	.....	1934	8,893,030
Costa Rica	San Jose	Republic	President	Sr. Don Leon Cortez	.....	1936	551,541
Cuba	Havana	Republic	President	Dr. Miguel Marino Gomez y Arias	.....	1936	4,008,169
Czechoslovakia	Prague	Republic	President	Dr. Eduard Benes	1884	1935	14,729,536
Denmark	Copenhagen	Kingdom	King	Christian X	1870	1912	3,684,000
Dominican Republic	Trujillo Ciudad	Republic	President	Rafael Leonidas Trujillo	1893	1930	1,478,121
Ecuador	Quito	Republic	President	Federico Diaz	.....	1935	1,500,000
Egypt	Cairo	Kingdom	King	Faruk I	1920	1936	14,186,898
Estonia	Tallinn	Republic	State Head	Konstantin Pats	.....	1932	1,126,383
Finland	Helsingfors	Republic	President	Pehr Evind Svinhufvud	1861	1931	3,667,067
France	Paris	Republic	President	Albert Lebrun	1871	1932	41,834,923
Germany	Berlin	Republic	Reichsfuehrer	Adolf Hitler	1889	1934	65,969,052
Great Britain	London	Monarchy	King	George VI	1895	1936	46,189,206
Greece	Athens	Monarchy	King	George II	1890	1935	6,746,000
Guatemala	Guatemala	Republic	President	Jorge Ubico	1879	1931	2,245,593
Haiti	Port-au-Prince	Republic	President	Stenio Vincent	.....	Nov. 18, 1930	2,550,000
Honduras	Tegucigalpa	Republic	President	Tiburco Carias	.....	1932	854,184
Hungary	Budapest	Kingdom	Regent	Nicholas von Horthy	1868	Mar. 1, 1920	8,898,367
Iceland	Reykjavik	Kingdom	King	Christian X	Sept. 26, 1870	May 14, 1912	114,743
India	Delhi	British Empire	Viceroy	Marquess of Linlithgow	1887	1936	351,399,880
Iraq (Mesopotamia)	Bagdad	Kingdom	King	Ghazi I	1912	1933	2,849,282
Irish Free State	Dublin	British Empire	President	Eamonn de Valera	1882	Dec. 6, 1932	3,033,000
Italy	Rome	Kingdom	King	Victor Emanuel III	Nov. 11, 1869	July 29, 1900	41,806,000
Japan	Tokio	Empire	Emperor	Hirohito	Apr. 29, 1901	Dec. 26, 1926	69,254,158
Latvia	Riga	Republic	President	Albert Kviesis	1871	Apr. 9, 1930	1,950,502
Liberia	Monrovia	Republic	President	Edwin J. Barclay	.....	May, 1931	1,500,000
Liechtenstein	Vaduz	Principality	Prince	Francis I	Aug. 28, 1853	1929	10,213
Lithuania	Kovno	Republic	President	Antona Smetona	1875	Dec. 17, 1926	2,471,000
Luxemburg	Luxemburg	Grand Duchy	Grand Duchess	Charlotte	Jan. 23, 1896	Jan. 9, 1919	303,000
Mexico	Mexico	Republic	President	Gen. Lazaro Cardenas	1895	1934	16,552,722
Monaco	Monaco	Principality	Prince	Louis II	July 12, 1870	June 26, 1922	22,153

COUNTRIES OF THE WORLD—TABLE II.—STATISTICS AND INDUSTRIES

Countries	Area Square Miles	Public Debt	Miles of Railroad	Chief Industries	Leading Products and Exports
Afghanistan	245,000	.....	.....	Agriculture, grazing.	Wool, skins, fruit, nuts.
Albania	17,374	$2,763,600	.....	Agriculture, cattle and sheep raising.	Wood, corn, wheat, rice, tobacco, olives, oranges, fish.
Argentina	1,153,418	972,914,721	24,223	Grazing, agriculture.	Beef, mutton, wheat, hides.
Australia	2,974,581	3,533,606,000	25,805	Grazing, agriculture, manufacturing.	Wool, meat, butter, wheat.
Austria	32,369	332,558,000	3,623	Grazing, agriculture, manufacturing.	Grains, fruits, wine, cattle, salt, yarns. leather goods.
Belgium	11,752	No Funded Debt	3,000	Agriculture, forestry, manufacturing.	Textiles, leather, glass, iron, steel, zinc wares, sugar.
Bolivia	506,467	70,600,000	1,722	Mining, agriculture.	Minerals, rubber, hides, cocoa.
Brazil	3,285,319	.....	19,603	Agriculture, mining.	Coffee, rubber, cattle, cotton, sugar.
Bulgaria	39,814	293,344,700	1,724	Agriculture, grazing.	Tobacco, grain, hides, petroleum, attar of roses.
Canada	3,690,043	2,177,763,959	40,572	Agriculture, mining.	Copper, lumber, nickel, grain, coal, cattle.
Chile	281,820	410,370,561	5,412	Agriculture, mining.	Copper, silver, nitrate, grain.
China	4,277,170	724,796,171	4,350	Agrieulture.	Silk, rice, tea, indigo, cotton, eggs, cereals, beans, copper.
Colombia	482,400	80,440,000	1,384	Agriculture, mining.	Coffee, fine woods, emeralds, gold, bananas, cotton.
Costa Rica	23,000	41,845,560	430	Agriculture, stock raising.	Coffee, cacao, bananas, gold, silver.
Cuba	41,634	80,518,300	3,025	Agriculture, lumbering.	Sugar, tobacco, cattle, hard woods.
Czechoslovakia	54,195	1,129,000,000	8,315	Agriculture, mining, lumbering.	Food stuffs, minerals, wood, livestock.
Denmark	16,570	358,628,200	3,185	Agriculture, dairying.	Dairy products, eggs, fuels, metal and wood manufactures, textiles.
Dominican Republic	19,325	21,500,000	153	Agriculture.	Sugar, cacao, tobacco.
Ecuador	118,627	24,554,494	530	Agriculture.	Cacao, ivory, nuts, coffee, hats, hides, rubber.
Egypt	347,840	546,023,708	2,842	Agriculture, mining.	Cotton, petroleum, cereals, sugar cane.
Estonia	18,355	22,949,060	1,156	Agriculture, dairying.	Dairy products, paper, flax, potatoes, timber.
Ethiopia (Abyssinia)	350,000	.....	495	Grazing, agriculture.	Hides, skins, coffee, beeswax.
Finland	149,641	89,400,000	2,992	Lumbering, agriculture.	Lumber, butter, cheese, paper, grain.
France	212,659	17,788,344,400	26,876	Agriculture, manufacturing.	Textiles, coal, raw silk, wine, wool.
Germany	185,889	2,013,504,600	33,347	Agriculture, manufacturing.	Grain, sugar, beer, iron and steel products.
Great Britain	94,284	36,374,322,200	20,389	Agriculture, manufacturing.	Grain, machinery, coal, iron.
Greece	49,022	302,730,000	1,770	Agriculture, mining.	Tobacco, fruits, wine, olive oil.
Guatemala	42,353	16,836,802	700	Agriculture, lumbering.	Coffee, sugar, bananas, chicle.
Haiti	10,204	17,735,479	158	Agriculture.	Cacao, cotton, logwood, sugar, coffee.
Honduras	46,332	.....	934	Agriculture, stock raising.	Bananas, coffee, sugar, hides.
Hungary	35,911	274,932,000	4,374	Agriculture, mining.	Grain, coal, iron.
Iceland	39,709	3,640,167	.....	Agriculture, stock raising.	Hay, potatoes, mutton, fish.
India	1,805,332	3,624,974,140	52,886	Agriculture.	Cotton, jute, oil, minerals.
Iraq (Mesopotamia)	143,240	.....	749	Agriculture, stock raising.	Wheat, barley, rice, millet.
Irish Free State	26,592	126,300,000	3,028	Agriculture, manufacturing.	Grain, potatoes, hay, meat.
Italy	119,744	9,559,851,600	10,358	Agriculture, manufacturing.	Silk, oil, fruits, cotton.
Japan	148,756	2,979,500,000	12,127	Agriculture, manufacturing.	Rice, silk, porcelain, toys, tea.
Latvia	40,856	15,771,556	1,776	Agriculture, stock raising.	Flax, linseed, grain, meat.
Liberia	45,000	5,000,000	.....	Agriculture.	Coffee, rubber, oil, ivory.
Liechtenstein	65	.....	.....	Agriculture, stock raising.	Grain, meat products.
Lithuania	20,550	8,606,850	1,213	Agriculture, lumbering.	Flax, grain, wood products.
Luxemburg	999	11,981,800	330	Agriculture.	Grain, hay, iron products.
Mexico	767,198	267,493,250	16,714	Agriculture, stock raising.	Grain, cotton, fiber, meats, coffee, sugar.
Monaco	8	.....	.....	Gambling.	
Morocco	231,500	37,054,304	1,500	Agriculture, grazing.	Eggs, poultry, grain, wool, hides.
Nepal	54,000	.....	24	Agriculture, grazing.	Rice, grain, cattle, hides.
Netherlands	12,582	98,810,760	2,284	Agriculture, fishing, manufacturing.	Food products, fish, sugar, cereals.
Newfoundland, including Labrador	162,750	79,477,479	989	Mining, fishing, lumbering.	Paper, fish, iron ore.
New Zealand	103,285	1,386,613,975	3,254	Agriculture, stock raising.	Grain, wool, dairy products.
Nicaragua	49,200	22,470,374	171	Agriculture, lumbering.	Sugar, coffee, bananas, timber.
Norway	124,964	423,991,544	2,349	Fishing, lumbering.	Fish, paper, matches, ships.
Palestine	9,000	30,558,550	756	Agriculture.	Grain, fruit, nuts, wines.
Panama	33,667	18,686,055	47	Agriculture, stock raising	Bananas, coconuts, hides, gum.
Paraguay	172,000	4,200,000	.....	Agriculture, grazing.	Hides, quebracho, yerba mate, tobacco.
Persia	628,000	7,976,291 (funded)	231	Agriculture.	Grain, fruits, oil, rugs, wines.
Peru	533,916	100,811,961	2,725	Mining, stock raising.	Copper, silver, oil, cotton, wool.
Poland	149,140	466,984,470	12,040	Agriculture, lumbering, mining.	Grain, beets, timber, zinc.
Portugal	35,490	348,227,450	2,040	Agriculture, fishing.	Wines, cork, fish, wool.
Rumania	122,282	871,977,169	7,102	Agriculture, lumbering.	Cereals, oil, timber.
Russia	8,144,228	1,336,425,000 (internal)	47,051	Agriculture, manufacturing.	Grain, beets, flax, machinery.
Salvador	13,173	22,905,820	.....	Agriculture.	Coffee, tobacco, rice, indigo.
San Marino	38	.....	20	Agriculture, stock raising.	Grain, meat, hides.
Siam	200,148	56,682,124	1,739	Agriculture, lumbering.	Rice, teakwood, fish, coal, iron.
Spain	190,050	2,898,128,500	9,859	Agriculture, mining.	Olives, cork, wine, silk, coal, iron.
Sweden	173,157	482,024,920	10,246	Agriculture, mining.	Grain, beets, coal, steel, butter.
Switzerland	15,976	383,549,479	3,374	Agriculture, manufacturing.	Grain, dairy products, watches, textiles.
Syria	60,000	.....	887	Agriculture.	Cotton, silk, wines, fruits.
Turkey	282,627	628,230,000	3,291	Agriculture, mining.	Tobacco, cereals, cotton, minerals.
Union of So. Africa	472,347	.....	13,281	Mining, stock raising, agriculture.	Gold, diamonds, hides, wool, grain.
United States	3,026,789 (continental)	16,185,309,831	249,309	Agriculture, mining, manufacturing.	Grain, cotton, oil, coal, textiles, meat, automobiles.
Uruguay	72,153	224,618,248	.....	Agriculture, grazing.	Grain, wool, hides, meat.
Venezuela	393,976	5,470,000	661	Agriculture, stock raising.	Coffee, cacao, balata, hides, rubber, oil.
Yugoslavia	96,134	534,442,924	6,231	Agriculture, stock raising.	Corn, sugar, tobacco, meat, hides.

THE PANAMA CANAL

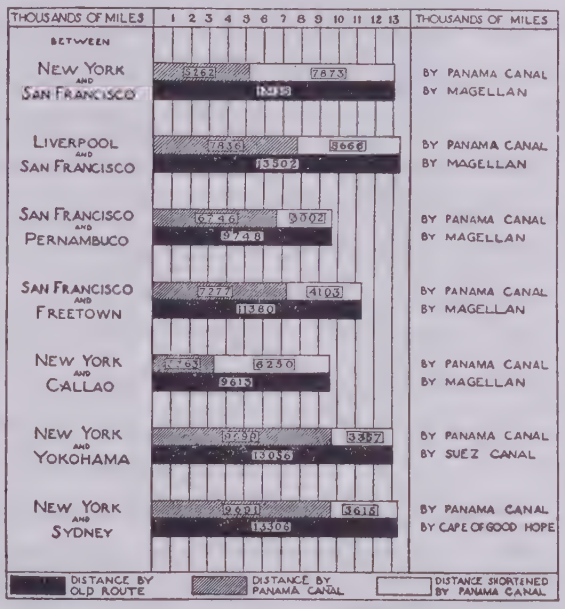
THE Panama Canal is due south of Niagara Falls, within ten degrees of the equator. In certain parts of the Isthmus of Panama the sun rises in the Pacific Ocean and sets in the Atlantic. The city of Panama is south and east of Colon, the city at the eastern entrance to the Canal. When Balboa discovered the Pacific Ocean he called it the "Southern Sea." From that day in 1513, and beginning with the expressed wish of Balboa, the idea of a ship canal across the Isthmus has developed. It remained for the nineteenth century to witness a serious consideration of a workable plan.

A French company under the leadership of de Lesseps began the work of digging a canal in 1880, but their project collapsed in 1888. The first Panama Railroad was begun in 1850 and the first train crossed in January, 1855. For the haul of 47 miles the road charged first-class passengers $25 each and "steerage" passengers $10. The freight rates were five cents a pound on baggage and $1.80 a cubic foot for express. The French company bought the railroad for $18,000,000 to help in building the canal. Before discontinuing their work, the French excavated about 50,000,000 cubic yards of earth.

The United States Government purchased the rights and property of the French company for $40,000,000. When the agitation for a canal was started in 1903 a treaty was offered to Colombia in whose territory the zone was located. The treaty was rejected, but, by a fortunate series of events for the American building of the canal, Panama seceded and became an independent state. On Nov. 13 the Hay-Bunau-Varilla Treaty was signed. By it the United States guaranteed the independence of Panama and paid $10,000,000 for the Canal Zone, a strip ten miles across the Isthmus, excluding the cities of Panama and Colon, over which the United States, however, has a sanitary control. In addition, beginning in 1913, a payment of $250,000 has been made annually.

Six days later President Roosevelt appointed an Isthmian Canal Commission. A new commission was appointed on Apr. 1, 1905. The days of construction were absorbing ones. There were contests with yellow fever and malaria and heroic encounters with great slides of earth. There were prolonged arguments over a sea-level or a lock canal, with the advocates of the latter winning. In February, 1907, Col. George W. Goethals was made Chief Engineer and a commission of army officers was installed who were to "stay on the job until they were ordered home." The following January Col. Goethals was given entire control in the Canal Zone, and on Apr. 1, 1914 he was appointed as first Governor of the Panama Canal Zone.

Although the opening of the Canal did not come until 1914, President Wilson, in the White House, on Oct. 10, 1913, four centuries after Balboa had stood on the "peak in Darien" and discovered the Pacific, pressed a key which turned the waters into the Gaillard Cut section of the Canal. On Aug. 15, 1914, the passage of the S.S. *Ancon*, opened the great Canal to traffic. Nothing shows better the use of this great piece of engineering than a tabulation of the traffic during the years that have elapsed since the memorable trip of the *Ancon*.



Besides the revenue paying vessels, certain ships paying no tolls pass through. These are vessels belonging to the United States, Colombia or Panama engaged in government business. These constitute no small part of the traffic as may be seen from the fact that in the year ending June 30, 1930, 545 United States vessels made the passage. The tolls listed in the tabulation refer to all sea-going ships paying tolls. Vessels in the immediate service of the United States do not pay, but those of the Shipping Board in commercial service do.

The minimum depth of the channel is 42 feet, and in Gatun Lake the maximum depth is 85 feet. The Panama Railroad follows the Canal on the eastern bank from Colon to Panama. The total length of the Canal from deep water to deep water is a fraction over 50 miles. From the Atlantic Ocean starting point in Limon Bay the Canal extends to Gatun, where three locks lift traffic to Gatun Lake. The way proceeds up the valley to Gamboa and through the famous Gaillard (formerly known as Culebra) Cut and to the Pedro Miguel lock and dam. A lock lowers the vessel to the Miraflores Lake and at the south end of this body of water two more steps lower the ship to the level of the Pacific. A channel at sea-level carries the ship for eight miles out past Balboa. The locks are 1,000 feet long and 110 feet wide, which takes any ship at present built.

A part of the cost of building the Panama Canal has been written off as chargeable to national defense. This sum on June 30, 1930, was $113,127,338. It includes $40,000,000 paid to the French Canal Company. The balance of the investment is $268,578,015 with an added $6,417,489 spent for equipment. In the fiscal year 1930 the net income of the Canal from all sources was $18,082,452 and the net profit on auxiliary business operations was $760,972.

A ship going from New York to San Francisco saves 7,873 miles by using the Canal. Peru and Chile are brought nearer to New York than is San Francisco. Between New York and Ecuador the Canal saves 7,400 miles; Japan, 3,357 miles; Hawaii, 6,600 miles. Curiously enough the distance from New York to Manila is but 14 miles less than by way of the Suez Canal; and Hong kong is 18 miles farther by way of Panama

From Liverpool to San Francisco the distance by way of the Strait of Magellan, 13,502 miles has been reduced to 7,836 miles by the Canal, a saving of 5,666 miles. The distance saved on the voyage to Valparaiso is 1,540 miles; to Callao, 4,043 miles; to Honolulu, 4,403 miles; to Wellington, New Zealand, 1,366 miles.

The figures in this table are taken from the "official table of distances" used by the war department of the United States government, except the distances to cities marked with an asterisk (*), which are computed along the best routes of travel. All distances are in statute miles.

WORLD TRAVEL DISTANCES

The chief ports of the world are named in alphabetical order across the top and down the sides of the tables. The distance between any two ports will be found at the intersection of the two columns which contain the names of the selected ports. Thus the distance from Baltimore to Bombay is given as 8,431, and the small "s" shows that the route is via Suez Canal. Distances are for full-powered steam vessels reckoned in nautical miles.

WORLD TRAVEL DISTANCES—Continued

The chief ports of the world are named in alphabetical order across the top and down the sides of the tables. The distance between any two ports is found at intersection of the two columns which contain the names of the selected ports. Thus the distance from New York to Melbourne is given as 11,586, and the small "c" shows that the route is via Cape of Good Hope. Distances are for full-powered steam vessels reckoned in nautical miles.

THE RACE OF THE CLIPPER SHIPS

Trade and industry owe much to the clipper ships which reached the height of their glory in the middle of the nineteenth century. The name "clipper" was derived from the fact that the bow was so designed that it cut through the waves instead of hitting them. For a period of time, clipper ships literally sailed every other type of craft from the seas and were adopted wherever maximum speed and seaworthiness were essential. Splendid prizes were held out to the captains and crews as an inducement, and the keenest rivalry existed between ships in the race home, a spirit of competition even more strong than that which existed between ship-owners. As long as the word "clipper" remains in the English language, so will these clipper races remain famous alike for the skill as for the competitive instinct in the crews that got them home in record time.

In our picture the artist, Manning deV. Lee, has depicted three clippers racing with taut sails and flying spray for the valuable cargo of Brazilian coffee which will belong to the winner. Intense rivalry developed between ship-owners to bring each new crop of the aromatic beans to market at the earliest possible moment.

BOOK VI

TRADE AND INDUSTRY

AGRICULTURE is the oldest and most important industry. It is the art of tilling the ground, the planting, cultivation and harvesting of crops, and includes fruit-growing or horticulture, animal husbandry, or the rearing, breeding, feeding and management of the domesticated breeds of live stock, as well as the manufacture or evolving from products of the soil articles for home consumption or purposes of commerce. By it humanity is fed and clothed, and it contributes in many other ways to the welfare and wealth of the world. Without agriculture man would be a barbarian and the earth a wilderness.

The knowledge that centuries of research and practice give, the light contributed by agricultural chemistry supplemented by new and improved machinery and modern transportation facilities, have greatly enlarged the productions and possibilities of agriculture; and its problems, the mysteries of the soils, and of animal and plant life are engaging the best intellect.

Acreage Yields.—While in the aggregate of field productions the United States ranks first, America does not compare favorably with older countries in acre-yields. To compass this a more scientific farming, more educated farmers, more thorough tillage and cultivation, careful seed selection, proper fertilization, and rational crop rotation must be the agencies; in fact a more intimate knowledge and use of the underlying principles governing soil fertility, and crop and live stock production. What this would mean finds illustration in the examples afforded by England and Germany in wheat-growing, with averages of 32.2 and 26.1 bushels per acre, respectively, compared with the 14 bushels per acre in the United States, from a soil naturally as fertile and as well adapted as any.

Home and Foreign Markets.—In the settlement and development of America the millions of acres of fresh land brought into production yielded more than domestic consumption required, which caused the seeking of markets elsewhere for the surplus, and the resulting export trade has been a wellspring of prosperity. There are signs, however, that American farmers will not so largely depend for profits in the future upon foreign demands, as home requirements are annually increasing. A case in point is the constantly lessening difference between the production and home consumption of wheat.

In the five-year period of 1894-8 exports from the United States averaged 32 per cent of annual production, and in 1904-8 had fallen to 17 per cent, while the average annual production was 535,387,000 bushels for the first period, and 665,959,000 bushels in the latter. Deducting the average yearly exports for each period it is shown that the consumption of wheat at home increased 50 per cent. Also, for 1909, the value of agricultural exports was $903,000,000, or $151,000,000 below the highest record, made in 1907, and $114,000,000 below the next highest, in 1908, while on the other hand the imports of agricultural products were never so high in value, the amount being $637,000,000, in 1909.

Soils and Their Fertilization.—Naturally the soil is and must be of primal importance. Plants obtain their food from the soil, and atmosphere, and the mineral elements in the soil are utilized only through the plant roots. If requisite elements are lacking yields are less, however much of a factor tillage may be. Without proper proportions of plant food available in the soil, tillage and good seed do not suffice to maintain it in a high state of productivity, and a supply of suitable plant food must be maintained if maximum yields are to be realized.

Chemistry of Soil.—Vegetation requires carbon and oxygen, taken into the plant leaves from the air as carbon dioxide; hydrogen, a constituent of water absorbed through the plant roots; nitrogen, taken from the soil by all plants and also from the air, especially by legumes; and potassium, phosphorus, magnesium, calcium, iron and sulphur, drawn only from the soil.

Of these, nitrogen, the most expensive element of plant food, although comprising four-fifths of the atmosphere, is perhaps the one becoming the most seriously deficient in the ordinary soils of the wheat and corn growing sections, due largely to continuous grain-growing, resulting in a loss of vitality and dwarfed growths.

A rational rotation of crops, use of manures, with the legumes as pasture and hay crops, or used as green manure by plowing them into the soil, will upbuild the land, and the shortage of nitrogen be overcome by the liberal use of legumes, such as alfalfa, clover and peas, in the form of either green or animal manures, which also add humus of great importance.

Phosphate.—One eminent soil expert says: "To increase the value of farm manure we should add phosphate to it. Thus we can balance manure, and when used on soils rich in potassium, in rotation with nitrogen-fixing legume crops, we can provide plant food in a balanced ration to meet the needs of maximum yield. By these means we can check the progress of soil exhaustion, and even gradually increase the fertility and productive capacity of the land. Indeed, we can thus profitably enrich such land even beyond its virgin fertility," and, again ". . . land may be built up and be made richer than it ever was by a good system of strictly grain farming." The experiment stations are successfully solving these problems.

Humus, decaying vegetable or animal matter, is the great storehouse of nitrogen, and is also an indispensable element in soils, not so much because of its direct nourishment to plants but because it helps to render other materials available for the growing crops. It is humus that gives life and heart to the soil, improves its physical condition, its tilth and texture, augments its water-holding capacity, gives its dark color, modifies extremes in its temperature, facilitates the entrance of air, and is what most worn-out lands suffer for want of.

Commercial Fertilizers, by which are provided artificial plant food, are in common and extensive use where lands have been depleted and crop production decreased, as on the tobacco and cotton lands of the Southern states, acting as a sort of medicine or stimulant to the soil, but many of them have little or no further influence than is evidenced in the increase of a single season's crops or crop.

Composition of the Principal Commercial Fertilizing Materials

Fertilizing Material	Nitrogen	Phosphoric Acid			Potash	Chlorine
		Available	Insoluble	Total		
Supplying nitrogen:	Per Cent	Per Cent	Per Cent	Per Cent	Per Cent	Per Cent
Nitrate of soda	15.5–16.0					
Sulphate of ammonia	19.0–20.5					
Dried blood (high grade)	12.0–14.0					
Dried blood (low grade)	10.0–11.0			3.0– 5.0		
Concentrated tankage	11.0–12.5			1.0– 2.0		
Tankage (bone)	5.0– 6.0			11.0–14.0		
Dried fish scrap	7.0– 9.0			6.0– 8.0		
Cotton-seed meal	6.5– 7.5			1.5– 2.0	2–3.0	
Castor pomace	5.0– 6.0			1.0– 1.5	1–1.5	
Supplying phosphoric acid:						
South Carolina rock phosphate			26–28	26.0–28.0		
South Carolina rock superphosphate (dissolved South Carolina rock phosphate)		12–15	1– 3	13.0–16.0		
Florida land rock phosphate			33–35	33.0–35.0		
Florida pebble phosphate			26–32	26.0–32.0		
Florida superphosphate (dissolved Florida phosphate)		14–16	1– 4	16.0–20.0		
Boneblack			32–36	32.0–36.0		
Boneblack superphosphate (dissolved boneblack)		15–17	1– 2	17.0–18.0		
Ground bone	2.5– 4.5	5– 8	15–17	20.0–25.0		
Steamed bone	1.5– 2.5	6– 9	16–20	22.0–29.0		
Dissolved bone	2.0– 3.0	13–15	2– 3	15.0–17.0		
Thomas slag				11.4–23.0		
Supplying potash:						
Muriate of potash					48–52.0	45.0–48.0
Sulphate of potash (high grade)					48–52.0	0.5– 1.5
Sulphate of potash and magnesia					26–30.0	1.5– 2.5
Kainit					12–12.5	30.0–32.0
Sylvinit					16–20.0	42.0–46.0
Cotton-hull ashes				7.0– 9.0	20–30.0	
Wood ashes (unleached)				1.0– 2.0	2– 8.0	
Wood ashes (leached)				1.0– 1.5	1– 2.0	
Tobacco stems	2.0– 3.0			3.0– 5.0	5– 8.0	

The following table is given, showing the amount of fertilizing constituents in one ton of various agricultural products, if returned to the land in the form of manure:

Farm Products	Nitrogen	Phosphoric Acid	Potash
Timothy hay	19.2	7.2	25.2
Clover hay	39.4	8.0	35.0
Alfalfa hay	53.2	10.8	49.2
Cowpea hay	79.6	13.2	47.2
Field corn fodder	17.2	7.2	21.4
Corn silage	8.4	2.4	6.6
Wheat straw	8.6	2.6	14.8
Rye straw	10.0	5.8	15.8
Oat straw	13.0	4.4	24.4
Wheat	34.6	19.2	7.0

Oats	36.2	15.4	11.4
Corn	29.6	12.2	7.2
Barley	39.6	15.4	9.0
Wheat bran	51.2	58.4	31.4
Linseed meal	108.6	37.6	26.2
Cotton seed meal	142.8	61.8	36.4
Potatoes	7.0	3.2	11.4
Milk	10.2	3.4	3.0

Kinds of Soils.—Generally a soil well drained, with a sandy or gravelly subsoil, is adapted to tree and fruit growing. The deep alluvial prairie lands are premier for corn, and the rather drier and more compact soils, containing liberal proportions of lime and clay, are especially prized for wheat. Soil alone, however, does not determine the kinds of crops that should be raised.

Rainfall.—Over a large portion of America the precipitation is ample for the requirements of agriculture, but owing to wide variation in the yearly rainfall some sections have too much and others too little. In some of the plains regions west of the Missouri river, and elsewhere as well, precipitation is comparatively scant, but over considerable of these the greatest proportion of the yearly rainfall comes in the crop-growing season.

All localities are subject to vagaries of the weather, but their harmful effects are minimized by the knowledge that experience and study have brought. Diversity of crops, scientific methods of preparation and tillage best adapted to the particular locality, drainage and irrigation are being utilized through a better understanding, and have large influence on the general welfare.

Irrigation and Drainage.—Irrigation is the artificial watering of land to increase production, or make available for agriculture lands that otherwise would be too dry. Artificial watering of the land has been practiced from earliest times in the older countries, and even by the prehistoric people of some portions of what are now the United States.

Mormons, beginning late in 1840, in Utah, were the first modern people to demonstrate the practicability of extensive irrigation in America, and from their modest beginnings farming and fruit-growing by irrigation have slowly but continuously been extended until the nation, states, municipalities, companies and individuals are all interested in irrigation enterprises in the regions of insufficient rainfall. Authorities state that in 1860 about 100,000 acres of land were under irrigation in the United States, while in 1910 there were being irrigated over 10,000,000 acres, and more than 15,000,000 acres capable of irrigation were under completed canals and reservoirs.

The National Reclamation Law of 1902 gave great impetus to such undertakings in the United States. By its provisions the proceeds from sales of public lands in fourteen states and two territories have been used in the construction of irrigation systems. In each of these the reservoirs are essential parts, storehouses for the collected flood-waters thereby made usable when needed for lands otherwise barren. Most of the irrigated lands are supplied by gravity with water from reservoirs and surface streams, although the lands watered by artesian wells are not unimportant, and those irrigated by pumping from wells by wind-power and gasoline engines are increasing, especially where immeasurable quantities of water, popularly called the underflow, lie near the surface. The applying of water in the United States is quite generally by checks, flooding and furrows, and in all skill and judgment are required, the character and situation of the soil and the crops planted being governing factors.

Drainage, by either natural or artificial means, has for its principal object the removal of excess water from the land, to make it more productive. Many tracts already producing would be greatly enhanced in value if some practical system of soil drainage were installed. The most efficient method is by the use of porous tiles, buried at proper depths and distances apart in the ground. In times of too much water they quickly carry off the surplus, early leaving the surface in condition for cultivation, and in times of drought permit such action of the earth's vapors as to accumulate moisture in the soil.

Underdrainage.—The practice of underdrainage is old, but the use of specially made burnt clay tiles for the purpose is comparatively recent. Such lands, for instance, as are full of water for the first two or three feet below the surface, or those where water stands on the surface after heavy rains, are greatly improved by tile drainage, and ditches also are often profitably employed to carry off surface water. Properly drained fields obviously present many advantages. Even in lands under irrigation the circulation of water in the soils is quite necessary, to prevent injurious accumulation of soluble substances having unfavorable effects. Fortunately, most lands have natural underdrainage, but without this the removal of the excess water by tiles is to be commended.

Ground too wet is generally cold, often sour, and unfriendly to plant growth, whereas well drained land, containing the moisture held by capillarity, has appreciably more warmth and needed aëration. These conditions not only increase its powers for developing and yielding plant food, but the soil being warmer, promotes the germination of seeds and gives thriftier, healthier plants. In ordinary seasons it enables preparation, planting, cultivating and harvesting to be done at such times as experience has shown best.

Tillage and Dry Farming.—It is quite probable that low yields and failures of crops are more generally due to inadequate and improper tillage than to any other part of the farmer's work. Proper seed, a soil of average fertility, its timely and proper preparation and subsequent tillage, where crops are cultivated during their growth, very materially determine yields.

Good soils often fail of compensating returns because of poor tillage. It is through the processes aided by cultivation that plant food is available and utilized. Sowing or planting the staple crops on unbroken sod would be unprofitable. By tillage the soil is not only aërated and pulverized but moisture is conserved. The action of air and moisture in the soil brings about such changes that the otherwise largely unavailable food elements are liberated for assimilation by plants through their roots. Hence, the importance of thorough and scientific tillage for all crops, for yields are materially influenced by the frequency and kind of cultivation given.

Dry Farming.—This is all the more imperative in those regions of scant rainfall, and in these in recent years have been adopted a system of culture that makes production more certain and more abundant. This is popularly called "dry farming," the principles of which have been practiced from the most ancient times. Dry farming means simply proper tillage, an outstanding feature being suitable preparation of the soil for the reception and retention of the natural precipitation. By providing a loose, finely pulverized surface, or dust blanket, capillary attraction with the moisture beneath is broken, lessening evaporation and promoting proper percolation.

Where irrigation is impracticable for lack of water, as in the major portions of the semiarid regions, such methods prove advantageous, and by conservation the natural rainfall is made sufficient for yields that otherwise would have been impossible. Its general principles might be profitably adopted everywhere, and are absolutely essential to remunerative results in regions of scant rainfall.

Agricultural Education.—Recognizing agriculture as the country's chief industry, Americans early evinced interest in agricultural education, which took practical form in the organization of societies for its promotion. Washington, the first president of the United States, strongly urged upon Congress the wisdom of providing ways and means for agricultural research and dissemination of the useful knowledge acquired, and he was a member of the first society formed, in 1785, for the advancement of agriculture in America.

This was the nucleus from which has developed the comprehensive agricultural educational system of our day, reaching its highest efficiency in the present excellent colleges and schools maintained in the interest of husbandry, with their elaborate curricula, extensive equipment, and army of capable instructors. Now, also, nearly every farming community has an agricultural or similar association. State, county and district fairs have been educators; nearly, if not all, the states have their boards of agriculture or their equivalent, supported by public funds, and from these institutions are issued, free, a great variety of literature to those interested in rural pursuits.

Agricultural Literature.—In the same time there has been developed through private enterprise an extensive agricultural literature, of general and special works and periodicals, many of which are devoted wholly to some one branch of farming, as dairying, a single breed of live stock, orcharding, market gardening, and the like. Farmers' institutes, the agricultural college short courses and extension work, instruction by correspondence and home reading courses and other kindred methods, all aid in teaching the whys and wherefores of the business of farming.

Extension Education.—A number of colleges, with the coöperation of interested railroads, carry the gospel of better farming direct to those who cannot attend the schools, by sending out train specials,

known as seed, wheat, dairy, corn, alfalfa, or poultry trains, depending on the topic selected for presentation. These trains are properly equipped and manned with college specialists, who lecture at the different railroad stations visited, and answer such questions as may be propounded, illustrating their lectures and answers by examples, specimens, diagrams, charts and tables—a method of teaching found extremely popular.

United States Department of Agriculture.—The head of the agricultural educational forces in the United States is the National Department of Agriculture, which was established in 1862 as a bureau, under direction of a commissioner, and in 1889 by an act of Congress made an executive department of the government under a secretary, appointed by the President, and who is a member of his cabinet. The work of its extensive corps of scientists and experts is principally for the nation as a whole, while that of the colleges and experiment stations chiefly concern the advancement of agriculture in the states in which they are respectively located. The national department issues bulletins, reports and other literature from its specialized bureaus, some free and others for which only nominal charges are made. The most popular are the "Farmers' Bulletins" and the "Yearbooks," both free, the latter obtained generally by application to members of Congress.

Agricultural Colleges.—While there were a number of agricultural colleges and schools supported mostly by private funds and popular subscriptions previously, the Land Grant act of 1862, by which Congress donated public lands to states and territories providing agricultural colleges, laid the broad foundation upon which have been built institutions for teaching agriculture and the mechanic arts in every state and territory. Supplemental to this endowment the states make liberal appropriations for furthering the work.

To Michigan belongs the distinction of having the oldest agricultural college in the United States, it having been created by legislative enactment in 1855, and formally opened in 1857. Nearly one-half of such colleges are connected with their state universities, and the others are separate, or are parts of technical or industrial institutes.

Curricula.—Their curricula embody many distinct courses, pertain to nearly every conceivable phase of farm affairs, and provide for teaching the sciences related to the various industries of farm, shop and home. Chemistry, physics, bacteriology, botany, entomology, zoölogy, mechanics, and kindred studies, are prominent Courses comprehend among others the study of soils, soil physics, crops and their production, farm mechanics and farm management; animal husbandry, or the origin and history of the various breeds of domesticated animals and their characteristics, care, feeding, breeding and management; dairying, horticulture, veterinary science, mechanical engineering, electrical engineering, and domestic science and art.

Agricultural Experiment Stations, as the term would imply, are for conducting agricultural experimental investigations. They are generally connected with the agricultural colleges, and the members of the faculties of the colleges usually comprise the staff of the station. The first of the regularly organized experiment stations was in Connecticut in 1875, followed by others elsewhere.

In 1887 Congress passed the Hatch act, which gave $15,000 a year for the maintenance of each agricultural experiment station, for experimentation, investigation, and the compilation and reporting of results.

Purpose and Work.—The law specifically states that these stations shall "conduct original researches or verify experiments on the physiology of plants and animals, the diseases to which they are severally subject, with remedies for the same; the chemical composition of useful plants at their different stages of growth, the comparative advantages of rotative cropping as pursued under a varying series of crops; the capacity of new plants or trees for acclimation; the analysis of soils and waters; the chemical composition of manures, natural or artificial, with experiments designed to test their comparative effects on crops of different kinds; the adaptation and value of grasses for forage plants; the composition and digestibility of the different kinds of food for domestic animals; the scientific and economic questions involved in the production of butter and cheese, and such other researches or experiments bearing directly on the agricultural industry of the United States, as may in each case be deemed advisable."

In 1906 Congress passed the Adams act, having for its object extension and strengthening of the experimental work of stations by additional funds. By its provisions an initial appropriation of $5,000 was to be increased each year until 1911, when it would amount to $15,000, thereafter making annually available an aggregate of $30,000 of government funds for each station, under the Hatch and Adams acts. Several states have two stations, one being supported wholly with state funds, and several maintain branches of the government stations.

Publication of Results.—Results of the work of these stations are published in bulletins and circulars sent free to those who desire them. While the agricultural colleges and stations are in a sense separate institutions, their property and work are more or less closely interwoven, to their mutual advantage, the colleges profiting from the work of the stations, and the stations from the gratuitous use of the college farms, buildings, apparatus and equipments.

Plant Breeding, and Seeds.—A work of great importance carried on by experiment stations is that of improving crops in both yield and quality. Knowing that through the process of selection based on chemical analysis the sugar content of the sugar-beet had been increased from about 5 per cent to 16 per cent, the idea was advanced that the chemical composition of corn might be similarly changed. Experiments showed that it could be done at will, either to a high or low protein, oil content, or other constituent; that a corn rich in protein had an added value for feeding to growing animals; the corn with the larger oil content was of special worth in fattening animals, and the increase of carbohydrates rendered it more valuable for manufactures, as for starch, glucose, and other articles. Similarly, wheat had been improved for flour-making by increasing the gluten content, and such possibilities in plant-breeding seem well-nigh limitless.

Value of Selected Seed.—The wisdom of using seed selected according to approved standards has already been convincingly demonstrated, through improved quality and increased yields. Several states, notably Minnesota, Illinois and Kansas, have by these methods materially enlarged their yields of wheat and corn. Experience has shown, too, the advisability of planting only such seeds as have been graded, and tested for germination, so that a given quantity may be planted uniformly on a given area, with reasonable assurance of definite results.

Imperfect Vitality of seeds cannot be detected by mechanical examination alone, but the testing box tells in advance of the field planting. The importance of this is emphasized by the illustration that if seed corn, for instance, was only 90 per cent germinable, it would mean the vacant places in the field would aggregate 10 per cent of the area, or ten acres out of a hundred which would produce nothing, due to an uneven and imperfect stand because of the 10 per cent of worthless seed. Lacking good seed there can be no successful agriculture. (See also *Elementary Agriculture* under Education.)

Status of the United States in Agriculture.—In its aggregates of field production the United States is without a peer among the nations. Although the capabilities of some parts are as yet but poorly comprehended, the possibilities of others scarcely suspected, and developments superficial, owing to the large holdings by corporations as well as by individuals, and the variant conditions that had to be understood before they could be dealt with, the achievements of the past promise to be far surpassed by the enlightened husbandmen of the future.

Rank Among Our Industries.—The country's progress and development agriculturally is suggested by the fact that the aggregate of Indian corn raised in 1911 in the United States was considerably more than twice that in 1890. With a yield of 308,103,000 bushels, it assumed first rank in wheat in 1890; in 1909 the yield was 737,189,000 bushels, or 139 per cent greater. The 1901 crop, however, of 748,460,000 bushels was the largest ever produced, the 1909 crop being next.

In quantity and value the agricultural products of the United States exceed those from any other source. In three-score years they have advanced from the point of not equaling home demands to that of making the United States the world's largest exporter of farm products. In the aggregate of products American agriculture rivals that of all Europe. The farms not only contribute abundantly for home needs, and provide export commodities overshadowing in value all others combined, but supply the manufacturers of the country with raw materials, although, as already stated, the ratio between production and consumption at home has been gradually narrowing.

Exports.—For the year ending June, 1911, the value of farm products exported from the United States was $1,000,000,000, of which live stock and their products were an important part. Large numbers of domestic animals, especially cattle and sheep, and immense shipments of dressed meats go to foreign ports constantly. Cotton is the leading export crop, the amount thus disposed of in 1911 reached a total value of $526,000,000. For the fiscal year ending June 30, 1911, the live animals exported aggregated in value $19,050,000, while that of packing house and dairy products reached nearly $150,000,000.

TABULATIONS ON AGRICULTURE, HORTI-

TABLE I.

Crop	Soil	Planting Date	Seed to Acre	Normal Yield per Acre	Origin and Brief History	Use
Alfalfa. *Medicago sativa.* Linn. *eguminosæ.*	Deep, well-drained, nonacid, fertile, with deep, permeable subsoil.	May-August, north March-May, Aug.-Oct. south.	20-25 pounds broadcast. 15-20 pounds drilled.	3 tons.	Is native to southwestern Asia and was in use centuries before Christian era. Spread from Media to Greece about 480 B. C., Italy first century A. D., Spain eighth century, Mexico and South America sixteenth century. Was introduced from Chili into California in 1854. Came from Mexico to Texas early part of nineteenth century.	Stock feeding. Pasture. Soiling. Soil improvement.
Barley. *Hordeum sativum.* Jessen. *Gramineæ.*	Old, well-subdued land, not soggy. Rich clay loam best.	April-May north. March-April, September-March, south.	1.5 to 2.5 bushels.	25.5 bushels.	Supposed to be native of western Asia, and widely grown before Christian era. Use as bread-plant universal throughout Europe, Asia and Africa to close of fifteenth century.	Malting purposes. Hay and grain. Food for domestic animals. Human diet. Malt-sprouts and brewers' grains are by-products.
Buckwheat. *Fagopyrum esculentum.* Mœnch. *Polygonaceæ.*	Rather light, well-drained, and not over-rich. Will grow on wide range, including poor land.	May-July 15.	3-5 pecks.	18.1 bushels.	Native of Europe and northern Asia. Has been cultivated for centuries in all grain-growing countries. Is found wild in China and Siberia, and has been grown in China for food from time immemorial.	Flour for human food. Honey plant. Grain for poultry. Middlings a by-product for stock feeding.
Clover, Alsike. *Trifolium hybridum.* Linn. *Leguminosæ.*	Deep clay loam. Will do well on moist and cool land.	March-August.	8-15 pounds alone. 4-6 pounds on wheat or rye in spring.	1.5 tons hay. 4 bushels of seed.	Takes its name from parish in South Sweden. From there probably introduced into England. Is found in Europe, northern Africa, western Asia. Reached America from Great Britain or Scandinavia.	Hay. Pasture. Silage. Honey plant. Soil improvement.
Clover, Red. *Trifolium pratense.* Linn. *Leguminosæ.*	Slightly alkaline medium clay loam, underlaid with moderately porous clay subsoil.	March-August.	15 pounds alone. 8-14 pounds on small grain in spring.	1.5 tons hay. 3-6 bushels of seed.	Probably native to Europe. Introduced into England early in seventeenth century. Doubtless introduced into America by early colonists.	Hay. Pasture. Soiling. Silage. Soil improvement.
Clover, White. *Trifolium repens.* Linn *Leguminosæ.*	Light clay loam, slightly alkaline.	March-August.	10-12 pounds alone. 2-4 pounds in mixtures.	1.5 tons hay. 2.5 to 6 bushels of seed.	Indigenous to Europe, northern America and probably western Asia. Grown in every country in Europe and throughout America. Best in moderately cool, moist climate.	Lawn grass. Pasture. Honey plant. Short hay. Soil improvement.
Corn. *Zea mays.* Linn. *Gramineæ.*	Fertile, medium loam. New lands preferable.	May-June north. Late March, south.	4-8 quarts. 9-11 quarts for silage.	25.4 bushels. 8-12 tons silage.	Originated in Mexico. Found in cultivation and principal food of Indians by first explorers of North America. Is related botanically to a native Mexican grass, teosinte (*Euchlæna mexicana*).	Human food. Stock feeding. Grain for poultry. For manufacture of glucose, dextrine, alcohol, starches, grits, hominies, oil, etc.
Cotton. *Gossypium hirsutum* and *G. barbadense.* *Malvaceæ.*	Fertile clay or sandy loam, with a clay subsoil at a depth of about two feet.	April-May 15.	½ to 1 bushel.	0.5 bale.	Origin antedates recorded history. Supposed to have originated in India, or possibly China. Found in various countries of southern Asia and Africa, and Columbus and other explorers found it native in West Indies, South America and Mexico. First cultivated in United States in colony of Virginia, 1621.	Manufacture of cloth, thread and yarn. Cottonseed oil. Cottonseed meal, oil cake and hulls for stock feed.
Cowpea. *Vigna unguiculata.* Walp. *Leguminosæ.*	Wide range, sandy and loamy soils preferred.	May-June north. May-July south	1 to 1.5 bushels. 3 pecks for seed.	1.5 tons. 10 bushels of seed.	Native of India and region northwestward to southern part of trans-Caspian district. Has been cultivated more than 2,000 years. Reached West Indies latter part of seventeenth century, and mainland of America later.	Soil improvement. Forage. Seed food for man and domestic animals. To fit land for sod.
Mangels. *Beta vulgaris.* Linn. *Chenopodiaceæ.*	Wide range, deep alkaline loam preferable. Good preparation of seed-bed essential.	April-May	5-8 pounds.	24 tons.	Considered direct descendant of chard, used as vegetable by Greeks 300 B. C. Use of root for cattle feeding recorded in sixteenth century. Beets introduced in America by early colonists.	Stock feed.
Millet. Many groups and varieties. *Gramineæ.*	Fertile, mellow clay loam.	April-July.	1-3 pecks drilled.	1.5 tons.	Cultivated in China since 2800 B. C. Still largely grown in oriental countries as food grain and forage. In America, usually grown as supplementary or catch-crop.	Hay. Forage. Soiling. Silage. Pasture. Seed for stock feed.
Oats. *Avena sativa.* Linn. *Gramineæ.*	Not specially fertile. Clay loam preferable.	April-May north. February-March, September-December south.	2-3 bushels.	30.1 bushels.	Probable nativity Tartary in western Asia, or possibly eastern Europe. Largely north temperate zone crop, but grown in Australia, Africa and South America. Has been cultivated in America since advent of first settlers.	Food for animals. Human food. Forage crop. Pasture.
Rice. *Oryza sativa.* Linn. *Gramineæ.*	Rich, moist, well-drained clay loam.	March 15-June 15.	1.3 bushels	25-30 bushels.	Existed in India in early historic times, and doubtless indigenous there. Introduced into America soon after settlement of Virginia. Introduced accidentally into lower Carolina in 1694.	Human food. Stock feed. Starch. Wine.

*The bulletins herewith mentioned may be had upon application to the director of the respective agricultural experiment station or college publishing

CULTURE AND ANIMAL HUSBANDRY
FIELD CROPS

Fertilizers	Plant Diseases and Enemies	Remedies	Bulletins*
Lime to correct acidity, well-rotted manure.	Dodder.	Close cutting, removal of stalks, burning, close pasturing.	Farmers' Bulletins Nos. 194, 215, 339, 373.
Commercial fertilizer containing phosphoric acid and potash.	Leaf spot.	Mowing.	Canada Central Experimental Farm Bulletin No. 46.
	Anthracnose.	Mowing, and application of nitrate fertilizer.	Most experiment stations have issued bulletins.
	Root rot.	Plowing under.	
	Web-worm, army worm.	Mowing, fall disking.	
Barnyard manure.	Rust and mildew	No effective remedy.	
200 to 500 pounds of complete commercial fertilizer.	Closed smut.	Formaldehyde treatment: 1 pint formaldehyde into 20 gallons water in barrel. Submerge sacks of barley 10 minutes in solution, then empty on platform to dry. Preferably, cover drying seeds with blanket for two hours.	Wisconsin Experimental Station Reports Nos. 20, 21, 22, 23.
	Loose smut.	Hot water treatment, which is effective also against closed smut: Grain in gunny sacks submerged 12 hours in cold water, to soften hull; then removed and drained 1 hour; then submerged in hot water at *constant* temperature of 130° F. for not over 6 minutes. Seed should be sown same or following day.	Yearbooks of the U. S. Dept. Agr.
Fertilizer seldom needed.	Relatively free from diseases and insects.		Yearbooks of the U. S. Dept. Agr.
Light applications barnyard manure or moderate dressing of complete fertilizer on poor soil. 100 pounds of low-grade fertilizers, especially if sown late.	Birds may cause loss.		Cornell Bulletin No. 238.
Lime.	Clover failure.	Lime and manure. The addition of potash may aid.	U. S. Dept. Agr. Plant Industry Bulletins Nos. 31, 59, 66, 123.
Carbonate of lime.			
Stable manures.	Flower midge.	Feed off or mow first crop just before timothy heads out. Pasturing or clipping back to delay blooming ten days useful.	Farmers' Bulletins Nos. 123, 237, 260, 323.
	Seed fly.	No practicable remedy known.	
	Root borer.	Crop rotation.	
See alsike clover.	See alsike clover.	See alsike clover.	See alsike clover.
See alsike clover.	See alsike clover.	See alsike clover.	See alsike clover.
10-20 tons farm manure each year or two.	Root worm.	Crop rotation and fall plowing.	U. S. Dept. Agr. Office of Experiment Stations, Bulletin No 57.
Phosphoric acid, nitrogen and potash.	Webworm.	Crop rotation and fall plowing.	Farmers' Bulletins Nos. 32, 41, 81, 174, 199, 229, 253, 292, 298, 303, 313, 317.
Plow under large quantities of vegetable matter, preferably legumes and grasses.	Cutworm.	Early fall plowing. Sprinkling bran mixed with paris green and molasses in proportions of 30 pounds bran, 1 pound paris green, 2 quarts molasses, enough water to moisten the bran.	
	Chinch bug.	Trap in dusty furrows. Destroy in furrows by kerosene. Strip of coal tar will prevent passage.	
	Grasshoppers.		
	Crows. Smut.	Burn affected plants and rotate crops.	
Acid phosphate kainit.	Webworm and cotton-square borers.	Dust with paris green.	U. S. Dept. Agr. Office of Experiment Stations, Bulletin No. 33.
Muriate of potash.	Plant lice.	Plow under host plants in fall or winter, or spray with whaleoil soap, kerosene emulsion or tobacco solution.	Bureau Plant Industry Bulletin No. 62.
Nitrate of soda.	Cutworms. Cotton worm.	Place about fields bunches of grass immersed in paris green; or destroy by winter cultivation.	Division of Statistics Bulletin No. 16.
Cottonseed meal.	Cottonboll worm.	Apply paris green to plants.	Yearbooks 1902, 1904.
Barnyard manure.	Mexican cottonboll weevil. Wilt.	Mature crop early and destroy immediately all rubbish. Fumigate seed with carbon bisuphide before planting.	Farmers' Bulletins No. 36, 48, 217, 302, 314, 326.
	Sore-shin or damping off.	Plant disease-resistant seed; burn infested plants; rotate crops.	
	Root knot.	Lime and cultivate to keep surface mulch dry.	
Acid phosphate 200 to 400 pounds and muriate of potash or kainit, 160 pounds per acre.	Wilt.	Bordeaux mixture. Iron variety practically immune.	U. S. Dept. Agr. Bureau of Plant Industry, Bulletin No. 25.
			U. S. Dept. Agr. Agrostology Bulletin No. 64, Circular No. 24.
	Mildew and leaf spot.	Seldom extensive damage.	Yearbook for 1896.
	Nematode worms.	Iron variety practically immune.	Most experiment stations have issued bulletins.
10 to 12 tons manure in fall. 300 to 500 lbs fertilizer rich in nitrogen.	See sugar beet.	See sugar beet.	New York (Cornell) Bulletins Nos. 243, 244.
Manures to be determined by local needs.	Smut.	Formaldehyde or hot water treatments. See under barley.	Farmers' Bulletin No. 168.
Requires plant food near surface.			Division of Botany Bulletin No. 23.
	Chinch bug.	Crop rotation. See under oats.	Kentucky Experiment Station Bulletin No. 98.
			Kansas Bulletin No. 102.
Fertilizers must be used sparingly.	Closed and loose smut.	Formaldehyde or hot water treatments of seed. See under barley.	Farmers' Bulletins Nos. 250, 395, 420, 424.
Barnyard manure, 10 to 25 loads per acre on poor soils.	Orange leaf rust.	Plant resistant and early maturing varieties.	Ohio Experiment Station Bulletins Nos. 101, 138.
Fertilizer containing 10 to 20 pounds each of ammonia and potash, and 30 to 60 pounds of phosphoric acid per acre.	Black stem rust.		Kansas State Bd. Agr. 14th Report.
	Chinch bugs.	Plow furrow to prevent spread. Scatter tar in furrow. In extreme cases burn one field to save another.	
	Army worms.		
Rich soils generally used.	Rice weevil.	Carbon bisulphide.	Farmers' Bulletin No. 110.
	Rice worm.	Draw off water and allow field to dry for few days.	Division of Botany Bulletin No. 22.
	Rice grub.	Water.	U. S. Dept. Agr. Office of Experiment Station Bulletin No. 113.
	Chinch bug.	Thorough flooding.	Louisiana Experiment Station Bulletins Nos. 24, 50, 61, 77.
	White blast.	Application of lime to soil.	
	Smut.	See under barley.	

the same, or to the United States Department of Agriculture. A list of such stations follows the tables.

TABLE I. FIELD

Crop	Soil	Planting Date	Seed to Acre	Normal Yield per Acre	Origin and Brief History	Use
Rye. *Secale cereale.* Linn. *Gramineæ.*	Light, with little clay. Well drained, will grow on poor soil.	April-May or September-November.	3-4 pecks, early. 6-8 pecks, late.	15.7 bushels. 1 ton of straw.	Original home was between Austrian Alps and Caspian Sea. Culture more than 2,000 years old. Seems to be of decreasing importance.	Grain for animal and human food. Fall pasture. Soiling. Cover-crop and green manure. Flour. Alcoholic liquors.
Sorghum. *Andropogon sorghum.* Brot. or *Sorghum vulgare.* Pers. *Gramineæ.*	Rich, well drained, sandy or clay loam.	March-June.	1.5to2bushels broadcast. 6 pounds to 0.5 bushel for silage drilled.	3-6 tons fodder. 8-20 tons green forage.	Originated in tropical or subtropical regions of old world, and in cultivation as human food for many centuries, long before Christian era. Tropical Africa generally considered birthplace.	Pasture for hogs. Hay. Fodder. Silage. Sirup.
Soybean. *Glycine Hispida.* Maxim. *Leguminosæ.*	Well-drained sandy, loam or clay soil.	May-June.	2-3 pecks in drills. 1 to 1.5 bushels broadcast.	12-20 bushels.	Native of southeastern Asia. Thought to be derived from wild *Glycine soja* of Japan. Grown extensively in China and Japan.	Animal grain feed. Silage. Soiling. Hay. Cover-crop and soil improvement. Human food.
Sugar Beet. *Beta vulgaris,* Moq. *Chenopodiaceæ.*	Clay loam, or medium light sandy loam.	May, north January-May south.	8-12 pounds.	11.5 tons.	Known at least three centuries before Christian era. Sugar first extracted about middle of eighteenth century by Marggraff. First attempt to grow beets for sugar in U. S. in 1830, near Philadelphia.	Stock feeding. Sugar manufacture.
Sugar Cane. *Saccharum officinarum.* Linn. *Gramineæ.*	Well-drained soil of good average character.	March 21-May 20.	4 tons of cane.	8-25 tons.	Origin lost in antiquity. Cultivation probably among first undertaken by tropical peoples. Early use almost exclusively for eating raw. As source of sugar it stood practically alone until beginning of last century.	Manufacture of sugar and molasses.
Sweet Potato. *Ipomœa batatas.* Poir *Convolvulaceæ.*	Warm, sandy, well-drained and aerated.	March 21-May.	1.5 to 4 bushels.	100 bushels.	Nativity unknown, probably tropical America. Was cultivated in tropics of both hemispheres when authentic records began. De Candolle inclines to an American origin.	Human food.
Timothy. *Phleum pratense.* Linn. *Gramineæ.*	Deep clay loam, moist and fertile.	March-October.	8-16 pounds; with clover 10 pounds.	1.5 tons.	Native of Europe and extensively cultivated in cooler parts of North America as a forage plant. Introduced to America from England in 1720.	Hay. Pasture.
Tobacco. *Nicotiana tabacum.* Linn. *Solanaceæ.*	Rich, friable sandy loam in seed-bed, well fertilized each spring with fertilizer containing 10 per cent ammonia, 8 per cent available phosphoric acid, 12 per cent soluble potash.	February 1 to March 1 in seed-bed. April-June in field.	1 tablespoonful to 100 square yards of seed-bed, to set out six acres.	800-1000 pounds.	Of American origin. Pipes and other means for smoking tobacco were found in prehistoric mounds of the United States, Mexico and Peru. Columbus found natives using tobacco for smoking, chewing and snuff. In 1558, Jean Nicot, French ambassador to Portugal, sent a supply of tobacco seed to Queen Catherine de' Medici, and to commemorate the service the generic name Nicotiana was given.	Disinfectant. Smoking and chewing purposes. Stalks for making of paper.
Vetch. *Vicea* spp. *Leguminosæ.*	Wide range. Used on poor sandy or gravelly soils to improve them. Prefers moist clay loam.	April-June. September-December.	1 bushel.	1.5 to 3 tons.	Common spring vetch is native in Europe and western Asia. Was cultivated by Romans. Reached America 100 years ago.	Cover-crop. Stock feed. Soil improvement. Pasture.
Wheat. *Triticum sativum.* Lam. *Gramineæ.*	Light clay and glacial drift soils.	September-October. April-May.	6-8 pecks.	13.8 bushels.	Wheat cultivation antedates recorded history. Monuments more ancient than Hebrew scriptures depict its cultivation established. Chinese grew wheat 2700 B. C. Cultivation in America prior to discovery by Columbus not known.	Flour for human food. Grain for stock feeding. Straw. Bran, shorts and middlings are by-products for stock-feeding.

TABLE II. ORCHARD

Crop	Climate	Soil	Planting Time, Plants or Seed per Acre	Diseases	Remedies
Apple *Pyrus. malus.* Linn. *Rosaceæ*	Temperate	Clay loam to sandy loams, with variety preferences.	Fall or spring, fall preferable.—27-33.	Scab.	Spray thoroughly with lime-sulphur, 1-40, or bordeaux, 3-3-50, 3 times: (1) Just before blossoms open, (2) just as blossoms fall, (3) 10 to 14 days after blossoms fall.
				Fire blight.	Cut out and destroy diseased parts. Wash wound with corrosive sublimate 1 part to 1,000 of water. Paint wound with gas tar or lead paint.
				N. Y. apple tree canker.	Spray before buds start with lime-sulphur, 1-12, or bordeaux, 10-10-50; soak body and limbs when making first application for scab. Cut out cankers and treat wound as for fire-blight.
Asparagus. *Asparagus officinalis,* Linn. *Liliaceæ*	Temperate.	Warm, well-drained loam, deep rich, fertile and moist.	Early spring, April preferable for seed.—5,445-14,520. 1 oz. of seed to 400 plants. Rows 8 ft. apart, plants 1 ft. in row; or rows 4 ft. apart, plants 2 ft. in rows, 5,445. Rows 2 ft. apart, plants 18 inches in row, 14,520.	Rust.	During cutting season, permit no plants to mature. Fertilise liberally and cultivate thoroughly. Late in the fall burn all infected plants. Spray with bordeaux, 5-5-50, containing a sticker of resin, sal soda, soap. Spray when shoots are 8 to 10 inches high after cutting, and repeat once or twice a week.

CROPS—Continued

Fertilizers	Plant Diseases and Enemies	Remedies	Bulletins
250 pounds per acre of dissolved phosphate rock.	Black rust of stems. Orange rust of leaves. Smut. Ergot. Chinch bug. Hessian fly.	Burn infested stubble—rotate crops. Formaldehyde or hot water treatment. See under barley. Clean seed on clean land. Burn rubbish nearby. Rotate crops. Plow deep trenches and use tar strips. Resistant varieties, late seeding, burning stubble, sowing early wheat trap crop.	Pennsylvania Agr. Experiment Station Bulletin No. 52. U. S. Dept. Agr. Yearbooks.
Barnyard manure and leguminous green manures.	Grain smut. Whole-head smut. Chinch bugs and green aphis.	Rotation and seed selection. Hot water and formaldehyde treatments. See under barley. Seldom serious. Avoid continuous cropping on same area.	Farmers' Bulletins Nos. 37, 50 90, 135, 174, 246, 288. Bureau of Chemistry Bulletins Nos. 14, 20, 26, 34.
200 to 300 pounds high-grade acid phosphate. 50 pounds muriate or sulphate of potash per acre.	Sclerotium. Nematode root worms. Rabbits. Grasshoppers. Reddish brown hairy caterpillar.	Fatal. No treatment. Not specially serious.	Farmers' Bulletins Nos. 58, 121, 372. Connecticut Experiment Station Bulletin No. 22. Delaware Bulletins Nos. 60, 61. Georgia Bulletin No. 17. Indiana Bulletin No. 108. Kansas Bulletins Nos. 18, 92, 100, 123. Many other station bulletins.
Green fertilizers, generally alfalfa. Stable manures. Complete commercial fertilizers.	Leaf spot. Curly top. About 150 insect enemies.	Bordeaux mixture and crop rotation. Seldom occurs in two successive seasons in same locality. See entomology bulletins in next column.	Division of Entomology Bulletins Nos. 19, 23, 29, 33, 40, 43. Specia Report No. 28. Bureau of Chemistry Bulletins Nos. 27, 96. Farmers' Bulletins Nos. 52, 92.
Stable manure. Nitrogenous fertilizers, dried blood, fish refuse in small quantities. Lime extensively.	Root diseases, rind disease, sereh, pineapple disease, red top, top rot, smut, rust. Rats. Borers. Innumerable insects. Parasitic nematodes on roots.	Burn over, use quicklime as soil fungicide. Burn over or poison. Mongoose will destroy. Hand pick, rotate crops, use trap crops, or rest land. Fought by introduction of parasites. Expose soil to air and sunlight.	Bulletins of Hawaiian Sugar Planters Experiment Station, Louisiana, Cuba, and Porto Rico Experiment Stations.
Abundant humus. Light straw manure. Crimson clover sod plowed under at half-growth. Stable manure put in furrow under the crop.	Black rot. Soil rot. Soft rot. Tortoise beetles. Sawflies. Flea beetles.	Use slip-seed. Thoroughly clean and disinfect storage house. Plant in new soil. Crop rotation. Apply kainit and sulphur, 300 pounds per acre. Dry potatoes before storing. Destroy all infected potatoes. Dip plants before setting in solution of arsenate of lead, 1 pound to 25 gallons water. Paris green or the above arsenical spray. Arsenical sprays.	Farmers' Bulletins Nos. 26, 129, 324. Arkansas Experiment Station Bulletin No. 72. South Carolina Bulletin No. 63.
Top dressing with barnyard manure and complete fertilizer.	Rust Grasshoppers		Farmers' Bulletin No. 111. Division of Agrostology, U. S. Dept. Agr., Bulletins Nos. 7, 14, 17, 20. N. Y. State College of Agr. Farmers' Reading-Course Bulletin No. 10.
In field, 1,000 pounds cottonseed, 1,000 pounds cottonseed meal, 300 pounds carbonate of potash, 700 pounds fine ground bone, and 800 pounds of lime to acre. Cow manure at rate of 20 to 25 loads per acre. Seldom needed. On poor land, complete fertilizer, and especially phosphoric acid and potash, may be required.	Root rot. Sore skin. Wilt. Angular leaf spot. Pole burn. Flea beetle and hornworm. Tobacco worm. Cutworms. Bud worm.	Sterlize soil with heat or formalin before seed sown. Lime. Plant disease-resistant seed; burn infected plants; crop rotation. Grow vigorous plants. Apply heat carefully and ventilate sheds to reduce humidity. Light spray of paris green, 1 pound paris green, 1 pound quicklime, 100 gallons water, stirred constantly while in use. Dust or spray with paris green, 1 pound to 160 gallons water. Sow along rows bran and paris green, 1 pound paris green, 50 pounds bran. Hand pick or dust or spray with paris green.	Farmers' Bulletins Nos. 60, 82, 83, 120, 343. Plant Industry Bulletin Nos. 18, 51, 91, 96. Report on the Culture of Tobacco, U. S. Census, 1883. Bulletins from experiment stations, particularly Connecticut, Maryland, North Carolina, Kentucky. Farmers' Bulletins Nos. 18, 102, 147. Division of Agrostology Circular No. 6. Alabama Experiment Station Bulletins Nos. 87, 96, 105.
Barnyard manure. Complete commercial fertilizer. 200 to 400 pounds of a 4-12-4 fertilizer commonly used.	Hessian fly. Chinch bug Rust. Loose smut. Stinking smut or bunt.	Late seeding, burning stubble. Clean tillage, crop rotation. Plant resistant varieties. No satisfactory treatment. Formalin, 1 pound to 50 gallons water. Sprinkle the wheat and cover with cloths soaked in the solution, or immerse the sacks 30 minutes; or blue stone, 1 pound to 5 gallons water. Immerse sacks 10 minutes, then drain and dry. Apply the solution to all utensils and machinery used.	Farmers' Bulletins Nos. 132, 250. U. S. Dept. Agr. Division of Physiology and Pathology Nos. 16, 24, 29. Plant Industry Bulletins Nos. 3, 47, 78, 79. Office of Experiment Station Bulletin No. 11.

AND GARDEN CROPS

Insect and Other Enemies	Insecticides and Remedies	Time to Bear	Yield per Acre	Bulletins on Culture
Bud moth.	Applications of either 1 lb. paris green or 4 lbs. arsenate of lead in 100 gals. water (1) when leaf tips appear and (2) just before blossoms open.	3 to 6 years from planting. Good crop in 10 to 15 years.	Tree 30 years old 20-30 bus.	Cornell Bul. 272. Geneva Buls. 163 and 185. Cornell Buls. 93, 124, 142. Geneva Buls. 262, 296, 306, 320. Geneva Circular 9.
Canker worms.	Spray once or twice before blossoms open with 1 lb. paris green, or 4 lbs. arsenate of lead in 100 gals. water. Repeat after blossoms fall. Use sticky bands or wire-screen traps to prevent ascent of wingless females.			
Codling moth.	Use burlap bags on trunk, and kill caterpillars under them every 10 days from July 1 to Aug. 1, and once later.			
Oyster shell scale.	Spray with kerosene emulsion diluted with 6 parts of water or whale oil soap, 1 lb. to 4 or 5 gals. water, in May or June when young white lice appear.			
Asparagus beetle.	Chickens and ducks will destroy. Close cutting of young shoots early in season. Use fresh air-slacked lime or arsenites dusted on dew-wet plants after cutting period.	Seed 3-4 years. Plants 1-3 years.	2000 bunches of 3½ in. diameter.	Geneva Buls. 75, 188. California Buls. 165 and 172. New Jersey Reports 1896, 1898. Farmers' Bul. 61. Massachusetts Bul. 61. Iowa Bul. 53.

TABLE II. ORCHARD AND

Crop	Climate	Soil	Planting Time, Plants or Seed per Acre	Diseases	Remedies
Beans (bush). *Phaseolus vulgaris. Leguminosæ.*	Warm temperate.	Good warm loam.	May-June—1 qt. of seed to 100 feet of drill. In drills 2 ft. apart plants 12 inches in row. In hills, 18x20 inches, 3 plants per hill.	Anthracnose or red spot.	Plant clean seed. Hand spray with Bordeaux mixture, 5-5-50, (1) when plants break through ground, (2) when first pair of leaves are expanded, (3) when pods have set.
Beans (pole). *Phaseolus vulgaris. Leguminosæ.*	Warm temperate.	Warm fertile soil.	Late spring, after danger of frost. After ground becomes warm.—1 qt. seed to 200 hills. Hills 4x4 ft., one plant per hill. Should be at least 5 plants per pole.	Blight.	Spray with bordeaux as for anthracnose.
Beets. *Beta vulgaris.* Linn. *Chenopodiaceæ.*	Temperate.	Loose, light, fresh, clean rich soil.	April-June—Seed 5-6 lbs. per acre. In drills 12x6 inches.	Scab, rust, rot, spot diseases.	Avoid following potatoes with beets. Practice clean culture and proper rotations. Spray with bordeaux mixture for leaf diseases.
Blackberry. *Rubus nigrobaccus.* Bailey. *Rosaceæ*	North temperate. Cool, northern exposure.	Strong loam, retentive of moisture and tending toward clay.	Spring preferably, or fall—900 to 1550.	Anthracnose and leaf rust. Orange rust.	Cut out bearing canes as soon as they are through fruiting. Dig up and burn infected bushes as soon as detected.
Cabbage. *Brassica oleracea.* Linn. *Cruciferæ*	Cool, moist climate.	Well-drained, rich, friable loam.	April-May to June-July—7,000-11,000. 1 oz. seed to 3,500 plants.	Club root or club foot. Black rot.	Practice crop rotation. Set only healthy plants. Do not use manure containing cabbage refuse. Lime the seed-bed at least as early as fall before. Practice crop rotation. Soak seed 15 minutes in solution made by dissolving one corrosive sublimate tablet in pint of water.
Cauliflower. *Brassica oleracea.* Linn. var. *botrytis.* D. C. *Cruciferæ.*	Temperate, cool and moist.	Richest land, strong, moist loam best.	April-July in seed-bed. July in field.—7,000 to 10,000. 1 oz. seed to 3,000 plants.	Same as cabbage.	See cabbage.
Celery. *Apium graveolens.* Linn. *Umbelliferæ.*	Temperate.	Moist peaty soil or highly fertilized land.	January-April in seed-bed. May-August in field—20,000 to 30,000. 1 oz. seed to 7,000 plants.	Cerospora leaf blight or early blight. Septoria leaf blight or late blight.	Spray with ammoniacal copper carbonate, 6-3-45, making 5 to 8 applications. Begin while still in seed-bed. Bordeaux 5-5-50, may be used for earlier application. Same treatment as for early blight, but continue till harvest.
Cherry. *Prunus avium* and *Prunus cerasus.* Linn. *Rosaceæ.*	*Sweet.* 39-44° latitude 68-86° longitude. *Sour.* 35-45° latitude, 68-100° longitude.	Elevated, light, dry, loamy, retentive soil.	Spring or fall—Sweet 48, sour 134.	Brown rot. Black knot. Leaf spot; powdery mildew.	Plant resistant varieties. Prune trees to let in sunlight and air. Spray with self-boiled lime-sulphur, 8-8-50, to which add 2 lbs. arsenate of lead to 50 gals. Spray (1) about time young fruit sets, (2) 2 to 3 weeks later, (3) 1 month before fruit ripens, omitting the arsenate. Cut out and burn all knots before leaves appear. Spray with lime-sulphur or bordeaux. Dust with sulphur or spray with potassium sulphide, 1 oz. to 3 gals. water, or lime-sulphur as for leaf spot.
Currant. *Ribes rubrum.* Linn. *Saxifragaceæ.*	Cool temperate climate.	Cool, moist and rich soil.	Fall or spring—2,178.	Cane blight or wilt. Leaf spot and anthracnose	Begin when plants are small, go over 3 or 4 times every summer and cut out and burn all diseased canes. Upon first appearance of currant worms spray with bordeaux and paris green, 1 lb. to 100 gals., or arsenate of lead, 4 lbs. to 100 gals. Repeat if second brood of worms appears.
Gooseberry. *Ribes* spp. *Saxifragaceæ.*	Cool and shady north temperate.	Moist, but not soggy, clay loams. Rich, cool, bottom lands.	Fall or early spring—2,178.	Powdery mildew.	Cut away drooping branches. Keep ground free from weeds. Spray with potassium sulphide, 1 oz. to 2 gals. Commence when buds are breaking and repeat every 7 to 10 days until fruit is gathered.
Grape. *Vitis.* spp. *Vitaceæ.*	Warm. Along shores of bodies of water best. The location must provide frost drainage.	Gravel or clay.	In spring. Completed by last of May—605.	Black rot. Downy mildew.	Remove all mummies and diseased leaves. Rake all refuse into furrows and cover. Use surface cultivation and keep down weeds and grass. Keep vines well sprouted. Spray with bordeaux, 4-4-50, till middle of July, after that with ammoniacal copper carbonate. Spray first when third leaf shows. Foliage should be protected by coating of spray *before* every rain. Make 4 applications of bordeaux, 50 to 60 gals. of spray to acre. Apply bordeaux as for black rot.
Lettuce. *Lactuca sativa.* Linn. *Compositæ*	Cool temperate.	Open, loose, rich loam.	April-June Aug-Sept.—1 oz. seed to 3,000 plants. Rows 2 ft. apart, plants 1 ft. in row equals 21,780 plants.	Rot or drop.	Steam sterilization of soil to depth of 2 inches or more; or use fresh soil for every crop. Common in greenhouses
Muskmelon. *Cucumis melo.* Linn. *Cucurbitaceæ.*	Hot, bright temperate climate.	Light and quick warm soil. Sandy loam.	May-June—1 oz. seed to 50 hills. Plants 6x6 ft. (preferable). Plants 5x5 ft.	Downy mildew. Wilt.	No effective method of control. Spray with bordeaux, 5-5-50. Gather and destroy all wilted leaves and plants.
Onion. *Allium cepa.* Linn. *Liliaceæ.*	Temperate.	A rich, moist, but not wet, loam with subsoil of clay.	April-May—1 oz. to 100 feet of drill. 4-5 lbs. per acre. In drills, 14 to 20 in. apart, seed 5 to 6 lbs.; sets 6 to 12 bus.	Mildew. Smut.	Spray with bordeaux, 5-5-50, when plants show 3 leaves. Repeat every 10 days till harvest. Crop rotation. Drill into rows when planting seed, 100 lbs. sulphur and 50 lbs. air-slacked lime to acre.
Pea (garden). *Pisum sativum.* Linn. *Leguminosæ.*	Temperate.	Rich, friable soil, not overrich in nitrogen.	April-May or July-Aug.—1 quart of seed to 100 ft. of drill, or 2 bus. per acre Dwarf 12x1 in.; tall, double rows 3 ft. apart.	Powdery mildew.	Fungicidal spray.

GARDEN CROPS—Continued

Insect and Other Enemies	Insecticides and Remedies	Time to Bear	Yield per Acre	Bulletins on Culture
Weevil.	Use bisulphide of carbon as for pea bug.	45-65 days from seed	75-120 bus.	Cornell Bul. 239. New Jersey Bul. 151. Geneva Bul. 48.
Weevil.	Use bisulphide of carbon as for pea bug.	65-70 days from seed.	75-100 bus. dry beans.	Cornell Buls. 87, 115. New Hampshire Bul. 62.
Not often damaged by insects.		65-150 days.	400 to 700 bus.	Cornell Bul. 163.
Saw-fly Cane borer.	Spray with paris green or arsenate of lead, or apply hellebore. In midsummer cut off and destroy the drooping tips.	1 year. Good crops in 2 and 3 years.	50 to 100 bus.	Cornell Bul. 99. Central Experimental Farm, Ottawa, Can., Bul. 56.
Cabbage worm. Cabbage Apnis.	If plants not heading, spray with kerosene emulsion or paris green to which sticker has been added. If heading, apply hellebore. Before plants begin to head spray with kerosene emulsion diluted with 6 parts water; whale-oil soap, 1 lb. in 6 gals. water; or one of tobacco extracts.	90-150 days.	7500 heads.	New Jersey Bul. 98. Geneva Buls. 232, 251, 302. Cornell Bul. 78.
Same as Cabbage.	See cabbage.	110 days from seed.	125-200 barrels, 18-30 heads per barrel.	See cabbage.
No widespread or serious insect pests.		120-150 days.	120-160 crates.	Cornell Bul. 132. Michigan Bul. 102. Geneva Bul. 51.
Aphis. Plum curculic	Spray with kerosene emulsion diluted with 6 parts of water or with one of tobacco extracts. Spray just after blossoms fall with arsenate of lead, 6-8 lbs. in 100 gals. water, and repeat in about a week. After fruit has set, jar trees daily over sheet or curculio catcher.	3 years. Commercial crops 4-6 years according to variety.	2½ tons.	Cornell Buls. 81, 98, 235. Geneva Bul. 98. U. S. Dept. Agr. Bureau of Entomology Circular 120.
Currant worm.	When worms first appear, spray with 1 lb. paris green or 4 lbs. arsenate of lead in 100 gals. of water. Ordinarily the poison should be combined with bordeaux. After fruit is half grown use hellebore.	1 year. Good crops in 2 and 3 years.	100 bus.	Geneva Buls. 167, 199. Iowa Bul. 30.
Currant worm.	See currant.	1 year. Good crops in 2 and 3 years.	100 bus.	Geneva Buls. 114, 133, 161.
Steely beetle or flea beetle. Root worm. Leaf Hopper. Rose Chafer.	When buds begin to swell, cover with arsenate of lead, 8 lbs. in 100 gals. of water. To kill larvæ add 1 lb. paris green or 4 lbs. arsenate of lead to every 100 gals. of bordeaux mixture. Spray latter part of June with 6 lbs. arsenate of lead in 100 gals. water. Repeat in 7 to 10 days. Cultivate thoroughly in June, close to vines, to kill pupæ. Spray underside of leaves with whale-oil soap, 1 lb. in 10 gals. water, about July 1. Repeat in a week or 10 days. Spray with 10 lbs. arsenate of lead in 100 gals. water.	Fair crop in 4 years.	3 to 5 tons.	Cornell Buls. 157, 208, 224, 235, 254, 266.
Little troubled by insects.		65 days from seed.	400-800 half-bushel baskets, 600 baskets good average.	Massachusetts Bul. 69.
Striped cucumber beetle. Aphis.	Plant early squashes as trap crop. Spray with bordeaux. Dust with tobacco dust or snuff, or land plaster with a little kerosene or turpentine. Spray with kerosene emulsion diluted with 6 parts water or use one of tobacco extracts. Burn vines after harvest, and keep down weeds.	120-140 days from seed.	3,000-7,000 melons.	Cornell Bul. 95.
Onion fly or maggot. Thrips.	See cabbage-root maggot. Kerosene emulsion, diluted with 6 parts water; tobacco decoction; whale-oil soap, 1 lb. to 4 gals. water.	135-150 days from seed.	500 bus.	Geneva Bul. 182. Michigan Bul. 31.
Pea weevil or pea bug. Pea moth or worm. Pea aphis or louse.	Fumigate seed stock with carbon bisulphide. Place seed in tight vessel or room and expose to fumes for 2 or 3 days. One pound of bisulphide for 100 bushels of peas. Early planting of early varieties. Plant seed in drills and use cultivator to bury aphides after they have been brushed from vines.	50 to 80 days.	100 to 150 bus. green in pod.	Cornell Bul. 67. Farmers' Bul. 45. Florida Bul. 36. New Jersey Report 14. Delaware Bul. 49.

TABLE II. ORCHARD AND

Crop	Climate	Soil	Planting Time, Plants or Seed per Acre	Diseases	Remedies
Peach. *Prunus persica.* Sieb. & Zucc. *Rosaceæ.*	Warm and sunny. In north near body of water.	Light and sandy loam.	Spring preferable—134.	The yellows. Leaf curl. Brown rot.	Dig out and burn diseased trees as soon as discovered. Spray trees once *before buds swell* with bordeaux, 5-5-50, or lime-sulphur mixtures used for San Jose scale. Plant resistant varieties. Prune trees to let in air and sunlight. Thin fruit well. Spray with self-boiled lime-sulphur, 8-8-50, and arsenate of lead 2 lbs. to 50 gals. water. Spray (1) when shucks are shedding from young fruit, (2) 2 to 3 weeks later, (3) 1 month before fruit ripens, omitting the arsenate.
Pear. *Pyrus communis.* Linn. *Rosaceæ.*	Temperate. Best near large bodies of water.	Strong loam of moderate depth overlying a porous subsoil.	Spring or fall—48 to 108 standard plants. 193 dwarf plants.	Fire blight. Scab.	Prune out blighted branches, cutting 6 to 8 inches below diseased part. Disinfect with corrosive sublimate solution, 1 to 1,000. Clean out limb and body cankers. Disinfect all large wounds and cover with coat of paint or gas tar. Plant resistant varieties. Spray three times with lime-sulphur, 1-50, or bordeaux, 3-3-50, as for apple scab.
Plum. *Prunus domestica.* Linn. *Rosaceæ.*	Temperate.	Clay loam. Some varieties on light moist soils.	Spring or fall—108-134.	Black knot. Brown rot. Leaf spot.	Cut out and burn all knots before leaves appear in spring. See peach. Two or three applications of self-boiled lime-sulphur or bordeaux, 3-3-50. First application about 10 days after blossoms fall. Japan plums should not be sprayed with bordeaux.
Potato. *Solanum tuberosum.* Linn. *Solanaceæ.*	Moist, cloudy climate. Sensitive to frost.	Warm, rich, sandy or loamy soil.	March to May—8 to 10 bu. seed. Early, rows 18 in. apart; late, 3 ft. x 18 in. or 3 ft. x 3 ft.	Blight and rot. Scab.	Spray with bordeaux, 5-5-50. Commence when plants are 6 to 8 in. high and repeat every 10 to 14 days during season. Use 40 to 100 gals. per acre each application. Treat tubers before cutting by soaking in formalin solution, 1 pint to 30 gals. water, for 2 hours, or in corrosive sublimate, 1 oz. to 7 gals., for 1½ hours. Plant in clean soil.
Quince. *Cydonia vulgaris.* Pers. *Rosaceæ.*	Temperate	Heavy, moist, retentive clay loam, well drained.	Spring or fall—200.	Leaf and fruit spot.	Spray three times with bordeaux as for apple and pear scab.
Radish. *Raphanus sativus.* Linn. *Cruciferæ.*	North temperate.	Rich, light, loose; one that drains rapidly.	March-Sept.—1 oz. seed to 100 ft. of drill. Rows, in garden, 12 to 18 in apart.	Relatively free from diseases.	
Raspberry. *Rubus strigosus.* Michx. (red). *R. occidentalis.* Linn. (black). *Rosaceæ*	Cool temperate.	Deep, moist soil. Lighter loams for red, heavier loams for black.	Fall or spring, the latter preferable for black-caps—Black 2,420; red 2,904.	Anthracnose. Cane blight or wilt. Red rust.	Remove all old canes and diseased new ones as soon as fruit is gathered. Spray with bordeaux, 5-5-50, when new canes are 6 to 8 inches high and follow with two more at intervals of 10 to 14 days. No successful treatment known. For new settings use only plants from healthy plantations. Dig up and destroy infected plants.
Spinach. *Spinacia oleracea.* Linn. *Chenopodiaceæ.*	Cool season plant. Grown in fall and spring.	Abundance of available plant-food, particularly nitrogen. Any good garden or field soil.	March and Aug-Sept.—1 oz. seed to 100 ft. drill or 10 to 12 lbs. per acre; rows 12 to 15 in. apart.	Mildew, anthracnose, leaf blight.	Burn all affected parts. Practice crop rotation. Treat soil with mixture of flowers of sulphur and air-slacked lime.
Squash. *Cucurbita pepo,* var. *Conensa.* Linn. *Cucurbetaceæ*	Temperate.	Warm and quick soil. Sandy lands or sandy loams best.	Summer, April-May; winter, May-June—1 oz. seed for 25 hills, or 4 lbs. per acre. Summer, hills 4x4 ft.; winter, hills 8x10 ft.	Mildews.	Bordeaux mixture or ammoniacal carbonate of copper.
Strawberry. *Fragaria chiloensis,* var. *ananassa.* *Rosaceæ*	Cool season plant.	Rich, rather moist, sandy soil.	Aug. or spring—10,000 to 14,000.	Leaf-spot, rust, or leaf-blight.	In setting new plantations, remove all diseased leaves before plants are taken to field. Spray newly set plants with bordeaux, 5-5-50, as soon as growth begins. Repeat three or four times during season. The following spring, spray just before blossoming and again 10 to 14 days later. Plant resistant varieties.
Tomato. *Lycopersicum esculentum,* var. *vulgare.* *Solanaceæ*	Warm climate, long season, sunny, open position.	Warm soil, light, porous and well drained.	Start plants in hot bed Feb. or March; transplant May to June—1 oz. to 3,000 plants.	Septoria, leaf-spot. Mildew. Black rot. Bacterial blight.	Spray with bordeaux, 5-5-50, as soon as plants are set out. Spray underside of leaves. Repeat every week or ten days. Spray with bordeaux. Crop rotation. Crop rotation, destruction of affected vines and contiguous vegetable matter.
Turnip. *Brassica rapa.* Linn. *Cruciferæ.*	Cold weather plants. North temperate.	Loose, moist soil.	April, or July-Aug.—1 oz. seed to 100 ft. of drill. Rows 18 in. apart, or broadcast. Rutabaga, rows 2 ft., plants 10 inches in row.	Club root. Soft rot.	See cabbage. Plant on soils free from disease. Plant resistant varieties.
Watermelon. *Citrullus vulgaris.* Schrad. *Cucurbitaceæ.*	Warm and sunny climates. Southern temperate.	Light, quick, warm, gray, sandy soil, with strong clay subsoil.	May-June—1 oz. seed for 30 hills, or 4 to 5 lbs. per acre. Hills 8x10 ft.	Free from any vital disease.	

TABLE III. HORSES, CATTLE,

Best Breeds	Characteristics	Uses	Brief Breeding Rules
HORSES **American Saddle Horse**	Head rather small and clean cut. Eyes wide apart, full, clear and prominent. Ears pointed. Long upright neck, sloping shoulders. Deep chest, short, strong back. Barrel ribbed well back. Strong coupling, quarters level, strongly muscled. Pasterns long and sloping. Bones of leg broad and flat, strong tendons. Height about 15 hands 2 inches. Weight about 1,000 pounds.	Saddle horse for pleasure, as a gaited horse, hunter, cavalry or commercial purposes. A light harness horse also.	1. Age of puberty 12 to 24 months. 2. Best age for breeding, 2 to 3 years. 3. Period of heat, 9 days after delivery and each 2 or 3 weeks thereafter; duration of heat, 2 to 3 days.

GARDEN CROPS—Continued

Insect and Other Enemies	Insecticides and Remedies	Time to Bear	Yield per Acre	Bulletins on Culture
Peach borer.	Dig out borers in June and mound up trees. Apply gas tar or coal tar to trunk from roots up to a foot or more above surface of ground.	2 years. Good crop in 4 to 5 years.	5-10 bus. per tree in full bearing.	Cornell Buls. 176, 192, 276.
Curculio.	Spray just after blossoms fall with arsenate of lead, 6 to 8 lbs. in 100 gals. water, and repeat in a week. After fruit has set, jar tree daily over a sheet and destroy beetles.			
San Jose scale.	See apple.			
Pear psylla.	After blossoms fall, spray with kerosene emulsion diluted with 6 parts water or whale-oil soap, 1 lb. in 4 or 5 gals. water, or one of tobacco extracts. Repeat every 3 to 7 days.	3 or 4 years. Fair crop in 6 to 12 years. Dwarfs in 5 to 7 years.	A tree 20-25 years old from 6-15 bus.	Cornell Buls. 108, 145, 142, 272. Geneva Buls. 67, 84.
Leaf blistermite.	Spray with lime-sulphur wash in fall or spring, or with concentrated lime-sulphur solutions, 1 gal. in 10 gals. water.			
Pear slug.	Spray with 1 lb. paris green or 4 lbs. arsenate of lead in 100 gals. of water.			
Plum curculio.	Spray just after blossoms fall with arsenate of lead, 6 to 8 lbs. in 100 gals. water, and repeat in about a week. After fruit has set, jar trees daily over sheet and destroy the beetles.	3 years. Good crop in 5 or 6 years.	3 to 8 bus. per tree.	Cornell Buls. 38, 81, 131, 235. Geneva Buls. 98, 117.
Colorado potato beetle.	Spray with paris green, 2 lbs., or arsenate of lead, 4 lbs., in 100 gals. water, or arsenite of soda combined with bordeaux mixture.	80 to 140 days.	100-300 bus.	Geneva Buls. 101, 123, 221, 241, 264, 267, 279, 290, 311. Vermont 85. Maine 141.
Flea beetles.	Bordeaux mixture as applied for potato blight.			
Quince curculio.	When adults appear, jar them from tree onto sheets or curculio catchers and destroy them.	2 years. Good crop in 4 years.	100 to 300 bus.	Cornell Buls. 80, 145, 148.
San Jose scale.	See apple.			
Round-headed apple-tree borer.	See apple.			
Maggots.	Cover soil just after planting with a heavy dressing of unleached wood ashes. Inject bisulphide of carbon into earth about plants.	30-45 days from seed.	2,800-3,500 bunches.	
Sawfly.	See blackberry.	1 year. Good crop in 2 and 3 years.	50-100 bus.	Geneva Buls. 124, 226.
Cane borer.	See blackberry.			
Leaf miner.		30 to 60 days.	200 barrels.	Rhode Island Bul. 41. Geneva Buls. 70, 99.
Striped cucumber beetle.	See muskmelon.	Summer, 60-80 days; winter 125-160 days.	10 to 15 tons, winter.	N. Y. State Exp. Station Report 6th. New Jersey Bul. 94. Geneva Buls. 75, 113, 156, 158. Ohio Bul. 105. Cornell Bul. 31.
Squash-vine borer.	Plant a few early squashes between rows of late varieties as trap crop. As soon as early crop is harvested, remove and burn vines.			
Aphis.	Spray with kerosene emulsion diluted with 6 parts water or use one part of tobacco extract. Burn vines after fruit harvest and keep down weeds.			
Squash stinkbug.	Trap adults under boards in spring. Kill nymphs with kerosene emulsion.			
White grubs.	Dig out grubs from beneath infested plants. Destroy pupæ by early fall cultivation of land.	1 year. Heavier crop usually in 2 years.	75-250 bus.	Cornell Bul. 79.
Boll worm.	Hand picking. Use of corn as a trap crop. Destruction of wormy fruit.	150 days from seed.	8 to 16 tons.	Cornell Buls. 32, 61. Michigan Buls. 19, 31. Florida Bul. 48. Kentucky Bul. 66. Connecticut Bul. 115.
Tobacco worm.	Hand picking.			
Nematode galls.	Crop rotation and preventing contiguity of host plants, notably cowpeas.			
Root maggots.	Inject bisulphide of carbon into soil about roots before grubs have burrowed deeply into tissues. Crop rotation.	60-70 days from seed.	600 to 1,000 bus.	Geneva Report 6th.
Flea beetle.	Spray with bordeaux or sprinkle with paris green diluted with land plaster (1 part by bulk of paris green to 50 of plaster).			
Melon worm.	Spray with paris green, 4 ounces to 50 gals. water. Two or three sprayings a week apart.	120-180 days.	400-500 melons.	Georgia Bul. 38.
Melon louse.	Spray with a 1 to 20 mixture of kerosene and water, or kerosene emulsion, or whale-oil soap, 1 lb. to 1 gal.			
Striped cucumber beetle.	See muskmelon.			
Flea beetle.	Hand picking and thorough spraying with bordeaux mixture and paris green.			

SHEEP AND SWINE

Best Foods	Diseases and Symptoms	Treatment	Bulletins
For the trotter. When not in training, feed should be reduced at least one-half. Good oats and clean sweet timothy should constitute bulk of ration. Also a few carrots and a bran mash occasionally. In spring, when shedding, bran mash may be given more often to keep bowels open.	*Big-head.*—Symptoms: Loss of vitality, irregular appetite or other digestive disturbance. Tendency to stumble. Then intermittent or migratory lameness. Swelling of bones of face and jaw. Animal becomes thin, coat rough, and skin tight.	Place animal under new conditions. Give lime, one peck slacked in a cask of water, more water being added from time to time. Give a tablespoonful of powdered bone meal in each feed, with free access to a large piece of rock salt. Feeds containing mineral salts, such as beans, cowpeas, oats and cottonseed meal are good. Animal should not work during active stage or be used for breeding.	Best references to breeds in studbooks issued by breed societies.

TABLE III. HORSES, CATTLE,

Best Breeds	Characteristics	Uses	Brief Breeding Rules
HORSES—Cont'd. **Belgian Draft**	Short body set on short legs. Tendons of legs large. Head good size. Eyes small, neck short, thick and well crested. Shoulders heavily muscled. Chest deep and wide, good barrel. Back short, broad and inclined to sag. Loins wide, short and very thick. Flank low and full. Hindquarters short, very wide, muscular. Lower thighs very wide, well muscled. Hocks round and meaty. Colors, chestnut, roan. brown and bay.	Draft and crossing, especially on grade draft mares.	4. Period of gestation 11 to 12 months. 5. Proper rations and sufficient exercise important during pregnancy. 6. Fecundity favored by (a) Warm climate. (b) Abundance of exercise. (c) Generous supply of nutritious food, regularly given. (d) Crossing (e) Heredity (f) Full maturity of animal. 7. Variation in type caused by (a) Changed conditions of life. (b) Heredity—union of two animals with diverse qualities. (c) Habit or use or disuse of parts. (d) Food.
Clydesdale	Weight 1700 to 2000 pounds for stallions, 1500 to 1800 pounds for mares. Height, 16 to 16½ hands. Colors, bay, brown, black or chestnut, with white markings on face and legs. Head intelligent. Shoulder good, which gives a free, easy, long stride. High withers. Arm well muscled. Feathering on leg is fine, silky and long. Quarters and croup muscular. Springy, strong pastern. Front action free and snappy.	Draft and crossing on native draft mares.	
French Coach	Height 16 hands. Weight 1000 to 1400 pounds. Rather upstanding Smooth and symmetrical, fine quality, clean cut, intelligent head, long graceful neck, closely ribbed body, muscular quarters. Legs well set and fine. High free knee action, regular uplifting hock action. Colors, bay, brown or black.	Coach and carriage horse, cavalry and fast saddle purposes. Crossing on common brood mares for production of grade coach horses for general city purposes.	8 Selection is of two kinds— (a) Natural. Survival of those possessing greatest ability to live and get food under particular conditions. (b) Methodical. Favoring and fixing of characters especially useful to mankind.
German Coach	Colors, bay, brown or black. Height 16 to 16½ hands. Weight 1350 to 1450 pounds. Deep round body. well proportioned, close ribs, neck long and high set on shoulders, neat head, intelligent face. Back short and strong, smooth at coupling, plump rounded quarters, strongly muscled limbs, strong hock good feet.	Saddle, carriage and draft. The horse-of-all-work.	9. Heredity—like produces like. Offspring resemble parents in stature, form and feature. Normal and abnormal characters are inherited. Predisposition to diseases is subject to laws of heredity. Characters that have appeared regularly through many generations transmitted with greatest force. Variations also transmitted.
Hackney	Considerable substance, very smooth, gracefully curved outlines, rather short legs, head well proportioned, full bright eyes, well-developed neck, shoulders long, sloping. well muscled. Body deep and round-ribbed. Muscular loins and quarters, strong hocks, excellent action. Colors, brown, bay or chestnut, with white markings. Height 15. 2 to 16 hands.	Heavy-harness horse. A desirable cross on common mares of much quality.	10. Correlation of parts. Whole organism so closely interwoven that change in one organ or set of organs almost certain to result in disturbance of the balance of other qualities and produce a change of other organs. Certain characters are normally correlated.
Percheron	Height 15. 25 to 16 5 hands Weight 1500 to 2000 pounds. Colors, gray and black. Active temperament, intelligent head, deep body, wide muscular croup, clean-cut legs, joints clean and hard; legs show abundance of quality. Good action.	Draft and crossing to produce grade draft mares.	11. Atavism, or reversion to characteristics of remote ancestors, may occur. Leading causes are change of environment and crossing.
Shetland Pony	Height 10 hands 2 inches. Weight 325 to 375 pounds. Compact build, deep body, heavy muscular quarters, short legs, short broad back, deep full chest, muscular neck, small head and ears, prominent eyes, docile disposition. Colors, brown, black and bay. Long shaggy coats, heavy, long mane.	Child's pony and light driving.	12. Inheritance of acquired characters. Acquired character is gained as result of action, nonaction, or reaction from environment. Such characters may be inherited. 13. Determination of sex. Many theories have been advanced, but in the present state of our knowledge it is not practicable to attempt to control the sex among the mammalian animals.
Shire	Conformation low, broad and stout. Heavy in build, slow in movement. Large girth, deep and strongly coupled with broad back, quarters heavily muscled. legs strong, feet large. Feathering on legs below knees and hocks. Weight 2200 pounds. Height 17 hands. Colors, brown, bay or black with white markings on face and legs.	Draft and crossing to produce grade draft horses.	14. Prenatal influences of doubtful consequence. Pregnant animals should be kept quiet and free from causes which might produce extreme nervous shock. They should have normal exercise.
Standard-Bred Trotter	Head well proportioned, clean cut, neck long and muscular, crested in stallions. Shoulders well muscled, chest low, foreleg long from elbow to knee, short from knee to fetlock. Pasterns sloping, feet moderate in size, oily in appearance. Back and loin well muscled, hindquarters and croup well muscled and smooth. No fixed colors. Height 16 hands. Weight for mares 900 pounds, stallions 1150 pounds.	Racing, driving as a roadster, and breeding. Also heavy - harness horse. Much used in breeding "cow ponies."	15. Four methods of breeding (a) Cross-breeding. A union of different breeds or races or breeding together of different strains of families within the same breed. Increases fertility, size and restores constitution, vigor and thrift. Breaks up established types, and destroys prepotency of the breed. Not certain to produce improvement.
Suffolk Punch	Low-set, short legs, deep body, muscular, durable feet. Head clean cut, with full forehead and Roman nose, neck full, with strong crest, chest deep and wide. Barrel deep, round-ribbed, and well let down on hind flank. Legs and hindquarters muscular. Height 16½ hands. Weight 2000 pounds. Color chestnut.	Heavy draft and crossing on range mares.	(b) Grading. Breeding of unimproved females to males of well-established breeds will invariably improve stock.
Thoroughbred	Very deep, narrow chest, long legs. Refinement and clear definition of feature. Large nostrils, full, clear eyes, broad forehead, neck long and straight, sloping shoulder, muscular hindquarters, sharp withers, well marked superficial blood vessels, silky skin and hair. Colors, bay, brown, or chestnut, more or less white in face and limbs. Height 15 to 16 hands. Weight 900 to 1050 pounds.	Racing, sporting, breeding Influence felt in all but draft breeds.	(c) Inbreeding. Breeding together of close relations. Will fix desirable qualities. Likely to diminish size, weaken constitution, impair fecundity. (d) Line-breeding. Union of animals more or less closely related. Favors fixation of characters, but may result in too great refinement and weakness of constitution.
Welsh Pony	Good shoulders, strong back, neat head, best of legs and feet. Height 12 to 13 hands. Colors, bay or brown, gray or black. Great strength and endurance.	Child's pony and for hack and tradesmen's purposes.	16. Pedigree and individual excellence should both enter into choice of breeding animals. Neither alone sufficient.

SHEEP AND SWINE—Continued

Best Foods	Diseases and Symptoms	Treatment	Bulletins
When horse goes into training, strength of food should be gradually increased. At first may have all hay he will consume. Later it may be necessary to limit it. No carrots. Bran mash once or twice a week if constipated. Oats gradually increased.	*Hives.*—Symptoms: Eruption of swellings from one-half to two inches in diameter on skin. The edges of swellings cut off sharply from surrounding tissue.	Withhold feed for 24 hours. Then give bran mashes and small quantities of hay. Cleanse digestive tract by quart of linseed oil or 1½ pounds epsom salts. To relieve itching, apply alkaline solutions, 1 tablespoonful sodium bicarbonate to 1 quart of water, or a weak solution of ammonia.	Report of Kansas State Board of Agriculture, 1899.
	Heat stroke.—Symptoms: Horse stops sweating, appears droopy in harness, drags along, soon falls and becomes unconscious. Breathing rapid and shallow, pulse rapid and weak, body temperature excessively high.	Treatment energetic. Apply ice bags to head and pour cold water over body to reduce temperature immediately. Give ½ pint whisky, followed by tincture of digitalis in 1 dram doses by mouth or ½ dram doses subcutaneously to stimulate heart. Continue cold water until temperature is reduced to 102 or 103 degrees Fahr. Rub limbs briskly with straw or the hands. Recovery is gradual, over week or two.	
	Moon blindness.—Symptoms: Great irritation in eyeball, excessive flow of tears; eye kept closed and drawn back into socket; mucous membrane on inside of eyelid red, swollen and may protrude between closed lids; eyeball enlarged and cloudy, very sensitive to light.	Keep animal in the dark and wash off eye several times daily with a 4 per cent solution of boric acid. A few drops may be dropped in eye. Ice poultices may be used 3 or 4 days, after which warmth should be applied by covering eye with cotton soaked in warm water. One or two drams of potassium iodide daily have been recommended.	Farmers' Bulletin No. 170.
For the driving horse.—Oats lead among the grains. Bran mash for constipation. When horse is not taken from stable during day, the concentrates should be reduced by one-third. Laxative foods, such as clover or alfalfa hay or bran, in too large quantities should be guarded against.	*Lampers.*—Symptoms: Mucous membrane of mouth becomes congested with blood and protrudes below incisor teeth.	May be relieved by making a few shallow punctures in mucous membrane with a sharp knife that has been thoroughly sterilized. Such treatment demands expert care.	
	Rheumatism.—Symptoms: Animal becomes stiff and lame, followed by rise of temperature (104 degrees Fahr.) A swelling appears around joints of legs which is very painful to the touch. Location may change from day to day, and attacks be intermittent.	Administer a cathartic, aloes balls containing 7 drams of aloes. Thoroughly rub affected joints with a stimulating liniment, as camphor or chloroform liniment. Follow cathartic with salicylates given in form of sodium salicylate. 6 to 8 drams may be given 2 or 3 times daily in food. Keep horse in dry place and give plenty of fresh air.	North Carolina Bulletin No. 189.
For the work horse.—In general, horse should have over 2 pounds of provender daily for each 100 pounds of weight. Of this about two-thirds should be grain, depending on heaviness of work. Morning meal should be rather light, mostly of grain. Midday ration should not be large. Heavy feeding at night. In cold weather a more carbonaceous ration may be used. Equal parts of corn and oats better than larger proportion of oats.	*Colic.*—Symptoms: Animal lags or stops in harness or walks around stall restlessly. Looks around at side, kicks at belly, may grit teeth. Tail gets a peculiar crook and is held extended. May lie down, roll, kick, or make violent movements, as slamming head against floor or biting at self or manger. Attacks may be intermittent.	Give animal plenty of room. To allay pain, cannabis indica, 1 to 2 ounces, may be given, or morphine sulphate, 5 to 7 grains, given subcutaneously. Larger doses of either dangerous. An excellent prescription is fluid extract cannabis indica, 4 drams; tincture opium, 6 drams; sulphuric ether, 1 ounce; sweet spirits of niter, 1 ounce. Give in 1 dose and repeat if necessary in an hour. To stimulate intestines, 8 drams of aloes or 1 pint of linseed oil. Injections of lukewarm water into rectum good. In fermentation colic tapping is quickest and surest method. This requires expert surgery.	Florida Bulletin No. 72.
	Heaves.—Symptoms: Distressing dry cough which often occurs in paroxysms. A double respiration present. Expired air comes from nose in 2 jets, with pause between them.	Condition incurable. Greatest benefit from regulation of diet. All dusty hay should be withheld and small quantities of best timothy given sprinkled with lime or molasses water. Nutritious concentrated foods best: corn, oats and bran with carrots and turnips or apples mixed in.	
For the brood mare.—Much the same as for work horse with the addition of more protein foods, as bran and oil-meal. If constipated, give bran mash. After foaling, a hot bran mash fed once a day has a cooling and laxative effect. To stimulate milk flow, good pasture grass best, but oats or wheat bran with equal weight of corn-and-cob meal is good.	*Bots.*—Symptoms: Cause irritation of walls of stomach and intestines and obstruction of passage between stomach and intestines.	Best treatment preventive. Eggs should be removed from hair before tenth day. If occasional bots noticed in manure, animal should be starved for 12 hours, allowing only water, after which give 2 teaspoonfuls of tartar emetic in water as a drench. Repeat in 4 hours; 8 or 12 hours later give a drench of 1 pint to 1 quart of linseed oil.	Iowa Bulletin No. 18.
	Worms.—Symptoms: Presence of worms in fæces the only sure sign.	Give animals no food for 12 to 18 hours. Then give tartar emetic in two-dram doses every 4 hours until 3 doses are given. Follow in 3 or 4 hours with 1¼ pints of linseed oil.	
	Curb.—Symptoms: A rupture of the ligament on posterior surface of hock with swelling and heat, often lameness. Leg shows bulging backward below point of hock.	In acute inflammation cold water should be applied for 10 to 12 hours daily in constant stream. If lameness persists after a week, a blister of biniodide of mercury 1 part to vaseline 8 parts should be applied and animal should rest for 2 to 4 weeks.	
For the foal.—Should begin to nibble grain from mother's box at 2 months, and at 5 to 6 months be eating well. Should have more protein than work horse. Oats, shorts, peas and perhaps corn, may constitute the grain. Alfalfa, clover and mixed hays may constitute the roughness. Abundant exercise important.	*Founder.*—Symptoms: Onset sudden with fever from 102.5 to 106 degrees Fahr., rapid respiration, increased pulse, intense pain in feet. Animal stands with hind feet well under body.	Give tincture of aconite in 10-drop doses every 2 hours during first day. Allow animal to stand with affected feet in a soaking-tub of cold water, or in puddle of soft clay, water to be kept cold by addition of ice. Give 2 ounce doses of saltpeter in a pint of water 3 times daily for 1 week. Case may need expert attention.	New Jersey Bulletin No. 92.
	Bone spavin.—Symptoms: Onset gradual. Lameness most marked when horse is first brought out of stable and disappears on warming up. Bony enlargement on hock joint.	Proper shoeing will assist in removing lameness. 4 to 6 weeks rest with repeated blisters may give temporary relief. Most successful treatment requires assistance of a veterinarian.	
	Ringbone.—Symptoms: Onset gradual with lameness. Local heat, swelling and pain in joint. Presence of bony enlargement about joint.	Foot should be properly dressed and shod. If lameness is marked, prolonged rest and repeated mercurial blisters (1 part biniodide of mercury to 8 of vaseline) should be applied. If this is not successful, call veterinarian.	
For the stallion.—During breeding season, grain ration should consist mainly of good sound oats, varied by ration of corn, corn-and-cob meal, or barley. Wheat bran is valuable. The roughness should be clean, sweet hay, timothy or timothy and clover mixed.	*Splint.*—Symptoms: Lameness. Pressure over splint will cause animal to flinch. Skin will show increase of temperature and there may be some edema. New bony growth may be seen or felt on front of internal splint bone.	For acute inflammation, let cold water run over part for several hours each day for a week. Hair should be clipped, then apply blister of one dram benzoid of mercury to one ounce of petrolatum. Animal should rest 3 to 4 weeks. In severe cases, call veterinarian.	Special Report on Diseases of the Horse, Bureau of Animal Industry, U. S. Dept. Agr., 1903.

TABLE III. HORSES, CATTLE,

Best Breeds	Characteristics	Uses	Best Foods
CATTLE			
Aberdeen-Angus	Black color, polled heads, rotund compact type, smoothness of conformation, short legs, evenness of flesh when fat, deep, full hindquarters. Beef breed.	Beef. Very valuable in crossing and grading. Little value for milk.	
Ayrshire	Medium size, standard weight for cows 1000 pounds, bulls 1500 pounds or more. A little smoother than Jersey or Holstein but from behind wedge shape is evident. Tips of ears notched, horns white with black tips and curve outward and upward. Body large and deep, ribs well sprung, hindquarters often heavy. Udder shows high development of form and setting. Color variable through red, white, and brown in patches. Mild but active disposition. Dairy breed.	Milk, butter, and cheese. Crossing to improve grade herd.	
Brown-Swiss	Weight for cows 1200 pounds and bulls 1800 pounds. Colors shade from light to dark chestnut brown. Light tuft of hair between horns, on inside of ears, and a narrow line along back. Nose black, mouth surrounded with meal-colored band. Horns with black tips, medium size. Face dishing, large, full eye; ribs well sprung. Hoofs and tongue black, udder large, extending well up in front and rear. Teats large, well placed. Short legs. Dairy breed.	Milk for condensing and butter and cheese making.	
Galloway	Low, blocky animal, with long, soft, shaggy coat of black hair, hornless, well sprung in the ribs, resembling barrel in shape, which is evenly covered with juicy lean flesh. Head short and wide, forehead broad, face clean, nostrils large. Eye large and prominent. Neck short, clean. Shoulders broad, joining body smoothly. Hindquarters long, wide, well filled. Rump straight, wide, carrying width of body out uniformly, well filled with flesh. Thighs broad and thick. Legs short and clean. Beef breed.	Beef, hides and crossing. Very prepotent.	
Guernsey	Clean-cut, lean face, long, thin neck, backbone rising well between shoulder blades, pelvis arching and wide, rump long, abdomen large and deep, udder full in front, of large size and capacity. Teats well apart, and of good even size. Hair a shade of fawn with white markings, cream colored nose, horns amber, small, curved and not coarse. Mature cows about 1050 pounds. Bulls 1200 to 1500 pounds. Dairy breed.	Milk, cream and butter. Cross-breeding.	
Hereford	Color, red and white. Head, including jaws and throat, white, white under neck, down the breast, under belly, and on legs. Bush of tail white, white strip on top of neck to top of shoulders, remainder of body red. Head short, forehead broad, eyes full, horns rather strong and of whitish yellow color, free from black tips, more or less drooping, neck short and thick. Hide heavy and loose and covered with dense soft coat of hair. Breast broad and full, free from loose dewlap. Shoulders broad on top. Ribs well sprung and extending well backward. Rump bones wide apart. Legs short, straight and set well apart. Line of back straight and level. Quarters full and well rounded. Beef breed.	Beef, especially early or "baby" beef.	
Holstein-Friesian	Color, black and white piebald. Head, broad between eyes, eyes large and bright, horns small, tapering toward tips, neck long, chest moderately deep and low, barrel long and wedge shaped, large abdomen, legs rather short and nearly straight and wide apart. Hair fine, soft and furry. Udder very capacious, extending well forward in front; teats well formed and wide apart. Dairy breed.	Milk, butter and cheese. Fair beef qualities.	
Jersey	Small head, muzzle black or dark in color surrounded by light or mealy strip of light skin and hair. Eyes prominent, bright and wide apart. Horns crumpled, small, often black tipped. Neck fine, clean and small. Legs short, fine boned and small. Body well rounded, large and deep. Skin mellow, loose, yellow, with short fine silky hair. Udder large, not pendulous. Teats medium size, placed far apart. Back straight from shoulder to tail. Movement light and graceful. Cows 800 to 1000 pounds, bulls 1200 to 1500 pounds. Dairy breed.	Milk and butter.	
Red Polled	Weight for bulls 1800 to 2000 pounds, cows 1300 to 1500 pounds. Color red. Nose flesh color. Switch of tail and udder white. Head medium length, wide between eyes. Poll well defined and prominent, neck of medium length, clean cut, straight from head to top of shoulder. Chest broad and deep, back long, straight and level, hips wide and well covered, legs short and straight. Udder full and flexible. Teats well placed and wide apart. Hide, loose, mellow, with full coat of soft hair. Dual purpose breed.	Beef, milk and butter.	
Shorthorn	Head wide between eyes, short from eyes to nostril. Horns short, curved forward, waxy white with dark tips. Neck short and fine. Back straight, level and broad and deeply covered with flesh. Thighs wide, deep and long, well filled down in the twist. Body deep, squarely built. Flanks well let down, underline nearly straight. Legs medium length. Colors, pure red, pure white, a mixture of these colors, or roan. Beef breed.	Beef, crossing, grading. Fair results for milk, butter and cheese.	

For dairy cattle

1. The dairy calf.—Avoid fattening feeds. Choose such as tend to develop a vigorous muscular system. Gradually substitute skimmed milk for full milk after first few days. A small quantity of some concentrated feed, as shorts, linseed meal, or flaxseed meal boiled into a jelly with water (1 part meal to 6 of water) is fed daily with the skimmed milk. Milk should be at blood heat unless calf is accustomed to cold milk. At 6 or 8 weeks other feeds are given, preferably oats wheat middlings, or a mixture of both. For older calves, mill feeds, oil-meal, barley, malt sprouts, etc., are desirable. Keep fine quality of early-cut hay before calves.
2. Dairy heifer.—As time of parturition approaches, feeding should be plain, good clean hay from clover or mixed grasses, corn fodder, corn silage (not to exceed 25 to 30 pounds a day) or roots. Both dry and succulent roughage is fed, and small amounts of bran, ground oats, shorts, gluten feed and perhaps corn. Shortly before calving, feeding of all grains except about 2 pounds of bran, is discontinued and dry roughage and roots are fed till cow freshens. Directly after calving a warm thin slop of oatmeal, bran or shorts is given or warm water only. Until danger of fever is over, feed should be very light and gradually increased for 2 or 3 weeks until cow is on full feed. Corn meal good for a heavy milking heifer.
3. Dairy cow.—
   (a) Summer.—Ample pasturage. Later in the season add soiling crops, such as corn, alfalfa, peas and oats, rye, rape, etc. Summer silage: corn, red or other clover and alfalfa. 30 pounds of soiling crop or silage average allowance for dairy cows on poor pastures, to be increased as conditions demand. In case of heavy milkers or very short pasture, add few pounds of wheat bran or wheat bran and oats, throughout season.
   (b) Winter.—Succulent feeds should be provided during entire lactation period. Silage and roots are main available feeds. Best results from not over 40 pounds silage fed daily, and fed with some dry roughage, hay or corn fodder. Protein feeds, as clover hay, wheat bran or oil-meal should be fed with corn silage or fodder. Clover hay or hay of other legumes stands first for dairy cows. Pure timothy, especially if late cut, is a poor cow feed. Other kinds of hay are millet, oat, sorghum, alfalfa and pea. Common concentrates are the cereals and mill refuse, starch or glucose factory refuse, brewery and distillery feeds and oil-meals. Good rule is to feed as many pounds of grain feeds a day as cow produces pounds of butterfat during week and to feed as much roughage as cow will eat up clean. Should give variety of feeds containing liberal amount of easily digestible substances. Feeding must be regular.
4. Dairy bull.—Ground oats, wheat bran, gluten meal, oil-meal, silage, clover hay; grain ration not to exceed 5 or 6 pounds per day for 1000-pound animal. Keep animal vigorous, not fat and lazy.

For beef cattle

Baby beeves (10 to 16 months).—Require heavy grain feeding. Corn depended on largely, fed with a food rich in protein, as oil-meal or gluten feed. Oats and bran may be added if not too expensive. Good ration is 5 pounds corn, 2 pounds oats, ½ pound oil-meal, plenty of good clover or alfalfa hay. Corn silage is valuable. Daily ration must be increased as fast as calves can handle it.

Long yearlings (18 to 23 months).—When calves are born in spring they are given little or no grain before or after weaning. Through summer and fall depend on grass. In winter a liberal feed of hay with small allowance of grain. Pasture without grain following summer and full feed of grain next fall and winter. If roughage is largely alfalfa, clover or cowpea hay, the grain ration may consist of corn alone. If other roughage used, supplement corn with equal weight of bran, or one-third to one-half of that weight of oil-meal. In the second fall feed close grown corn fodder, shelled corn, alfalfa, clover or cowpea hay. If non-legume roughage used make night grain ration one-fifth to one-fourth oil-meal, gluten or cottonseed meal.

Short two-year-olds.—Finish by feeding grain in connection with spring and summer pasture. With this system a light grain ration is fed the first winter and less than half feed of grain second winter. Soaked shell corn is effective for spring and summer feeding.

Fall feeding two-year-olds.—Corn fodder on pasture. May begin about September 15 and continue in field for 3 months. Begin with 3 pounds of corn a day and increase till cow's capacity is reached. 3 pounds bran and 1 pound oil-meal or cottonseed meal per steer per day will greatly increase gains.

Winter feeding range two-year-olds.— Cattle which have had no grain during summer and fall. Snapped corn most used early in feeding with alfalfa, clover or cowpea hay. Field-cured stalks with alfalfa equally good. After 6 to 8 weeks begin shelled corn gradually to replace snapped corn. If non-leguminous hays used, supplement corn with about 2 pounds per day of bran, oil-meal, gluten or cottonseed meal. On full feed will take 20 to 25 pounds grain per day, plus all roughage desired.

Range three-year-olds.—Require smaller proportion of protein foods than above, but consume a larger proportion of grain to hay.

SHEEP AND SWINE—Continued

Brief Breeding Rules	Diseases and Symptoms	Treatment	Bulletins
1. Age of puberty 4 to 18 months.	*Caked udder.*—Part or all of udder becomes enlarged and firm. Cow is depressed and there may be a slight rise of temperature. Gland is sensitive to pressure and flow of milk is lessened. Milk is watery and may be tinged with blood.	Give sparingly of milk producing food. Massage udder with hand and rub in camphorated oil or tincture of iodine 1 part, alcohol 8 parts. Then severe warmth should be applied by sponges wrung out of hot water and held against udder. In case of development of abscess or gangrene expert assistance will be needed.	Herdbooks of all breeding and registration societies. Special Report on Diseases of Cattle and Cattle Feeding, U. S. Department of Agriculture, Bureau of Animal Industry, 1892. Revised 1904.
	Chapped teats.—Symptoms: Apparent on teats. May cause great difficulty in milking.	In fresh cows wean calf as soon as possible. See that teats are dry before cow goes out into the cold or wet weather. Bland antiseptic ointment, as a 10 per cent ointment of calomel in petrolatum should be applied after milking. Yellow oxide of mercury in a 5 per cent ointment is also good. Care must be taken to prevent milk becoming contaminated. In very bad cases milk should be withdrawn for few milkings with tube and udder massages. End of teat and milking tube must be sterlized before inserting. Astringent applications, as lead water with laudanum or tannic acid ointment, are good when there is considerable discharge from the sores.	Bureau Animal Industry Circular No. 51.
2. Best age for breeding beef cattle, 20 to 27 months, dairy cattle 18 to 24 months.			Same Bulletin No. 108.
			Same, 15th Annual Report.
	Milk fever.—Symptoms: Attack usually comes on within two days after calving. Cow is restless, staggering gait, especially in hind legs, weakening of knees and fetlocks in front. This increases until paralysis becomes general, and animal goes down. Cow takes very characteristic position—head turned round to side, usually left, rests against chest, causing peculiar arching of neck. If head drawn out straight, immediately flops back to above position. Animal quiet and insensible.	Because of paralysis of the throat, great care should be taken in administration of medicines by the mouth. Patient should be kept in an upright position on the breastbone, and not on her side. Only successful treatment is the injection into the udder of atmospheric air, which requires the assistance of a surgeon.	Farmers' Bulletins Nos. 55, 205, 346.
			Connecticut Reports, 1893-1901.
3. Period of heat, 40 to 60 days after delivery, if suckling the calf, and 20 to 30 days if calf is taken away at birth. Period recurs each 3 weeks thereafter. Duration 12 to 24 hours.			Cornell Bulletins Nos. 268, 269.
			Florida Bulletin No. 96.
	Sore tongue.—Inability to eat, frequent movement of lips with formation of froth on their margin, driveling of saliva. Ulcers occur on gums around teeth, inside lips and on tip of tongue. Muzzle dry and parched, and crusts and scabs form over the parts. The thin skin in clefts between jaws may become fissured and eroded, causing a slight swelling with pain. Animal takes position with back arched and feet propped under body.	Remove herd from pasture to barn or corral and feed on soft nutritious food, such as bran mashes, ground feed and gruels. Keep clear cool water in manger. Dissolve 2 heaping tablespoonfuls of borax or one tablespoonful potassium chlorate in each of first 2 buckets of water taken during day. Astringents, such as ½ tablespoonful alum, borax or chlorate of potash, should be placed on tongue. Feet may be treated with a 2 per cent solution of carbolic acid or of creolin. Fissures or lesions of skin benefited by carbolized vaseline or zinc ointment.	Georgia Bulletin No. 49.
			Illinois Bulletin No. 142.
			Indiana Bulletins Nos. 129, 130, 136, 137; Circulars Nos. 12, 14.
4. Period of gestation 9 to 9½ months (285 days).			Kansas Bulletin No. 81.
	Indigestion.—Symptoms: When stomach and small intestines affected, loss of appetite and rumination, coated tongue and emaciation. Constipation is usual, although diarrhœa may be present. Fæcal matter contains imperfectly digested food and more or less mucus. When large intestine involved, appetite may not be affected. Diarrhœa marked, droppings coated with mucus. No undigested food present. Animal will lose flesh and become hidebound.	In constipation, 1 quart of castor oil should be given. Easily digested and nutritious food should be given in small quantities. Green food best or hot bran mashes, with small amount of good sweet hay. In diarrhœa and fermentation a mixture of bismuth subnitrate 1 dram and creosote ½ dram shaken up with milk or given as a drench twice daily for 2 or 3 days is beneficial. For a tonic powder, nux vomica 1 dram, reduced iron ½ dram, powdered gentian root 1 ounce, should be given in the feed 2 or 3 times daily for a few weeks.	Louisiana Bulletins Nos. 104, 115.
			Maryland Bulletin No. 84.
			Massachusetts Report, 1908.
Breeder should work toward a certain standard or ideal and should choose parents that approach that ideal. The parents, especially the male, should have known ancestry of approved type, as there is less danger of undesirable variations in the offspring.			Michigan Bulletins Nos. 149, 257; Circular No. 4.
	Choking.—Symptoms: Champing of jaws, driveling of saliva, ceasing to chew and choking movements, head extended, eyes bulging, inability to swallow.	When obstruction is in pharynx, a block of wood should be placed in mouth between back teeth, and object removed with hand. If in gullet, small amount of olive oil should be given at frequent intervals to lubricate the esophagus and allow object to pass into stomach. If this fails, the probang, a long, hollow, flexible tube, may be used. It is oiled. By means of probang, foreign body gradually forced into stomach.	Mississippi Bulletins Nos. 70, 121.
			Missouri Bulletins Nos. 53, 58.
	Cough.—Symptoms: Chilly sensations or a chill followed by rise of temperature to 103 to 105 degrees Fahr., loss of appetite and rumination, dry muzzle, constipation, rapidity of pulse and respiration. Cough at first dry, harsh and painful. Later cough becomes moist and there is nasal discharge.	Animal should be placed in light, comfortable stall and given plenty of clear water. Keep bowels open with 1 pound of Glauber's salts. Feed green succulent materials if possible or bran mashes and moistened hay. An electuary consisting of extract of belladonna leaves 5 grains, morphine sulphate 3 grains, powdered licorice-root 4 drams and sufficient sirup to make an electuary, should be given on tongue 4 times daily. If cough persists after the secretion ceases a mixture of ammonium chloride 1 dram in ½ ounce of brown mixture should be given 4 or 5 times daily.	New York (Geneva) Bulletin No. 317.
			Ohio Bulletin No. 193.
The feeding and environment are important if best results are desired.			Oregon Bulletin No. 102. Pennsylvania State Board of Agriculture Bulletin No. 16.
	Warts.—Symptoms: Appear as grayish or grayish red projections of skin or mucous membrane. Favorite location is udder and teats, sides of head and neck, on lips and belly.	May be removed with scissors or fingers, or ligatured by rubber band or horsehair. Roots should be cauterized with tincture of iron, glacial acetic acid or lunar caustic. Acids should not be used around eyes or mouth. When warts are found in large numbers, arsenic in form of Fowler's solution should be given in 1 teaspoonful doses twice a day for a 6-months calf.	Pennsylvania Bulletin No. 88; Report, 1908.
The various breed associations have established standards of excellence which serve as guides to breeders in choice of parents.			Rhode Island Bulletin No. 77.
	Mange.—Symptoms: Contagious disease. Points of redness, pimples, vesicles and formation of scabs. Intense itching which becomes unbearable at night in hot stables or when exposed to sun. Animals scratch, rub, and bite themselves. Hair falls out and skin is bloody. In worst stages skin moist and bloody, ulcerated, scabby, thickened and wrinkled.	A good combination of drugs for killing parasites is flowers of sulphur 1 ounce, vaseline (or lard) 10 ounces. Best method is to dip animal in a vat containing flowers of sulphur 24 pounds, unslaked lime 12 pounds, water 100 gallons. This should be repeated in 10 days to 2 weeks.	South Carolina Bulletin No. 67.
			Tennessee Press Bulletin No. 1900.
	Ringworm.— Symptoms: Formation of circular patches on skin which soon becomes denuded of hair. Outer layer of skin is inflamed and vesicles form which exude a gummy liquid. Scaly crusts are formed, usually on head and neck.	Remove crusts by washing with soap and water, then apply acetic acid, 10 per cent sulphur ointment, tincture of iodine, or nitrate of mercury ointment once daily. Cleanse and whitewash stable to destroy spores scattered by crusts.	Texas Bulletin No. 110.
For additional breeding rules, see horses.			Wisconsin Bulletins Nos. 33, 38, 116, 117, 151.

TABLE III. HORSES, CATTLE,

Best Breeds	Characteristics	Uses	Best Foods
SHEEP			
Cheviot	Medium size, hornless, face and legs white, body closely covered with wool of soft fiber and pure white. Head bold and broad. Fleece forms almost a ruff about face. Deep and large in breast, back wide and straight. Short legs set well apart, hoofs black. Mature rams 200 pounds, ewes 150 pounds.	Mutton. Not superior as a wool producer. Wool of good quality, but light.	A clean and dry feeding place is necessary. Regularity in feeding imperative. Ordinarily best to feed sheep twice a day. Sheep need to have access to salt and water at all times.
Cotswold	Large, high-standing breed with heavy fleece of long white, lustrous wool. Ample topknot often covering eyes. Bold upright carriage. Head moderately small, face white or mixed with gray, eyes prominent, neck short, thick and strong, shoulders broad and full, back broad, breast broad and well forward, quarters long and full, mutton quite down to hock. Weight of ram 250 pounds, ewe 200 pounds.	Mutton and wool, the latter especially. Crossing on native and merino sheep.	*Feeding lambs.*—When ewe has a single lamb, not necessary to feed any grain until near weaning time. When a ewe has two lambs, they should get some grain. If lambs are to be sold before weaning, grain feeding must begin as early as possible. A mixture of three-fourths corn meal and one-fourth bran is satisfactory. Right after weaning it is well to have fresh pasture, or rape or other succulent feed. In addition, lambs should be fed liberally on grain.
Dorset-Horn	Face and legs pure white, flesh-colored nose. Both sexes have horns. Eyes prominent, neck short and symmetrical, shoulders broad and full. Chest full and deep, quarters wide and full with mutton extending down to hock. Fleece medium grade, of even quality, extending over belly and well down on legs. Short stout legs. Weight for rams 200 pounds, ewes 160 pounds.	Mutton breed. Early breeder, valuable for production of hothouse or winter lambs. Fleece light.	For fattening, corn is best. combined with peas and bran, Grain feeding must come gradually. For fattening mature lambs during fall, good grass pasturage and rape or rutabagas, with a mixture of corn and oats, is most satisfactory.
Hampshire Down	Black face, head large, well covered with wool on forehead and cheeks, nostrils wide. Ears large and drooping, eyes prominent and lustrous, legs well under outside of body, straight, almost black. Chest deep and full with breast prominent and full, back straight, quarters long and deep in thigh. Ewes prolific and heavy milkers. Weight for rams 250 pounds, ewes 185 to 195 pounds.	Mutton and production of early market lambs. Fleece inferior.	For final fattening, lambs should be confined in yard. During winter dry succulent fodder with grass will give good results; for dry fodders, alfalfa or clovers; for succulence, corn silage or roots; for grain, corn, oats, bran and oil-meal or cottonseed meal.
Leicester	Hornless, large size, rectangular form of body on clean legs, bare faces or carrying a very scant topknot. Head long, tapering toward muzzle, face wedge-shaped, covered with fine white hairs, eyes large and prominent, neck strong and moderately short. Breast deep, broad and full. Back broad and well fleshed. Legs of moderate length. Fleece fine, uniform, curly, with bright luster.	Crossing purposes to get early lambs for market. For wool especially, and mutton.	To fatten lambs in a short period give preparatory feeding on rape or roots for about six weeks. Should have pasture before going on rape, which must be restricted in quantity. For grain, begin with bran or oats. Give one-fourth pound per head daily at start. Increase quantity slowly. At end of a month about 1 pound per head, which should consist of ½ corn and ½ bran or oats, given in 2 feeds. For fodder, clover hay, corn stalks or pea-straw. Increase amounts gradually.
Lincoln	Large size with heavy fleece of long wavy or curly wool and moderate tuft of wool on face. Color white, head large, without horns, body deep, back wide and straight. Legs broad and set well apart. Weight for rams 250 pounds, ewes 200 pounds.	Wool. Crossing, especially on merino stock.	*Breeding ewes.*—Fond of clover hay, alfalfa, alsike, pea-straw, shredded corn fodder and oat hay. A ewe weighing 100 to 150 pounds will eat 2 to 3 pounds of such fodders daily during winter. May need to supplement pasture with small grain, as oats. Just before lambing time, ewes should be fed liberally on variety of roughage. Some succulent food, as corn silage and roots, will help to produce good flow of milk. After lambing they should receive some wheat bran or oats, unless they can go on good pasture.
Merino	Distinguished by its very fine wool, usually delicately crimped. Wool generally short and dense. Grows to tips of ears and hoofs of feet. Form, when shorn, angular, shoulders narrow, back not usually so straight or strong as English breeds, legs less straight and neck more slender. Ram usually has horns. Very enduring and resistant. *The American merino* has 3 to 5 heavy folds on neck, and folds on arm and sides and across hips. Fleece covers entire sheep except tip of nose and hoofs. Eyes hidden by wool. Outside of fleece a dirty brown, but inside white. Ewes 80 to 100 pounds, rams 100 to 175 pounds. *Delaine merinos* have smoother bodies than the American, and fewer folds and wrinkles. Mature ewes 100 to 150 pounds, rams 140 to 200 pounds. *Rambouillet merinos* have large bodies, usually smooth and free from wrinkles, except perhaps on neck. Fleece fine and white. Rams usually have large spirally curved horns, ewes hornless. Legs long. Rams 175 to 185 pounds, ewes 140 to 160 pounds.	Wool Fleece especially fine, strong and heavy. Used for crossing to increase wool production. Delaine merino mutton of fair quality.	*Feeding rams.*—For ram lambs, clean, heavy oats and pasture are best. In winter, clover hay and corn fodder, roots or silage, should constitute the ration. During breeding season, bran, oats, roots and clover hay should be fed liberally.
Oxford Down	Largest of down breeds. Nearly straight on underline. Long and coarse fleece. Very stately appearance. Color of face and legs brown, which is often flecked with gray. Ewes very prolific and heavy milkers. Not hardy under American climatic conditions. Rams 250 to 350 pounds, ewes 180 to 275 pounds.	Representative mutton breed. Fleece long and coarse.	
Shropshire Down	Dark brown face and legs. Broad head, short face, thick muscular neck, body somewhat barrel shaped, except that it is straight on back Body, head and legs to knees covered with fleece of even length and quality. Weight for rams 225 pounds, ewes 175 pounds.	Mutton and wool.	
South Down	Smallest of down breeds, but the model in form. Short straight legs, wide apart; broad level back thickly fleshed; long broad hips; neck short, thick at shoulder; head small, forehead full, face short, eyes prominent, ears small. Face and legs uniform reddish brown. Hindquarters carry down very heavy; breast broad and prominent. Fleece compact, long and close wool, white and carrying some yolk. Best weight for rams 200 pounds, ewes 150 pounds.	Mutton breed; used for crossing to produce early lambs. Wool of good quality.	
Suffolk Down	Large, rangy sheep, black-faced, hornless, with long clean, black legs. Wool is of good quality and mutton is excellent. A good feeder and very prolific.	Mutton breed; used also for crossing. Wool is short.	

Best Breeds	Characteristics	Uses	Best Foods
SWINE			
Berkshire	Rather more than medium size. Snout of medium length, face dished. Ears nearly erect, well carried. Jowl heavy. Neck short with considerable crest. Shoulder, back and rump of good width. Body deep. Ham thickly meated, strong constitution. Color black with a white mark on face. White on each foot and on tip of tail.	Lard and pork. Meat lean and of high quality.	*Breeding boar.*—Should not be overfed, but given just what he will eat up clean. Ration needs to be varied and have bulk, and always contain a succulent food. Young boars should be fed more concentrated foods than older animals. Boar should be fed more liberally during breeding season, than remainder of year. Food should consist of grain (finely ground oats with one-third to one-half ration of wheat middlings or wheat bran), skimmed milk, succulent food (roots, finely cut second-crop clover or alfalfa leaves).
Cheshire	Medium size. Body has good length. Shoulders and hams well developed. Face slightly dished. Ear small and erect. Bone fine and of fair quality. Color white. Black spots often occur on skin.	Lard, pork and bacon.	
Chester-White	Medium size, face straight or very slightly dished. Ear droops and is somewhat loosely attached to head. Color white, hair in many specimens wavy or curly. Neck wide, deep and short. Jowl smooth, neat and firm. Shoulders broad, deep and full. Chest large, deep, full in girth. Sides full, smooth, deep; ham broad, full, long, wide and deep. Back broad on top, straight or slightly arched, legs short and straight. Coat fine. Weight of boars 2 years old 500 pounds, sows 450 pounds.	Lard and pork. Crossing, especially with Poland-China.	*Breeding sows and young.*—Good pasture (blue-grass, clover, field-pea, alfalfa, cowpea, soybean) is essential and cheap. Mature sows need little except good pasture in August and September. In October about 2 pounds per head of corn should be given. After sows are bred they should have pasture and some grain, preferably equal parts of corn and oats at the rate of 3 or 4 pounds to 300

SHEEP AND SWINE—Continued

Brief Breeding Rules	Diseases and Symptoms	Treatment	Bulletins
Age of puberty 6 to 10 months. Best age for breeding 18 to 20 months. Period of heat, regularly during spring and autumn months. At other seasons period is irregular and often absent. Duration 2 to 3 days. Period of gestation 5 months (21 weeks). One ram to 30 to 50 ewes. Ram may be allowed to run with flock at night. In north, breed in October to December to get lambs in March-May; in South breed in August or September. Ewes have passed greatest usefulness at 7 to 8 years. Lambs may be allowed to run with mother 3 to 4 months. Should be weaned by 4 months. To get hot-house lambs, have rams and ewes in good physical condition, not overfat. Use a young ram and keep him well fed while in service. Give ewes abundance of succulent food and some corn. If ewe was not shorn in fall, shear as early as safe. Have ram with ewes not earlier than March 15 nor later than May 15. For additional breeding rules see horse.	*Stomach worm.*—Symptoms: Sheep become unthrifty, dull and lose flesh and strength. A soft non-inflammatory swelling appears under the jaws. Diarrhœa appears. *Tapeworms.*—Symptoms: Slow development. Weakness and loss of flesh. Flanks are drawn up or distended with gas. Unsteady on feet. Excessive diarrhœa may develop. *Bloating.*—Symptoms: Abdomen becomes bloated and distended, filling with gas. Feeding falls off, animal shows stupidity, and respiration is difficult. *Liver rot or fluke disease.*—Symptoms do not appear until disease is far advanced. Rapid loss of condition and weakness, wool becomes dry and may drop off. Eyes and lips become bloodless. Appetite falls off. Bowels irregular. *Gid, staggers or sturdy.*—Symptoms: Animal moving in a circle, swaying, reeling, running forward with head elevated, turning about sharply, showing lack of control. Animal may be stupid. Eyes becoming staring, sight lost. *Scab.*—Symptoms: Sheep scratch, rub and bite infested places. Little blisters form which rupture and exude a yellowish liquid which dries on skin and forms scab. Mites may be found in margin of scab. Wool mats and falls out. Shoulders, sides, back and rump most affected. *Sheep Ticks.*—Symptoms: Animals show itching and pain caused by ticks, and bite and scratch themselves. *Foot rot.*—Symptoms: Lameness is apparent. Foot reveals red, moist spot in cleft just above the horny part. A sticky offensive discharge from hole in horn of hoof follows. Just above hoof there is swelling, accompanied by heat and sensitiveness. *Paper skin or lung worm disease.*—Symptoms: A fitful or spasmodic cough leaving animal almost suffocated. Discharge accompanies cough. In final stages skin becomes dry and papery. Appetite falls off, resulting in weakness and decline. *Sore feet and sore mouth.*—Symptoms: Lameness and difficulty in eating. Ulcers appear on skin of leg above hoof and in membrane lining the lips. *Garget.*—Symptoms: Udder is swollen and hot. Milk contains streaks of blood or clumps of pus. *Grass staggers.*—Symptoms: Failing appetite, constipation, abdominal pain, fever, restlessness, unsteadiness, delirium, running against objects aimlessly. *Scours.*—Symptoms: Offensive diarrhœa, loss of appetite, distended abdomen, abdominal pain. Depression and weakness.	Change flock to high, well-drained land which has not been occupied by sheep for some time. Feed generously and provide plenty of salt. Mix 10 drams of coal-tar creosote in a gallon of water and give to lambs 4 to 6 tablespoonfuls, and to yearlings and older sheep 8 to 10 tablespoonfuls every other day until 3 doses have been given. Feed should be withheld for 12 hours before and 3 hours after medicine. Fringed tape worm difficult to control by medicine. For broad tapeworm, give every sheep in flock ½ to 1 dram of extract of male fern in 2 to 4 ounces of castor oil, or 1 to 1½ drams of kamala. Withhold feed night before and in the morning of the day in which the medicine is given and give no water for 5 or 6 hours after medicine. Surgical treatment is necessary. Remove sheep to high, dry pastures and separate the sick from the well. Give nourishing food and plenty of salt. Infested pastures and pools should be drained and should be used for other purposes until clean. Snails should be destroyed. Drugs have little effect. Animals in advanced stage should be slaughtered. Carcasses of infested sheep should be completely disposed of so that dogs cannot get at them. As precaution, give dogs that have run of place 1 or 2 teaspoonfuls of castor-oil, followed 12 to 24 hours later by 25 minims of extract of male fern, followed with another dose castor-oil in 2 hours. Keep dog tied and burn all discharges. Shear all sheep and confine for 2 to 4 weeks. Then dip in a mixture that will kill the mange mites. Lime and sulphur dip is very good. Repeat 7 to 10 days later. Each sheep must be kept in dip 2 minutes and head dipped at least once. Dip flock in lime and sulphur mixture or in a kerosene emulsion. Dip twice with an interval of two weeks. Pens and resting places must be thoroughly cleaned before animals are returned. Treat feet of healthy sheep with a solution of 1 pound chloride of lime to 12 quarts water or 1 pound carbolic acid crystals to 4 gallons water. Remove sheep to clean fields. To treat diseased sheep, cut away all loose or undermined horn and all proud flesh, and stand sheep for 10 minutes in solution containing 4 pounds copper sulphate in 5 gallons water. When disease has reached deeper, area should be washed with a solution containing 1 ounce carbolic acid crystals in 20 ounces water, then dusted with a powder of equal parts boric acid and oxide of zinc and covered with soft bandage. Market infested animals or separate from flock. Remove flock to clean inclosures and give nourishing feed, plenty of salt and pure water. Fumigation is best, using a mixture of flowers of sulphur and alcohol in a deep vessel floating in pan of water. Place in tight room and ignite. Attendant should remain to see that none suffocate. A mixture of 1 part salt to 25 parts of copperas should be kept constantly before sheep. Remove scabs and wash twice daily with solution of 1 tablespoonful creolin in 1 quart of water. Then paint infected parts only with Lugal's solution of iodine. Give 5 ounces of epsom salts dissolved in a pint of water, as purgative. Bathe udder often with warm water and rub with camphorated oil, and keep udder milked out clean. Affected animals should receive a strong laxative. Then give 2 tablespoonfuls, twice a day, of following mixture in a half pint of linseed tea: Aromatic spirits of ammonia 1½ ounces, alcohol 2½ ounces, fluid extract of nux vomica ½ dram. 2 teaspoonfuls castor-oil containing 2 or 3 drops of creolin should be given at once and followed by a tablespoonful of following mixture 3 times daily: Paregoric 1 dram, subnitrate of bismuth 2 drams, sherry wine 3 drams, salol ½ dram, mucilage of acacia 5 ounces.	Best breed information found in flockbooks published by the various breed societies. Experiment station records will reveal innumerable experiment station bulletins. Arizona Bulletin No. 60 Report, 1908. Illinois Bulletin No. 129, Circular No. 125. Michigan Bulletin No. 178. Missouri Board of Agriculture, Missouri Bulletin 7 (1909), No. 2. Missouri Station, Circular Information No. 25. Nevada Bulletin No. 63. New York (Cornell) Bulletin No. 285. Oklahoma Report, 1908. Tennessee Bulletin No. 84. Wisconsin 23d Report. Virginia Bulletin No. 178. Wisconsin Report, 1907. Wyoming Bulletins Nos. 79, 81, Report 1908.

Brief Breeding Rules	Diseases and Symptoms	Treatment	Bulletins
1. Age of puberty 3 to 7 months. 2. Best age to breed 8 to 12 months. 3. Period of heat, 3 days after weaning the pigs and every 9 to 12 days thereafter. Duration 1 to 3 days. 4. Period of gestation 112 to 116 days.	*Mange.*—Symptoms: The crusts about eyes and ears are often the first evidence of disease. Disease spreads until it may cover entire body. Marked itching. Sometimes loss of flesh and decline. *Verminous bronchitis.*—Symptoms: Bronchial tubes inflamed, very severe coughing. Growth stunted. Caused by a small round worm in bronchial tubes. *Paralysis.*—Symptoms: Hind legs affected first, gradually extending over entire body. *Rickets or rachitis.*—Symptoms: Animals stunted and poorly nourished. Lameness appears and bones about joints swell. Bones may become very weak and body fall over.	Crusts may be removed by scrubbing with soap and water followed by application of a 3 per cent solution of creolin or an ointment made of sulphur 2 drams, resorcin 1 dram and vaseline to make an ounce. Continue daily until all parasites are killed. When large numbers are affected, dipping in lime and sulphur dip (described under mange in cattle) is necessary. Dipping should be repeated after 6 days. Kill adult pigs for food in first stages. Give young pigs a teaspoonful of turpentine in swill 3 times daily. Surgical treatment requiring extreme care is necessary. Feed concentrated and nutritious food rich in proteids. Milk, middlings, bran and ground bone meal are good. Lime water should be given. Sunlight, fresh air, clean quarters and exercise must be provided. Precipitated phosphate of calcium in 1 dram doses 2 or 3 times daily in the feed, with oil of phosphorus in 1 drop doses is helpful.	Best breed information found in herdbooks published by various breed associations. Bureau of Animal Industry Bulletin No. 48. Farmers' Bulletin No. 331. Colorado Bulletin No. 146. Report 1907. Illinois Circulars Nos. 126, 133. Indiana Bulletins Nos. 100, 126. Iowa Bulletin No. 106. Mississippi Bulletin No. 107.

TABLE III. HORSES, CATTLE,

Best Breed	Characteristics	Uses	Best Foods
SWINE—Cont'd **Duroc-Jersey**	Medium size, fine bone. Snout medium length, face slightly dished, ear drooped, jowl heavy, body wide and deep set on short legs. Ham heavily fleshed. Cherry red the popular color, but yellowish red and chestnut are often seen. Weight of boars 2 years old 600 pounds, sows 500 pounds.	Lard and pork. Crossing, especially with Berkshire and Poland-China.	or 400 pound sows, until late December. Then substitute daily 5 or 6 pounds of ration, ground oats 2 parts, ground corn 2 parts and bran 1 part. Skimmed milk is especially recommended for mixing grain ration. In winter give liberally of clover, alfalfa, or pea-hay.
Hampshire or **Thin-Rind Swine**	Medium size, face straight, ear inclined forward, but does not droop. Jowl light, as is also shoulder and ham. Back of medium width. Legs of medium length and bone of good quality. Color, black extremities with a white belt 4 to 12 inches wide encircling body and including fore-legs, which should also be white. Weight, boars 2 years old 450 pounds, sows 400 pounds.	Bacon and pork. Almost general purpose.	For first 24 hours after pigs are born, give sow no food. Then give light ration of ¼ ground corn, ½ shorts. ¼ ground oats mixed with 3 to 5 pounds skimmed milk to one of grain. Pigs should be given a little feed at 3 weeks, using same ration as for sow. Feed liberally to 3 months of age.
Large Yorkshire or **Large White Swine**	One of the largest breeds. Snout of medium length, with little or no dish. Moderate dish in face. Jowl of good width and muscular. Ears rather large, firmly attached, fringed with fine hair. Shoulders and back of medium width. Side long. Ham lighter than that of lard type with flesh carried well round inside of thigh. Legs medium length. Bone fairly heavy, clean and flinty. Color, white.	Bacon. Valuable for crossing on Poland-China, Berkshire and Chester-White.	*The bacon hog.*—Best feeds are mixed peas, barley, oats, shorts and skimmed milk. Barley, ground or soaked over night is feed most used. Oil-meal or tankage may be added advantageously. Summer feeding on pasture of clover, alfalfa or rape. *The lard hog.*—Principal source of food the undigested food in droppings of steers. Follow steers with equal number of pigs of about 6 months of age, and give them one-fourth to one-third pound of tankage daily. For the last 4 or 5 weeks of fattening they should be removed from steer lots and fed as much corn as they will consume. Method will vary according to method of feeding the steers. Pigs that do not follow steers are fattened on pasture, clover or alfalfa or June-grass being best. Corn alone or abundant clover pasture is excellent ration.
Poland-China	Medium size. Face slightly dished. Jowl full and heavy. Ears fine, firmly attached; about one-third of ear droops. Neck short, thick and heavily arched on top. Shoulder heavy. Side short. Back wide. Ham very wide and deep. Legs short, bone fine. Black, with 6 white points on face, feet and tip of tail. Weight of boars 2 years old 600 pounds, sows 500 pounds.	Lard and pork. Valuable in crossing.	
Tamworth	Should have golden-red hair on a flesh-colored skin, free from black. Snout long and straight. Ear large. Jowl narrow and light. Neck and shoulder are light; back and loin of medium width, side of good length, moderately deep. Rather deficient in ham. Legs long and strong.	Bacon. Crossing, especially with Berkshire.	

TABLE IV. CHICKENS, TURKEYS,

Best Breeds	Characteristics	Uses	Best Foods
CHICKENS **Plymouth Rock**	Three varieties, the barred, white and buff. Back and body rather long, breast broad and deep. Single combs, yellow shanks. Cocks weigh 9½ pounds and hens 7½ pounds.	General purpose, for both meat and eggs. Brown egg.	A good ration must contain sufficient digestible nutrients to meet needs of animal. Animal's appetite is safest guide as to amount of food needed.
Wyandotte	Eight standard varieties, white, buff, black, silver, golden, silver penciled, partridge and Columbian. A bird of curves, back short and broad, body deep and round, breast broad and deep, with a low-set keel. Shanks short, strong and carried well apart. Colors silver, white, black, buff and mixtures. Close-fitting rose combs. Abundant fluffy, close-fitting plumage. Weight 8½ pounds for cocks, 6½ pounds for hens.	General purpose, for both meat and eggs. Brown egg.	
Rhode Island Red	Two varieties, single comb and rose-comb. Tail color black. Rhode Island red has a red surface of body plumage, with a red under color, free from slate. Buckeye breed surface color is dark, rich garnet, and under color allows a bar of slate-color next to surface. Body of bot-long, Rhode Island reds level. Buckeye body shows slight elevation in front. Weight of Rhode Island red cocks 8½ pounds, hens 6½ pounds, Buckeye cocks 9 pounds, hens 6 pounds.	General purpose. Brown egg.	*Balanced ration.*—For egg production, 1 part protein to 4.6 parts carbohydrates. For fattening, 1 part protein to 7 or 8 parts carbohydrates. For raising young chickens, 1 part protein to 4 parts carbohydrates.
Brahma	Two varieties, light and dark. Show heavy leg and toe feathering, thick, close plumage. General color of light Brahma, white, with black tail and black center stripes in both hackle and saddle feathers. In dark Brahma, wings of cock crossed by heavy black bar, and entire breast, body, leg and toes black. Back, wings, body and breast of female have a basis of gray on which are distinct dark pencilings. Weight for dark cocks 11 pounds, hens 8½ pounds; for light cocks 12 pounds, hens 9½ pounds.	Meat breed. Brown egg.	The ration should consist of foods which the fowl likes. The following grains are preferred by fowls in order named: wheat, corn, oats, peas, barley, buckwheat, rye. The ration should provide a good variety and sufficient bulk to aid digestion. Wheat, bran, clover and alfalfa meal provide bulk in ration. The ration should contain easily digested foods, as whole grain and part ground feed. Feed at least one-third ground grain, as wheat or bran middlings, ground oats, corn meal and very small quantities of gluten meal. Wheat is most desirable of grains. Corn should be used largely because it is cheaper. Heavy oats rank next. Meat in some form, as beef scrap or green cut bone or skimmed milk should be included in every ration. It should form at least 10 to 15 per cent of total food consumed each day. Green food in form of cabbage, roots or cut clover should be given each day. Grit in form of cracked oyster shells or mortar is indispensable. Because of cost, wheat bran and middlings, and buckwheat middlings may be much used. Chickens should be fed according to age and season of year, giving the more heat producing foods in winter. The lighter and more active breeds can be fed a wider ration than the heavy and more sluggish breeds. The ration should be balanced in such a way that the appetite is kept good, the needs of egg production met, and the fowls prevented from becoming too fat.
Cochin	Four varieties, buff, partridge, white, black. Peculiarity is an appearance of massiveness and fluffiness. Heavy, short feathering is piled high on back and extends wide at sides. Excessive thigh and shank feathering. Combs single, low, close on head and evenly serrated with five distinct points. Cocks weigh 11 pounds, hens 8½ pounds.	Meat breed. Brown egg.	
Leghorn	Eight varieties, single-comb and rose-comb brown single-comb and rose-comb white, single-comb and rose-comb buff, single-comb black and single-comb silver duckwing. Characterized by early maturity and great activity. Large combs on top of head.	Egg production. White egg.	
Minorca	Three varieties, single-comb black, rose-comb black, single-comb white. Long body, carried rather upright, deep at breast with back tapering sharply toward tail, which is long and carried rather low. Comb large. Ear lobes large and pure white. Cocks of rose-comb weigh 8 pounds, hens 6½ pounds. Single-combs weigh 1 pound heavier.	Egg breed. White egg.	
Dorking	Three varieties, colored, white and silver-gray. Body long and deep. Carries abundance of flesh. Skin white. Colored largest cocks weigh 9 pounds and hens 7 pounds. White cocks weigh 7½ pounds, hens 6 pounds. Silver-gray variety is between these two. All have a fifth toe.	General purpose, meat especially. Egg of very light color.	
Orpington	Three varieties, buff, black and white. Long body, abundant plumage, white skin. Short heavy shanks. Tendency to feathering on shanks. Cock weighs 10 pounds, hen 8 pounds.	General purpose. Egg tinted.	
Houdan	Color black and white evenly broken in alternate splotches throughout entire plumage. Head ornaments of crest and beard. White skin. Carry fifth toe on each foot. Cocks weigh 7 pounds, hens 6 pounds.	General breeding purposes. White egg.	
Hamburg	Six varieties, golden spangled, silver spangled, golden penciled, silver penciled, white and black. About size of the Leghorn.	Egg and fancy breed. White egg.	
Indian	Two varieties, Cornish and white. Beaks and shanks yellow. Bird of strong proportions. Back and wings of cock mixture of red and black, tail and breast black. Hen's back, wings, breast and body a rich bay penciled with black. Cocks weigh 9 pounds, hens 6½ pounds.	Meat breed. Tinted egg.	

SHEEP AND SWINE—Continued

Brief Breeding Rules	Diseases and Symptoms	Treatment	Bulletins
Boars do not show best form before 4 or 5 months old, and should not begin service under 10 months. Give best service 2 to 5 years old. Sows should be prolific and good milkers. For pork, breed sows any time after 8 months of age, but for pure-bred breeding stock 12 months of age better. Should breed twice a year, to get 1 litter in early spring (April to May), the second in September or October. Pigs may run with sows 8 to 10 weeks.	*Sore mouth.*—Symptoms: Aversion to food and saliva dripping from mouth. Gums become congested and later necrotic patches develop, especially about front teeth and tusks. Offensive odor to mouth. Jaws are swollen, lips and mouth often cracked and covered with scabs. Rapid decline and prostration.	Affected animals should be separated from well animals and pens thoroughly disinfected. Wash mouth with 2 per cent warm creolin solution to remove patches. Then a 10 per cent ointment of salicylic acid may be applied in severe cases. Treat daily until ailment is cured.	
	Cottonseed poisoning.—Symptoms: Loss of appetite accompanied by thumps. Animal drops over, kicks and squeals for a few minutes and dies.	Complete elimination of cottonseed meal from ration is the only positive prevention. Given in proper quantities it is normally safe, but its use demands special precautions.	Ohio Bulletins Nos. 209, 213. Oklahoma Bulletin No. 80. Pennsylvania Bulletin No. 95. South Dakota Bulletin No. 105. Wisconsin Bulletin No. 184; Report 1907.
	Catarrhal rhinitis or snuffles.—Symptoms: Animal more quiet than usual and may experience slight chills. Eyes are red, appetite lessened and constipation is present. Watery discharge from nostrils, which later thickens and makes breathing difficult.	Keep animal warm and provide clean, well-lighted pen. Liquid foods should be warmed, 1½ ounces of castor oil should be given. Fumigation by burning tar in close room may help. To lessen nasal discharge, tincture of belladona leaves in ½-teaspoonful doses twice daily may be added to feed.	
	Thumps.—Symptoms: Sets in suddenly with a jerking or twitching movement of flanks, which may become excessive, producing a thumping. Animal keeps quiet and has a poor appetite. May fall off in weight.	If caused by worms, give dried sulphate of iron in swill once a day for 7 or 8 doses, ¼ pound sulphate for 40 pigs. If caused by indigestion, give less food and allow access to charcoal and wood ashes. Exercise should be allowed also on free pasture. In first stages give every 4 hours a physic of 2 ounces raw linseed oil followed with 3 to 10 drops of tincture of opium in a little oil.	
	Hog cholera.—Symptoms: Continuous fever and discoloration of skin. Animals lack spirit and lie huddled together. Refuse to move when disturbed.	Demands expert and immediate care.	
For additional breeding rules see horses.	*Swine plague.*—Symptoms: Aversion to food. Much coughing, back arched, groin sunken, eyes reddened and skin in front takes reddish tinge.	Demands expert and immediate attention.	

DUCKS AND GEESE

Brief Breeding Rules	Diseases and Symptoms	Treatment	Bulletins
Very close inbreeding tends to produce chicks that are weak and fall an easy prey to disease or are infertile. Line breeding is better. Mate offspring of a pair with father and mother rather than brother with sister.	*Simple canker.*—Symptoms: Appears as yellowish or whitish patches in mouth or throat. Surrounded by inflamed mucous membrane.	Dust powdered boric acid on sores or apply pure creolin with soft cotton cloth. Fifteen grains boric acid in 1 ounce water may be used freely as a wash.	Ontario Department of Agriculture Bulletin No. 151.
	Lice.—Symptoms: May be found under wings and on skin about feather roots, on abdomen, back, neck and head.	Dust thoroughly with pure fresh Persian insect powder. Work well down to skin. Repeat in 10 days.	Farmers' Bulletins Nos. 41, 51, 64, 177, 182, 200, 234, 287, 355, 357.
	Mites.—Symptoms: Red, black and gray. Breed in cracks and crevices of building or under droppings.	Keep roost clean. Use abundance of mixture of 1 quart kerosene and 1 fluid ounce creolin or good liquid lice killer for painting roosts and droppings-board.	Bureau of Animal Industry Bulletin No. 110; Same Circular No. 140. Arizona Bulletin No. 60. Connecticut Bulletins Nos. 52, 55.
Grandchildren of original father may be mated to those of original mother.			
	Diphtheria.—Symptoms: Fowl becomes suddenly ill and loses appetite; legs are hot, comb hot and deep red. Difficult breathing and sharp cough. Inflammation of throat. Legs and wings may become paralyzed.	Segregate sick fowl and preferably kill and burn. May give fowl four times daily a 0.01 grain tablet of biniodide of mercury. Cleanse mouth and throat often with strong peroxide of hydrogen, or 1 tablespoonful creolin in 4 fluid ounces of water.	Kansas Bulletins Nos. 162, 164. Maine Bulletins Nos. 157, 159, 165, 166, 168 (contains bibliography). Maryland Bulletin No. 138. Missouri Board of Agriculture Missouri Bulletin No. 6 (1908), No. 12. New York (Cornell) Bulletins Nos. 212, 258, 274, 277, 282, 284.
Selection involves the careful inspection of the individuals of any generation and preservation for breeding of only the best.	*Scaly leg.*—Symptoms: Rough grayish or whitish scales and crusts on shanks and feet.	Apply ointment made by mixing 1 teaspoonful creolin in 1 cupful melted lard. Stir until cool and apply daily until scales and crusts drop off.	
Hybridization involves the crossing of two strains, varieties, or races in order to combine the favorable qualities of the two. Sex control seems at present beyond human power.	*Colds.*—Symptoms: Sneezing, watery eyes, discharge from nostrils and swollen face. Bubbles or drops form in corners of eyes.	Sleeping quarters should be well ventilated. Give condition powders or tonic in food or drinking water, or season mashes with ginger and red pepper. Following mixture will usually cure if taken at start: 20 to 30 drops spirits of camphor with a tablespoonful granulated sugar. Dissolve in pint of drinking water and allow birds access to no other drink.	Oregon Bulletin No. 100; Circular No. 4. Pennsylvania Bulletin No. 87. Rhode Island Bulletin No. 126, Report 1908.
Period of incubation is 19 to 24 days, average 21.	*Catarrh* (contagious) *or roup.*—Symptoms: Peculiar, strong offensive odor. A glairy water-white or yellowish discharge from nostrils and under eyelids. Legs hot. Comb and wattles hot and deep red. Characteristic roup smell always present.	Kill and burn all very sick birds. Segregate in an open shed all that show symptoms. Use creolin dip—1 teaspoonful pure creolin in 1 pint water and dip heads in solution, using fresh solution for each 6 birds—and make fowl inhale creolin vapor by spraying over with the same solution. Thoroughly cleanse head, mouth, eyes, nostrils and throat with this disinfectant, and keep fowls in wide open, fresh pens.	
To get early market poultry mate late in fall. Brahma and Cochin pullets begin to lay at 7 to 9 months. Leghorns and other small breeds 4 to 6 months. Plymouth Rock and Wyandottes, 5 to 7 months. Mate breeding hens 2 to 6 weeks before earliest date for hatching. Hens should have few weeks rest before breeding season, for high-class stock. Breeding stock should have free range or, if confined, be not crowded and fed green feed and meat scrap in addition to that given laying stock. Hold eggs for hatching in cool, dry place, at temperature of 40 to 55 degrees Fahr. Hen for setting should be in fair condition, should feel hot to hand when handled, and should allow herself to be handled freely.	*Worms.*—Symptoms: Will appear in the excrement.	Allow no food for 12 hours. Then give in 1 dose a mixture of 2 teaspoonfuls oil of turpentine and 1 tablespoonful sweet oil. Administer directly into crop through rubber tube passed down throat. May be necessary to repeat in 12 to 24 hours.	
	Gapes.—Symptoms: Difficult breathing and characteristic gaping attitude. Caused by a parasitic worm which attaches itself to mucous lining of windpipe.	Remove worms by a loop of horsehair or a wire gape-worm extractor dipped in a weak solution of creolin. Stretch fowl's neck forward and introduce extractor into windpipe. Carefully twist it as withdrawn. Immediately disinfect extractor bearing worms.	
	Diarrhœa.—Symptoms: Looseness of bowels. Discharges yellowish, greenish, dark or watery.	Give bird dry grain with abundance of charcoal, and do not allow any meat food. Scalded milk, thickened with well-boiled flour and seasoned with ginger, makes a desirable food and remedy.	
	Contagious diarrhœa.—Symptoms: Thirst, little appetite, stupidity, bowel discharge loose and watery, often dark or bluish green, sometimes blood streaked. Comb and wattles dark red or purplish, and legs hot.	Segregate affected birds. Disinfect and remove excrement. Give calomel in 0.01 of a grain dose 3 times daily. For difficult cases dissolve 12 tablets of mercury bichloride, 0.001 of a grain drug strength each, in 1 quart of drinking water and allow no other drink. This medicine should be given less frequently as soon as improvement appears.	

TABLE IV. CHICKENS, TURKEYS,

Best Breeds	Characteristics	Uses	Best Foods
CHICKENS—Cont'd **Bantam**	Ornamental birds of many varieties: Sebright, rose-comb, booted white, Brahma, Cochin, Japanese, Polish, game, black-breasted red Malay.	Fancy and ornamental varieties of many foregoing breeds.	See page 392d.

Best Breeds	Characteristics	Uses	Best Foods
TURKEYS **Bronze**	Largest and hardiest of all varieties for the market. Adult cock 36 pounds, hen 20 pounds.	Meat.	The young must be fed with care at first, allowing only bread and milk mixed with ¼ pot cheese and a little chopped onion, given 2 or 3 times a day. Once or twice a day feed finely cracked corn, wheat and oatmeal mixed in equal parts. After second week, bread and milk should be decreased and grains and pot cheese increased. Fine grit and charcoal should be available. Water should be provided in such a way that young turkeys cannot become wet. When turkeys graze in fields during day they should be fed grain at night, corn, wheat, oats or peas. During breeding season, one feeding a day of mixture of equal parts by weight of wheat middlings, wheat bran, corn meal, ground oats and meat scraps, stirred up with skimmed milk, should be given. In fattening turkeys for market they should be fed all the whole corn they will eat at night. In morning a mixture of 6 parts corn meal, 3 parts wheat middlings, 1 part beef scraps, mixed as thick paste with sour skimmed milk may be given. Turkeys do best on free range.
Narragansett	Plumage bronze and black with a mixture of white. Second in size to bronze. Cock 30 pounds, hen 18 pounds. General color gray.	Meat.	
Buff	Feathers a reddish buff, the wing flights being white.	Meat.	
Slate	Plumage of a bluish slate shade. Cock 27 pounds, hen 18 pounds.	Meat.	
Black	Plumage pure black. Otherwise same as above.	Meat.	
White Holland	Plumage pure white throughout; has pinkish white shanks. Cocks 28 pounds, hens 18 pounds.	Meat.	
Bourbon Red	A kindred variety to the buff, having deep reddish-buff plumage.	Meat.	

Best Breeds	Characteristics	Uses
DUCKS **Rouen**	Largest and most popular of all colored market varieties. Weight 9 pounds for drakes, 8 pounds for ducks.	Meat.
Black Cayuga	Largest solid black duck known. Mature pair weighs 15 pounds. Body of good length.	Meat. A fair layer.
Pekin	Largest white duck in existence. Specimens weigh as high as 10 or 12 pounds. Head and beak long and of good size, beak orange-yellow, back, breast and body long, broad and deep, with deep keel. Creamy white.	Meat. A good layer.
Crested White	Medium-sized white duck with large white crest or topknot, about two-thirds the size of Pekin, which it resembles in color and shape of body, except crest.	Meat. A fair layer.
Indian Runner	Head long and flat, light fawn in color, cap and cheek markings light fawn, bill straight, green with black bean at tip, eyes hazel, neck white from head to beginning of breast markings, back, light fawn or gray, breast light fawn, body light fawn, rear half white. Shanks and feet orange-yellow. Carriage very erect. Small size.	Meat. The best layer.
Colored Muscovy	Good size, black and white in color, black predominating. Side of head and region around eye are without feathers and are carunculated or corrugated and scarlet. Builds her nest and never scatters her eggs. Never quacks. Active on wing.	Meat.
White Muscovy	Same as colored muscovy except that it is pure white.	Meat.

Best Breeds	Characteristics	Uses
GEESE **African**	Large head with pronounced black knot and heavy gray dewlap under throat. Neck long, back broad and flat, breast full and round, body large and upright, thighs short and plump. Shanks medium length and dark orange color. Wings of good size, close fitting. General color, gray. Mature gander 20 pounds, goose 18 pounds.	Meat and feathers.
Embden	Color white. Square, compact body. Neck long and massive appearing, large head. Medium-size orange-colored bill. Back slightly arched, breast round, deep and full. Shanks short, stout, deep, orange color, thighs strong, wings large, tail short. Eyes bright blue. Mature gander 20 pounds, goose 18 pounds.	Meat and feathers.
Toulouse	Blue-gray in color, marked with brown. Head large but short, bill short and stout, neck medium long, body compact, medium length, deep, belly almost touching ground, back broad, slightly arched; breast broad and deep, wings large, strong, close fitting, tail short. Adult gander 20 pounds, goose 18 pounds.	Meat and feathers.
White and Brown Chinese	Bodies plump and round, covered with coat of soft feathers and fine down. Medium size, mature specimens weighing 10 to 14 pounds. Long arch necks, with large round knob at base of beak. Short erect body and carriage.	Meat and feathers. Much in demand for ornamental purposes.

DUCKS AND GEESE—Continued

Brief Breeding Rules	Diseases and Symptoms	Treatment	Bulletins
Set fresh eggs from vigorous stock having the qualities particularly desired. Eggs should not be more than 1 week old, and must be clean. For Asiatic breeds, mate 1 male to 6 to 10 females; for Americans, 1 male to 15 to 20 females; for Mediterraneans, 1 male to 20 to 25 females. In selecting breeding stock, pedigree, appearance, condition and performance are of first importance in the parents. Strong, constitutional vigor and early maturity essential.	*Fowl cholera.*—Symptoms: A yellowish discoloration of part of droppings usually white. Fowl becomes unsteady on legs, feathers rumpled, wings droop, head drawn down, comb and wattles pale, legs hot. Food repulsive. *Pip.*—Symptoms: Mucous membrane of mouth dries and a hard horny scale is formed on end of tongue. The hard scale or pip will in time fall off of its own accord. *Bronchitis.*—Rattling in throat and difficult loud breathing.	Use mercury bichloride as on page 393 (contagious diarrhœa). 1 per cent solution carbolic acid in drinking water and cayenne pepper in food are recommended. Treatment seldom satisfactory. Apply equal parts of glycerine and water freely or wash mouth frequently with a solution of 15 grains boracic acid in 1 ounce of water. Remove fowl to comfortable fresh-air pen, protected from drafts. Give nourishing, bracing food. Use 12 tablets arsenite of antimony, 0.001 of a grain each, to each pint of drinking water and allow bird no other drink.	See page 393.

Brief Breeding Rules	Diseases and Symptoms	Treatment	Bulletins
Select big, strong, vigorous, healthy, well-matured stock, not closely related. Constitutional vigor of first importance. Introduce new blood into flock. Males should be unrelated to females, as inbreeding weakens flock. Medium-sized male with good, fair-sized females of strong constitutional vigor and mature age will give best results. Have 4 or 8 females to 1 male. Hen lays 20 to 40 eggs in a season, beginning March or April. 1 mating sufficient to fertilize entire batch of eggs. Hen will lay 15 to 20 eggs before becoming broody, and if broken up then will lay another batch. Period of incubation 26 to 30 days. Old birds in good condition, not overfat, best breeders. Birds of either sex may be used for breeding until 8 or 10 years old. Laying generally begins in March or April.	*Blackhead.*—Symptoms: Turkeys look pinched, shrunken and purple about head. Feathers rough. Diarrhœa present with bright yellow excrement. Birds have little life and drag about. *Colds.*—See under chickens. *Roup.*—See under chickens. *Gapes.*—See under chickens. *Tapeworms.*—Symptoms: Presence of worms in fæces. *Diarrhœa.*	Kill and burn affected birds, and thoroughly disinfect coops, buildings, feeding and drinking troughs, etc. Pepper, ginger and something sour in food aid in prevention. Freshly powdered kuosso, tansy and pumpkin seeds are recommended. Turpentine in small doses has given success. Mix 2 ounces sulphuric acid and ½ pound copperas in 2 gallons water, and give 1 teaspoonful of mixture in each quart of drinking water.	See chicken references. Farmers' Bulletin No. 200.

Brief Breeding Rules	Best Foods	Diseases and Symptoms	Bulletins
Mate only standard specimens. Select meaty birds, deep keeled and strong in bone. Attention must be given to pedigree, appearance, condition and performance. Quick growth is important. Better ducklings result from eggs from old ducks, but young ducks lay a month earlier than old ones, and their eggs may be used for early hatching. Laying period December to June. Usually 1 male to 5 females till June, then to 10 females. Birds are kept in flocks of 25 to 40 of both sexes. Laying season extends from January to August. Period of incubation 25 to 32 days. Ducks are poor sitters and eggs generally hatched by hen or incubator. For general breeding notes see chickens.	When breeding birds have free range and water-run, they may be fed either whole corn, wheat, oats or barley, or a mixture. If eggs are desired, supply good beef scrap. The birds may be allowed to help themselves. When confined and heavy egg production desired, soft food should be fed morning and night and a light feed of hard grains in middle of day. Corn meal, low-grade flour, wheat bran, meat scrap and some green food, as turnips, cabbage, cut clover or alfalfa, make a valuable mixture. Drinking water should always be within reach. Begin to feed ducklings when 40 to 48 hours old. Start with mixture of two-thirds wheat bran and one-third corn meal, moistened with water or milk; a raw egg stirred in with each quart of grain is good addition, as is also a little sand or prepared grit. Keep before ducklings for 2 days if it remains sweet. Otherwise renew. When ducklings 1 week old, they may take 0.05 beef scrap, 3 parts wheat bran, 2 parts corn meal, 4 feedings a day. Gradually increase proportion of corn meal so that at 6 weeks the meal and bran are equal, and the beef scrap is 0.15 of the whole. At 6 weeks feed 3 times daily. If this feed too laxative, reduce the beef scrap. Excess green food likely to make skin yellow. Abundance of grit and fresh water must be constantly available.	Ducks are remarkably free from disease and there are no diseases peculiar to them. Ducks running with other fowls may contract diseases, which should be treated as for other fowls. Lameness may result from damp quarters. Ducks having colds, as shown by frothy scum over eyes, should have eyes washed with warm water containing a little carbolic acid. Treat as for cold.	See chicken references. Farmers' Bulletin No. 64.

Brief Breeding Rules	Best Foods	Diseases and Symptoms	Bulletins
Choose bright, active goose and gander of good parentage, 2 to 5 years old. Mate in fall or early winter. Gander and geese 1 to 4 in number, should be put together and isolated till they become acquainted. Young ganders often take but 1 goose. Hens may be placed on the eggs. Goose will usually lay 2 litters. Wild ganders do not mate until 2 to 3 years old, and frequently will not mate first year in captivity. Period of incubation 27 to 33 days. Laying season is very short, beginning about February 1. Will lay 20 to 50 eggs per year. Geese not fully mature until 1 year old, and first year eggs frequently infertile. Best laying is from second year on. Ganders are most valuable at 3 to 7 years. Goose becomes broody after laying about 18 to 20 eggs. If these taken away and goose shut up for few days she will then lay another batch, and with similar treatment a third batch. Eggs for hatching should be held at 50 to 60 degrees and turned each day. For general breeding notes, see chickens.	Geese graze freely and in this way pick up much of their food. In winter, supply a little grain and liberal allowance of succulent food, as roots and cabbage. At laying time the feed should be increased. A liberal ration, as prepared for ducks, containing considerable animal food, should be given twice a day. Water and grit should always be accessible. In finishing grass-fed geese for market, feed corn meal with 10 per cent of beef scrap, scalded or wet with cold water. Once a day give whole corn. Keep goslings in warm place, and first 2 or 3 days feed a little soaked bread and water. Gradually let them out, and in a week they may go free. Will need nothing but a little stale bread first 5 weeks, if on good free range. After 5 weeks a mash of one-third corn meal, two-thirds bran should be given. After 6 weeks give equal parts of corn and bran, to fatten.	Geese are almost wholly free from disease, and the grower is seldom troubled in this respect.	See chicken references. Farmers' Bulletin No. 64.

TABLE OF SHRUBS AND HEDGES

Name of Shrub	Height in Feet	Time of Flowering	Color of Flowers	Distance Apart in Feet	Uses	Remarks
Althea, or Rose of Sharon (*Hibiscus*).	8 to 10	August September	Red, pk., wht.	3	Screen.	Single kinds better; makes good screen; stands pruning well.
Common Barberry (*Berberis vulgaris*.)	6	June	Yellow	2	Defensive screen.	Foliage dense, very dark green.
Japanese Barberry (*Berberis Thunbergii*)	4	June	Yellow	1 ½	Boundary, drive, terrace.	Bears red berries; fall color striking.
Single Bridal Wreath (*Spiraea Van Houtter*)	5 to 6	June	White	2 to 3	Boundary.	Widely planted, showy and economical.
Sea Buckhorn (*Hippophae rhamnoids*).	6 to 10	.....	.....	3	Screen.	Gray foliage makes it distinctive.
Dogwood (*Cornus alba*)	8	June	White	2 ½	Screen or background for lower growths.	Bark blood-red and showy in winter.
Slender Deutzia (*Deutzia gracilis*).	2 ½	June	White	2	Edging.	Showiest of dwarf-flowering hedges.
English Privet, or Prim (*Ligustrum vulgare*).	2 to 6	.....	.....	1	Best clipped hedge; edging, terrace, etc.	Better than California, because hardier.
English Wayfaring Tree (*Viburnum lantana*).	10 to 15	June	White, large	5	Screen.	Grows rapidly, has attractive, dark foliage and purple fruit.
Golden Bell (*Forsythia intermedia*).	5 to 8	Early May	Yellow	3	Boundary.	Best of yellow shrubs; blooms before Cydonia; too striking for wide use.
Tartarian Honeysuckle (*Lonicera Tatarica*).	10	June	Pink	3	Screen.	Dense foliage, showy flowers and berries.
Large-flowered Hydrangea (*Hydrangea panculata, var. grandiflora*).	3 to 15	July, August	White pink	2 to 3	Screen, boundary.	Blooms when flowers are scarce; showy.
Japanese Briar (*Rosa rugosa*).	5 to 8	All summer	Wt., pk., red	2	Boundary.	The only rose suitable for a hedge.
Japanese Snowball (*Viburnum plicatum*).	6 to 8	June	White	4	Screen, boundary.	Showy and better than Common Snowball.
Japan Quince (*Cydonia Japonica*).	4	May	Red	1 ½	Defensive boundary.	Blooms among first of all the shrubs; thorny, subject to scale.
Lilac (*Syringa vulgaris*).	8 to 15	June	Purple, white	2	Screen.	Spreads all over creation if given a chance, but is an excellent screen.
Honey Locust (*Gleditschia triacanthos*).	3 to 15	May	Greenish	1 ½	Defensive.	Requires close attention to pruning; apt to become bare near bottom. Being supplanted by better kinds.
Garland's Mock Orange (*Philadelphus coronarius*).	8 to 15	Early June	White	3	Screen.	Flowers highly scented; grows rapidly.
Osage Orange (*Maclura pomifera*).	3 to 15	May	White	2 to 3	Defensive screen.	Bears yellow fruit 3 to 4 inches in diameter, when not clipped.
Spirea (*Spiraea arguta*).	2 to 3	Early May	White	2	Edging, terrace.	Two weeks earli r than *Spiraea*; showy, but not a sure bloomer.
Spirea (*Spiraea, Anthony Waterer*).	2 to 3	All summer	Magenta	2	Boundary, edging, terrace.	Good for those who like such things.
Native Thorn (*Crataegus coccinea*).	3 to 12	May	White	2 ½	Screen; defensive boundary.	One of the best native shrubs, or small trees. Bears showy scarlet fruit; improves with shearing, making very dense hedge. Can be kept at any height.
Cockspur Thorn (*Crataegus Crus-galli*).	3 to 15	Late May	White	2 ½	Defensive screen; boundary.	Native plant, with very long thorns. Fruit showy. Good windbreak.
Wistaria or Wisteria (*W. Frutescens*).	8 to 15	All summer	Lilac	2	Screen; trellis.	Handsome, hardy, slow-growing, climbing shrub. Flowers in elegant racemes, slightly scented.

FLOWER PLANTING TABLE

May is the almost sole flower-planting month; the Adonis, Cornflower, Pink, Primrose and Sweet Pea may also be planted in April.

Name of Flower	Life of Plant	Blooms	Plants In. Apart	Seeds Inches Deep	Colors
Achillea	Annual-Perennial	May-June	6	.....	Yellow
Adonis	Annual	June-October	6	¼	Blue-White
Ageratum	Perennial	August-October	10	.....	White-Rose
Anemone	Annual	July-September	14	¼	Various
Aster	Annual	July	8	⅛	Blue-White-Pink
Bachelor's Button	Annual	June-September	14	¼	Various
Balsam (Lady's Slipper)	Perennial-Annual	June-July	10	¼	Blue-White-Pink
Bellflower (*Campanula*)	Perennial	May-August	26	.....	Crimson
Bleeding Heart (*Dicentra*)	Perennial	June-October	12	½	Orange
Calendula	Annual	August	10	⅛	Orange
California Poppy	Annual	June-September	8	⅛	Orange
Candytuft	Annual	August	36	¼	Green
Castor Bean	Perennial-Annual	August-October	18	½	Various
Chrysanthemum	Annual	June-September	10	¼	White-Purple-Rose
Clarkia	Annual	June-October	10	¼	Red-Purple-Yellow-White
Cockscomb	Perennial	June-July	12	.....	Various
Columbine (Aguiliegia)	Perennial	July-August	12	.....	Coral
Coral Bell	Annual	June-August	12	⅛	Yellow-Brown
Coreopsis	Annual	June	10	⅛	Blue-White-Rose
Cornflower	Annual	August-September	24	¼	Red-White-Pink
Cosmos	Annual	July-September	36	.....	Various
Dahlia	Perennial	Aug.-Sept.	10	.....	White-Pink-Rose
Daisy	Perennial	July-August	10	.....	Yellow
Evening Primrose	Perennial-Biennial	April-July	6	¼	Blue

FLOWER PLANTING TABLE—Continued

Name of Flower	Life of Plant	Blooms	Plants In. Apart	Seeds Inches Deep	Colors
Forget-Me-Not	Perennial	July	10	.....	Various
Four-o'Clock	Perennial-Annual	July-August	12	¼	Red-White-Yellow
Foxglove	Perennial-Biennial	June	12	⅛	White-Pink
Gaillardia	Perennial	July-October	12	⅛	Yellow-Red
Globe Amaranth	Annual	July	12	¼	Pink
Godetia	Annual	July-October	12	⅛	White-Red
Gourds	Annual	July-October	14	½	Various
Helianthus	Perennial	July	12	¼	Yellow
Heliopsis	Perennial	August-September	18	.....	Yellow
Hollyhock	Biennial	August	16	½ drills	Red-Pink-Purple-White-Yellow
Iceland Poppy	Perennial-Annual	June-September	6	⅛	White to Orange
Iris	Annual	May-July	12	.....	White-Blue-Yellow
Larkspur	Perennial-Annual	June-July	8	½	Blue-White-Pink
Lavatera	Annual	July	8	¼	Rose
Lobelia	Annual	June-September	4	⅛	Blue-Red
Love-in-a-Mist	Annual	June-July	10	¼	Scarlet
Love-Lies-Bleeding	Annual	June-September	8	¼	Blue-White
Lupine	Perennial-Annual	June	5	.....	Blue-White-Pink
Mallow	Perennial	July-September	10	.....	White-Rose
Marigold	Annual	August-October	6	¼	Lemon to Orange
Mignonette	Annual	July-October	12	⅛	Whitish Green
Monkshood	Perennial	July-August	8	.....	White-Blue
Moonflower	Annual	August-September	5	¼	White
Morning Glory	Annual	July-August	12	¼	Various
Nasturtium	Annual	July-October	10	½	Various
Nicotiana	Annual	July-August	8	¼	Red-White
Pansy	Perennial-Annual	May-October	12	⅛	Various
Peony	Perennial	May-June	48	.....	Red-White-Pink
Petunia	Annual	July-September	8	Scatter	White-Pink-Blue-Wine
Phlox	Perennial-Annual	July-October	8	⅛	Various
Pink	Perennial-Annual	August	6	⅛	White to Rose
Poppy	Annual	July-August	5	⅛	Various
Portulaca	Annual	July-October	5	⅛	White-Red-Yellow
Primrose	Perennial	April-May	6	.....	Yellow-Pink
Pyrethrum	Perennial	August-October	12	.....	Various
Rudbeckia	Perennial	August-September	12	.....	Yellow

Salvia	Perennial-Annual	August-October	6	⅛	Scarlet
Scabiosa	Perennial	June-August	8	.....	Blue-Yellow-White
Schizanthus	Annual	July-August	10	¼	Yellow-Lilac
Silene	Perennial	June-August	6	.....	White to Rose
Snapdragon	Perennial-Annual	July-August	8	¼	Various
Stock	Annual	June-July	6	¼	White to Red
Sunflower	Perennial-Annual	August	36	¼	Yellow
Sweet Alyssum	Annual	May-September	5	⅛	White
Sweet Pea	Annual	June-October	8	3 trench	Various
Sweet William	Perennial-Biennial	July-August	10	¼	Red-White-Pink
Verbena	Perennial	June-August	8	.....	Various
Veronica	Perennial	August	6	.....	Purple
Violet	Perennial	March	6	.....	Violet
Wallflower	Perennial-Biennial	July-August	8	½	Yellow-Brown
Zinnia	Annual	July-October	10	½	Various

THE ROSE GARDEN

There are numerous varieties of roses, and their care occupies an important province in flora culture. The best results are obtained from setting out the plants or roots in the spring—from the middle of April to the middle of May. For practical purposes they may be divided into the following classes, with the leading examples of each:

Classes	Characteristics
The Hybrid Perpetuals	Hardiest of the garden roses
Frau Karl Druschki	An ideal white rose
Jacqueminot ("Jack Rose")	Brilliant scarlet
Paul Neyron	Dark rose—largest of all
Magna Charta	Bright pink—a favorite
George Arends	Splendid soft pink
The Hybrid Teas	The most satisfactory for the general garden
Robert Huey	One of the largest bright reds
The Lyon	Deep coral pink verging on yellow
White Killarney	One of the best pure whites
La France	Clear satiny pink
Burbank	Rich pink
Richmond	Brilliant crimson
The Teas	Much tenderer than the Hybrid Teas; sweet scented
The Bride	Pure white
Perle des Jardins	Beautiful rich yellow
Papa Goutier	Dark Crimson
Hardy Climbers	Popular and showy
American Pillar	Large, single, pink flowers
Excelsa	Finest of crimson ramblers
Hiawatha	Single, brilliant crimson
Dorothy Perkins	Soft shell-pink, fragrant

Classes	Characteristics
Lady Gay	Delicate cerise-pink which change to creamy white.
Wichmoss	A "Moss" rose, light bluish-pink, fragrant.
Hybrid Briers	Hardy semi-climbing roses
Lord Penzance	Beautiful contrasting shades
Refulgence	Dazzling scarlet, in clusters
Juliet	Rosy red with reverse petals of old gold
The "Baby Ramblers"	Dwarf, "perpetual bloomers"
Phyllis	Beautiful pink
Jessie	Bright cherry-red, white center
Orleans	Brilliant red, white center
Snowball	White, free flowering
Noisette	Excellent climber for walls
William Allen Richardson	Deep orange-yellow flowers
Garland	Semi-double, blush and white
Longworth Rambler	Splendid autumn climber; flowers, semi-double and crimson
Japanese and Chinese	
Blairii (China)	Vigorous climber for sunny walls; flowers, blush and rose
Rugosa (Japanese)	No pruning is needed; flowers, white, rose and violet

NUMBER OF YEARS SEEDS RETAIN THEIR VITALITY

Vegetables	Years	Vegetables	Years	Vegetables	Years	Vegetables	Years
Cucumber	8 to 10	Asparagus	2 to 3	Radish	4 to 5	Pepper	2 to 3
Melon	8 to 10	Beans	2 to 3	Beets	3 to 4	Tomato	2 to 3
Pumpkin	8 to 10	Carrots	2 to 3	Cress	3 to 4	Egg Plant	1 to 2
Squash	8 to 10	Celery	2 to 3	Lettuce	3 to 4		
Broccoli	5 to 6	Corn (on cob)	2 to 3	Mustard	3 to 4	HERBS	
Cauliflower	5 to 6	Leek	2 to 3	Okra	3 to 4	Anise	3 to 4
Artichoke	5 to 6	Onion	2 to 3	Rhubarb	3 to 4	Caraway	2....
Endive	5 to 6	Parsley	2 to 3	Spinach	3 to 4	Summer Savory	1 to 2

ECONOMICS OF PLANTS, ANIMALS AND MINERALS

I. Foodstuffs. II. Narcotics and Medicines. III. Fibers. IV. Commercial Woods. V. Gums, Resins and Extracts. VI. Oils, Fats and Waxes. VII. Dyestuffs and Tanning Materials. VIII. Animal Products. IX. Mineral Products.

The most important commercial products are summarized in the following pages. The materials are grouped according to their sources: thus all the many products of the cotton plant are treated under one head; and since cotton fiber is the most important product of this plant, it is placed under the general heading of vegetable fibres, even though it supplies oil, cattle food and other articles. Countries of production are mentioned in the order of their relative importance.

FOODSTUFFS

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Wheat is the fruit of a grass (*Triticum sativum*). Fr., *Froment, Blé;* Ger., *Weizen;* Sp., *Trigo.*	Its commercial varieties, hard, soft, red, white, etc., differ in percentage of starch and gluten. The whole grain is ground into *graham flour*, made into *breakfast foods* and used in brewing. From parts of the grain are prepared *whole wheat flour, white flour, middlings, bran, wheat grits, wheat starch, macaroni, spaghetti*, etc. Wheat straw is plaited into braids (Leghorn, etc.) for hat making, and is used like the straw from other grains for packing material and as bedding for animals.	Grows in temperate climates, the largest crops being raised in United States (especially in Minnesota, North Dakota, Ohio, South Dakota and Kansas); Central Europe (Russia, France, Austria-Hungary and Italy); India, Argentina, Canada and Australia. The area of wheat production is steadily increasing and wheat raising has become an important industry in newly developed countries, such as parts of British America, West Australia and Manchuria. The United States is the chief exporter of flour.	Wheat flour may be said to be the standard foodstuff of modern civilized man. In the modern flour mill, heavy rollers of steel or porcelain have replaced the old-style millstones. The bran, middlings and flour are separated by sieves, the finest being of silk bolting cloth. Macaroni is made from special varieties of hard, glutinous wheat. The principal countries exporting wheat are United States, Russia, Argentina, Canada, Roumania, India and Australia. Straw braids come largely from Italy, China and Japan.
Barley is the seed of a grass (*Hordeum sativum*, variety *vulgare*, etc.). Fr., *Orge;* Ger., *Gerste;* Sp., *Cebada.*	It is used chiefly in brewing and for horse feed; also in soups. *Pearl barley, barley flour, malt, beer* and *alcohol* are its chief products.	Cultivated chiefly in north and central Europe, the colder parts of Asia and North America.	Malt is made by moistening barley and allowing it to sprout in a dark room. During germination the starch is converted into dextrine and maltose. On fermentation, maltose produces alcohol. Pearl barley is prepared by removing the hard outer coats of the grain.
Rye is the seed of a grass (*Secale cereale*). Fr., *Seigle;* Ger., *Roggen;* Sp., *Centeno.*	It is used in the form of *rye flour* and for distilling whisky and vodka. Rye straw is plaited into *hat braids.*	Cultivated in the cold climates of northern Europe, especially in Russia. Only small amounts are grown in the United States.	Rye flour is the chief breadstuff in parts of Russia, Scandinavia and Germany. Whisky is distilled from fermented rye and corn.
Oats is the fruit of a grass (*Avena sativa*). Fr., *Avoines;* Ger., *Hafer;* Sp., *Avenas.*	Used chiefly for horse feed, and in lesser amounts for making *oatmeal* and breakfast foods.	Grown in largest amounts in Russia and the United States (especially Illinois and Iowa). Cultivated throughout the temperate parts of the civilized world.	The manufacture of oatmeal is of relatively small importance since the more nourishing products of wheat are increasingly used.
Corn, Maize or **Indian Corn** (*Zea mays*) belongs to the grass family. Flint, dent, sugar, soft and pop corn differ in percentage of starch and gluten, and the grain may be white, yellow, red or black in color. Fr., *Blé, Grain;* Ger., *Getreide, Korn;* Sp., *Grano.*	Among the dozens of useful products made from corn are *corn meal, corn grits, hominy, breakfast foods, beer, whisky, alcohol, cologne spirits, cornstarch, dextrine, glucose, grape sugar, corn sirup, corn oil, soap, rubber substitute* and *cattle foods.* A special variety of corn is raised to make *cob pipes.* Compressed *corn pith* is packed between the double hulls of warships. Corn husks are used in *mattresses* and *paper* is made in very limited amount from the leaves and stalks. Large amounts of *popcorn*, plain and candied, are eaten in the United States.	Corn is the most valuable farm crop of the United States. The chief corn growing states are Illinois, Iowa, Kansas, Nebraska and Missouri. The bulk of the world's production of maize is grown in this country, although it is an important crop in Hungary, Italy, Egypt, South Africa, and other parts of the world.	Corn is of primary importance as a food for live stock, enormous quantities being used to fatten cattle and swine. The manufacture of starch and other products from corn is an industry of increasing magnitude. The chief starch derivatives are *dextrine* and *glucose* or *grape sugar* (used in brewing beer and as a substitute for true sugar). Corn oil may be called a by-product in starch manufacture, yet the annual value of corn oil is greater than that of cornstarch produced in the United States. It is used in soap and paints. Vulcanized by heating with sulphur, it forms a widely used adulterant and substitute for rubber.
Rice is the fruit of a grass (*Oryza sativa*). Fr., *Riz;* Ger., *Reis;* Sp., *Arroz.*	*Rough rice* and *clean rice* are the common commercial articles. *Rice polish, saké* or rice wine, rice straw and rice paper are of lesser importance. Rice, steamed and swelled, is now extensively used as a breakfast food.	It is usually grown in swampy land or else on irrigated fields. In most countries rice is grown in the most primitive fashion. Immense irrigating plants and modern agricultural machinery make possible the large production in parts of the United States. It is the chief crop in southeastern Asia, from India through Indo-China, a great part of China, southern Japan and many islands of the Pacific. Rice of excellent quality is raised in Texas, Louisiana, Arkansas and South Carolina, and an amount about equal to the production of this country is imported from eastern Asia.	It is estimated that one-third of the people of the world live principally on rice. Rough rice or paddy (rice in the hull) is first hulled by machinery and then the grains are polished or whitened. The *rice polish*, which consists of the powdered outer coats, is a very nourishing cattle food. *Saké*, the national drink of Japan, is a weak alcoholic liquor brewed from rice. Rice straw is of enormous use in Asia, being employed for hundreds of purposes, some of them as unexpected as the making of bags, ropes and sandals.
Millet and **Sorghum** are cultivated grasses of many genera (*Panicum, Setaria, Andropogon*, etc.). Fr., *Millet;* Ger., *Hirse;* Sp., *Mijo.*	Guinea corn, kaffir corn, broom corn and other names are employed to distinguish the different kinds.	These grains are grown in practically all parts of the world. In Europe and America they are important chiefly as fodder plants, although in many other parts of the world the seeds are used as human food.	In some places the juice of sorghum is boiled down to make sirup or sugar. Common brooms are made of the tops of one variety of sorghum (broom corn). These grains are mainly of local importance.

FOODSTUFFS—Continued

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Buckwheat (*Fagopyrum esculentum*) is regarded as a cereal because its seeds are used like those of wheat, rye and other grains. Fr., *Sarrasin;* Ger., *Buchweizen;* Sp., *Trigo sarraceno.*	The seeds are ground into buckwheat flour. Buckwheat fields are especially attractive to bees and a fairly important source of honey.	Buckwheat cultivation has decreased in recent years. New York and Pennsylvania produce the greater part of the crop in the United States. Abroad it is raised chiefly in Russia, France and Japan.	Buckwheat flour is less used than formerly. Very little of this grain enters into foreign trade.
Hay is made from many grasses and leguminous plants. Fr., *Foin;* Ger., *Heu;* Sp., *Heno.*	Timothy, clover and alfalfa are the chief sources of hay in the United States.	It is produced almost exclusively in temperate climates. Its yearly value in the United States is almost equal to that of the wheat crop.	Hay is most important in the cattle raising sections of the world. Some baled hay is exported to Europe and a little is sent to the tropics.
Starch is prepared from many seeds and roots. The common starches are from corn, wheat, rice, potatoes (*Solanum tuberosum*), cassava, tapioca (*Manihot utilissima*), arrowroot (*Maranta arundinaceæ*) and the pith of the sago palm tree (*Metroxylon* sp.) Fr., *Amidon;* Ger., *Stärke;* Sp., *Almidón.*	Starches appear on the market in powder, lump, flake and pearl forms. Starch grains differ in size and shape according to their source so that it is not difficult under a microscope to identify the various kinds. Glucose, dextrine and alcohol are made from starch.	For industrial purposes starch is prepared chiefly from potatoes in Europe and from corn and potatoes in the United States. Cassava is a very important foodstuff in almost all parts of the tropics. Many starches are of great local importance, such, for example, as taro in Hawaii. Comparatively few enter into general commerce.	In general, starches are separated from roots or seeds by grating them and washing with water. The starch grains are carried off in suspension and later separated from the water. Starch and starchy foods are of the greatest importance to men and animals. Aside from the manufacture of glucose, dextrine and alcohol, starch is used for sizing yarn, cloth and paper, for making paste and laundry purposes. Tapioca comes on the market chiefly from Brazil and Straits Settlements. Arrowroot starch is produced in Bermuda, St. Vincent and Jamaica. Sago is exported from Straits Settlements.
Vegetables of an almost infinite variety are used in all parts of the world. Many of these are roots, some seeds, some leaves or other parts of plants.	The bulk of the crop is consumed fresh, although beans, peas, etc., are dried and increasing amounts of vegetables are canned or otherwise preserved.	The largest cultivation of fresh vegetables is as a rule near great cities.	Vegetables are so heavy in proportion to value that they are not normally shipped long distances. Potatoes and onions, being least perishable, are most important in general commerce. Better transportation facilities naturally increases the trade in both fresh and canned vegetables.
Fruits, like vegetables, are used in great variety. Those deserving special mention are: **Apple** (*Pyrus malus*).—Fr., *Pomme;* Ger., *Apfel;* Sp., *Manzana.* **Plum** (*Prunus domestica*).—Fr., *Prune;* Ger., *Pflaume;* Sp., *Ciruela.* **Grape** (*Vitis* sp.).—Fr., *Raisin;* Ger., *Weinbeere;* Sp., *Uva.* **Orange** (*Citrus sinensis* and *aurantium*).—Fr., *Orange;* Ger., *Orange;* Sp., *Naranja.* **Banana** (*Musa sapientum*).—Fr., *Banane;* Ger., *Banana;* Sp., *Banana, Guineo.* **Date** (*Phoenix dactylifera*).—Fr., *Datte;* Ger., *Dattel;* Sp., *Datil.* Many others are of almost as great value.	Large quantities of dried and evaporated fruits are produced, among which are apples, apricots, plums (prunes) and grapes (raisins). Canned fruits, jellies, sirups, wines, liquors and vinegar are manufactured.	Different fruits thrive in different climates. Apples are widely raised in temperate regions, the largest production being in the northern United States and parts of Canada. France, Italy and Spain, the greatest grape-growing countries, are the largest producers of wine.	Refrigerator cars and special steamers make possible the shipment of fresh fruits to parts of the world distant from the region of production. There is a large export of green, ripe and dried apples from the United States and Canada to England and the Continent. Australia and South Africa are increasing their export of apples and other fresh fruit. Prunes, raisins and other dried fruits are shipped to all parts of the world from California and Mediterranean countries. Bananas, oranges and pineapples are the chief tropical fruits in general commerce. Florida and southern California, with the West Indies, Central America and northern South America, supply the markets of the United States. Those used in England and northern Europe come from the Canary islands and the West Indies. Dates come chiefly from northern Africa and western Asia.
Sugar is obtained from the juice of the sugar cane (*Saccharum officinarum*) and from the juice of the sugar beet (*Beta vulgaris*). Fr., *Sucre;* Ger., *Zucker;* Sp., *Azucar.* Maple sugar is from the juice of the sugar maple tree (*Acer saccharinum*). Sugar and sirup are made also from the juice of several palm trees.	Pure cane and beet sugar are in every way identical. Raw cane sugar, brown to yellowish in color, produced by evaporation of the juice in open pans (muscovados), and crystals from vacuum pans are both important commercially. The price of raw sugar is determined by its purity as shown on chemical analysis. A fairly good indication of purity is found in color, and raw sugars are graded according to an accepted standard which is set by the Dutch government. *White sugar*, granulated, loaf and pulverized, as commonly sold, is more nearly chemically pure than most other articles of commerce. *Molasses*, from cane juice boiled in open pans, is palatable for human food, and, like all cane molasses, is fermented and distilled to make *rum.* *Molasses* from vacuum pans (whether from cane or beet juice) is not pleasant in taste, but is an important food for cattle and is distilled to make alcohol.	Sugar cane is grown in India, Cuba, Hawaii, Java, Brazil, Mauritius, Louisiana and other parts of tropics and subtropics. India's large production is consumed locally and enters little into export trade. Sugar beets are grown most extensively in Germany, Austria, Russia, France and United States. More than half of the world's supply of sugar (exclusive of India) now comes from the sugar beet. Economic modern processes necessitate the building of enormous mills and the manufacture of sugar on a very large scale. A factor of great importance in this has also been the production of sugar from beets, grown on the farms of the temperate zone, close to the point of consumption. Here the refuse or pulp from the beets, along with the molasses, is promptly used for stock food.	After harvesting, sugar cane is carried (usually by rail) promptly to the mill, where the juice is pressed out. Modern mills have nine rollers, arranged in three sets. The trash, or bagasse, is almost dry when it leaves the last rollers and is used as fuel to run the mill. The juice is boiled down, generally in vacuum pans heated by steam, and the sugar crystals which form are separated from the molasses in centrifugals. Sugar beets are sometimes stored for several months before being used. The juice is commonly extracted by diffusion; that is, the beets are sliced and soaked in warm water. The sweet liquid is then treated in practically the same way as cane juice. Raw sugar is refined or purified by dissolving it in water, treating it with lime and the serum of blood, filtering through animal charcoal and recrystallizing. The large sugar refineries are located in the United States and Europe. Sugars from the maple and the palm are produced only in small amounts and are only of local value. Sugar of milk is of some importance medicinally and industrially.

FOODSTUFFS—Continued

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Alcohol is formed as a result of the fermentation of sugar and is therefore obtainable from practically any fruit or from any starchy matter through conversion of the starch into sugar. Alcohol is also a product of wood distillation. Fr., *Alcool;* Ger., *Weingeist;* Sp., *Alcohol.*	Alcohols differ in chemical composition according to the source. Grain alcohol, denatured alcohol and wood alcohol are the chief commercial types.	All parts of the world make and use alcoholic liquors. Distilled liquors contain more alcohol than fermented drinks. Wood alcohol and denatured alcohol are finding an increasing use for many industrial purposes in Europe and America, largely because of the lessened tax on their production.	Grain alcohol is distilled from fermented grain, chiefly Indian corn, in the United States. Potatoes are the most important source of alcohol in Germany. For industrial purposes it is denatured, or rendered unfit for use in beverages, by the addition of substances which give it an objectionable taste, odor or color. Alcohol finds a large use for heating, lighting and the development of power in alcohol motors. In these uses Europe leads. It is employed also in the manufacture of artificial silk, ether, paints, varnishes and hundreds of other products.
Tea, as it appears in commerce, is the prepared leaves of a bush or small tree (*Thea sinensis*). Fr., *Thé;* Ger., *Thee;* Sp., *Te.*	Teas are classed commercially according to the district of production as China, Ceylon, India, Assam, Japan, Formosa, Java; according to the method of preparation giving sun-dried, pan-fired, basket-fired; (*a*) green—Gunpowder, Imperial, Hyson, Caper, etc.; (*b*) black—Pekoe, Oolong, Souchong, Congou, etc., and according to the quality, dependent chiefly on the age of the leaf. *Brick tea* is commonly of low grade and not salable in the United States. It is made from tea dust and sweepings or from large leaves and trash. It has a large sale in Tibet and Russia. *Soluble tea,* or tea extract, and *tablet tea* are not of great commercial importance.	Tea is grown chiefly in hilly country throughout eastern and southern Asia. China, Ceylon, India, Japan and Java are the chief producing countries. The cultivation of the tea plant requires great care to produce leaves of perfect quality, young, tender and fragrant. The very youngest leaves and leaf buds, when properly prepared, sell for the highest price. In some places tea is picked only once or twice a year, while in other countries, where the climate is favorable to rapid growth of new shoots, the pickings are very frequent.	Green and black teas are made from leaves of the same species of plant. For black tea the leaves are allowed to wither and ferment slightly before being dried, usually over a charcoal fire. Green teas are prepared by drying the leaves more quickly and not allowing them to ferment. Tea is popular because of its pleasant taste and stimulating quality (due to the theine, or caffeine, which it contains). Outside of tea producing countries, the chief consumers are English-speaking people. The United Kingdom buys about half of all export teas, chiefly from Ceylon, Assam and Bengal. The United States uses more green tea than any other country, much of our supply coming from Japan, Formosa and China. Much Chinese tea is exported overland to Russia.
Coffee is the seed of a small tree. The world's supply of coffee is produced chiefly by the species of tree which was originally native in Abyssinia and cultivated in Arabia (*Coffea arabica*). The Liberian coffee tree (*C. liberica*) is cultivated to a limited extent. Fr., *Café;* Ger., *Kaffee;* Sp., *Café.*	The commercial varieties of coffee are named according to the districts of production, and to a very considerable extent these names when so applied indicate flavor (Mocha, Java, La Guayra, Santos, Rio, etc.). Such names as Mocha and Java, indicating high-grade coffees, have in the past been applied to beans from other localities, but this practice has been stopped in the United States by recent pure food laws. *Coffee extract* is prepared for sale to only a small amount. The popularity of coffee is due to the fact that, like tea and chocolate, it contains caffeine, a mild stimulant.	Coffee is cultivated in many parts of the tropics. Brazil is by far the greatest producer, the coffee district being mainly in the states of Sao Paulo, Rio de Janeiro, Minas Geraes and Espirito Santo. Much coffee is grown in the mountains of northwestern South America, Central America and the West Indies. Coffee is grown in Java and other parts of the East Indies, as well as in smaller quantities in Arabia, Africa and Australia.	Two beans are usually contained in each red coffee berry. The berries are sometimes dried in the sun and then cleaned by machinery to separate the beans from the several coats which cover them. In the wet method the berries are first crushed and washed to free them from the pulp, after which the beans are dried in the sun and cleaned by machinery. Coffee is roasted before use and people in some parts of the world prefer a much darker roast than others. Coffee is but little adulterated at the present time, but there are various substitutes on the market, such as chicory, roasted barley, etc. The United States uses more coffee than any other part of the world both in total amount and per capita.
Cacao Beans are the seeds of a rather small tree (*Theobroma cacao*). Fr., *Cacao;* Ger., *Cacao;* Sp. *Cacao.* (This species is absolutely distinct from the cocoanut palm and from coca, the leaves of which yield cocaine.)	Cacao beans are classified commercially according to the place of origin as San Thomé, Bahia, Esmeralda, Guayaquil, Mexican, etc., and according to the method of drying as fermented (rotted) or unfermented. *Cocoa* and *chocolate* in its many forms, bitter, sweet, milk, candy, etc., are increasingly used for food and drink. They are in some respects superior to both tea and coffee in supplying nutriment (oil, starch and albuminoids) in addition to the same stimulant principle. *Cocoa butter* is added to some of the finest candies and enters into the manufacture of cosmetics, pomades and salves. Cocoa shells are of scarcely any importance.	Cacao trees are grown in warm moist climates, usually in the shade of larger trees. Brazil, Ecuador and the island of Sao Thomé in the gulf of Guinea, Venezuela, Trinidad, Mexico, Central America, Ceylon and the East Indies produce cacao. The beans grow in pods six to ten inches long, each of which contains, perhaps, fifty seeds. These, after removal from the rind, are dried, generally in the sun, on especially prepared floors. It is customary to allow them to ferment slightly before drying, to develop the flavor.	Chocolate is made by grinding cacao beans which have first been cleaned, roasted, crushed and separated from the thin skin or shell which covers each. Sugar, vanilla or other ingredients are added to make sweet chocolate, etc. Cocoa or cocoa powder is made by pressing the ground-up beans in a powerful machine to remove some of the oil, and then pulverizing the remaining mass. Because it contains less fat than chocolate some people find it easier of digestion. Cocoa butter is the solid oil or fat removed in making cocoa. Great factories in the United States, Holland, France, Switzerland, England and Germany use the bulk of the crop of cacao beans. The United States imports beans from the producing countries and prepared chocolate and cocoa from Europe.
Yerba Mate or (Paraguay tea), the dried leaves of a tree (*Ilex paraguayensis*). Fr., *Maté;* Ger., *Maté;* Sp., *Maté.*	These leaves contain caffeine and are used like tea.	The tree grows wild in Paraguay and adjoining regions of Argentina and Brazil. The leaves are not selected but entire branches are taken.	After drying, the leaves and twigs are broken up and packed for sale. Maté is a common beverage in many parts of South America. Attempts, not very successful, have been made to popularise it in Europe and America.
Mustard is the seed of plants of the genera *Brassica* and *Sinapis.* Fr., *Moutarde;* Ger., *Senf;* Sp., *Mostazo.*	*Yellow* and *black mustard* are the important kinds, although some seeds are brown, red or white in color. Mustard is used in condiments and medicinally. *Oil* pressed from mustard seeds is used in some countries for burning and soap-making.	Widely cultivated in Europe, as well as in the United States, Asia and the East Indies.	Used in larger amount than any other spice. Black mustard, or a mixture of black and yellow mustard, produces on mixing with water a very pungent essential oil. To this is due the sharp smell and taste of mustard and its action on the skin (in mustard plasters, etc.). The flour made by grinding the seeds of black and yellow mustard enters into a great many condiments.
Pepper is the fruit of a vine (*Piper nigrum*). Fr., *Poivre;* Ger., *Pfeffer;* Sp., *Pimienta.*	*Black pepper* consists of the dry, unripe berries, while *white pepper* is the ripe fruits with the outer skin removed.	Grown chiefly in the neighborhood of Singapore and on the Malabar coast of India.	Whole peppers, *i. e.*, the entire berries, are pulverized to make ground pepper. Half the value of spices imported into the United States consists of whole black and white pepper.

FOODSTUFFS—Continued

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Red Pepper (Cayenne pepper or chillies) is the fruit of a small plant (*Capsicum* spp.). Fr., *Poivre de Cayenne;* Ger., *Spanische pfeffer;* Sp., *Pimiento.*	Enters into the composition of many condiments, and unripe appears as green peppers. There are large and small varieties.	Grown in almost all parts of the world and used in large amounts by people in warm climates, as Mediterranean countries, India, Africa, Mexico and West Indies.	In addition to the local production, the United States imports red peppers from Africa and Japan.
Allspice (or Pimento) is the dried unripe fruit of a tree (*Pimenta officinalis*). Fr., *Piment;* Ger., *Jamaikapfeffer;* Sp., *Pimento.*	A common spice, sometimes called *Jamaica pepper.*	Grown and produced almost exclusively in Jamaica.	The berries are simply dried in the sun and are commonly used whole. Popular because of its cheapness.
Cloves are the dried flower buds of a tree (*Caryophyllus aromaticus*). Fr., *Girofle;* Ger., *Gewurznelke;* Sp., *Clavos de Girofle.*	A spice used in food, confectionery and liquors. *Clove oil* is employed also in medicine and dentistry and is the basis for the manufacture of artificial vanilla.	Cultivated in the Molucca islands, East and West Indies, Zanzibar and Pemba.	The manufacture of vanillon, or artificial vanilla, from oil of cloves is important. The United States is the largest consumer of cloves.
Nutmegs are the kernels of the fruits of a small tree (*Myristica fragrans*). Fr., *Muscade;* Ger., *Muskatnuss;* Sp., *Moscada.*	The fruit looks like a small pear and the kernel is covered by a thin shell, outside of which is a red seed coat, which when dry is *mace,* another spice.	Nutmegs and mace are produced chiefly in Banda islands, East Indies.	The selling price has fallen within recent years so that West Indian plantations are no longer profitable.
Vanilla is the prepared, unripe seed pod of an orchid (*Vanilla planifolia*). Fr., *Vanille;* Ger., *Vanille;* Sp., *Vainilla.*	The pods, or beans, are used in flavoring. *Vanilla extract* is made from the beans and is imitated with tonka beans (from a South American tree) and artificial vanilla (from coal tar or oil of cloves).	Vanilla beans are produced in greatest amount and best quality in the state of Vera Cruz, Mexico. Reunion, Tahiti and Mauritius supply inferior grades. The vine requires a very moist climate.	Aside from the use in food, candy, chocolate, ice cream, etc., the cheaper grades of vanilla are employed extensively in flavoring chewing tobacco.
Ginger is the dried rootstalk of a plant (*Zingiber officinale*). Fr., *Gingembre;* Ger., *Ingwer;* Sp., *Gengibre.*	*Coated ginger* is dried with the skin on, while *peeled ginger* is scraped and bleached. Candied and preserved ginger, powdered ginger and ginger ale are commonly sold.	Grown in tropical countries, particularly in Bengal, Cochin China, China, Africa and Jamaica. African is usually coated ginger and Jamaica is the best quality of peeled ginger.	Ginger is next to pepper among spices in the amount imported yearly into the United States. Candied ginger is exported in large amount from Canton, China.
Turmeric consists of the dried stems of a plant of the ginger family (*Curcuma longa*). Fr., *Curcuma;* Ger, *Gelbwurzel;* Sp., *Curcuma.*	*Curry,* a much used condiment, is compounded with turmeric powder.	Grown in southeastern Asia and neighboring islands.	Used industrially in making yellow dye for cotton goods, in preparing fancy leather and in chemical work.
Cinnamon is the dried bark from young twigs of a small tree (*Cinnamomum zeylanicum*). Fr, *Cannelle;* Ger., *Zimmt;* Sp., *Canela.*	The best is in quills, or long rods, composed of pieces of bark rolled together. *Chinese cinnamon* or *cassia* is inferior. Used as a spice, usually in powdered form. *Cinnamon oil* is distilled from the bark as well as from leaves and twigs.	The best quality is from Ceylon. Cassia is from China, India and Indo-China.	Cassia is cheaper and much more common than true cinnamon.
Caraway, *anise, sesame, cardamoms, coriander,* and *pistachio* are less important spices.	*Sarsaparilla, fruit juices, aloes, asafetida* and many *essential oils* are used in flavoring.	Most spices are natives of Asia and the East Indies and are cultivated in the tropics and subtropics.	Many flavoring materials and extracts are made artifically in the chemical laboratory.
Olives are the fruit of a tree (*Olea europea*). Fr., *Olive;* Ger., *Olive;* Sp., *Oliva;*	*Pickled olives* are usually the unripe fruits prepared and bottled in salt water. *Olive oil* (sweet oil) is the most popular oil for table purposes. Oils from cotton seeds, peanuts, sesame seeds and other sources are used like olive oil.	The tree, which lives to a great age, grows in Mediterranean countries, California and Australia. Only limited districts produce olives fit for bottling. Most olives are grown for the production of oil.	Olives for pickling are soaked in lye to remove bitterness and often spices are added to the pickle to give an aromatic flavor. Olive oil is pressed from the ripe fruit. The poorer grades of oil are used in lubricating and for soap-making.

NARCOTICS AND MEDICINES

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Tobacco is the prepared leaf of a plant (*Nicotiana tabacum, N. rustica,* etc.). Fr., *Tabac;* Ger., *Tabak;* Sp., *Tabaco.*	Commercial grades are named from the locality of production as Havana, Sumatra, Mexican, Turkish, Virginia, etc. Certain grades are appropriate for use as cigar wrappers and others for fillers and are so named in the trade. *Cigars, cigarettes, chewing tobacco, smoking tobacco* and *snuff* are extensively used. The stems and ribs of the leaves are employed in *sheep-dip* and for fumigating greenhouses.	More tobacco is raised in the United States than in any other country and Kentucky raises more than any other state. India is the second largest producer. In Europe it is cultivated in Austria-Hungary, Russia, Germany, Netherlands, France, Belgium and Turkey. Cuba, Porto Rico, Mexico, Central and South America, China, Java, Sumatra, Philippines, Ceylon, Syria and Cape Colony are important producers. Seeds of Havana tobacco plants raised in Connecticut or elsewhere produce a grade of Havana tobacco. The many grades of tobacco are due to the varieties of the plant, as well as to soil, climate and cultivation. The curing of the leaf is of the utmost importance. It includes a period of slight fermentation and drying in well ventilated barns.	Cigars are nearly all made by hand, but many cigarettes are manufactured by machinery Nearly all plug tobacco is flavored with molasses, vanilla, licorice or other substances. The United States exports over half of the tobacco raised, chiefly to England in the form of leaf tobacco. Few cigars are exported, but cigarettes and plug tobacco go to the East Indies, China and Australia. Leaf tobacco is imported in large amount from Cuba, Sumatra, and Turkey and manufactured cigars are brought from Cuba. Large revenues are raised in many countries from the taxation of tobacco, and in Austria, France, Spain, Italy and Japan the tobacco business is a government monopoly.
Hops are the dried fruits of the hop vine (*Humulus lupulus*). Fr., *Houblon;* Ger., *Hopfen;* Sp., *Lupulo, hoblon.*	Hops are employed chiefly in brewing beer and malt liquors.	They are cultivated in almost all parts of Europe, especially in England, Germany and Austria. In the United States, California, Oregon, Washington, New York and Wisconsin produce the largest crops.	Hops are added to the malt, liquor, or wort, before fermentation and give a bitter flavor to malt liquors. Hops are not exported on a large enough scale to be an important item in commerce.

NARCOTICS AND MEDICINES—Continued

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Opium is the dried juice of the white poppy (*Papaver somniferum*). Fr, *Opium;* Ger., *Opium;* Sp., *Opio.*	Opium is valuable as a narcotic because of the morphine and other alkaloids it contains. *Laudanum* is a tincture of opium and alcohol. Paregoric is a common preparation in which opium is an ingredient.	Opium culture is an important industry in northern India, China, Persia, Asiatic Turkey and Egypt. In China the government strongly discourages opium smoking and has greatly restricted the cultivation of the poppy. The juice is obtained by scratching the seed capsule and collecting the little drops which exude on it. The juice is then further dried in the sun.	Opium for smoking is exported to China from India. It is used in the form of pills in Mohammedan countries like Persia and Turkey. The United States imports opium for medicinal purposes chiefly from Turkey in Asia.
Quinine is the bark of a tree (*Cinchona sp.*). Fr., *Quinquina;* Ger., *Chinarinden;* Sp., *Quina.*	A drug of great importance, much used in the form of sulphate of quinine or other salts.	Originally native in the Andes and hence called Peruvian bark. The world's supply now comes from plantations in Java. Produced also in South America, Ceylon and India.	The principal market is Batavia, Java, from whence it is largely shipped to Holland
Coca is the leaf of a small tree or bush (*Erythroxylon coca*). Fr., *Coca;* Ger., *Cocablatter;* Sp., *Coca.*	*Cocaine*, an alkaloid which produces local anæsthesia, is the important constituent	Cultivated chiefly in steep valleys in the Andes of Peru and Bolivia, in smaller quantities in India, Ceylon and Java.	The Indians of the Andes chew the leaves on account of the stimulating effect, and the bulk of the crop is so used. The residue is exported to manufacturers of medicinal preparations in Europe and America.
Medicinal Plants and drugs are numbered by the hundred. Among the most important are:	These are used in the form of extracts, tinctures and other pharmaceutical preparations.	Many grow wild, but the tendency of modern medicine is to use material from carefully selected plants cultivated for the purpose.	The preparation of medicines is carried on by a large number of firms in practically all parts of the world. The trade in drugs, however, is of less relative importance now than it was in the middle ages, when rhubarb, for example, occupied a prominent place in the list of commodities.
Rhubarb, a genus of plants belonging to the family *Polygonaceae.* Fr., *Rhubarbe;* Ger., *Rhabarber;* Sp., *Ruibarbo.*	Its root has long been recognized as of medicinal value owing to its astringent properties. The principal kinds of medicinal rhubarb have received such names as Russian or Turkey, East Indian, Himalayan, Chinese, and English, according to their source.	The best comes from China, though it is called Turkey rhubarb. In Europe and America generally there are several kinds of rhubarb cultivated for the sake of their stalks.	Rhubarb possesses more or less purgative and astringent properties; this is essentially the case with the roots, and hence these are largely used in medicine. The leaf-stalks of certain species are now largely used for tarts, puddings, jam, etc., and the juice is made into a kind of wine.
Sarsaparilla, the dried roots of several plants of the genus *Smilax.* Fr., *Salsepareille;* Ger., *Sarsaparilla;* Sp., *Zarzaparrilla.*	*Smilax medica* supplies the sarza of Vera Cruz. *S. siphilitica*, or *S. papyracea*, yields the Lisbon or Brazilian sort. *S. officinalis* belongs to Central America, although it yields the kind known as Jamaica sarsaparilla. *Hemidesmus indicus* yields the East Indian sort.	There are two special varieties obtained from Jamaica and Lima respectively. The roots are very long, of the thickness of a quill, dark brown in color and bitter in taste.	Sarsaparilla is valued in medicine on account of its mucilaginous and demulcent qualities. Various decoctions made from the roots are medicinally used as tonics and diuretics, and derive their properties from the presence of starch, resin, a volatile oil, and the crystalline principle smilacine.
Aconite is a hardy herbaceous plant, of the family *Ranunculaceae*, represented by the well-known wolfsbane or monkshood. Fr., *Aconit;* Ger., *Eisenhütchen, Wolfswurz;* Sp., *Acónito.*	An alkaloid contained in the leaves of monkshood. It is one of the most powerful poisons known.	The plants are natives of Europe, Asia, and North America, but the woolly aconite, or monkshood, is probably a native of Great Britain.	They are remarkable for their poisonous properties and medicinal qualities, being used internally as well as externally in rheumatism, gout, neuralgia, etc. In certain forms, a tincture of the root is used medicinally in cases of heart disease.
Ipecacuanha, the dried root of several plants of the family *Rubiaceae.* Fr., *Ipecacuana,* Ger., *Ipecacuanha, Brechwurzel;* Sp., *Ipecacuana.*	The best is the annulated, yielded by the *Cephaelis ipecacuanha.*	It is a native of Brazil, and the dried root is exported from the Rio Janeiro, Buenos Ayres, and other South American ports. Recently the cultivation of the plant has been introduced into India and Ceylon. The name of *American ipecacuanha* is given to the *Euphorbia ipecacuanha*, a plant which grows in sandy places in North America.	It is simply the root that is valuable, and in its bark exists the active principle emetine, which renders ipecacuanha of service in medicine. The color of the root is generally brown or red. The cases in which ipecacuanha is used are mainly dysentery, asthma, and coughs.
Belladonna, a plant, *Atropa belladonna*, or deadly nightshade of the family. *Solanaceae.* Fr., *Belladone;* Ger., *Belladonna;* Sp., *Belladama.* All parts of the plant are poisonous, and the incautious eating of the berries has often produced death.	The inspissated juice is commonly known by the name of extract of belladonna.	A plant which has narcotic and poisonous berries, a native of Europe.	The extract of the plant is used medicinally for soothing irritation and pain, and by oculists for the purpose of dilating the pupil during an examination of the eye, and diminishing the sensibility of the retina to light. The activity of belladonna is owing to the presence of the alkaloid atropine.
Nux Vomica, the fruit of a species of *Strychnos*, order *Loganiaceae.* Fr., *Noix vomique;* Ger., *Brechnuss;* Sp., *Nuez vómica.*	The taste of the berries is exceedingly bitter, and from them the two alkaloids strychnine and brucine are obtained.	The plant is chiefly found in Cochin China and the East Indies. The fruit of the tree is a large berry, much like a small orange, and in it the seeds are laid flat.	The seeds are mainly exported from India, and their only value is for the extraction of the alkaloids, which are used in medicine. The alkaloids are known as a very virulent poison.
Castor, the name of the plant *Ricinus communis*, and also of the oil extracted from the seeds of the plant. Fr., *Huile de ricin;* Ger., *Rizinusöl;* Sp., *Aceite de ricino.*	The beans and the oil made therefrom.	It is a native of India, but its cultivation is now very widespread. The seeds are oval in shape, and mottled brown in color.	The oil is obtained from the seeds by bruising and pressing. It is afterward heated to the boiling point, which coagulates and separates the albumen and impurities. Castor-oil is used medicinally as a mild but efficient purgative. It is chiefly imported from India.
Areca, a genus of lofty palms with pinnated leaves, and a drupe-like fruit inclosed in a fibrous rind. Fr., *Arec;* Ger., *Areca;* Sp., *Areca.*	It produces nuts and fibers.	The tree grows in various parts of the East Indies, and is cultivated on account of its nuts. There are two species of areca and each of them is remarkable for the for the purposes to which its fruit is applied. One is the *Areca catechu*, also known as the betel-nut palm, which is one of the most beautiful trees of the East Indies.	With lime and the leaves of the betel pepper, the areca-nuts when green form the celebrated masticatory of the east. They are an important article in eastern trade. The nuts are also imported into Europe and America for the manufacture of tooth powder.

MAKING WILLOW FURNITURE

© *Publishers Photo Service*

1—The willow withes as they come already stripped of bark and tied up in bundles from Europe. The best willow comes from France. **2**—The first step in making furniture is to soak the willow for several hours in water. This makes it soft and pliable. This photograph shows an operator putting a bundle of willow in the tank to soak. **3**—Showing chairs made of willow which are almost finished. The withes are carried up through the frame and back of the chair and finished off in a heavy braid around the top edge. The ends are then clipped off and the chair is finished. **4**—This photograph shows an expert workman weaving a chair from willow withes The best workmen are Hungarians. This art has been introduced into this country from Europe. **5**—This photograph shows an expert workman weaving a chair from willow withes. **6**—A fine specimen of the willow weavers art. A finished chair with the workman going over the edge and clipping off the last projecting ends of the willow. **7**—Before leaving the factory the willow porch sets are fitted with seat cushions and pillows. This photograph shows the cushion maker supplying a beautiful porch settee with pillows and cushions. (See page 404.)

NARCOTICS AND MEDICINES—Continued

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Aloe, a plant of which there are nearly two hundred species. Fr., *Aloès;* Ger., *Aloe;* Sp., *Aloe.*	From the juice of the leaves of many species a drug is obtained, known as aloes, which is of much value in medicine. *Aloe fiber* is obtained from species of *aloe, agave, yucca, etc.*, and is made into coarse fabrics, ropes, etc.	The principal drug-producing species are the Socotrine aloe, the Barbadoes aloe, the Cape aloe, etc. A beautiful violet color is afforded by the leaves of the Socotrine aloe. The American aloe is a different plant altogether; as are also the aloes or lign-aloes of scripture, which are supposed to be the *Aquilaria Agallochum* or aloe wood.	Some of the larger kinds are of great use, the fibrous parts of the leaves being made into cordage, fishing nets and lines, cloth, etc. The inspissated juice of several species is used in medicine, under the name of *aloes*, forming a bitter purgative. Formerly the chief source of the drug was Socotra, but it is now imported from various parts of the world.
Kola, the seeds or fruit of the *Sterculia acuminata.* The nuts are also known as guru nuts, Fr., *Noix de kola;* Ger., *Kotanüsse;* Sp., *Nueces de kola.*	Nuts and alkaloids.	The tree grows extensively in tropical Africa.	Medicinally the nuts are employed in case of diarrhœa and affections of the liver. Large supplies are shipped from the Gambia to France and Germany, where they are used to adulterate cocoa and chocolate.
Angostura Bark, the aromatic bitter medicinal bark obtained chiefly from *Galipea officinalis.* Also called cusparia bark. Fr., *Ecorce d'Angostura de Columbie;* Ger., *Angosturarinde;* Sp., *Corteza de Angostura.*	Chiefly valuable for its bark.	The tree is 10 to 20 feet high, and grows in the tropical regions of South America.	The bark is valuable as a tonic and febrifuge and is also used for a kind of bitters. From this bark being adulterated by the poisonous bark of *Strychnos Nux Vomica, its use* as a medicine has been almost given up. It is an article of considerable commerce in Venezuela.

FIBERS

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Manila Hemp is a fiber obtained from the leaf stalk of the abaca (*Musa textilis*) of the banana family. Fr., *Chanvre de Manille, Abacá;* Ger., *Manila hanf;* Sp., *Abacá.*	The strongest rope fiber in common use, especially desirable for marine cordage. The finest fibers are used by natives in the Philippines for weaving sinamay cloth.	Produced commercially only in the Philippine islands. Practically all of this fiber is cleaned by hand.	The most important export from the Philippines. The bulk of the production is sent to the United States and England.
Sisal (or sisal hemp) is a hard, strong fiber from the leaves of a century plant (*Agave sisalana*). Fr., *Sisal, Chanvre d'Amerique;* Ger., *Sisal hanf;* Sp., *Henequen, Maguey.* Many similar fibers are obtained from the leaves of other species of *agave* plants.	Sisal is very important for making rope and twine. All of these fibers are used locally for making mats, bags, ropes, harness etc.	Sisal is cultivated in Yucatan and the Bahamas. The home of the agave plants is Mexico and Central America and this part of the world produces most of these fibers.	On modern plantations machines have superseded the primitive hand methods of cleaning the fiber. Sisal is the chief product of Yucatan and its greatest export. The bulk of the production is used in the United States in making rope, twine and sacking. All of the other agave fibers are of less commercial importance than sisal.
Willow is a tree or shrub, yielding pliable twigs, or withes (*Salix* spp.). Fr., *Saule;* Ger., *Weide;* Sp., *Sauce.*	Willow is used in basketry and for light, easily movable furniture.	The willow is native to many parts of the world, occurring as a shrub in cold regions and as a tree in temperate and warm climates.	Willow furniture is an important product. The pictures on the preceding page depict this use of the tough, pliable willow shoots.
New Zealand Flax (or New Zealand hemp) is a fiber from the leaves of a plant (*Phormium tenax*) of the lily family. Fr., *Chanvre de la Nouvelle Zelande;* Ger., *Neuseeland-Hanf;* Sp., *Cañamo de la Neuva Zelanda.* Fibers more or less similar to the foregoing are obtained from the leaves of other plants.	Used in rope making.	A wild plant in New Zealand. Prepared by scraping away the pulpy part of the leaf.	An important cordage fiber. The fiber exported is all graded by New Zealand government inspectors, who certify to its quality.
	These are all cordage fibers and some of them are much used by native people.	The plants grow wild in the warmer parts of both the old and the new worlds. Some are cultivated, but on a smaller scale than with sisal.	While these fibers are used to some extent in the mills of Europe and America, they are of relatively small importance.
Flax is the bast fiber of an annual herb (*Linum usitatissimum*). Fr., *Lin;* Ger., *Flachs, Lein;* Sp., *Lino.*	Flax or linen fiber and linseed oil are the chief products of the plant. *Tow* is a by-product in making linen and flax yarns and fabrics. *Linseed oil* is used in paints, varnishes, printer's ink, oilcloth and linoleum. *Linseed oil-cake* is a valuable cattle food. *Flax seeds* find limited use in medicine.	Flax is grown for fiber in Russia, Belgium, Italy, France, Holland, Ireland and Egypt. Little flax fiber is produced in the United States. Plants for fiber production are straight stemmed, while the varieties grown for seed have many branches. Flax seeds are produced in Russia, India, Argentina and the United States. Plants harvested for fiber are pulled up by the root in order to obtain the greatest possible length. The fiber is separated from the stalk of the plant by retting, a process of partial decay, breaking and scutching to remove the woody parts and hackling or combing. In the best grades of flax most of this work is done by hand.	Flax yarns are used in making rope, twine, bagging and coarse unbleached fabrics. Linen yarns are made into products of the better grade, including fine linens, cambrics, laces, etc. Linen is bleached by exposure to the sun and by treatment with a dilute solution of chloride of lime. Linen rags are the stock for the best qualities of paper. The United States imports flax fiber mainly from Europe, as well as large quantities of linens, laces, etc. Some flax seeds are imported and large amounts of linseed oil-cake are sent to Europe.

FIBERS—Continued

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Hemp is the bast fiber from a tall plant (*Cannabis sativa*) of the nettle family. Fr., *Chanvre;* Ger., *Hanf;* Sp., *Canamo.* Other hemps of different botanical origin and having quite different qualities are called by such names as manila hemp, sisal hemp, tampico hemp, Mauritius hemp, sunn hemp, bowstring hemp, etc. Strictly speaking, none of these is true hemp.	As with other cordage fibers of this character, the long, combed fibers are called line and the short strands, tow. The commercial fiber is longer, coarser and less strong than flax. It cannot be bleached perfectly white, although used in so-called coarse linens. Russian, Italian and Kentucky, as applied to hemp, denote the country of origin. Italian hemp is the finest, Kentucky the strongest. *Hemp oil* is pressed from the seeds. The dried leaves (*bhang*) are smoked or made into a drink in India and used, as is an extract (*hasheesh*), as an intoxicant.	Cultivated in Russia, the warm countries of Asia, the shores of the Mediterranean, Kentucky, Missouri, Illinois and California. The fiber is extracted by rotting, cleaning and combing, but more of the work is done by machinery than in the case of flax.	Russia produces more hemp fiber than all the rest of the world. Russia and Italy are the largest exporters. The United Kingdom uses a very large amount of the fiber in making binder twine and bagging. Hemp is considerably used in carpet manufacture. The use of jute for making bagging and burlap has had the effect of lessening the demand for hemp. Hemp oil is used in paints, varnishes and soap. The oil-cake is a cattle food.
Jute is the bast from a tall plant (*Corchorus sp*). Fr., *Jute, Chanvre de l'Inde;* Ger., *Jute, Jutehanf;* Sp., *Cañamo de las Indias.*	The commercial fibers are long, but softer and weaker than hemp. It does not bleach well and is less durable than hemp, especially when exposed to dampness. Extensively employed in cordage, burlap, bagging, carpets, etc. *Jute butts*, or rejections, are an important paper stock.	Grown in large quantities in the Ganges valley, India, and in lesser amount through other parts of southeastern Asia. The stalks are rotted and treated like flax and hemp.	Jute does not easily spin into fine threads. Its chief use is in making burlap and gunny sacks, although it is used in twine, rope, carpets, curtains, upholstery fabrics such as plushes, etc. Calcutta is the great shipping port for jute fiber and Dundee, Scotland, the most important place for its manufacture. There are large jute mills making burlap, etc., in India, the United States and other countries. Paper factories in this country use a large amount of jute butts for making wrapping papers.
Ramie is the bast fiber from a plant (*Boehmeria nivea*) of the nettle family. Fr., Ger. and Sp., *Ramie.*	Commonly called China grass, or rhea, although fibers from other plants sometimes receive these names. Usually strong and silky in appearance but difficult to clean and bleach.	Cultivated chiefly in China. Produced in Indo-China, India and on a small scale in Mediterranean countries. Will probably be cultivated widely when cheap processes can be employed for the preparation of clean fiber.	Used largely in China for weaving grass cloth, or Canton linen. The fiber is very difficult to "de-gum." Many experiments are being made to find a satisfactory process. Now used in making fabrics which resemble linen, laces, underwear, plushes, etc. Will be used more largely as its manufacture is improved.
Bast Fibers from other plants are of some importance; among these are *sunn hemp, linden bast, Cuba bast* and *lace bark.*	Sunn hemp is similar to jute in its qualities and uses. Linden bast or Russian bast is made into mats, ropes, etc.		These fibers are not used on a large scale. Cuba bast is woven into ladies' hats and used for tying bundles of cigars.
Coconut Palm.—This tree (*Cocos nucifera*) yields a great variety of useful products. Fr., *Cocotier;* Ger., *Cocospalme;* Sp., *Coco.*	*Coconut fiber* (*coir*, or coco fiber) is obtained from the outer husk of the nut. The shells are made into cups. The milk is a nourishing drink. The kernel or meat of the nut is used for food as *shredded* or *desiccated coconut.* Dried coconut meat (*copra*) is pressed to make *coconut oil* for soap and candle making and cooking. The *oil-cake* is a valuable cattle food. Coconut wood (porcupine wood) from the trunk of the tree is not of great importance. *Palm sugar* is made from the juice collected from the flower spathe or this juice is fermented to make alcoholic drinks (*toddy, tuba, arrack*).	The coconut palm grows in coast regions throughout the tropics. It is commonly cultivated, but frequently its products are of only local use. Plantations in nearly all parts of the world supply some articles for export.	Coconut fiber is made into matting, ropes and brushes, and the poorer grades are used in upholstery. Coco fiber comes chiefly from Ceylon and India. Much is imported into the United States in the form of yarn. Coconut oil and copra are among the chief exports of Ceylon. Copra is obtained also from islands in the Pacific and Indian oceans and in smaller quantities from other parts of the tropics. Coconut oil is manufactured and used on a larger scale in Europe than in the United States. Fresh coconuts come to this country largely from the West Indies and northern South America.
Cotton consists of the seed hairs of a plant (*Gossypium* spp.). Fr., *Coton;* Ger., *Baumwolle;* Sp., *Algodon.*	The chief commercial types of cotton are American upland, sea island, Egyptian, Indian, Brazilian and Peruvian. These differ in the length of the individual fibers (staple). The quality is indicated by the grading under such names as fine, good, good fair, fully fair, middling fair, good middling, middling, etc. Cotton fiber is spun into *yarn* and made into *thread, muslin, calico* and hundreds of other cotton or part cotton fabrics. *Mercerized yarn* is prepared by treatment with strong caustic alkali. *Cotton linters* are used in cheap yarns, cotton batting, mattresses, and the manufacture of celluloid and artificial silk. *Cottonseed oil* is used for table purposes, for packing sardines, for cooking, making soap, candles, etc.	Cotton is next to corn the most valuable farm crop of the United States. Nearly three-fourths of all the cotton produced annually in the world is grown in the south Atlantic and gulf states. The remainder comes mostly from India, Egypt, China, Brazil, and Asiatic Russia. A comparatively small percentage of the crop is sea island cotton from the coast of Georgia and from islands in the West Indies. The area of cotton production is spreading in the United States as well as in foreign countries. The cotton fiber, attached to the seeds, is picked by hand from the plants in the field. The seeds and fiber (or lint) are separated by machines (cotton gins) and the cotton is pressed into bales. Cotton seeds are subjected to heavy pressure in machines in order to extract the oil. The oil-cake is a valuable cattle food and the hulls are used for fuel or for paper making.	The greatest centers of cotton manufacture are in England, New England, the Carolinas and Georgia. Germany, Russia, India and Japan are among the important manufacturing nations Modern cotton mills are of immense size. The bales are opened, the cotton cleaned, carded, and twisted into slivers, rovings, and finally into yarn. Raw cotton, cotton yarn and cotton fabrics are all important in trade. About half the crop of the United States is exported in bales to be manufactured in the mills of other countries. Sea island cotton has the longest staple and is used for the finest qualities of yarn and fabrics. Egyptian cotton also has a long staple. Large amounts are imported into the United States. England has an enormous foreign trade in cotton fabrics. The United States exports chiefly unbleached muslin, more of which goes to China than to any other country.
Silk Cotton consists of the seed hairs of various trees and plants. Kapok is from a large tree (*Ceiba pentandra*). Fr., *Kapok, Soie vegetale;* Ger., *Kapok, Wolle der Wollbaume;* Sp., *Kapok, Algodon de seda.*	*Kapok* or *ceiba* is the commonest vegetable silk in commercial use. Similar fibers from other sources are called *balsa, pochote* and other names.	Kapok comes chiefly from Java, although the tree is common in many parts of the tropics. The crop is principally from wild trees.	These fibers can not be spun satisfactorily and are therefore used only for upholstery. The chief European market is in Holland.

FIBERS—Continued

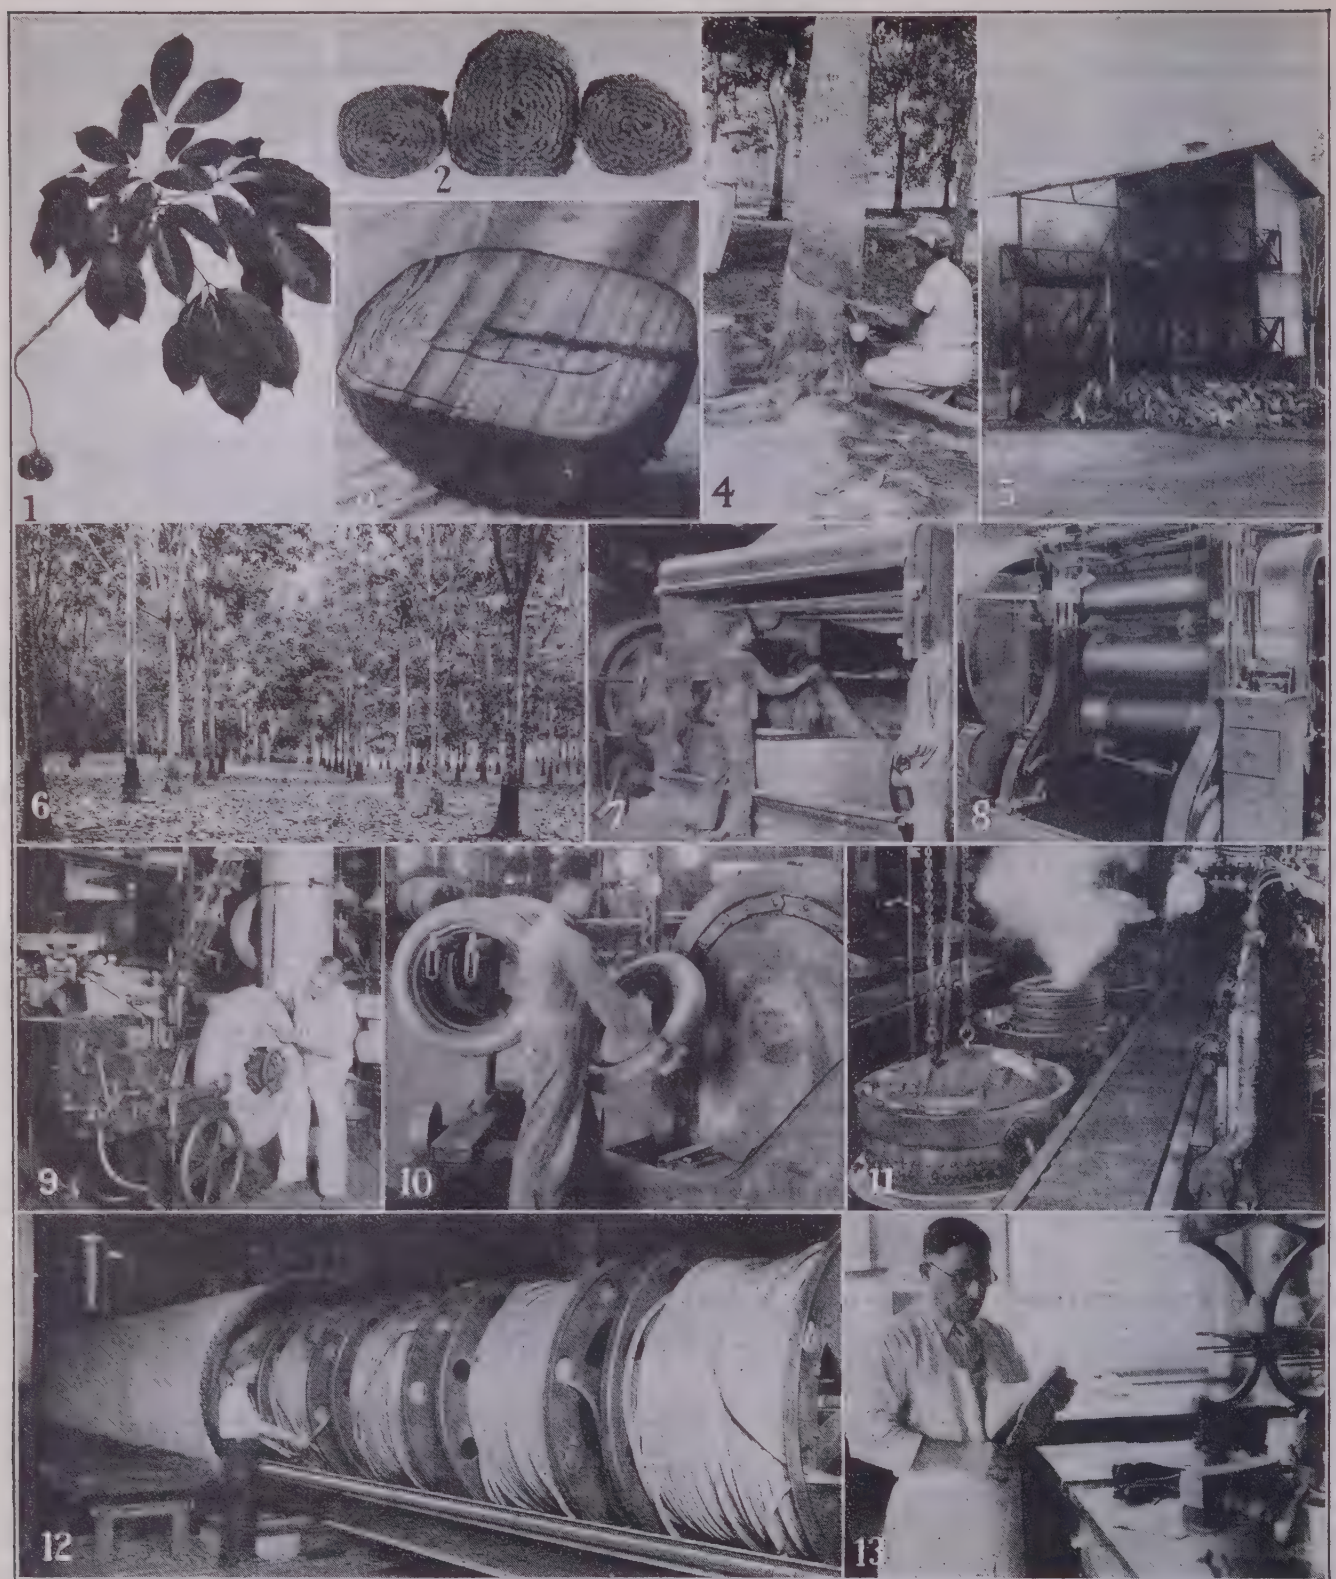
Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Raffia is peeled from the large leaflets of a palm tree (*Raphia pedunculata*). Fr., *Raffia;* Ger., *Raphiafaser;* Sp., *Raphia.*	Madagascar raffia is the only important grade. A similar soft fiber used locally is produced in West Africa.	From a very common wild tree.	Exported in considerable amounts from Madagascar and used by gardeners for tying plants. Used for making mats and basketry and in kindergartens.
Piassava comes from the sheathing bracts of certain palm trees, in West Africa *Raphia vinifera;* in Bahia, Brazil, *Attalea funifera;* in Para, Brazil, *Leopoldinia piassaba.* Fr., Ger. and Sp., *Piassava.*	Stiff coarse fibers known as West African bass, Bahia or Para bass or piassava.	From wild trees.	Used in making brooms and brushes. Piassava is an important export from the producing regions.
Kittool (*Caryota urens*) and **Palmyra** fiber or **bassine** (*Borassus flabellifer*) are from the leaf sheaths of other palms.	These and several other palm fibers of lesser importance are finer and less stiff than piassava.	Produced in Ceylon and India.	Fairly important for brush making, having some resemblance to bristles.
Palmetto fiber is from the leaf stalks and creeping stems of a palm (*Serenoa serrulata*).	The fiber and an extract used in tanning are both obtained from this palm.	Grows in Georgia, Florida, Alabama and Mississippi.	Manufactured in limited amount. Used for upholstery and in paper making.
Crin Vegetal is the shredded leaves of a palm (*Chamaerops humilis*). **Panama Straw** (*Carludovica palmata*) and many other fibers are of commercial value.	*Crin vegetal* and *Spanish moss* are used in upholstery, *zacaton* in brush making, *esparto* for paper stock, and *Panama straw* for weaving hats.	Crin vegetal grows wild in Algeria. Spanish moss is prepared for use in the Southern states. Esparto comes from North Africa. Zacaton roots from Mexico. The best Panama straw is prepared in Ecuador and Peru.	These fibers are fairly important in trade. Panama straw enters into commerce only as Panama hats and is not an article of export in its crude state.
Rattan is the stem of a climbing palm (*Calamus* species). Fr., *Rotin;* Ger., *Indianische Rohre, Rotang;* Sp., *Roten, Bejuco.*	Rattan cane is used whole or peeled. Split rattan is the bark which is removed from the peeled rattan.	Rattan vines grow wild in tropical forests of southeastern Asia. The thorny leaves and branches are cleaned away from the stems and the outer skin is removed. Then the rattan is cut into lengths, sorted according to thickness and tied in bundles.	Used for a multitude of purposes in the east. In Europe and America for making furniture, baskets, whips, etc. Split rattan is used for chair seats and peeled rattan for brushes and basketry. Exported largely from Singapore and Java.
Bamboo is the stem of the largest plant of the grass family (*Bambusa* spp.). Fr., *Bambou;* Ger., *Bambusrohr;* Sp., *Bamboa, Bambu, Caña.*	One of the most useful plants in the world. Whole stems and split bamboo are both important commercially.	Grows in tropical countries. Most common in southern Asia and the East Indies.	In the east, large bamboo serves for house construction, furniture, utensils, agricultural implements, fishing rods, canes and hundreds of other purposes. The young shoots are eaten as a fresh vegetable. Split bamboo is woven in basketry, mats, etc., and used in stiff brushes. Imported from the East Indies.

COMMERCIAL WOODS

SOFT WOODS OR NEEDLE-LEAVED WOODS

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Pine Wood is from various species of coniferous trees (*Pinus strobus, P. palustris,* etc.) Fr., *Pin;* Ger., *Fichte, Tanne;* Sp., *Pino.*	Soft pines are of several kinds, chiefly *white pine, western white pine, sugar pine* and *red pine.* Hard or *yellow pines* are more numerous and include *longleaf, (Georgia, hard* or *southern) pine, shortleaf (bull, spruce, Cuban, slash, pitch* or *loblolly) pine, western yellow pine* and *European (northern) pine,* called also *yellow deal* and *Scotch fir. Turpentine (spirits of turpentine)* and *rosin (colophony)* are prepared from the sap of certain species of yellow pine trees. *Tar, pitch, charcoal* and other products are obtained by distilling yellow pine wood.	Soft pine forests yield lumber in the northern United States and Canada and in the Rocky mountains. White pine was formerly the common timber in the Appalachians, but the supply is almost exhausted. Yellow pine is cut in large amount in the forests from North Carolina to Texas, and other hard pines come from the middle and far west, as well as from Mexico and the West Indies. Scotch fir is one of the most important woods of northern Europe. Turpentine is distilled from the sap of pines in Georgia and adjacent states, Russia, Austria, France and India.	The industries relying mainly on the forest and its products in the United States employ almost a million workers and add perhaps two billion dollars annually to the wealth of the nation. Pine is the most important construction wood in use. Very little of the great area formerly covered with white pine now remains in this country. The yellow pine is being cut rapidly and the price of lumber has practically doubled in the past twenty years.
Spruce (*Picea spp.*). Fr., *Sapin, Epinette;* Ger., *Fichte;* Sp., *Abeto, Picea.* **Hemlock** (*Tsuga* spp.). Fr., *Cigue;* Ger., *Schierling;* Sp., *Pinabete.* **Fir** (*Abies* or *Pseudotsuga* spp.). Fr., *Sapin;* Ger., *Tanne;* Sp., *Abeto,* are coniferous soft woods of great importance.	These are known by many names and there are several botanical species of each. *Black, white, red, tideland* and *Norway spruces, Douglas fir* and *European silver fir (Swiss pine)* are most important.	The spruces are common in Canada, northern Europe and on the northern Pacific coast of America and Asia. Hemlock is cut in northern United States, Canada, Japan and Siberia. Fir is found in the same general region as spruce.	The United States exports soft woods, chiefly pine, spruce and hemlock, to Europe, the West Indies, South America, Austria, Hawaii and Africa. Canada exports large quantities of spruce and pine to the United States and England. Russia and Sweden supply great quantities of soft woods to Europe, although the forests of Sweden are being rapidly cut away. Northern Japan and eastern Siberia contain forest areas rich in soft woods, which are beginning to be developed.
California Redwood comes from a coniferous tree (*Sequoia sempervirens*).	A soft, straight-grained, durable wood. Much used in shingles.	One of the largest trees of the world. Found only on the Pacific coast.	
Cedar. Fr., *Cedre;* Ger., *Zeder;* Sp., *Cedro,* and **Cypress.** Fr. *Cypres;* Ger., *Cupresse;* Sp., *Cipres,* are of many species. The true cedars belong to the genus *Cedrus.*	*Bald cypress, yellow cypress, Indian cypress, white cedar, juniper, red cedar* and dozens of other woods have more or less similarity.	These woods are widely distributed and extensively used, but are not marketed in such large amounts as the pines, spruces and firs.	

COMMERCIAL WOODS—Continued



HARD WOODS OR BROAD LEAVED WOODS

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Populus, spp., a misnomer Tulip tree. **Carolina Poplar** (*Populus deltoides*) large trees. Fr., *Peuplier;* Ger., *Pappelholz;* Sp., *Alamo.*	Tulip tree (*whitewood*) and Carolina poplar (*cottonwood*), although classed in the trade as hard woods, are almost as soft as pine.	Both are from large trees in the eastern and central United States.	These are soft, light, comparatively cheap woods, extensively used for general construction. They are not especially strong. All of them are important in paper making.
Linden comes from the basswood or lime tree (*Tilia* spp.). Fr., *Tilleul;* Ger., *Linde;* Sp., *Tila, Tilo.*	*Linden, basswood* and *whitewood* are the names used in America. *Linden, lime* or *lin* are European names. The bark supplies a useful bast fiber for ropes, mats, etc.	Common in southern Canada, central United States and Europe, growing to be trees of fairly large size.	Similar to Carolina poplar.
Maple (*Acer* spp.).—Fr., *Erable;* Ger., *Ahorn;* Sp., *Arce, Meple.* **Birch** (*Betula* spp.).—Fr., *Bouleau;* Ger., *Birke;* Sp., *Abedul.* **Beech** (*Fagus* spp.).—Fr., *Hêtre;* Ger., *Buche;* Sp., *Haya.* **Sycamore** (*Platanus* spp.).—Fr., *Sycomore;* Ger., *Platane;* Sp., *Platano.* These are among the important hard woods in common use.	*Sugar maple, silver maple, rock maple, black birch, cherry birch,* and many other names are employed. Peculiarities of the grain are known as bird's-eye, curly, etc., in the trade.	All of these are obtained from the hardwood forests of central United States and Europe. In some European forests the trees have been carefully planted and scientifically tended.	These are close-grained hard woods, suitable for furniture and cabinet work. Birch is the wood commonly used in imitation of mahogany. The silver maple and the Japan maple are highly valued as shade and ornamental trees.
Oak is from many species (*Quercus alba, Q. rubra, Q. robur,* etc.). Fr., *Chene;* Ger., *Eiche;* Sp., *Roble, Encino.*	*White oak, chestnut oak, live oak, red oak, black oak, swamp oak, willow oak,* and many other varieties are found in the lumber trade. *Oak bark* is used in tanning leather. *Cork* is the bark of one species (*Q. suber*) found in Portugal, Algeria and Spain.	Chiefly from eastern and central United States and Europe. Oaks are found also in many other parts of the world.	An open-grained hard wood of great strength and durability. When cut parallel to the medullary rays (quartered oak) it exhibits a beautiful grain valued highly for cabinet work.
Chestnut (*Castanea* spp.) is a large tree. Fr., *Châtaigne;* Ger., *Kastanien;* Sp., *Castaña.*	American and European chestnut woods are very similar. The nuts are popular for food. An extract from wood and bark is used in tanning.	Formerly a very common tree in the northern United States and still abundant. Common also in Europe.	The wood is used extensively for cabinet work. It is open-grained, softer and much less strong than oak.
Ash (*Fraxinus* spp.).—Fr., *Fréne;* Ger., *Esche;* Sp., *Fresno.* **Elm** (*Ulmus* spp.).—Fr., *Orme;* Ger., *Ulme;* Sp., *Olmo.* **Hickory** (*Carya* spp.).—Fr., *Noyer;* Ger., *Hickory;* Sp., *Nogal americano.*	These woods are of much commercial value. Hickory nuts are marketed.	The trees are found in the central United States, some on the west coast. Ash and elm grow also in Europe and Asia.	Valuable for their toughness and elasticity. Used for tool handles, carriage and wagon building, furniture, etc.
Walnut (*Juglans* spp.).—Fr., *Bois de noyer;* Ger., *Nusskolz;* Sp., *Nogal.*	*American* black walnut, *English, Italian, French* and *Circassian* walnut are commercial varieties. The nuts are exported from southern Europe.	Formerly a very abundant tree in the central United States. Has now become scarce, and high priced. Grown in many parts of Europe.	Used for gun stocks, cabinet work, veneering, etc. A highly decorative wood which has gone out of style in the United States because it is difficult to obtain.
Cherry is from the wild black cherry tree (*Prunus serotina*).		Native in the eastern United States.	Valued on account of its red color. Like walnut, cherry has become scarce and high priced.
Sweet Gum is from a common tree (*Liquidambar styraciflua*).	The wood is called *gum, red gum, hazel* or *bilsted.*	Native in the United States and Mexico. Cut chiefly in the Southern states.	A cheap cabinet wood, used to some extent in building.

IMPORTED CABINET WOODS

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Mahogany is the wood of a tropical tree (*Swietenia mahagoni.* Fr., *Acajou;* Ger., *Mahoganyholz;* Sp., *Caoba.*	*Santo Domingo, Cuban* and other kinds are named from the locality of production. Honduras *bay wood* is of inferior quality. Nearly all of the wood with a beautiful grain, or figure, is cut into thin veneers.	A wild tree in tropical forests of the West Indies, Mexico, Central and South America. African mahogany (*khaya*) comes from the west coast.	One of the most sought for of all cabinet woods. Largely imported into Europe and America. Particularly useful because of its beautiful color, grain and durability.
Cigar-Box Cedar is from a tree of the mahogany family (*Cedrela ovorata*).	*Cedro* is the name under which this wood is largely handled.	Produced largely in West Indies, Mexico, Central America and northern South America. Tuna mahogany of Australia is very similar.	One of the important woods of commerce. Too soft for work of the best grade but considerably used for furniture.
Teak is from a large tree (*Tectona grandis*). Fr., *Teck;* Ger., *Teakholz;* Sp., *Teca.*	Especially valuable for shipbuilding because it is practically indestructible.	Chiefly from Burma. Grows in southeastern Asia and adjacent islands.	A very important export from farther India.
Ebony (*Diospyros* spp. and other tropical trees).—Fr., *Ebène;* Ger., *Ebenholz;* Sp., *Ebano;* and **Rosewood** (*Dalbergia* or *Machoeium* sp.)—Fr., *Bois de rose;* Ger., *Rosenholz;* Sp., *Palo de rosa.*	*Cocobolo, tulip, amaranth, padauk, satinwood,* and many others are used for cabinet work and fancy articles.	Nearly all of these hard woods of beautiful colors are from tropical forests.	*Lignum vitæ* is especially useful for making pulleys and caster wheels. These woods are obtained in only limited quantity and many of them are sold by weight rather than measure.

THE RUBBER INDUSTRY

1. A branch from a rubber tree, showing the leaf and the seed. 2. Roll brown crêpe, a form of crude rubber. 3. Up-river fine Para crude rubber. 4. Tapping a rubber tree. 5. House in which the crude rubber is smoked. 6. A rubber plantation in the Far East. 7. Mixing mill. Here the crude rubber is torn and kneaded in passing between large hollow iron rolls. 8. A calender, or set of rolls, used in making rubber sheeting. 9. Core type one-man tire building machine. 10. Operator placing raw tire on a conveyor which will take it to the press room, where it is automatically dumped into a mold and made ready for vulcanization. 11. Vulcanizing automobile tires. 12. Lead encased rubber hose ready for vulcanization with high pressure water inside. 13. Making rubber footwear.

Photographs 1, 10 and 13 by courtesy U. S. Rubber Co.; all others by Courtesy B. F. Goodrich Rubber Co.

GUMS, RESINS AND EXTRACTS

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Gum Arabic is from small thorny trees (*Acacia* spp.). Fr., *Gomme arabique;* Ger., *Arabisches gummi;* Sp., *Goma arabiga.* **Gum Tragacanth** and **Mesquite Gum** are similar.	*Kordofan gum, Senegal gum, Barbary gum, Cape gum* and *wattle gum* are all of similar nature.	The trees grow wild in sandy regions in Africa and Australia.	These gums are soluble in water. Used for making mucilage, confectionery, etc., and in stiffening and printing silk and cotton fabrics.
Copal is resin produced by trees of many species. Fr., and Ger. *Copal;* Sp., *Goma copal.* (*Trachylobium, Dammara, Hymenaea, Agathis,* etc.).	Copals are named usually from their locality as *Zanzibar* (the hardest), *Sandarusi, Mozambique, Sierra Leone, Benguela, Angola, Loango, South American, Manila,* etc. *Kauri* is from the kauri pine tree of New Zealand.	These resins are mostly gathered from the trunks and branches of living trees. The best and hardest varieties, like Zanzibar and kauri, are found underground, having been formed perhaps ages ago and become partly fossilized.	Used for making varnishes by dissolving them in spirits of turpentine and oil. These substances are commercially important.
Dammar, Sandarach, Benzoin, Asafetida, Myrrh, Olibanum, Aloes, Guiac, Dragon's blood, Kino, Peru Balsam, Tolu, Copaiba, Storax and **Gamboge** are resins, gum resins or extracts from the juices of plants.	Gum resins and resins of many kinds are used in varnishes, medicines, incense, etc.	Such forest products are gathered in nearly all countries.	Not of so much relative commercial importance as such materials were in the middle ages.
Rubber is the milky juice (latex) of many trees and vines of the tropics and subtropics. (*Hevea, Manihot, Castilloa, Ficus, Landolphia,* etc.). Fr., *Caoutchouc, Gomme elastique;* Ger., *Kautschuk, Federharz;* Sp., *Caucho, Hule, Goma elastica.*	Crude india rubber, or *caoutchouc,* has dozens of commercial varieties differing greatly in quality according to the nature of the plant and the process of preparation (*Para, Ceara, Central American, African, Ceylon, plantation,* etc.) Crude rubber is treated with sulphur (vulcanized) to make elastic and waterproof articles, as well as hard rubber goods (*vulcanite* and *ebonite*). Substitutes for rubber are made from rape oil, corn oil, etc.	The largest supplies of rubber come to market from the East Indies. Para rubber is prepared by smoking (drying) the latex over a fire. The latex is coagulated often by simple drying in the air and frequently by chemical or mechanical processes. Mexico and Central America, Africa and the East Indies furnish large amounts. Most of the world's supply comes from wild trees. Every year there is a larger production from plantations, and much of this, like the Ceylon rubber, is of very fine grade and brings the highest market price.	Rubber has, within a very few years, become an important article in the world's commerce. Its uses are multiplying and its price has risen in proportion. Factories in Europe and America make automobile tires, rubber bands, elastic cloth, toys, shoes, tubing, hose, waterproof cloth, stoppers, erasers, etc., as well as articles of hard rubber, such as combs, buttons, surgical and chemical appliances. Rubber is used in floor cloths, cements and varnishes. Old rubber articles are worked over and the reclaimed rubber utilized.
Gutta-Percha is from the milky juice of a tree (*Palaquium gutta*). Fr., and Ger., *Gutta-Percha;* Sp., *Guta-Percha.*	Similar in some ways to rubber.	From the East Indies.	Used to insulate submarine cables and for making golf balls. Singapore is the chief port of shipment.
Balata is similar.			
Chicle or *Sapodilla* is from the milky juice of a tree (*Achras sapota*). Fr., Ger. and Sp., *Chicle.*	Chicle is called also *gum chicle,* or *crude chewing gum.*	Chiefly from Yucatan.	Used in chewing gum.

OILS, FATS AND WAXES

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
See Cotton, Corn, Olive, Flax, Hemp, Cocoanut, Cacao for other oils. See also various animal oils and petroleum.	Vegetable oils are of two important types, *fixed* or *fatty oils* and *volatile* or *essential oils.* Fixed oils are either *drying oils* like linseed or *nondrying* like olive.	Fixed oils are obtained from seeds by pressure in powerful machinery or by chemical processes. The oil-cake remaining is used for cattle food and fertilizer.	Drying oils are used in paints and varnishes, preparing leather, etc. Nondrying oils are used for table purposes, cooking, illuminating, lubricating, soap and candle making, etc. *Glycerine* is a by-product in soap making.
Castor Oil is from the seeds of the castor plant (*Ricinus communis*). Fr., *Huile de ricin;* Ger., *Rizinusöl;* Sp., *Aceite de ricino.*	The cold drawn or cold pressed oil is used in medicine. Much castor oil is treated with sulphuric acid to produce *Turkey red oil* for use in dyeing and calico printing.	The largest production is in India. Grown in the tropics and warm temperate climates.	Used in soap making, lubricating, preparing artificial leather and celluloid.
Palm Oil is from the pulp and seeds of a palm (*Elaeis* spp.). Fr., *Huile de palme;* Ger., *Palmfett;* Sp., *Aceite de palme.*	Palm oil is from the pulp, palm kernel oil from the seeds.	From the coast of the gulf of Guinea, West Africa.	For making soap and candles, and used in the preparation of tinplate.
Peanut Oil, *sunflower, almond, sesame, poppy, rape seed, kapok, soy bean* and various other oils are used.		Seeds for oil production are little cultivated in the United States with the exception of flaxseed, cotton and corn.	Marseilles, Rotterdam, and several other European cities have great mills for the production of vegetable oils of this character.
Essential Oils are made chiefly from flowers and leaves of plants.	*Attar of roses, patchouli, lavender, violet, geranium, cedar, wintergreen, cloves, lemon, orange, sassafras, peppermint, citronella, lemon grass, cinnamon, bay, almond, eucalyptus* and many others are prepared.	Fragrant oils are prepared in large amount for the perfumery trade in France, Italy, Germany and Austria, from roses, violets and other cultivated plants. Peppermint oil is produced in the United States, and it, as well as menthol, comes from Japan.	These oils are obtained by distillation of the plant with water or else by absorbing the fragrance in lard or oil (enfleurage). They are used in perfumery, for flavoring and in medicine.
Camphor is from the wood of the camphor tree (*Cinnamomum camphora*). Fr., *Camphre;* Ger., *Kampher;* Sp., *Alcanfor.*	Although called *gum camphor,* this is strictly a volatile or essential oil.	From Formosa, Japan, China and Borneo. Prepared by distilling the wood with water.	Nine-tenths of the world's supply is exported from Formosa. Its production is a monopoly of the Japanese government. Used in making celluloid and smokeless powder, in medicine and as a protection against insects.

OILS, FATS AND WAXES—Continued

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Vegetable Waxes are from myrtleberries (*Myrica* spp.), Japanese waxberries (*Rhus* spp.) or the leaves of the carnauba palm (*Copernicia cerifera*). Fr., *Cire végetal;* Ger., *Vegetabilishes Wachs;* Sp., *Cera vegetal.*	*Myrtleberry* or *Bayberry wax*, *Japan wax* and *carnauba wax* are much like beeswax in their nature and uses.	Japan wax is produced only in Japan. Carnauba wax is from Brazil.	These waxes are found in commerce but are not of great importance.

DYESTUFFS AND TANNING MATERIALS

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Logwood (*Hoematoxylon campechianum*).—Fr., *Campeche;* Ger., *Kampeschenholz, Farbholz;* Sp., *Palode Campeche.* **Brazil wood** (*Coesalpinia* spp.).—Fr., *Bois de Bresil;* Ger., *Brasilholz;* Sp., *Madera de Brasil.* **Fustic, Young Fustic, Sappan, Cam, Bar, Peach** and other woods.	Handled commercially in logs, chips, or very commonly in the form of extract.	From the forests of tropical America and the West Indies.	Aniline and other coal-tar dyes have lessened the demand for these, as well as almost all other vegetable dyes. There is still a fairly large trade in logwood.
Indigo is obtained from the juice of the indigo plants (mostly *Indigoferum* spp.). Fr., *Indigo;* Ger., *Indigo;* Sp., *Añil, Indigo.*		India, Ceylon, Java and Central America are the chief producers. Formerly cultivated much more extensively.	Prepared by soaking the plants in water. The green solution turns blue on exposure to the air, the indigo separates and falls to the bottom of the tank.
Madder, Annatto, Safflower, Quercitron, Turmeric, Turnsole, Persian Berries, Saffron, Archil, Cudbear, Litmus, Woad and many other vegetable substances are used as dyes.			
Tanbarks are from many species of trees.	*Hemlock, white oak, wattle, mangrove, larch* and *willow* are used.	Obtained mostly as by-products of lumber industry. In the United States, hemlock is most important.	Extracts from the bark are usually prepared and the material is found in commerce in this form. The value is largely dependent on the percentage of tannin.
Tanning extracts are prepared from many woods, fruits, leaves, roots and galls.	*Oak, chestnut, quebracho* and *cutch* are extracts from wood. *Myrobalans, valonia, divi-divi* and *algarobilla* are fruits yielding tannin. *Sumac* and *gambir* leaves, *canaigre* and *palmetto* roots and oak and sumac galls are all employed.	Obtained in nearly all parts of the world.	Different substances or extracts are employed in preparing different qualities of leather.

MISCELLANEOUS SUBSTANCES

Name of Raw Material	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Vegetable Ivory is the seed of a palm tree (*Phytelephas* spp.). Fr., *Ivoire végetal;* Ger., *Holzelfenbein;* Sp., *Corozo, Tagua.*	Other species of palms produce vegetable ivory in the South Sea islands.	From Ecuador, Colombia and Panama.	Used for making buttons, etc. Exported to United States and Europe.
Argols, a deposit in wine casks. Fr., *Tartre;* Ger., *Weinstein;* Sp., *Tártaro.*	*Argal* or *lees* are the only source of tartaric acid and tartrates.	Principally from Portugal.	Used in dyeing, making baking powder, cream of tartar, seidlitz powders and tartar emetic.
Lycopodium powder consists of the spores of club mosses. Fr., *Lycopode;* Ger., *Lycopodium, Barlapp;* Sp., *Licopodio.*		Exported from Russia.	Used in fireworks and by pharmacists.
Pyrethrum is the powdered flowers of a plant allied to the chrysanthemum. (*Pyrethrum* spp.).	Used in insect powders.	From Persia and southeastern Europe.	

ANIMAL PRODUCTS

Animal	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Cattle are of several important types. The most abundant is the domestic ox (*Bos taurus*). Fr., *Bétail;* Ger., *Rindvieh;* Sp., *Ganado.* The Indian Humped Ox and the Water Buffalo are raised in the East.	*Beef*, fresh, dried, salted, canned or otherwise preserved is the most valuable of all cattle products. *Hides* (including kips and calfskins) are second only to beef in importance. *Milk* is sold fresh, condensed, evaporated, or is made into butter, cheese, *casein* and *sugar of milk.* Horns, hoofs and bones are used for buttons, handles for knives, brushes, umbrellas and fancy articles, or made into *gelatine* and *glue.* *Tallow* from beef fat is used in food, soap, candles and lubricants. *Oleo oil* and *stearine* are from tallow and are used in making oleomargarine or butterine. *Neat's-foot oil* is a lubricant. *Dried blood* is used in purifying sugar, clarifying wines, and in dyeing. *Cow hair* is mixed in plaster. *Pepsin* and rennet are made from the stomach. All waste parts go into *fertilizers.*	The United States, Russia, India, Argentina, Germany, Austria-Hungary, France and Australia are the greatest cattle raising countries. In this country, the cattle raising area has moved rapidly westward. More than half of the beef cattle are now found in Texas, Iowa, Missouri, Kansas, Nebraska, Colorado and Wyoming. They are fattened in the corn belt (Illinois, Iowa, Nebraska, Kansas) and killed in the slaughter houses of Chicago, Kansas City, St. Louis and Omaha. The by-products of slaughtering are very numerous and the industry is conducted so economically that, in the great slaughter houses, no part of the animal is wasted. In some parts of the world hides and tallow are the chief products of the cattle industry on account of the difficulty of transporting the meat.	The United States, Argentina and Australia are the greatest exporters of live cattle and beef. Great Britain buys the greater part of the cattle products exported by the United States. Refrigerator cars and cold storage in steamships make possible the shipment of fresh meat to long distances. Fresh meat is a growing export from Argentina, Australia, New Zealand and South Africa to Europe. The dairy industry is of growing importance and New Zealand exports butter and cheese to England. Denmark, Sweden, Holland, Switzerland, Canada and Australia export dairy products. Notwithstanding the large production of hides in the United States, our tanning industry is so large that millions of dollars worth are annually imported, chiefly from South America. Sole leather is made from cattle hides. Leather is split and finished in a great number of styles.

SHOE INDUSTRY

1—Cutting room where uppers and linings are cut out from strong canvas. Patterns are so arranged as to allow little waste. **2**—Weighing scraps to ascertain percentage of waste. **3**—This machine cuts the lining from strong, white canvas. 20 thicknesses of cloth are cut at one time. Assistant at left holds two cutting dies. **4**—The ingenious machines which insert the eyelets in the canvas uppers of the shoes. One of these machines will insert two rows of hooks or eyelets in ten seconds. **5**—The shaping machine which stretches the upper in a smooth even form over the wooden last and takes the edge down. **6**—Rubber is placed between these plates, then placed in a hydraulic press which forces the rubber into design of the sole. Surplus rubber soles to the canvas uppers of the shoes. **7**—Cutting insoles from sheets of composition cork. These insoles insulate and keep rubber from heating foot. **8**—Machine cutting out rubber heels from large thick mass of rubber resembling dough. Scraps are thrown back in mixer and used again. **9**—Building up the rubber soles on the shoes. The workman is seen here smoothing down the rubber edging on a shoe. **10**—Attaching the rubber soles to the canvas uppers of the shoes. **11**—Trucks loaded with shoes ready for vulcanizing oven. This process hardens and cements together soles, heels and edgings. **12**—Shoes just out of vulcanizing oven, where the canvas upper is cemented to the rubber sole. **13**—Finishing off the edges of the rubber soles on buffer machines. **14**—In the finishing department. Here the girls are threading the laces into the shoes.

ANIMAL PRODUCTS—Continued

Animal	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Sheep (*Ovis aries*) are of a great number of breeds (Merino, Lincoln, Leicester, Southdown, Highland, etc.). Fr., *Moutons;* Ger., *Schafe;* Sp., *Carneros.*	*Wool* is the most valuable product of the sheep. The grades of wool are named according to the breed of sheep, the locality and the use to which they may be put. Clothing wools are fine and comparatively short, combing wools are of medium length, carpet wools are long and coarse. *Meat* (mutton and lamb) is of less importance than beef and pork. *Sheep* and *lamb skins* are used with the wool on, for rugs and furs (Persian lamb, broadtail, Astrakhan, Tibet). *Skins* (roans) are tanned for morocco and fancy leather. *Chamois* is usually oil-tanned sheepskin. *Catgut* is made of sheep intestines, *tallow* from the fat, *cheese* from the milk and *fertilizer* of all waste.	Raised chiefly in temperate countries, in largest numbers in Australia, Argentina, Uruguay, Russia and the United States. The finest wools are raised in Germany, Argentina, Australia, South Africa, and the United States. Combing wools come from England, Scotland, France, Australia and the United States. Carpet or native wools are produced in Russia, Asia Minor and China from sheep of unimproved breed. Sheep raising is an industry appropriate to a fairly open, temperate country which is sparsely settled. For this reason it has prospered in the western United States, Argentina, Australia, New Zealand and South Africa, where good breeds of sheep have been introduced.	Within the past hundred years, cotton has displaced wool as the most important commercial textile fiber. Wool is carded and spun into woolen yarns or combed and spun into worsted yarns. Woolens and worsteds are the two types of wool fabrics. Cotton is very largely mixed with wool to cheapen the product. The United Kingdom, Germany and France supply the world with woolen and worsted fabrics. The United States mills supply mainly the home market. Nearly all the factories are in New England and the Middle states. Live sheep are exported from Argentina, Australia, the United States and Canada, but a larger value is represented in frozen mutton, which goes in refrigerator ships from New Zealand, Australia and Argentina to Europe.
Swine are of many breeds (*Sus scrofa*). Fr., *Cochon;* Ger., *Schwein;* Sp., *Puerco, Cochino.*	The *meat* is by far the most valuable product. It is sold fresh, salted, pickled and smoked and in the form of ham, bacon and sausage. *Lard, lard oil, stearine,* and other fats and oils are obtained from the fat. The *skins* are made into leather and all waste parts are utilized in *fertilizers* or converted into *prussiate* (cyanide) *of potash.* *Bristles* come chiefly from China and Russia, where pigs have not been improved by breeding.	Pigs are raised in almost all parts of the world, but the hog raising industry is greatest in the United States. Corn is the food which is most important in fattening the animals for market.	Chicago, Kansas City and Omaha are the chief pork packing centers. Probably in no other industry is every by-product more completely utilized. Hog products constitute one of the most valuable of this country's exports, greatly exceeding the value of even cattle products.
Goats are less varied in their breed than many other domestic animals (*Capra* species). Fr., *Chévre;* Ger., *Zeige;* Sp., *Cabra.*	*Angora* and *Cashmere* are breeds which produce exceptional qualities of hair. The hair from the common goat is coarse and is used in making carpets and blankets. *Goat* and *kid skins* are the most valuable products of these animals.	The greatest number of goats are raised in western Asia. There are many in southern Europe and northern Africa. Angora goats are raised in Asia Minor, South Africa, Texas and Australia. In Switzerland they are raised for their milk, and cheese made from it.	Large numbers of goat and kid skins are imported into the United States, chiefly from the East Indies, Mexico and South America. These are largely tanned with chrome to make glazed kid and soft leathers. By other processes morocco and glove leather are prepared.
Camels (*Camelus* species) are of two types, the one-humped or dromedary, and the two-humped or Bactrian. Fr., *Chameau;* Ger., *Kameel;* Sp., *Camello.*	*Camel hair* is the only product which enters into general commerce. Locally the flesh, milk and hide are utilized.	Camels are found throughout central Asia and northern Africa. Camel hair comes chiefly from interior Asia.	The hair or wool is soft and suitable for making hosiery, underwear and shawls.
Alpaca is an animal similar to the camel (*Lama huanacos*). Fr., *Alpaga;* Ger., and Sp., *Alpaca.*	The wool of this animal is used to make dress goods.	Raised in Peru.	Imported into Europe and United States.
Horses are chiefly beasts of burden (*Equus caballus*). Fr., *Chevaux;* Ger., *Pferde;* Sp., *Caballos.*	*Horsehair* is from manes and tails. *Hides* are tanned to make leather. Horse flesh is eaten in Europe. *Pony skins* are used as furs.	Horsehair is exported chiefly from Russia, Argentina, Germany, and other countries.	The hair is used for making haircloth and brushes, and for stuffing mattresses and furniture.
Wild Animals of many kinds are killed for the sake of their skins.	Important *furs* are obtained from the sable, fox, weasel, marten, ermine, mink, skunk, raccoon, bear, otter, beaver, muskrat, seal, nutria, squirrel, chinchilla, mole, monkey, rabbit, etc.	Good furs come mostly from Siberia, Russia and British America, with the exception of skins of the monkey and cat families.	London and Leipzig are the world's great fur markets Skins of the domestic cat are dyed and dressed so as often to resemble more costly fur. Rabbit fur is similarly altered. Great numbers of rabbit skins are imported from Australia and New Zealand to the United States and the fur from them is used in making felt hats. Nutria fur is used for the same purpose.
Other Animals furnish products of value.	*Ivory* is chiefly from the tusks of African and Indian elephants.	*Deer horns* for knife handles, etc., come from many parts of the world. *Deer skins* are tanned for leather.	*Musk*, a perfume, comes from the musk ox of Asia. *Castoreum* from the beaver and *civet*, from the civet cats of Africa and Asia, are the bases for perfumes.
Whales are of several species (*Balæna, Physeter*). Fr., *Baleine;* Ger., *Wallfisch;* Sp., *Ballena.*	*Whale oil* (sperm oil) is drained from the blubber. *Whalebone* is from the mouth, *spermaceti* from the blubber and cavities in the head and *ambergris* from the intestines. *Porpoise leather* is from the skin of the white whale.	The Greenland fishery is most important, but whale fishing is not as prosperous an industry now, as it was one hundred years ago. This is largely because of the scarcity of whales and partly because kerosene is so generally used for illuminating.	Whale oil is used in leather dressing, burning, soap making and lubricating. Spermaceti is used in candle making and for waxing cartridge covers; whalebone for stiffening dresses, making brushes and whips; and ambergris in perfumes.
Sponges are the skeletons of peculiar animals (*Spongidæ*). Fr., *Eponge;* Ger., *Schwamm;* Sp., *Esponji.*	The qualities differ with the species and locality.	Obtained in the Mediterranean and West Indies.	Imported largely from the eastern Mediterranean.
Fish are of hundreds of species but there are comparatively few that are of great commercial importance. Fr., *Poisson;* Ger., *Fisch;* Sp., *Pescado.*	Of the food fish, cod, haddock, herring, sardines, mackerel and salmon are handled in large quantities fresh, canned, salted or otherwise cured. *Caviare* is the prepared roe of sturgeon. *Isinglass* is a pure gelatine made from the swimming bladders of sturgeon and other fish.	The great fisheries of the world are the "Grand Banks" off Newfoundland, the North Sea and the coast of Norway. Salmon are canned on the northwest coast of America and on a smaller scale in Japan, Siberia and Norway. Portugal, Spain and France lead in canning sardines. *Oils*, made from menhaden and other fish are used in preparing leather, in paints, oiling ropes, etc. *Cod liver oil* is used in preparing chamois and other leather and in pharmacy.	Canned salmon leads in value our exports of fish products, and goes mainly to England. We import herring, etc., in oil from Europe and considerable quantities of fresh or canned lobsters from Nova Scotia and Newfoundland. *Fertilizers* are prepared from the refuse from fish canneries and from fish which are not otherwise useful.

ANIMAL PRODUCTS—Continued

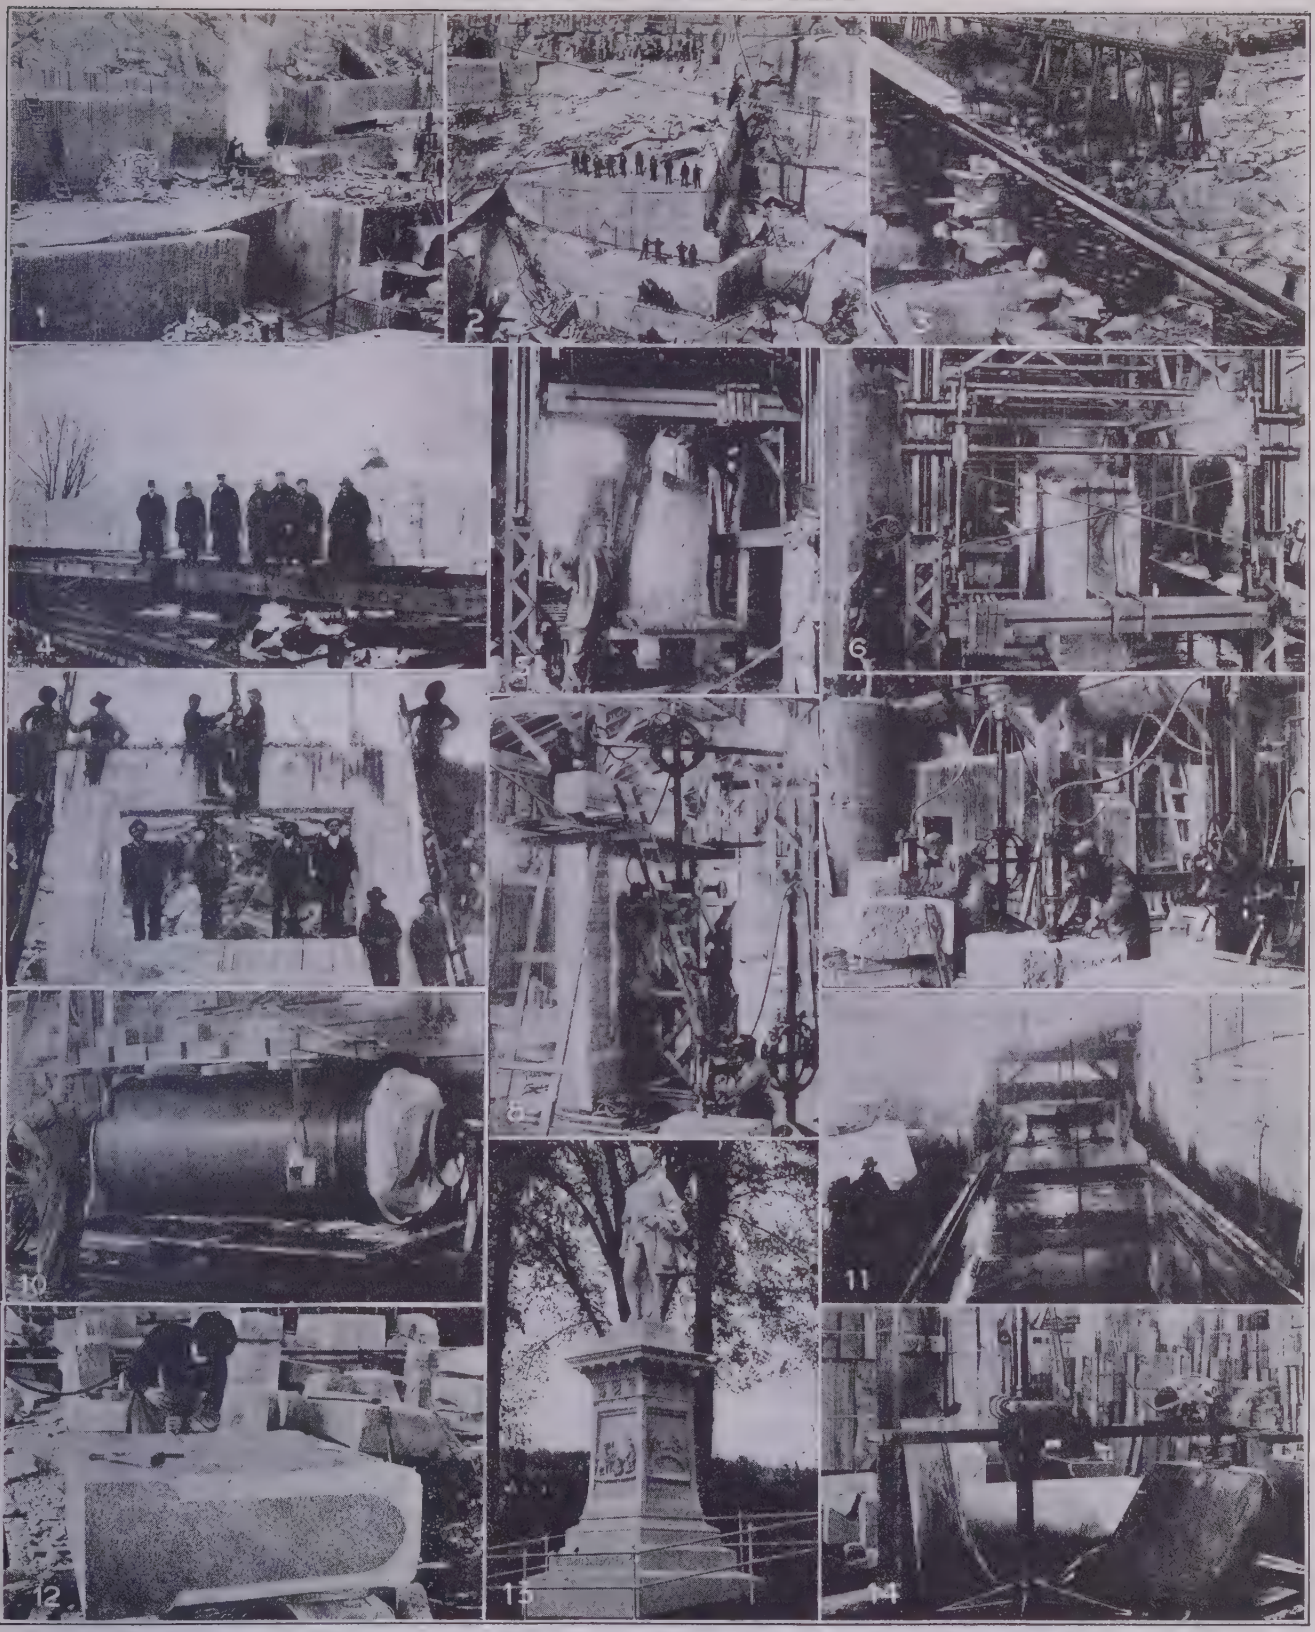
Animal	Chief Commercial Articles Produced	Habitat and Cultivation	Manufacture, Uses and Trade
Oysters are the most valuable shellfish. (*Ostrea* species, *Meleagrina*, etc.) Fr., *Huitres;* Ger., *Austern;* Sp., *Ostras.*	Oysters are gathered on the coasts of Europe and America. Some are canned but the greater amount are consumed fresh. Pearl oysters (*Meleagrina*) supply *mother of pearl* and occasionally true pearls. Abelone (*Haliotis*) and various mussel shells are also used.	Pearl oysters are found off the coasts of Ceylon, Society islands, northern Australia, Panama, in the Gulf of California, the Red Sea and the Persian gulf. Abalone shells come from the shores of the Pacific.	Pearl shell is used for buttons, knife handles, etc. Mother of pearl is imported largely from the South Pacific.

PRODUCTS OF BIRDS

Raw Material	Chief Commercial Articles Produced	Habitat and Production	Manufacture, Uses and Trade
Eggs are chiefly from the domestic fowl. Fr., *Oeufs;* Ger., *Eier;* Sp., *Huevos.*	Aside from their use as food, eggs supply *egg albumen.* Large numbers are bought in the spring and summer and preserved by cold storage.	There is a large and increasing foreign trade in fresh eggs.	Eggs are used in preparing tanned leather for gloves, etc.; and egg albumen in photographic paper, clarifying sugar, etc.
Feathers and bird skins are from many kinds of wild and tame birds. Fr., *Plumes;* Ger., *Federn;* Sp., *Plumas.*	Ostrich, cock, goose, duck, turkey, pheasant, heron, grebe, and many wild birds furnish *plumes* for decorative purposes.	Ostrich feathers are obtained by killing wild birds in central Africa and from ostrich farms in South Africa. Smaller quantities come from North Africa, Argentina and California. Down, for pillows and feather beds, is from the domestic goose.	The United States imports feathers and down chiefly from Europe. The greater part of the supply of ostrich feathers comes from South Africa, and from California ostrich farms.
Guano is the accumulated excrement of birds and bats. Fr., Ger. and Sp., *Guano.*	A valuable fertilizer. Refuse from fish canneries and oil factories goes under the name of fish guano.	From dry islands and caves.	Exported mainly from islands in the Pacific.

INSECT PRODUCTS

Silk is from the cocoons of the cultivated silkworms (*Bombyx mori*). Fr., *Soie;* Ger., *Seide;* Sp., *Seda.* Pongee and other wild silks are produced by insects of different species (*Antheræa*).	*Silk cocoons* are reeled to obtain *raw silk.* The unreelable parts of the cocoons are *silk waste,* which is converted into *spun silk.* Raw silk is "thrown" or twisted giving *tram* and *organzine* for weaving.	Silkworms are reared and cocoons produced commercially only in China, Japan, India and Mediterranean countries, particularly Italy, southern France, Greece, Turkey and western Asia. Here, cheap and competent labor can be obtained as it cannot in any other part of the world where the climate is favorable. The reeling of the raw silk from the cocoon is largely conducted in modern factories.	China exports almost half the raw silk of commerce. Japan and Italy each export less than half as much as China. The United States leads the world in the quantity of silk manufactured. France uses almost as much raw silk and makes fabrics of high grade. More than half the raw silk imported into the United States comes from Japan. We import silk fabrics in large amount from France, Germany and Switzerland.
Honey (Fr., *Miel;* Ger., *Honig;* Sp., *Miel*) and **Beeswax** (Fr., *Cire de abeilles;* Ger., *Bienenwachs;* Sp., *Cera de las abejas*) are produced by the honey bee (*Apis mellifica*).	*Honey* is sold either in the comb or extracted. *Beeswax* is obtained by melting the comb. Beeswax is adulterated and imitated by the use of paraffin, stearine, and vegetable waxes. Wax is used for candles, waxing floors and thread, artificial plants, salves, etc.	Honey and wax are produced in northern Europe and the United States.	Much honey is shipped from California to other parts of the United States and to Europe. Beeswax is imported from Europe and South America.
Lac is a resinous substance formed on twigs by the lac insect (*Tacchardia lacca*). Fr., *Laque;* Ger., *Lack;* Sp., *Laca.*	*Stick lac* is the crude material as gathered from the trees. *Seed lac* and *button lac* are partly purified. Red lac dye is a by-product now of little importance or value. *Orange shellac* is bleached to make white shellac.	From forests of northern India and Indo-China.	Dissolved in alcohol to make varnishes. Used in sealing wax, putty, for sizing paper, stiffening felt hats, etc.
Cochineal consists of the dried bodies of insects (*Coccus cacti*). Fr., *Cochenille;* Ger., *Cochenille;* Sp., *Cochinilla.*	Used as a red dye for wool.	Raised on cactus plants in Mexico, Central America, Teneriffe, and the East Indies.	Of little present importance due to the extensive use of dyes from coal tar.
Cantharides are the dried bodies of beetles (*Cantharis, Mylabris,* etc.) Fr., *Cantharides;* Ger., *Kantharidien;* Sp., *Cantáridas.*	*Cantharides,* Spanish flies and Chinese blistering beetles are similar.	From southern Europe, India and China.	Used medicinally for blistering purposes, and internally as a stimulant to the urinary organs.



MINERAL PRODUCTS

Metals	Ores and Chief Products	Locality and Preparation	Manufacture, Uses and Trade
Iron is the most useful metal. Fr., *Fer;* Ger., *Eisen;* Sp., *Hierro.* With the addition of carbon and often small amounts of other elements, iron is made into **Steel** (see pictures on page 418).	*Hematite* (sesquioxide of iron) is the ore which supplies three fourths of the iron of commerce. *Limonite* brown (homatite) is a hydrous oxide and furnishes nearly one-fourth of the world's supply of the metal. Magnetite and siderite are less common ores. *Pig iron* is the crude form of the refined metal and is transformed into *cast iron, wrought iron* and *steel* in their multitudinous forms. These three forms of iron differ in hardness, strength, elasticity, malleability, etc., according to the amounts of carbon, sulphur, phosphorus, manganese and other elements. *Ochers* and metallic paints are iron oxides. *Prussian blue* and *copperas* are iron compounds. *Pyrite* (iron pyrites or fool's gold) is a sulphide of iron, useless as an iron ore.	The United States, Germany, Great Britain, Spain and France are the greatest producers of iron. Its ores occur in almost all parts of the world. Hematite is mined in Minnesota, Michigan, Alabama and other parts of the United States and in Germany, England, France, Spain, Russia, etc. Limonite is also widely distributed. Pig iron is made by smelting iron ore in a blast furnace. The ore, mixed with limestone, is melted by burning coke, coal or charcoal. Pyrite is found in Spain and many other parts of the world and is valuable in the preparation of sulphuric acid (oil of vitriol).	The United States manufactures more iron and steel than any other country. Almost half of the production is in Pennsylvania. Cast iron appears in many articles but is weaker than other forms of iron. Wrought iron contains less impurity and is used for bars, plates, wire, structural material and parts of machinery. Steel (Bessemer, Siemens-Martin, open hearth, etc.) contains more carbon than wrought iron, possesses both strength and hardness, and is used for rails, structural material, machinery, tools, wire rope, sheet steel, etc. Its hardness may be increased by tempering. The United States imports iron ore from Cuba and Spain, pig iron from the United Kingdom and a little manufactured iron and steel from Europe. **We export large quantities of manufactured iron and steel.**

MINERAL PRODUCTS—Continued

Metals	Ores and Chief Products	Locality and Preparation	Manufacture, Uses and Trade
Lead is the softest, heaviest, most malleable and most easily melted of the common metals. Fr., *Plomb;* Ger., *Blei;* Sp., *Plomo.*	*Galena* (lead sulphide) is the only important ore; it often carries a considerable percentage of silver. Carbonates and sulphates of lead are less common. *Solder* and *type metal* are alloys of lead with tin and antimony. *White lead* is a carbonate, *red lead* and *litharge* are oxides. *Chrome yellow* and *orange mineral* are lead compounds used as pigments.	Ores are found in many countries but the main supply is from the United States, Spain, Germany and Mexico. The chief lead mines of the United States are in Missouri, Idaho, Utah Colorado and Kansas. Much lead bullion is from smelters where silver ores are reduced.	The chief use of metallic lead is in piping, sheet lead, shot and alloys. Large amounts of ore are transformed not into metallic lead but into white lead for use in paints. Lead ores and lead bullion are imported from Mexico. England is the greatest importer of lead and lead ores.
Zinc is one of the most useful metals. Fr., *Zinc;* Ger., *Zink;* Sp., *Zinc.*	*Sphalerite* or blend (zinc sulphide) is the chief ore. Carbonates, silicates and oxides of zinc are found. Crude zinc (*spelter*) is distilled from roasted ore. *Brass, German silver* and other alloys contain zinc. *Galvanized iron* consists of a coating of zinc on sheet iron. *Zinc oxide* (zinc white) resembles white lead and is used in paints.	Germany, United States and Belgium supply most of the zinc. In this country, Missouri and Kansas lead in zinc production.	Used in electric batteries, making hydrogen, zinc etchings, etc. The greatest amount of zinc is used in alloys and zinc compounds. Zinc and zinc ores are both imported and exported by the United States, the imports exceeding the exports. Zinc oxide is exported in larger amount than any other form.
Copper is, next to iron, the most important metal in use. Fr., *Cuivre;* Ger., *Kupfer;* Sp., *Cobre.*	There are many ores. *Chalcopyrite,* and *bornite,* (sulphides of copper and iron) are widely distributed. *Chalcocite* (copper sulphide) is mined in Montana, *malachite* and *azurite* (carbonates of copper) in Arizona and metallic copper in Michigan. *Copper matte* is the crude metal as it comes from the smelter. *Brass* and *bronze* are alloys of copper with zinc, tin, aluminium, etc. *Copper sulphate* (blue vitriol) is the most important chemical compound of copper.	The greatest production is in the United States, in Arizona, Montana, Michigan, and Utah. Spain, Japan, Chili, Australia and Germany produce smaller amounts. The metal is purified by smelting, and refined, often by electrolytic methods.	The value of copper has increased within recent years, due to its enormous use in electrical work. Aside from this, copper is employed in large amount in the various alloys into which it enters, and in coins, utensils, printing plates, etc. Copper sulphate is extensively used in electrical apparatus, dyes, chemical work and as an antiseptic. Large amounts of manufactured copper are exported to Europe. Smaller quantities of ores, matte and regulus are imported from Mexico, South America and other countries. Copper wire is extensively used by telephone and telegraph companies.
Gold is the standard precious metal. Fr., *Or;* Ger., *Gold;* Sp., *Oro.*	Gold ores are usually gravels or beds of quartz rock in which the metal occurs in small particles. *Chloride of gold,* used in photographic work, is its only important compound. Pure gold is called 24 carats fine. A smaller figure indicates that the metal is alloyed to harden it.	Found in nearly all parts of the world. South Africa and the United States are the leading producers. Australia, South America and parts of Europe possess important gold fields. Gold is separated from gravel (placer mines) by washing with water. The particles of metal, being heavy, sink and can be collected. Rock containing gold is crushed to fine powder and the gold combined with mercury (amalgamation). Low-grade ores are treated with a solution of cyanide of potassium which dissolves the gold and the metal is later separated.	Gold is used for money, jewelry, gold leaf (gilding) and in dentistry. It is almost always alloyed with copper and silver. Gold is the world's accepted standard of value. Shipments of gold go from one country to another chiefly to balance international business dealings. Government treasuries and bank vaults are the chief storehouses for gold, either as bullion or coin.
Platinum is a rare metal. Fr., *Platine;* Ger., *Platin;* Sp., *Platina.*	Found with gold, iridium and other rare metals in placer mines.	Chiefly from Russia. Smaller amounts from Colombia, California, Canada and Australia.	Used in the terminals of incandescent electric lamps. Also employed by chemists, jewelers and dentists.
Silver is the common precious metal. Fr., *Argent;* Ger., *Silber;* Sp., *Plata.*	*Argentiferous galena* (lead ore) is the commonest ore of silver. The amount of silver per ton varies greatly. Zinc and copper ores often carry silver. Many sulphides of silver (argentite, pyrargyrite, etc.) are found, as well as chlorides and bromides (cerargyrite and bromyrite). *Chloride* and *nitrate of silver* are used in photography.	Silver is produced in greatest amount in the Rocky mountains and the Andes. The United States, Mexico, Australia, Bolivia, Chili, Peru and Germany furnish nearly the entire supply. Montana, Colorado, Nevada and Utah lead in silver production in the United States. The ores are usually smelted and refined to purify the metal.	Manufactured into innumerable articles for household use and personal adornment. The cheapest are not solid (sterling) but are electrically plated with a very thin coating of silver. Silver coins form the bulk of the currency of the world, although in most countries gold is the standard.
Mercury (or quick silver) is a heavy metal which is liquid at ordinary temperatures. Fr., *Mercure;* Ger., *Merkur, Quecksilber;* Sp., *Mercurio.*	*Cinnabar* (sulphide of mercury) is the source of the metal, although a little is found in nature in the pure state. *Vermilion* (artificially prepared cinnabar) is used in paints. *Calomel* and *corrosive sublimate* are used in medicine and *fulminates* of mercury in explosives.	Produced in Spain, the United States, Austria, Italy and Russia. California supplies most of this country's quota. Obtained by distillation of the ore.	Used principally in the extraction of gold and silver from their ores by amalgamation. Employed in thermometers and barometers, silvering mirrors, and in making amalgams for dental work. Half of the mercury produced in this country is exported to Mexico, Central America and China.
Aluminium (or aluminum) is the lightest metal in common use. Fr. and Ger., *Aluminium;* Sp., *Aluminio.*	*Bauxite* (aluminium hydrate) is the only ore. *Cryolite* (fluoride of aluminium and sodium), a mineral mined only in Greenland, was formerly used as an ore but is now utilized in the manufacture of alum and soda. *Alum* (a sulphate) is made from cryolite or clays.	Bauxite is mined in France, Ireland, Austria, Arkansas, Alabama and Georgia. Aluminium is refined by electric processes, the works in America being located near Niagara Falls.	Used largely as an addition to iron and steel, preventing bubbles and waste in castings. Used in electrical work, and for purposes where a light, strong metal is necessary, as in certain machinery, hulls for small boats, etc. Refineries are located in Switzerland, France and Great Britain.
	Corundum (aluminium oxide) is, next to diamond, the hardest natural mineral. *Sapphire* and *ruby* are transparent forms suitable for gems. *Emery* is an impure form of corundum.	Canada, North Carolina, Alabama and India have mines of corundum. Emery is produced chiefly in Greece and Asia Minor. Rubies and sapphires are found in Ceylon, India and Montana.	Corundum and emery are powdered for use as abrasives in wheels, sharpening stones, polishing powder and cloth.
	Feldspar is a silicate of aluminium with other metals.	Mined in Canada, Pennsylvania, Connecticut, New York, Maine and Norway.	Ground up for use in pottery making. The location of manufacturing centers of pottery of all kinds and of bricks, is dependent on clay deposits. In pottery making, Ohio, New Jersey and Pennsylvania lead the United States. Abroad, fine china is made in France, Germany, Austria, England, Japan, and China. All of these countries export chinaware.
	Clay is chiefly silicate of aluminium and other metals. *Kaolin* is its purest form. The properties of clay vary with its composition, as china clay, fire clay, pipe clay, brick clay etc.	Clays are found in all parts of the world as a result of the decomposition of other rocks. For many purposes they are freed from sand and grit by washing with water, the clay being carried away in suspension. Later it is allowed to settle and gathered up in the form of mud.

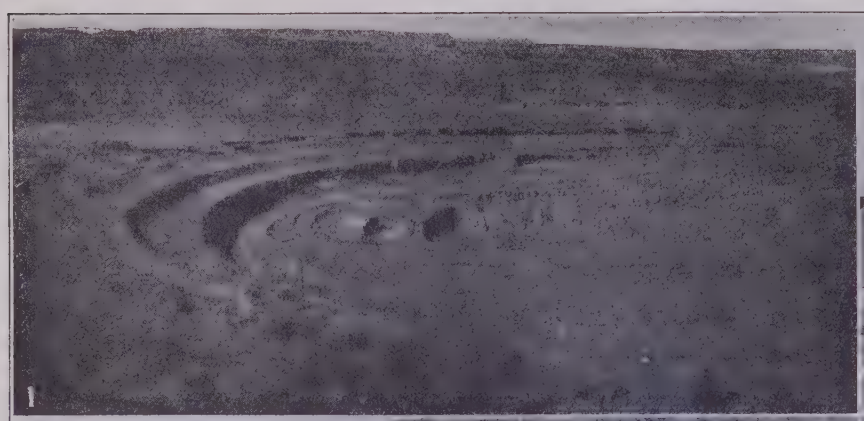
MINERAL PRODUCTS—Continued.

Metals	Ores and Chief Products	Locality and Preparation	Manufacture, Uses and Trade
Tin is less abundant than most of the common metals. Fr., *Etain;* Ger., *Zinn;* Sp., *Estaño.*	*Cassiterite* (tin oxide) is the only important ore. This mineral is commonly found as pebbles (stream tin) in gravel. *Tinplate* and alloys containing tin are of enormous importance in the arts. Of these, *bronze* is chief. *Gun metal, pewter, solder, type metal* and *britannia metal* are other alloys. Salts of tin are used in dyeing, glass making, etc.	The Malay peninsula and nearby islands (Banca and Billiton) produce over half the tin ore of the world. The remainder is mined in Bolivia, Australia, Tasmania and Cornwall, England. Small deposits occur in the United States. Tin melts at a low temperature and is easily refined.	England manufactures more tin than any other country. Tinplate, used for tin cans, roofing and kitchen utensils, is made by dipping sheet iron or steel in a bath of melted tin, thus covering it with a thin layer of tin. Tinplate is manufactured in the United States and imported from England. Tin metal is imported from England and Straits Settlements.
Antimony.—Fr., *Antimoine;* Ger., *Antimon;* Sp., *Antimonio.* **Bismuth.**—Fr., Ger. and Sp., *Bismuth.*	*Stibnite* (antimony sulphide) is the chief ore of antimony. Bismuth occurs in small amounts in a pure state and also combined with sulphur. These metals form many alloys such as *type metal, anti-friction metals, white metal, babbitt metal, fusible metals,* etc. *Tartar emetic* and other antimony compounds are used in medicine and dyeing.	Antimony is produced in Germany, France, Italy, Hungary, United States, Japan, and other countries. Bismuth comes mainly from Bolivia and Australia. Some is produced in Saxony and England.	While the total amounts of these metals in use are relatively small, they are of high importance due to their peculiar properties. Our imports of antimony are mainly in the form of regulus or metal.
Nickel.—Fr. and Ger., *Nickel;* Sp., *Niquel.* **Cobalt** is found with nickel and forms pigments. Fr., *Cobalt;* Ger., *Kobalt;* Sp., *Cobalto.*	*Garnierite* (a silicate of nickel and magnesium) is the common ore. Magnetic iron pyrite (*pyrrhotite*) often carries several per cent of nickel. Sulphides and other compounds occur. *German silver* contains nickel, copper and zinc. It enters into other alloys.	In Ontario, Canada, nickel is found in pyrrhotite. Garnierite is mined in largest amount in New Caledonia. Norway produces other ores.	France and Germany refine nickel from imported ore, chiefly from New Caledonia. Nickel steel, being especially hard and tough, is used for armor plate, special machinery and wire rope. Nickel is extensively used for cheap electro-plating. Nickel and nickel oxide are exported to Holland and England from the United States and ores and matte are imported from Canada.

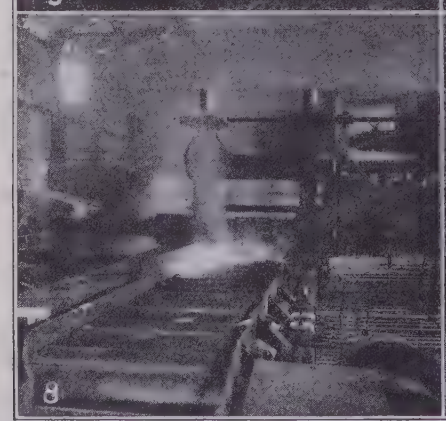
THE FOLLOWING METALS ARE LITTLE USED IN THE PURE STATE, BUT ENTER INTO THE COMPOSITION OF MANY USEFUL MINERALS



Metals	Ores and Chief Products	Locality and Preparation	Manufacture, Uses and Trade
Magnesium.—Fr., *Magnésium;* Ger., *Magnesium;* Sp., *Magnesio.*	The metal is used in flash powders for photographic use. *Magnesite* (magnesium carbonate) is used in making carbon dioxide gas and *epsom salts* and for preparing *magnesia* (calcined magnesia).	Chiefly mined in Austria, Germany and Greece.	Used in chemical manufacture, in fireproofing and lining furnaces. Imported into the United States.
	Dolomite (magnesium calcium carbonate) is common limestone, used for building.	Found in many parts of the world.	Calcined dolomite is used for lining iron furnaces.
	Talc (hydrous magnesium silicate), soapstone or steatite, is a soft mineral.	Mined in Maryland, Virginia, North Carolina, etc., and in Europe.	Made into laundry tubs, firebrick, hearthstones, griddles, slate and tailor's pencils, gas tips, etc. Imported in small amount from France and Italy.
	Meerschaum or sepiolite (magnesium silicate).	From Asia Minor and New Mexico.	Easily carved. Made into pipes and cigar holders in Austria and France. Largely imitated.
	Asbestos is a fibrous variety of serpentine (a magnesium silicate). Mineral *wool* is an artificial fibrous mineral.	Mined in Quebec, Canada. Another variety of asbestos comes from Italy. Mines recently discovered in Wyoming.	A fireproofing material. This mineral fiber is spun and woven into fireproof fabrics for theater curtains or made into felt building paper, pipe covering, etc.
Calcium (Fr., *Calcium,* Ger., *Calcium;* Sp., *Calcio*) has no commercial use in the metallic state. Its compounds, both natural and artificial, are of great economic importance.	*Limestone* (calcium carbonate) is a very common rock used for building. It may be of almost any color and coarse or fine in texture. *Marble* is a name applied to limestones suitable for polishing or ornamental work. *Mexican onyx* is translucent. *Chalk* is of peculiar soft texture; *whiting* is prepared chalk used to make putty and paints; *precipitated chalk* is similar.	Limestones are found and utilized in all parts of the world. In the United States, Pennsylvania, Illinois, Ohio, Indiana, New York and Missouri are the chief producers. Fine marbles are quarried in Italy, Egypt, France, Spain and Greece. Vermont, Georgia, Tennessee and New York supply the greater part of the marble used in the United States.	As building material, limestone is used everywhere. Lime is used in chemical industries and mortar. Handsome marbles are imported from Carrara, Italy, and other parts of Europe. Mexican onyx is also imported. Chalk comes mainly from the south of England. We export some Portland cement and import a little from Europe.
	Lime is made by burning (calcining) common limestone. *Portland* and *hydraulic cements* are prepared by calcining siliceous limestones or a mixture of limestone and clay.	Hydraulic and Portland cements are of enormous commercial importance, being used in concrete construction work. Europe and the United States produce large quantities. Pennsylvania is the leading state in this industry.	Buildings (both shops and residences) are now being extensively constructed of cement—in the former case being reënforced by iron rods.
	Chloride of lime (or bleaching powder), *acetate of lime, calcium carbide* and many other compounds are of industrial value.		
	Gypsum (hydrous calcium sulphate) is used in fertilizers (*land plaster*). *Plaster* is prepared by calcining (burning) gypsum. *Plaster of paris* is its purest form. *Alabaster* is compact white gypsum.	A common mineral mined in many parts of the world. Michigan, Kansas, New York, Ohio and other states produce it.	Fertilizers and plaster use up large quantities of this mineral. Plaster of paris is used for casts, decorative plaster work, cement, etc.
	Fluorite (calcium fluoride) is a less common mineral.	Mined in England, Kentucky and Illinois.	Used in chemical manufacture and as a flux for ores.
	Phosphate rock (chiefly calcium phosphate, is important in the preparation of fertilizers, and chemicals containing phosphorus.	Found in deposits of organic origin in South Carolina, Florida, Tennessee, the West Indies, Canada, Spain, France, Germany and England.	The natural phosphates are treated with sulphuric acid as a first step in the manufacture of phosphatic fertilizers. Exported in large amount to Germany, England and other countries.
Arsenic.—Fr., *Arsenic;* Ger., *Arsénik;* Sp., *Arsénico.*	*Arsenopyrite* (arsenic and iron sulphide), *orpiment* and *realgar* (sulphides of arsenic) are the sources of arsenic. *Arsenic* (white arsenic, arsenious acid or oxide of arsenic), *paris green* and other compounds and salts are prepared.	Germany, England, Canada the United States and Spain produce the ores. Chemical laboratories transform them into the useful compounds.	Sheep dip, rat poison, insecticides, embalming fluid, pigments and dyes are prepared with arsenic compounds. Arsenic salts are used in preparing certain coal-tar colors.

METALS—Continued

Metals	Ores and Chief Products	Locality and Preparation	Manufacture, Uses and Trade
Chrome.—Fr. and Ger., *Chrome;* Sp., *Cromo.*	*Chromite* (oxide of chromium and iron) is the only ore. *Bichromate of potash* is the most important compound.	Mined in Asia Minor, Greece, Canada, New Caledonia, California, etc. Salts are prepared in the chemical laboratory.	Bichromate of potash and chromic acid are used in tanning soft leather. A small percentage added to steel makes it very hard and suitable for burglar-proof safes, tools, etc. Salts of chrome are used for dyes and pigments (chrome yellow, chrome green).
Barium.—Fr., *Baryte;* Ger., *Barium, Baryt;* Sp., *Bario.*	*Barytes* or barite is a heavy white mineral (barium sulphate).	Mined in the United States and Germany.	A substitute or adulterant for white lead in paints and used in making oxygen.
Strontium.—Fr. and Ger., *Strontium;* Sp., *Estroncio.*	*Strontianite* (strontium carbonate) and *celestite* (strontium sulphate) contain this element.	Found in Germany, Scotland, Texas and New York.	Strontium salts are used in sugar refining and making red fire.
Potash (or potassium), an alkaline metal. Fr. *Potasse;* Ger., *Kalium;* Sp., *Potasio.*	Chlorides, sulphates, etc., are found in Germany. Wood ashes and sugar beet refuse furnish much of the world's potash.	Stassfurt, Germany, possesses the only known large deposit of natural potash salts.	These salts are the source of potash in many chemical industries and in fertilizers. Exported in large amount from Germany to England, France and America.
Sodium (Fr., *Sodium;* Ger., *Natrium;* Sp., *Sodio*) is the most important alkaline metal.	*Salt* (rock salt, sea salt, lake salt, halite or sodium chloride) is the commonest natural compound of sodium. Important for food and in chemical manufacture.	Rock salt is mined in Germany, Austria, Spain, England, Louisiana, Kansas, India and other parts of the world. Obtained by evaporating salt water from wells in England, Michigan, New York, Ohio and China, or by evaporating salt water in the West Indies, Great Salt lake, etc.	Used for meat packing, curing fish, in silver refining, and the preparation of hydrochloric acid, soda ash, carbonate of soda, etc. The foreign trade in salt does not represent very large values.
	Soda niter (nitrate of sodium) is a very easily soluble mineral.	Found in quantity only in the deserts of northern Chili.	Exported in large amounts to Europe and America for fertilizer and the manufacture of nitric acid and other chemicals.
	Borax (hydrous sodium borate) occurs in nature in an impure form and is prepared also from calcium borates.	Borates are found in Tuscany, Central Asia, California and Nevada, and in South America.	Borax and boracic acid are used in pottery manufacture, for the preservation of meat, in dyeing and in medicine.
Rare Metals.—Tungsten, molybdenum; vanadium, uranium. Thorium, cerium, lanthanum and yttrium.	The ores of these metals are unusual minerals.	Found in Colorado, Arizona, Germany, England and Sweden.	Used in making special high grades of steel. Their salts are used in dyeing.
	Monazite, samarskite, thorite and other rare minerals contain these elements.	Found in North Carolina, Norway, Brazil and Ceylon.	Used in preparing the mantles for incandescent gas lights.
Lithium.	Lithium silicates are the source of this element.	Principally from South Dakota, California and Sweden.	In chemical laboratories converted into lithium carbonate for medicinal tablets and mineral waters.
Radium.	Occurs with ores of uranium.	A newly discovered very rare element.	The chloride has peculiar properties and is used chiefly by physicians.



NONMETALLIC MINERALS

Mineral	Ores and Chief Products	Locality and Preparation	Manufacture, Uses and Trade
Sulphur.—Fr. *Soufre;* Ger., *Schwefel;* Sp., *Azufre.*	*Sulphur* or *brimstone* is found in a pure state in volcanic regions or associated with gypsum and limestone. *Pyrite* (sulphide of iron) is also a source of sulphur compounds.	Sicily, Italy, Japan, Louisiana and Texas have mines of native sulphur.	Used in manufacturing sulphuric acid, gunpowder, matches, as a disinfectant, for bleaching and vulcanizing rubber. Blue vitriol, green vitriol and alum are sulphates. Sulphur is imported from Sicily and Italy.
Quartz (silica) is of many varieties, crystalline to amorphous. Fr., *Quartz;* Ger., *Quarz;* Sp., *Cuarzo.*	*Rock crystal* is employed for lenses. Many semiprecious stones are varieties of quartz, as *agate, moss agate, onyx, sard, chalcedony, chrysoprase, jasper,* etc. *Rock flint, flint* and *quartz sand* are used in making glass and pottery. *Sandstones* of various colors are chiefly quartz.	Rock flint is mined in Connecticut and Pennsylvania. Flint comes from the chalk cliffs of England and France. Sandstones are quarried and used for building in almost all parts of the world. Pennsylvania, Ohio, and New York supply the greatest quantities in the United States. Honestones and whetstones are mostly sandstone, and in this country are largely quarried in Arkansas, Michigan and New Hampshire.	Outside of building stones, quartz is used in greatest amount in making glass and pottery. For glass it is melted with alkali (soda ash) and either lime or lead oxide. Glass is either blown or molded. Belgium, Austria, Germany, France, Great Britain and the United States manufacture glassware. Pennsylvania, Indiana and New Jersey are the leading states. Large amounts are imported by England and the United States.
Gems of many kinds are found in nature. Fr., *Pierres precieuses;* Ger., *Edelsteine;* Sp., *Piedras preciosas.*	These are nearly all transparent stones having brilliancy or beauty of color. Aside from diamond, corundum and varieties of quartz, the following are important—*topaz, emerald, aquamarine, tourmaline, olivine, spinel, moonstone, opal, turquoise* and *garnet.*	Produced in many parts of the world. Siberia, Russia, Ceylon, India, Brazil, North Carolina and Montana are all important.	Cut and polished for use in jewelry. Much of this work is done abroad.
Mica is a common mineral found in rocks in many parts of the world. Fr., *Mica;* Ger., *Marienglas, Glimmer;* Sp., *Espejuelo.*	Several varieties occur (*muscovite, biotite,* etc.) Valuable only when found in large sheets which can be split smoothly.	Mined in India, Canada, North Carolina and South Dakota.	Transparent sheets are used for lamp chimneys and stove doors. Employed in electrical work, and lubricating. Imported from India.
Building Stones.—Fr., *Pierres de construction;* Ger., *Bausteine;* Sp., *Piedrasde construcción.*	*Granite, syenite, gneiss, basalt* and other hard or durable rocks.	Quarried for local use in all parts of the world.	Only stone of exceptional beauty is shipped to a great distance. Scotland, Norway, the New England states and other localities produce fine stones. The story of the granite industry is told in pictures on page 415.

Photos by courtesy Youngstown Sheet and Tube Company

1—An Open-Pit Mine. Scene in Minnesota where the largest iron ore mines in the world are located. Trains travel up circular terraces to take out the ore. **2**—Loading an ore ship at docks on the Great Lakes. Loaded trains from the mines run out on tracks over the ore pockets. Loading chutes convey the ore into the hold of the ship. **3**—The Blast Furance. The four huge stacks, or "stoves," heat the air for the furnace, which is seen at the right directly undes the elevator which carries up the materials to fill the blast furnace. **4**—A Bessemer converter, making steel from iron. This is one of the most spectacular scenes around a steel mill. **5**—After steel has been made in a Bessemer converter it is emptied into a great fire brick lined ladel. Our picture shows the ladle pouring into the ingot molds. **6**—Tapping the open-hearth furnace, showing large ladle which receives the steel. Smaller cinder ladle at right. **7**—In the puddle mill, making wrought iron. Puddler drawing ball of the plastic metal from the furnace. **8**—Rolling an ingot in the blooming mill. Thrust after thrust elongates the ingot to many times its original length. **9**—Mighty rolls of the sheet mill rolling sheet steel. **10**—Car loaded with sheet and tube pipe, ready for shipment. (See page 413.)

CARBON AND CARBON COMPOUNDS

Mineral	Forms and Chief Products	Locality and Preparation	Manufacture, Uses and Trade
Coal is the most important fuel. Fr., *Charbon de terre, houille;* Ger., *Kohle, Steinkohle;* Sp., *Carbon mineral.*	*Peat, lignite* and *brown coal* are poor in quality, retaining much appearance of vegetable origin. *Bituminous coal,* coking coal, non-coking coal, cannel coal, cherry coal, splint coal, gas coal, steam coal, etc., are all varieties of soft coal and contain a considerable percentage of volatile matter. *Anthracite coal* is almost pure carbon. By distillation, bituminous coal yields *gas, ammonia, coal tar* and *coke.* Coal tar products are numbered by the thousand. Among them are *naphtha, benzene, oil of mirbane, perfumes, flavors, drugs, saccharine, aniline* and other dyes, *phenol, carbolic acid, salicylic acid, napthaline, photographic developers, creosote, oils, tar* and *pitch.*	Coal is a result of the alteration of vegetable matter. Deposits occur in almost all parts of the world, but many are almost entirely undeveloped; as, for example, the coal fields of China. The largest production is in the United States, Wales, England, Germany, Austria, Russia and Australia. Mines are worked in India, Japan, Mexico, South America, South Africa, China and the Philippines. Pennsylvania, Ohio, West Virginia, Alabama, Indiana, Iowa and many other states mine coal in great amount. Pennsylvania produces nearly all of the anthracite and a large quantity of bituminous coal.	Bituminous coal is the fuel which runs the factories, railways and steamships of the world. The distillation of coal tar and the utilization of its numerous by-products, is one of the best examples of modern economy which turns waste material into useful products and large profits. Much coke is made without saving the by-products. The United States exports coal, both bituminous and anthracite to Canada and ships bituminous coal to Mexico, Cuba and other countries. Some coal is imported from British America. Great Britain has a large export trade in coal. Much of that shipped from Cardiff, Wales, is in the form of briquettes or blocks made by mixing small coal with pitch or tar and pressing it into shape.
Petroleum (or coal oil).—Fr., *Pétrole;* Ger., *Petroleum, Bergol;* Sp., *Petróleo.*	Petroleum or *coal oil,* in its crude state, is a dark colored liquid. It yields by distillation, first; light oils, *gasoline, naphtha, benzine;* second, *illuminating oils, kerosene, headlight oil,* etc.; third, *lubricating oils, engine oil, cylinder oil, machine oil;* fourth, *petroleum residuum* (for asphalt paving) and *coke. Petrolatum, vaseline* and *paraffin wax* are by-products in petroleum refining.	Obtained from wells in the United States, Russia, Dutch East Indies, Galicia, Roumania and other countries. More than half of the world's output is from the United States, the leading districts being (1) Kansas and Oklahoma, (2) California, (3) Illinois, (4) Pennsylvania and (5) Texas. Crude oil is transported from the wells for hundreds of miles through pipe lines to the refineries.	Probably no modern industry is more effectively organized and carried on than the petroleum business. There is no waste in the distillation of the crude oil and no part of it for which uses have not been found. In addition, the business of selling the oil is managed with the highest skill. American kerosene oil is exported to all parts of the globe. Crude oil is also exported as well as other petroleum products.
Asphaltum (or mineral pitch).—Fr., *Asphalte, Goudron minéral;* Ger., *Asphalt;* Sp., *Asfalto.*	A bituminous mineral substance found more or less pure, in some localities. *Rock asphalt* consists of sandstone or limestone impregnated with asphalt. Much asphalt is produced in refining certain grades of petroleum—such as those obtained in California and Texas.	The pitch lake of Trinidad and the Bermudez lake at the mouth of the Orinoco in Venezuela, are the largest known deposits of moderately pure asphalt. Smaller deposits of high grade occur in Utah, Cuba and the Barbadoes. Rock asphalts are mined in France, Switzerland, Sicily, California, Kentucky and Oklahoma.	For paving, rock asphalts are much used in Europe. Trinidad and Venezuelan asphalts are exported in large quantities to the United States and Europe. For paving, these lake asphalts are mixed with broken stone, sand and petroleum residuum. Pure varieties (gilsonite, marjak, glance pitch) are made into black varnish, used for insulating, etc.
Graphite is almost pure carbon. Fr., *Graphite;* Ger., *Graphit;* Sp., *Grafito.*	*Plumbago* or *black lead* is used in making crucibles, lead pencils, lubricants for heavy machinery, stove polish, foundry facings, paint, etc. *Artificial graphite* is made from coal or coke by an electric process.	Produced in Bohemia, Ceylon, Italy, Germany, Mexico and the United States. The deposits in Ceylon are the largest in the world. Much of that mined in New York and Alabama is of very high grade.	Powdered graphite is mixed with fine clay in greater or less proportion and then molded and baked to form such articles as crucibles and lead for pencils. Graphite is imported from Ceylon to the United States, and lead pencils from Europe.
Diamond is pure crystallized carbon. The hardest known substance. Fr., *Diamant;* Ger., *Diamant;* Sp., *Diamante.*	Many diamonds are transparent, colorless stones. Some are blue or yellow. Some stones (*bort* and *carbonado*) are unfit for gems but valuable for polishing or in diamond drills.	South Africa produces the bulk of the world's supply. These deposits are in rock. In Brazil and India a few diamonds are found in gravel. Most of those from Brazil are opaque and dark colored (carbonado).	The beauty of a diamond is largely due to cutting. The diamond cutting industry is centered in Amsterdam and Antwerp. Diamonds are imported to the United States mainly from Holland and Belgium after cutting. Carbonado is used in diamond drills. Diamonds are used in cutting glass and for grinding and polishing.
Amber is a fossil resin. Fr., *Ambre;* Ger., *Bernstein;* Sp., *Ambar.*		Found chiefly along the shores of the Baltic.	Used in making mouthpieces for pipes, cigar holders, beads, etc.
Carborundum.	Carbide of silicon. Harder than any known substance but the diamond.	Manufactured at Niagara Falls, by electrically heating a mixture of coke, sand and salt.	Used for making polishing powder, in grinding wheels, sharpening stones, abrasive cloth, etc.

MONEY, BANKING AND FINANCE.—Money comprises all things which every one accepts in exchange for his property and services and in exchange for which one can always procure the property and services of others which are on the market for sale. It includes coins made of gold, silver and copper, notes issued by banks, and, in the United States and some other countries, certain government notes.

Functions of Money may be described by the phrases *standard of value* and *medium of exchange.* By the former is meant that commodity in terms of which the value, or ratios of exchange, of commodities are measured and expressed. Gold is that commodity in the chief commercial countries of the world at the present time, and a certain definite portion of it, in the United States 23.22 grains, is declared by statute to be the unit of value and is given a special name, as the dollar, pound sterling, mark, franc, etc. By the medium of exchange is meant those things which *mediate,* or act as go-betweens, in exchanges. It includes coins made of the standard commodity, all other things included under the head money, and many things not ordinarily so included, such as bank deposits, some other book accounts, various devices for making payments used by express companies and post offices, private tokens, etc.

The Elements of the Medium of Exchange common to the leading countries at the present time may be classified as *standard coins, subsidiary coins* and *bank currency.* In some countries are also found certain special coins not classifiable either as standard or subsidiary, and certain *government notes.*

Standard Coins are those made from the commodity which serves as the standard of value, are minted freely or at a small charge for whoever brings metal of the proper standard to the mints, and are legal tender for all payments public and private.

Subsidiary Coins are usually made of silver with an intrinsic value below their face value, are redeemable in standard coins, are legal tender only for small amounts, and are minted in limited quantities on government account. Among special coins may be mentioned the United States silver dollar, the five-franc piece of France, Belgium, Switzerland and Italy, and the thaler of Germany. These are coins which possess full legal tender power in their respective countries, and are not directly redeemable in standard coins, but are either no longer coined at all or only coined from time to time in limited quantities under the authority of special laws.

The Government Notes referred to are usually noninterest-bearing promissory notes issued by governments in various denominations suitable for monetary purposes, and payable to bearer on demand. In the early stages of their history they are frequently not redeemable on demand in standard coins, and consequently depreciate in various degrees according to the likelihood of their redemption in a long or a short period, the fiscal condition of the government issuing them, and other circumstances.

United States Money.—The medium of exchange of the United States at the present

time, exclusive of its bank currency, consists of gold coins, silver dollars, silver half and quarter dollars and dimes, a nickel five-cent piece, a copper cent, gold certificates, silver certificates, greenbacks and Sherman notes.

Gold and Silver Certificates are issued, the former chiefly in large, and the latter in small denominations, by the treasury department in exchange for gold coins and silver dollars respectively, which are held for their redemption.

Greenbacks, also called United States notes, were first issued in 1862 and 1863 to assist in financing the Civil war. Until January 1, 1879, they were not redeemable in coin and were consequently depreciated. Since that time the Secretary of the Treasury has been obliged to redeem them in gold on demand, and for that purpose has kept on hand a gold reserve, which was fixed at $150,000,000 by the act of 1900. When redeemed, they can only be reissued in exchange for gold coin, and the total amount which may be issued under existing laws is $346,681,016.

The Sherman Notes were issued under authority of an act passed in 1890 providing for the purchase each month of 4,500,000 ounces of silver bullion at its market price, to be paid for in treasury notes, which were to be redeemable on demand in gold coin or silver dollars at the option of the Secretary of the Treasury.

In 1893 the silver purchase clause of this act was repealed, about $150,000,000 of the certificates having been issued to that time. The bullion accumulated in the vaults of the treasury under authority of this act was subsequently coined by authority of law, silver certificates issued, and, by authority given in the act of 1900, gradually substituted for the Sherman notes, less than $1,000,000 of which still remain in circulation.

MONETARY SYSTEM OF THE UNITED STATES, 1933

I. Gold, Silver and Minor Coins

	Gold Coin	Standard Silver Dollars	Subsidiary Silver Coin	Minor Coin
Weight	25.8 grains to the dollar.	412.5 grains	385.8 grains to the dollar	5 cent piece; 77.16 grains, 75 per cent copper, 25 per cent nickel.
Fineness	900-1000.	900-1000.	900-1000.	1 cent piece: 48 grains, 95 per cent copper, 5 per cent tin and zinc.
Ratio to gold		15.988 to 1.	14.953 to 1.	
Limit of issue	Unlimited.	Coinage ceased in 1905, resumed in 1921.	Needs of the people.	Needs of the people.
Denominations	$20, $10, $5, $2½.	$1.	50 cents, 25 cents, 10 cents.	5 cents, 1 cent.
Legal tender	Unlimited.	Unlimited, unless otherwise contracted.	Not to exceed $10.	Not to exceed 25 cents.
Receivable	For all public dues.	For all public dues.	For all dues up to $10.	For all dues up to 25 cents.
Exchangeable	For gold certificates, as below, and subsidiary and minor coin.	For silver certificates and minor coin.	For minor coin.	
Redeemable			In lawful money at the treasury in sums or multiples of $20.	In lawful money at the treasury in sums or multiples of $20.

II. Paper Currency

	Gold Certificates	Silver Certificates	United States Notes	Treasury Notes of 1890	National Bank Notes	Federal Reserve Notes	Federal Reserve Bank Notes
Limit of Issue	Unlimited for gold coin unless gold reserve falls below $100,000,000.	Amount of silver dollars coined, $562,173,530.	$346,681,016.	No further issues; volume steady diminishing by redemption in silver dollars.	Not to exceed capital of banks.	Unlimited, not to exceed collateral deposited.	Unlimited, not to exceed collateral deposited.
Denominations	$10,000, $5,000, $1,000, $500, $100, $50, $20, $10.	$100, $50, $20, $10, $5, $2, $1.	$1,000, $500, $100, $50, $20, $10, $5, $2, $1.	$1,000, $500, $100, $50 $20, $10, $5, $2, $1.	$1,000, $500, $100, $50, $20, $10, $5.	$10,000, $5,000, $1,000, $500, $100, $50, $20, $10, $5.	$1,000, $500, $100, $50, $20, $10, $5, $2, $1.
Legal tender		Not a tender.	For all debts, public and private, except customs and interest on public debt.	Unlimited, unless otherwise contracted.	Not a tender.	Not a tender.	Not a tender.
Receivable	For all public dues.	For all public dues.	For all public dues.	For all public dues.	For all public dues except customs.	For all public dues.	For all public dues except customs.
Exchangeable	For subsidiary and minor coin.	For silver and minor coin.	For subsidiary and minor coin.	For silver and minor coin.	For subsidiary silver and minor coin.	For subsidiary and minor coin.	For subsidiary silver and minor coin.
Redeemable	In gold coin at the treasury.	In silver dollars at the treasury.	In gold at the treasury.	In gold or silver at the treasury.	In lawful money at the treasury, or at bank of issue.	In gold at the treasury or at any Federal Reserve Bank.	In lawful money at the treasury, or at the bank of issue.

COINAGE OF THE UNITED STATES, 1792-1926

Denomination	Pieces	Values
GOLD		
Double eagles	168,820,856	$3,376,417,120.00
Eagles	52,811,985	528,119,850.00
Half eagles	78,249,869	391,249,345.00
Three-dollar pieces (coinage discontinued under act of September 26, 1890)	539,792	1,619,376.00
Quarter eagles	19,222,833	48,057,082.50
Dollars (coinage discontinued under act of September 26, 1890)	19,499,337	19,499,337.00
Dollars, Louisiana Purchase Exposition (act of June 28, 1902)	250,258	250,258.00
Dollars, Lewis & Clark Exposition	60,069	60,069.00
Total gold	339,454,999	$4,365,292,437.50
SILVER		
Dollars (coinage discontinued, act of Feb. 12, 1873, resumed act of Feb. 28, 1878)	843,826,021	$843,826,021.00
Trade dollars (discontinued, act of Feb. 19, 1887)	35,965,924	35,965,924.00
Dollars (Lafayette souvenir, act of March 3, 1899)	50,026	50,026.00
Half dollars	455,621,800	227,810,900.00
Half dollar (Columbian souvenir)	11,310,170	5,655,085.00
Quarter dollars	604,154,341	151,038,585.25
Quarter dollars (Columbian souvenir)	40,023	10,005.75
Twenty-cent pieces (coinage discontinued act of May 2, 1878)	1,355,000	271,000.00
Dimes	1,278,356,797	127,835,679.70
Half dimes (coinage discontinued, act of February 12, 1873)	97,604,388	$4,880,219.40
Three-cent pieces (coinage discontinued, act of Feb. 12, 1873)	42,736,240	1,282,087.20
Total silver	3,371,020,730	$1,398,625,533.30
MINOR		
Five-cent pieces, nickel	1,401,129,862	$70,056,493.10
Three-cent pieces, nickel (coinage discontinued, act of September 26, 1890)	31,378,316	941,349.48
Two-cent pieces, bronze (coinage discontinued, act of September 26, 1890)	45,601,000	912,020.00
One-cent pieces, copper (coinage discontinued, act of February 21, 1857)	156,288,744	1,562,887.44
One-cent pieces, nickel (coinage discontinued, act of April 22, 1864)	200,772,000	2,007,720.90
One-cent pieces, bronze	5,252,120,427	52,521,204.27
Half-cent pieces, copper (coinage discontinued, act of February 21, 1857)	7,985,222	39,926.11
Total minor	7,095,275,571	$128,041,600.40
Total coinage	10,805,751,300	5,891,959,571.20

Silver-dollar coinage under acts of April 2, 1792, $8,031,238; February 28, 1878, $378,166,793; July 14, 1890, $187,027,345; March 3, 1891, $5,078,472—total $578,303,848.

The Medium of Exchange of other Countries, exclusive of their bank currency, resembles that of the United States in most essentials, but differs from it in some particulars.

Canada.—That of Canada approximates it most closely, the unit of value being the same, and government notes playing an important role. The gold coins of both England and the United States, however, are there current, and the governor-general may declare other gold coins legal tender at their bullion value.

England has a large unit of value, consisting of 123.274 grains of standard and 113.001 grains of pure gold, which is represented in a coin called the *sovereign*. Its silver coins are all subsidiary, the shilling weighing 87 3/11 grains 0.925 fine, being the unit among them and having a tale value of one-twentieth of a sovereign. The penny and the farthing are minor coins of copper having tale values respectively, of one-twelfth and one-forty-eighth of a shilling.

Only during and since the World War have government notes constituted an element of the English currency.

England's currency was inconvertible until 1925 when the gold standard was resumed. The par value of the sovereign is $4.8665 in United States currency.

France, Belgium, Switzerland, and Italy prior to the war had the so-called franc system, the franc consisting of 4.978 grains of standard and 4.4802 grains of pure gold, being the unit (par value 19.30 cents U. S. currency). In these countries all the silver coins were subsidiary, except the five-franc piece which in its status closely resembles the silver dollar of the United States. It contains 385.8 grains of standard and 347.22 grains of pure silver, and from 1865

to 1878 they were coined in limited quantities for government account only, but since the latter date their coinage has been suspended. However, they still remain legal tender at their tale value for all amounts.

All of these countries suspended specie payments shortly following the outbreak of the World War. The Swiss franc, however, depreciated very little. In October, 1926, the Belgian government established a new unit of currency, the Belga with a fine gold content of 0.209211 grams (par value in U. S. currency of 13.90 cents) and a fixed relation to the Belgian paper franc of 5 to 1, making the latter worth 2.78 in United States currency. In 1927, France and Italy still had inconvertible paper currency, the French franc being worth approximately four cents and the Italian lira about five cents in United States currency.

Germany makes the mark its unit, consisting of 6.1457 grains of standard gold. All silver coins are subsidiary except the thaler. The silver mark weighs 85.733 grains, and all subsidiary coins are legal tender only in payments of twenty marks or less. The thalers are remnants of the old currency systems in use before the foundation of the empire and are legal tender for any amount. Imperial treasury notes constitute a small element of the currency of the empire.

During the war Germany's currency became inconvertible and in 1923 it was practically worthless. Later one trillion of the old marks were exchanged for one of the new marks issued by the Reichsbank established under the Dawes plan. The gold content of the new mark is the same as that of the old.

Banks.—The largest element of the medium of exchange of commercial nations is supplied by banks, which also frequently perform other important financial functions, such as the encouragement of saving, the purchase and sale of securities, the promotion of industrial enterprises and the execution of trusts of various kinds. Their most fundamental operations are *the conduct of deposit accounts* and *the making of loans and discounts*.

Deposits are credits on the books of a bank obtained by business men and others by the sale to the bank of their surplus cash, their own personal notes, and of credit instruments representing payments due them from other people. These credits give the customer the right to call upon the bank for legal tender money or for a transfer to the credit of some other person of all or some part of the amount due him.

Some, known as *demand deposits*, give the right to demand payment at any time without notice, and others, known as *time deposits*, only after the lapse of a certain time from the date of demand.

Check.—In making use of his rights the customer employs the *check*, which is a written order to the bank to pay to bearer or to the order of a specified person a specified sum.

Loans and Discounts.—The personal notes and bills of exchange payable at some future date received by the bank in return for credits allowed or cash advanced are usually described in bank accounts as *loans* and *discounts*.

Bank Notes.—Instead of opening credit accounts or advancing legal tender money to its customers a bank having the authority may *issue notes*—that is, transfer to them its promises to pay to bearer on demand—in denominations convenient for use as money. To the bank these notes represent obligations of the same kind as deposits, but to the customer they serve as hand-to-hand money and may be substituted for government notes, and, for many purposes, for coin.

Banking Processes.—Through the processes involved in *loaning, discounting, conducting deposit accounts*, and *issuing notes*, banks perform a large part of the world's exchanges, in the United States the major part. Nearly all business men and a large percentage of other people are their customers.

Purchases of goods are generally made on time, the credit instruments, such as personal notes and bills of exchange, which represent the obligations thus created, are discounted by the banks, and deposit accounts opened against them. By transfers of these from one person to another the mutual indebtedness created by purchases and sales on credit are canceled and the transactions thus completed and closed.

Profits.—The interest on the discounted notes and bills, which it has purchased by credit accounts bearing no interest or a lower interest than is charged on loans or by notes, is the chief source of a bank's profits.

Exchange.—In the conduct of their business banks find themselves each day in the possession of checks, drafts and other bills of exchange drawn on other banks in the same or other cities.

Clearing Houses.—In order to collect those drawn on banks located in the same town clearing houses have been organized in all large and in many small cities. These are places at which clerks of the various banks meet for the purpose of exchanging checks, drafts, etc., and settling mutual obligations.

Correspondents.—For the collection of paper drawn on out-of-town banks and the supply of their customers with the means of meeting out-of-town payments, banks usually employ what are known as correspondents. These are banks in commercial and financial centers with which they arrange to have credited the amounts of checks, drafts, etc., sent for collection, and debited the drafts drawn in favor of their customers.

Through this correspondence system the banks of the entire commercial world have been organized into a great machine for the conduct of commerce, business men anywhere being able through their banker to make payments in any part of the world or to receive amounts due them.

Through it, also, the mutual indebtedness of the people of different cities, states and nations, created by mutual trade, investments, and other financial operations, are canceled in substantially the same manner as those between citizens of the same place are canceled by local banks and clearing houses.

Bank Balances.—The aggregates of the debits and credits which the banks of a place have with their correspondents represent with a considerable degree of accuracy what the people of the place owe to outsiders and what outsiders owe to them. The balance between these aggregates may be great or small, in favor of the banks or against them, and their payment, if demanded, must be accomplished by the shipment of money. If payment is not demanded the banks will ordinarily pay interest on adverse balances and receive interest on favorable ones. The banks are thus put to expense whenever the balance is against them and are making a profit whenever it is in their favor. In the first case, in order to indemnify themselves, they must charge a premium on drafts on out-of-town places, and in the second case they can afford to sell drafts at a discount, provided they can make more out of their funds at home than the interest allowed on their balances with correspondents.

Rate of Exchange.—This premium charged or discount allowed on drafts is known as the *rate of exchange*. If a premium is charged, *exchange is said to be at a premium;* if a discount is allowed, it is *said to be at a discount*.

The rate of exchange at a given time is fixed by a process of bargaining between either the banks of a place which have favorable balances with correspondents and therefore desire or are willing to sell exchange, and those which have unfavorable balances and consequently desire or are willing to buy exchange, or, in case all the banks are in the same situation as regards the condition of their balances, between the banks and those of their customers who want exchange.

Foreign Exchange.—In the foreign exchange, between countries having the same standard, the so-called *par of exchange* must be calculated; that is, the exact equivalent of the unit of one nation in terms of the other. Between the United States and other nations this calculation consists of dividing the number of grains of pure gold contained in the foreign unit by 23.22, the number of grains of pure gold in our dollar.

Between countries having different standards—for example, between gold and silver standard countries—the place of the par of exchange is taken by the relative market values of the two metals. If one or both of the nations have a secondary standard its depreciation must be calculated as well as the par of exchange or the relative values of the metals constituting their primary standards.

The rates of exchange between foreign countries fluctuate above or below the par of exchange or the substitute for it as the domestic rate fluctuates above and below the par value of domestic drafts. Between gold standard countries the upper and lower limits of these fluctuations are determined by adding to and subtracting from the par of exchange the cost of obtaining and shipping gold, and are called the *gold points*.

Foreign exchange during and since the war is discussed below under the title "Inconvertible Notes and Government Budgets."

Foreign Drafts are drawn by parties of various degrees of financial reputation and are made payable at different dates. Accordingly the element of interest enters into the calculation of their market values and consequently into the prices at which they are quoted.

When a New York banker sells a cable there is no appreciable interval between the time at which his balance with his foreign correspondent is diminished by the amount drawn, but when he sells a *sixty-day* draft he receives the pay for it at the date of sale and still draws interest on the total amount of his balance for sixty days, the draft not being payable until after the lapse of that period of time.

Leaving out of consideration, therefore, the cost of the cablegram, he could afford to sell a sixty-day draft at the price of a cable, minus interest, on the amount for sixty days at the rate received on balances with his correspondent.

Classes of Banks.—From the standpoint of the *source* of their authority to do business, banks in the United States may be classified as national, state and private,

according as they are chartered by Congress or by state legislatures, or operate without charters under the authority of the common law.

In the first group (chartered by Congress) belong the National, Federal Reserve, Federal Land, and Federal Intermediate Credit Banks, and in the second (state chartered) belong state and savings banks and trust companies. Private banks without special charters are prohibited in some states but permitted in others.

On the basis of their *functions* banks may be classified as commercial and investment banks and trust institutions; the first group playing an essential role in the exchange of commodities and services and supplying the greater part of the medium of exchange; the second serving as intermediaries in the assembling and the investment of the savings of individuals; and the third administering trusts of many kinds—such as the estates of deceased persons, of living persons who are unable or unwilling to administer them for themselves, and of charitable, educational and other institutions, acting as financial agents for corporations, states and municipalities and promoting and financing new enterprises, especially combinations, mergers and trusts.

The National, Federal Reserve, state and some private banks primarily perform commercial banking functions but combine investment and sometimes trust banking with them, while the Federal Land Savings and most private banks are primarily investment institutions, and trust companies are primarily trust and investment institutions, sometimes, when the law of the state in which they are located permits, combining commercial banking functions with these.

Banking Laws.—The laws governing the different classes of institutions are not uniform throughout the United States, although a tendency towards uniformity is observable in recent legislation.

The Federal Reserve, Federal Land and Federal Intermediate Credit Banks were created by special acts of Congress, passed respectively in 1913, 1916 and 1923, and the National Banks by an act passed in 1863.

Several amendments to these laws have been passed since their original enactment. Under the authority of the National Banking act and its amendments, several thousand National Banks have been incorporated and are now in operation. From time to time our states have enacted and amended general laws under the authority of which thousands of state banks, savings banks, and trust companies have been established and are regulated and administered.

The Federal Reserve act and amendments provide for twelve Federal Reserve Banks and the machinery for their administration and control, and the Federal Farm Loan act for a like number of Federal Land Banks and an indefinite number of Joint Stock Land Banks.

The characteristic features of National Banks, as determined by the laws at present in force, are: a minimum capitalization of $25,000 in towns of small size and of correspondingly larger amounts in larger cities; the right to issue notes on the security of certain specified classes of government bonds deposited with an officer known as the Comptroller of the Currency; the maintenance of a percentage of deposits as reserves, this percentage varying in size according as the bank is located in country towns, reserve cities or central reserve cities; limitations of the amount as the reserves required by law, amount and kinds of real estate mortgages which may be purchased, and of the amount that may be loaned to any single firm or person to ten per cent of the bank's capital and surplus; five detailed reports per annum to the Comptroller of the Currency, at times specified by him, and examinations by officers appointed by him; and the requirement that each bank must subscribe to the capital stock of the Federal Reserve Bank of its district an amount equal to six per cent of its own capital.

State Legislation.—The legislation of the various states regarding commercial banks is far from uniform, but the national banking code has served as a model in many cases. The chief differences between the rights and privileges of the two classes of institutions are the following:

(1) State banks do not issue notes chiefly because the National Government levies a tax of ten per cent on such notes and sometimes also because such issues are prohibited by law.

(2) In most states commercial banks with a capital stock as small as $10,000 are permitted and in a few no minimum is prescribed.

(3) The laws of most states are more liberal than the national banking code in the matter of real estate loans and in that of the amount permitted to be loaned to a single firm or individual.

The laws regarding savings banks differ somewhat according as the institution belongs to the mutual or the stock class, but usually limit their investments to certain specified classes of securities, limit the amount of deposits in the name of a single individual, and permit the bank to require a certain number of days' notice of the depositor's intention to withdraw deposits.

Legislation regarding trust companies is changing rapidly. The tendency in some states now is to require them to segregate the different branches of their business and to conform to the laws regulating institutions which specialize in each branch, for example, to the laws regarding commercial banks in the management of their strictly commercial business and to those regarding savings banks in their savings business.

The Banking System of the United States.—Under the operations of these laws the banking institutions of the country have been organized into a system, the machinery of which may be briefly described as follows:

The country is divided into twelve districts, in each of which is located a Federal Reserve Bank. A board of seven persons, consisting of the Secretary of the Treasury, the Comptroller of the Currency (the executive head of the national banking system) and five other persons appointed by the President, with offices at Washington, exercises important administrative and controlling powers over these banks. With the Federal Reserve Bank of each district, through stock ownership and in other ways, are affiliated all the National Banks located in the district and such state banks and trust companies as have elected to become so affiliated, such affiliated institutions being known as *member banks*. *Non-member banks* are indirectly connected with the Federal Reserve System through affiliation with member banks, which serve as their correspondents and reserve agents.

For their member banks each Federal Reserve Bank serves as reserve and collection agent and rediscounts certain kinds of commercial paper. Service as reserve agent means that balances of member banks with the Federal Reserve Bank of their district which in the case of banks in New York, Chicago and St. Louis, known as *central reserve cities*, must amount to at least thirteen per cent of their demand deposits, in that of banks in more than fifty other large and moderate sized cities, known as *reserve cities*, to ten per cent of their demand deposits, and in that of other banks, known as *country banks*, to seven per cent of their demand deposits. All member banks must keep an additional reserve amounting to at least three per cent of their time deposits.

As collection agent each Federal Reserve Bank collects for its member banks at par "checks drawn on all member and clearing member banks" (certain non-member banks admitted to the system for clearing purposes only) "and on all other non-member banks which agree to remit at par through the Federal Reserve Bank of their district." This process of check collection involves the interchange between the Federal Reserve Banks of checks received by each one drawn on banks in the other districts, the balances being debited or credited to each bank, as the case demands, by the Federal Reserve Board at Washington on an account established by each bank by the deposit with this board of a fund of gold known as the *gold clearance fund*.

Commercial paper discounted by a member bank for its customers, when it conforms to certain requirements prescribed by law and the regulations of the Federal Reserve Board, may be rediscounted at the Federal Reserve Bank of its district at rates prescribed by the Federal Reserve Board.

The Federal Reserve Banks also serve as depositories and as disbursing and financial agents for the federal government. Funds received by the government from taxes, sales of securities, or any other source may be deposited with the Federal Reserve Banks and credited to its account, and payments may be made by checks drawn against and debited on these accounts. The government may also deposit funds with National Banks, but to an increasing extent it is using for this purpose the Federal Reserve Banks, which may also be called upon to perform other financial services for the government, such as the sale of bonds and the payment of coupons.

In order to perform these services for member banks and the federal government, the Federal Reserve Banks have been equipped with certain powers, among the most important of which is the right to issue notes and to conduct certain open market operations. With the consent of the Federal Reserve Board, any Federal Reserve Bank may deposit with one of its officers, known as the *Federal Reserve Agent*, commercial paper which it has rediscounted for its member banks and gold or gold certificates, and issue notes known as *Federal Reserve Notes*, to the par value of the security deposited, provided a gold reserve amounting to at least forty per cent of the amount issued be held by the bank. Another kind of note, known as *Federal Reserve Bank Note*, may be issued by Federal Reserve Banks on conditions identical with those under which National Banks are permitted to issue notes, namely the deposit with the Comptroller of the Currency of certain classes of bonds of the federal government.

While the Federal Reserve Banks do not conduct checking accounts and transact other kinds of banking business with private persons and corporations, they are permitted to buy and sell upon the open

market certain carefully specified and defined classes of securities, among the most important of which are those issued by the federal government, and high grade bills of exchange.

The McFadden amendments to the Federal Reserve Act passed in 1927 were designed to put National Banks in a position of competitive equality with state banks in regard to branch banks and real estate loans.

Operation of the System.—The commercial banking business of the country is performed through this machinery in substantially the following manner:

Private persons and corporations, states, municipalities and other local political bodies, as well as innumerable associations of other kinds, deposit their current funds with local banking institutions and sell them their own promissory notes and the other forms of commercial paper which regularly come into existence in the transaction of the commerce of the country, and are credited with the amounts deposited and the proceeds of these sales on so-called *checking accounts*. They make their disbursement by drawing checks against these banks which are debited on these accounts. For these checks they receive hand-to-hand money, if that is what they need, or drafts on banks in other cities, if they have out-of-town payments to make, or send them directly to their creditors, who deposit them in their own banks for collection and crediting to their accounts. Local banks thus become responsible for the supply of their communities with the hand-to-hand money required and with the loans needed to carry on current commercial processes.

The banks in each locality conduct checking accounts with banks in the reserve and central reserve cities and, if they are members of the Federal Reserve System, with the Federal Reserve Banks of their respective districts, through the use of which they collect the checks on out-of-town institutions received from their customers, supply their own cash needs and dispose of surplus cash. If at any time their balances on these out-of-town checking accounts are exhausted or approach exhaustion, they replenish them through rediscounts of paper purchased from their customers, or through loans on security of their own paper.

The responsibility for the distribution of the cash resources of the entire country and for the adjustment of the total volume to its changing needs as well as for the intra- and inter-district clearing of the vast volume of checks used in the transaction of the country's business and for the smooth running of its commercial credit machinery rests upon the Federal Reserve Banks. They serve as central reservoirs, into which regularly flows surplus cash from every part of the country and from which regularly are supplied the needs of localities in which there is a shortage. Adjustments of the total volume of hand-to-hand money to meet the changing needs occasioned by seasonal and other fluctuations are made through the issue and retirement of Federal Reserve Notes. The need for an increase in their volume shows itself in the first place in the form of the presentation for discount at the local banks of an increasing volume of commercial paper, a portion of which in turn is sent for rediscount to the Federal Reserve Banks. Against these rediscounted notes and bills of exchange Federal Reserve Notes are issued and sent to the local banks and through them to their customers. When the need which occasioned the increase disappears or decreases, these notes accumulate in the local banks, having been deposited by customers who do not need them, are returned to the Federal Reserve Banks in payment of the matured commercial paper they have rediscounted, and for other purposes, and are cancelled and retired.

Through the rediscount of commercial paper for member banks the Federal Reserve Banks make it possible for local institutions to discount the commercial paper of their customers and make loans to them in other forms and thus to meet their commercial credit needs.

Additional Machinery for Investment Banking.—In the assembling and investment of the savings of the people of the United States, besides the commercial banking machinery, function the Federal Land and Joint Stock Land Banks, Farm Loan Institutions chartered by some of the states, a large and increasing number of trust companies, and savings banks, insurance companies, a large number of private banks, bond and mortgage houses, brokerage firms and stock exchanges. The Federal and State Farm Loan Banks and some other institutions aim primarily at obtaining capital to loan to farmers for agricultural purposes, chiefly through the sale of bonds to the investing public and the loan of the proceeds to farmers on the security of mortgages on their property. Insurance companies invest in the same form of security large amounts of the premiums they collect on the policies they issue. Commercial and savings banks, trust companies and many private banks receive savings deposits from their customers and invest them in bonds, mortgages and other investment securities. Brokers and bond houses serve chiefly as middlemen and distributing agents.

Stock Exchanges are organizations of brokers and other dealers in securities to facilitate the purchase and sale of the bonds and stock of railroad, public service, industrial and public corporations. They consist of offices located in the financial districts of large cities like New York, Chicago, Boston and Philadelphia, equipped with telephone and telegraph instruments which connect them with similar institutions in all parts of this and other countries, and with brokers' offices, banks, trust companies and other institutions directly in touch with the people who save and invest, and open at regular hours on week days for the meeting of brokers who execute orders for purchase and sale received from customers. The operations of the New York Stock Exchange extend to all parts of the country and to Europe, while those of the other exchanges are more restricted in scope.

European Banking Systems.—European banking systems differ from ours in the peculiarities both of the constituent institutions and of the central banking machinery.

The English, French and German systems, for example, consist of a relatively small number of large banks, each with many branches scattered throughout the country, a single central bank, also with branches, and numerous institutions of a more or less specialized character. The chief English institutions are the Bank of England, whose beginning dates back to the end of the seventeenth century; several large joint stock and private banks, foreign and colonial banks and discount firms and companies. The French system is headed by the Bank of France, which was established at the beginning of the nineteenth century by the first Napoleon, with which are associated five very large incorporated banks, with numerous branches scattered throughout France and several other countries, provincial, foreign and colonial banks. In Germany there is the new Reichsbank, the successor to the Imperial Bank, established in 1875. In addition to this central note issuing institution there are branches and small local, commercial, mortgage and coöperative banks.

In the performance of commercial banking functions the chief peculiarities of these foreign systems appear in the organization and operation of their central banks and in the relations of these with the other institutions.

The Bank of England.—In its ownership and management the Bank of England is a private institution and the laws passed by Parliament for its regulation and control leave wide scope for the exercise of initiative and judgment by its officers and board of directors. The privilege of issuing bank notes in England, while to a very limited extent shared with a small number of other institutions, is practically confined to this one. It is limited, however, in such a manner as to render the issues inelastic. The law requires that beyond the relatively small amount of 18,450,000 pounds, which may be issued against public securities, every note must be backed pound for pound by coin or bullion. This means, of course, that the notes practically replace an equivalent amount of coin when they are issued, and restore the same amount to circulation when they are retired, thus leaving the total volume of the circulating medium of the country unchanged.

The vaults of the Bank of England constitute the central cash reservoir of the British Isles. Other banks as a rule carry in their vaults only a sufficient amount of cash to supply the daily needs of their customers, depending upon other London banks, and ultimately upon the Bank of England, for additional supplies when needed, and shipping surplus accumulations to them and finally to the Bank of England. Through the conduct of checking accounts with these other banks and the discount for them of short-time commercial paper in case of need the bank places these cash resources at their disposal and distributes them throughout the country as needed.

On account of the large volume of foreign commerce conducted by Englishmen for centuries the city of London has become the chief market in the world for foreign bills of exchange, and the Bank of England has acquired a unique position in the distribution of the cash resources of the world. By raising its rate of discount, and through it the market rate in London, it may attract funds from every financial center in Europe and even from the United States, and by lowering its rate may turn the stream in the opposite direction. It is through the exercise of this unique power that it is able to render the total volume of the English currency responsive to business needs and elastic. The Bank of England also serves as depository, disbursing and fiscal agent for the English government.

The London Stock Exchange.—The London Stock Exchange also occupies a unique position in the investment markets of the world. Before the World War it regularly dealt in a larger variety and volume of foreign securities than any other exchange in the world, and, while since then its relative importance has considerably decreased, no other ex-

change has as yet succeeded to its unique position. It still serves as an international distributor of investment funds.

The position of London is, however, being threatened by New York, due to the large investments of American funds abroad, and the New York Stock Exchange now lists foreign securities.

The Bank of France and the Imperial Bank of Germany (Reichsbank).—The Bank of France and the old German Reichsbank (1875) were privately owned and controlled by officers directly or indirectly appointed by their governments. With the dissolution of the old Imperial Bank in October, 1924, the assets being assumed by the new Reichsbank, the control of the federal government over the bank was removed. The new bank is an autonomous institution independent of the German government. It is located in Berlin and its name is unchanged. Both the Reichsbank and the Bank of France are endowed with the right to issue notes against commercial securities and thus have the power to supply an elastic element to the currencies of their respective countries. Both conduct checking accounts, rediscount commercial paper and make advances to other banks and thus serve as the distributors of the cash resources of their respective countries. Through changes in their discount rates both exercise a considerable degree of control over the expansion and contraction of credit by other banks. Both serve as depository, disbursing and fiscal agents for their respective governments.

Effects of the World War.—The World War threw the financial machinery of the world into a state of disorder unparalleled in modern times. This was accomplished chiefly through the suspension of specie payments throughout Europe, the issuance of huge quantities of inconvertible government and bank notes, an enormous increase in the total indebtedness of all belligerent and most neutral countries, and the dissolution of old and the creation of new government units.

Inconvertible Notes and Government Budgets.—The expenses of the war constituted a heavy drain on the treasuries of the warring nations. This was met by levying taxes, selling bonds, and issuing inconvertible currency. The central banks were required by the governments to make additional loans. The rapid depreciation of the currencies, however, did not begin until the postwar period.

The English pound, though inconvertible, did not depreciate to the extent of other currencies. During the period 1916-1919, exchange rates were "pegged" (change in price by buying or selling prevented) at $4.76 and fluctuations one way or the other were slight. Early in 1919 when artificial stabilization was discontinued, exchange rates on London fell rapidly, going as low as $3.33. The increased gold holdings of the Bank of England and the retirement of its notes made possible a return to the gold standard in 1925. On the whole, England has escaped the worst ravages of an inconvertible currency, though she still suffers from the disorganization of world markets.

On August 5, 1924, the legal maximum limits of note issues of the Bank of France was raised from 6.8 billion to 12 billion francs. This limit was gradually increased until it reached 43 billion on July 31, 1920. Since that date it has been decreased. Exchange rates on France fell rapidly during 1915 and reached a low point in April, 1916, of about 16½ cents. During most of the war the franc was worth approximately 17 cents. In March, 1919, the franc was "unpegged" and immediately there began a precipitous fall. From over 18 cents in March, 1919, the franc fell to less than 6 cents in April, 1920. In March, 1924, it reached the low point of about 3½ cents, much the lowest point that the franc had ever touched since the days of the assignats at the time of the French Revolution. The French returned to the gold standard on June 24, 1928.

At the outbreak of the World War, Italy was still on an irredeemable paper basis as a result of the suspension of specie payments in 1893. However, the paper circulation was covered by approximately sixty per cent gold reserve. Immediately upon the outbreak of the war the maximum note issue limits of the issuing banks was increased. Subsequent issues brought the total from about 2,500,000,000 lire in 1914 to about 22,000,000,000 lire in 1920, since which time it gradually declined. Some of these issues were for state and other for business purposes. Prices and exchange rates rose and fell accordingly. As in the case of Britain and France, the exchange rate was pegged for the lira until 1919. When the artificial support was withdrawn the lira fell from 19 cents to less than 4 cents in April, 1920. Italy returned to the gold standard by royal decree on December 22, 1927.

Germany furnishes perhaps the best example of the disastrous effects of the issue of inconvertible currency. In 1914 the Reichsbank had about 2,000,000,000 marks of notes outstanding. Although the government resorted to taxation, there was a deficit of 134,000,000,000 marks for the period of April 1, 1914, to March 31, 1919. To cover its constant deficits the government issued long term loans amounting to 97,000,000,000 marks and borrowed the rest from the Reichsbank. The demands of the Treaty of Versailles for reparations payments increased the budget deficit although efforts were made by the new government to increase revenues by taxation. This was, however, unsuccessful and the deficit was met by increasing the note circulation of the Reichsbank until by November 15, 1923, it had increased from the bare two billion in 1914 to 92,844,720,743,000 million marks.

While during the four years of war, prices just about doubled in Germany, by November 15, 1923, they had multiplied by about 720 billion times over 1913. The effects of this chaotic condition of the currency was to destroy all normal business and to turn the nation into a speculative paradise. Thousands of people had their savings disappear because the savings were in terms of money which came to have practically no value. Institutions with endowments were impoverished. The thrifty classes who had saved were reduced to penury, and the practice of saving had been discouraged. On the whole all debtors benefited at the expense of creditors. In 1924 the gold standard was restored in Germany.

Russia, Austria, Poland and Hungary had experiences similar to those of Germany. In all of these countries issues of paper money in almost unlimited amounts were followed by a rise of prices to fantastic heights.

Stabilization.—The stabilization of the currencies and budgets of the old and newly created governments of Europe since the World War has been in many instances a prodigious task, but today the leading nations are on a gold basis and their currencies are stable. Austria has a new unit, the schilling (par value 14.07 cents U. S. currency), issued by the new National Bank of Austria. In Hungary a new bank of issue, the National Bank of Hungary, began business in June, 1924. Its new currency unit is the pengo (17.49 cents). Czechoslovakia has a National Bank of Czechoslovakia and the crown has been stabilized at about 2.96 cents. Poland in 1924 introduced the zloty (11.22 cents), Russia has the ruble (par value 51.46 cents), and the Soviet chervonetz which equals ten rubles. Finland, the markka (2.52 cents), Lithuania, the litas (10 cents), Latvia, the lat (19.3 cents). In almost all cases the gold exchange standard is used, foreign exchange being used as a reserve.

The United States.—In the United States there was no suspension of specie payments. The national debt was increased by about 18 billion dollars. This has been in part retired and refinanced at lower rates of interest. Taxation has yielded large revenues. Adjustments of foreign debts owed to the Government of the United States have been made with Great Britain, Italy, France and the other allied nations, which, calculated on a 5 per cent interest rate, are equivalent to a cancellation of fifty per cent of the original amount due. The ability of the allies to pay depends in part on their own prosperity and the ability of Germany to collect and transfer reparations payments under the Dawes Plan. Gold imports into the United States have increased, bank reserves are large, foreign trade and the purchase of foreign securities have developed at a rapid rate.

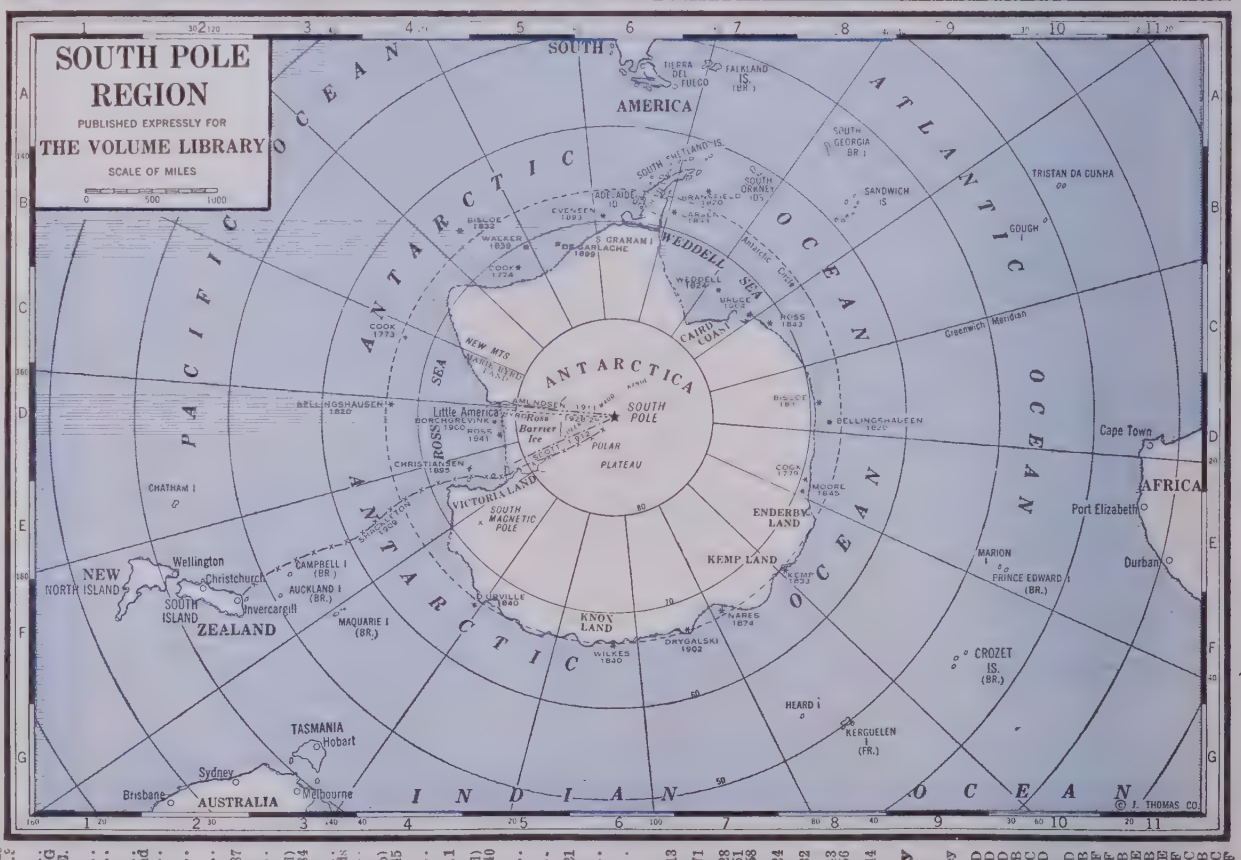
The International Date Line.—This line marks the change of day in circumnavigating the earth east or west. By common consent of the leading nations, it is placed in the Pacific; for a great part of its extent it coincides with the 180th meridian. When ships "cross the line," they add a day to their calendar if they are going west, and subtract a day if they are going east. Why? The date line is placed in the Pacific, far from most lands,



Approximate Length of Longest Day at Different Latitudes.

North Latitude	Days	Hrs.	Min.
90° (North Pole)	186		
85°	161		
80°	134		
75°	103		
70°	65		
66 33′	24	..	
65°	21	9	
60°	18	30	
55°	17	7	
50°	16	9	
45°	15	26	
40°	14	51	
35°	14	22	
30°	13	56	
25°	13	34	
20°	13	13	
15°	12	53	
10°	12	35	
10°	12	5	
5°	12	17	
0° (Equator)	12	..	

South Latitude			
0° (Equator)	12	..	
5°	12	17	
10°	12	35	
15°	12	53	
20°	13	13

66 33′	24	..	
	Days		
70°	65		
75°	103		
80°	134		
85°	161		
90° (South Pole)	174		

because the change is most conveniently made where traffic is not likely to be disturbed by a confusion of dates. As a matter of fact, the observance of the date line is theoretical rather than actual, and sailing masters change time, not at the line, but most commonly at the nearest port of call. The line as drawn on the Flat-Globe represents the official interpretation of the United States Government at present.

GREAT COMPOSERS OF MUSIC

DICTIONARY *of* BIOGRAPHY

Biographies in large type are those of the one hundred greatest men and women in history—so designated by a consensus of highest authorities.

Abbas I. (*ăb-băs'* or *ăb'băs*), **the Great,** shah or king of Persia, born in 1557, obtained the throne in 1586. He extended his rule beyond Persia proper, and at his death in 1628 his dominions stretched from the Tigris to the Indus. He is regarded by the Persians as their greatest sovereign.

Abbe (*ab'e*), **Cleveland,** meteorologist, was born in New York in 1838. He was graduated from College of the City of New York in 1857; Ph.D., 1891; LL.D., University of Michigan, 1888; in 1881 he became professor meteorologist U. S. Weather Bureau; professor meteorology, Columbia University in 1893. Was member National Academy of Sciences and many other scientific societies. Died. 1916.

Abbey, Edwin Austin, artist, was born in Philadelphia, Pa., in 1852, and began his art studies at the Philadelphia Academy of Fine Arts. He stands in the foremost rank of painters of historical and subject pictures. He acquired great fame as an illustrator of Shakespeare, whose plays have also supplied him with the subjects for some of his most successful pictures. Died, 1911.

Abbot, Ezra, American critic, was born in 1819. He contributed to periodicals, and also wrote several critical works in support of Unitarianism. Died, 1884.

Abbott, Jacob, author, was born at Hallowell, Me., in 1803, and was graduated from Bowdoin College in 1820. He studied theology at Andover, Mass. In 1838 he settled in Farmington, Me., where he died in 1879. He wrote there most of his books, which number in all more than two hundred. Among them are the *Rollo Books, Lucy Books, Jonas Books, Franconia Stories, Harper's Story Books, Marco Paul Series, Gay Family Series, and Juno Books.*

Abbott, John Stephen Cabot, a younger brother of Jacob Abbott, and author of many historical works, was born in Brunswick, Me., in 1805, and was graduated from Bowdoin College in 1825. He died in New Haven in 1877. Among his works are: *History of Napoleon Bonaparte; Napoleon at St. Helena; Life of Napoleon III.; History of the Civil War in America,* and *History of Frederick the Great.*

Abbott, Lyman, clergyman, author, editor, was born in Roxbury, Mass., in 1835; graduated from the University of New York in 1853; studied and practiced law; ordained Congregational minister in 1860. Edited Literary Record of *Harper's Magazine;* associate editor *The Christian Union* with Henry Ward Beecher, whom he succeeded as pastor of Plymouth church, Brooklyn, in 1888; resigned in 1898. Editor of *The Outlook;* author: *Jesus of Nazareth; Old Testament Shadows of New Testament Truths; A Study in Human Nature; In Aid of Faith; Life of Christ; Evolution of Christianity; The Theology of an Evolutionist; Henry Ward Beecher; Christian Ministry; Personality of God,* and *Industrial Problems.* Died 1922.

Abel (*ā'bel*), **Niels Henrik,** noted Norwegian mathematician, was born at Findoe, Norway, in 1802, and died near Arenthal in 1829. His work on elliptic functions is particularly celebrated. His complete mathematical works were published in 1839.

Abelard (*ab'ē-lärd*), **Peter,** scholastic philosopher and theologian, the boldest thinker of the twelfth century, was born at Pallet, near Nantes, in 1079, and died in the Abbey of St. Marcel in 1142. The doctrines advanced by Abelard in his controversy with St. Bernard have a decidedly rationalistic tendency; and he and his predecessor, Erigena, may be looked upon as the first avowed representatives of that school.

Abercrombie (*ab'-ĕr-krum-bi*), **James,** British general, was born in Scotland in 1706. He was commander-in-chief of the British forces in America in 1758. He died in 1781.

Abercromby, Sir Ralph, British general, born in Scotland in 1734. He served with much ability in Holland and in the West Indies, and in 1800 was chosen to command the forces to be sent against the French in Egypt, where he was killed in 1801.

About (*a-bōō'*), **Edmond Francois Valentin,** French novelist and miscellaneous writer, born in 1828, died in 1885. He was educated at the Lycée Charlemagne and the Ecole-Normale, Paris; was sent at government expense to the French school at Athens; on his return to Paris, devoted himself to literature. He was latterly a member of the Academy.

Abraham, the progenitor of the Israelitish nation. He was a native of Chaldea, but migrated with his wife, Sarah, and his nephew, Lot, to Canaan, where he lived a nomadic life and worshiped the one God, Jehovah, in the midst of the polytheistic Canaanites. He died about 1800 B. C. Of his two sons, Isaac was the ancestor of the Israelites; and the Arabs claim to be descended from Ishmael.

Abruzzi (*a-brōōt'sē*), **Duke of the,** prince of royal house of Italy, was born at Madrid, Spain, in 1873; scientist, explorer, aëronaut, sportsman, litterateur; traveled round world as a youth; ascended Mount St. Elias, Alaska, 1896; his Arctic expedition of 1899 penetrated nearest to north pole up to that time. In 1909 he ascended some of the highest peaks of the Himalayas.

Acton, Lord. See **Dalberg-Acton.**

Adams, Brooks, author, was born at Quincy, Mass., in 1848, son of the late Charles Francis Adams; graduated at Harvard in 1870; studied in Harvard law school one year; went as secretary to his father to Geneva, where the latter was arbitrator upon the Alabama claims under the treaty of Washington. Admitted to the bar; practiced law until 1881. Resumed law practice; lectured at Boston University school of law.

Adams, Charles Francis, statesman and economist, son of John Quincy Adams, was born in 1807; nominated by the Free Soil party for the office of vice-president in 1848; elected member of Congress 1858-60 by the Republicans; minister to England 1861-68; and one of the arbitrators of the Alabama claims, 1870. He was the Democratic candidate for governor of Massachusetts in 1876. He died in 1886.

Adams, Charles Francis Jr., historical writer, born in Boston, 1835; graduated at Harvard, 1856; admitted to the bar, 1858; served in union army through Civil War; brevetted brigadier-general, United States army, May, 1865. President Union Pacific railway, 1884-90; president Massachusetts Historical Society, 1895. Author: *Chapters on Erie and Other Essays; Railroads, Their Origin and Problems; Richard Henry Dana, a Biography* and other papers. Died, 1915.

Adams, Charles Kendall, educator, historian, was born at Derby, Vt., in 1835, and educated at the University of Michigan. From 1892 to 1901 was president of the University of Wisconsin. He was the author, among other writings of *Democracy and Monarchy in France; Manual of Historical Literature,* and of a monograph on *Christopher Columbus.* From 1892 to 1895 he acted as editor-in-chief of *Johnson's Universal Cyclopaedia.* Died in 1902.

Adams, George Burton, educator and historian, was born at Fairfield, Vt., in 1851. Educated at Beloit College, Yale, and the University of Leipzig. Professor of history at Yale, 1888-1925. Editor: Duruy's *Middle Ages;* Bemont and Monod's *Medieval Europe.* Author: *Civilization During the Middle Ages; The Growth of the French Nation; European History, Vol. II.,* in Hunt and Poole's *Political History of England.* Died 1925.

Adams, Henry, historian; born in Boston in 1838; graduated at Harvard, 1858; private secretary to his father, who was American minister at London, 1861-68; assistant professor of history at Harvard, 1870-77; editor *North American Review,* 1875-76. Author: *Essays in Anglo-Saxon Law; Historical Essays, Life of Albert Gallatin.* Died, 1918.

Adams, Henry Carter, professor of political economy and finance at the University of Michigan ; born in Davenport, Iowa, 1851; director Division Transportation, eleventh census; statistician Interstate Commerce Commission; president American Economic Association 1895-97. Author: *Outline of Lectures on Political Economy; State in Relation to Industrial Action,* etc. Died, 1921.

Adams, John, second president of the United States, was born at Quincy, Mass., in 1735, was graduated at Harvard in 1755, and was admitted to the bar in 1761. He was one of the delegates to the Continental Congress at Philadelphia, 1774. He was commissioner to the court of France, 1778, and was sent on an embassy to England, 1779. He was elected vice-president of the United States in 1789, and succeeded Washington as president in 1797. Died, 1826.

Adams, John Quincy, sixth president of the United States and son of the above, was born in Quincy, Mass., in 1767. When his father was elected president, the younger Adams was sent on an embassy to Berlin, and traveled through Silesia. On his return to America he was engaged as professor of rhetoric at Harvard University, and chosen United States senator for Massachusetts. When Monroe was elected president he recalled Adams from Europe, and made him secretary of state. On the retirement of Monroe from office Adams gained the presidency after a hard contest against Jackson, in 1825, and on the expiration of his term of office retired to Quincy, near Boston, but in 1830 was chosen as representative of his district. He died at Washington during the session of Congress 1848.

Adams, Maude, actress, was born at Salt Lake City in 1872; her family name was Kiskadden, but she adopted her mother's maiden name, Adams. She appeared on the stage in child's parts; went to school; starred as Lady Babbie in *The Little Minister,* 1897-98; as Juliet, in *Romeo and Juliet,* 1900; in *L'Aiglon,* 1900-01; in *Quality Street,* 1902; in *The Little Minister,* and *Hop o' My Thumb,* 1905; *Peter Pan,* 1906-07; *Joan of Arc,* 1909, etc.

Adams, Samuel, one of the American revolutionary leaders, was born in Boston, Mass., 1722. Adams was a member of the first Congress, and signed the Declaration of Independence in 1776; took an active part in framing the constitution of Massachusetts, and was for several years president of the senate of that state. Died, 1803.

Adams, William T. See **Optic, Oliver.**

Addams, Jane, social reformer, head resident of Hull House, Chicago, was born at Cedarville, Ill., in 1860; graduated from Rockford College, 1881; 1889 opened, with Miss Ellen Gates Starr, social settlement of Hull House; has been inspector of streets and alleys in neighborhood of Hull House, and has been a frequent writer and lecturer on social and political reform. Author: *Democracy and Social Ethics,* and *Newer Ideals of Peace.* 1931, won Nobel peace prize. Died 1935.

Addison, Joseph, English essayist, was born at Milston, England, in 1672, graduated at Oxford, and held for some years a fellowship at the university. Here some of his early writings brought him into notice and secured him a pension of $1,500 a year. At the death of King William his pension was stopped, and having no means of his own his prospects were gloomy indeed, until a lucky chance put him on his feet again. The ministry desired a poem written in praise of Marlborough, who had just won the battle of Blenheim. Addison wrote the poem, *The Campaign,* and was rewarded with the office of excise commissioner. In 1710 he began to bring out his famous essays. These he contributed to the *Tatler,* next to the *Spectator,* and afterwards to the *Guardian,* which he published in conjunction with his friend, Richard Steele. The most successful of these periodicals was the *Spectator.* It was a daily paper, but without any news. Addison died in 1719.

Ade (*ād*), **George,** author and dramatist, was born at Kentland, Ind., 1866; graduated from Purdue University, 1887; in newspaper work in Lafayette, Ind., 1887-90; on *Chicago Record,* 1890-1900. Author: *Artie; Pink Marsh; Doc Horne; Fables in Slang;* Plays: *The Sultan of Sulu; Peggy From Paris; The County Chairman; The College Widow,* etc.

Adler, Cyrus, orientalist and archaeologist, was born at Van Buren, Ark., 1863; graduated from University of Pennsylvania, 1883; Ph.D., Johns Hopkins, 1887; librarian Smithsonian institution, 1892-1905, assistant secretary of same 1905-1908; He has written many articles on Semitic philology, Assyriology, Oriental archaeology, comparative religion, bibliography, American Jewish history, etc. Author: *Told in the Coffee House.*

Adler, Felix, educator, lecturer; born in Alzey, Germany, 1851. Studied under Hebrew rabbi; graduated at Columbia; studied at Berlin and Heidelberg; professor of Hebrew and Oriental literature at Cornell, 1874-76; established in 1876 New York Society for Ethical Culture, to which he gives regular Sunday discourses. Author: *Creed and Deed; The Moral Instruction of Children,* etc.

Adrian IV. (*ā'dri-an*), named Nicholas Breakspeare, the only English pope, was born about 1100. He was chosen abbot, then cardinal, and lastly pope in 1154. He was vigorous in maintaining his authority at Rome and throughout Europe. He died in Italy in 1159.

Ærenthal (*ā'ren-tāl*), **Alois Leopold Baptist, Baron von,** Austro-Hungarian Minister for foreign affairs, was born in 1854. He was educated at Prague and Bonn Universities, and as a boy learned both Czech and German. He entered the diplomatic service in 1877, and served in Paris and St. Petersburg; minister to Roumania in

1895, and ambassador to Russia in 1899. In October, 1906, he was appointed to succeed Count Goluchowski. Died, 1912.

Æschines (*es'ki-nēz*), an Athenian orator, second only to Demosthenes, was born 389 B. C. He established a school of eloquence in Rhodes, and died at Samos, 314 B. C.

Aeschylus (*es'ki-lus*), the first in time of the three great tragic poets of Greece, born at Eleusis, in Attica, B. C. 525, died in Sicily 456 B. C. Before he gained distinction as a dramatist he had highly distinguished himself at the battle of Marathon (490), as he afterwards did at Artemisium, Salamis, and Plataea. He first gained the prize for tragedy in B. C. 484. *The Persians*, the earliest of his extant pieces, formed part of a trilogy which gained the prize in B. C. 472. In B. C. 468 he was defeated by Sophocles, and then is said to have gone to the court of Hiero, king of Syracuse. Altogether he is reputed to have composed seventy tragedies and gained thirteen triumphs. Only seven of his tragedies are extant: *The Persians, Seven Against Thebes, Suppliants, Prometheus, Agamemnon, Choephori*, and *Eumenides*, the last three forming a trilogy on the story of Orestes.

Aeschylus may be called the creator of Greek tragedy, both from the splendor of his dramatic writings, and from the scenic improvements and accessories he introduced. Till his time only one actor had appeared on the stage at a time, and by bringing on a second he was really the founder of dramatic dialogue. His style was grand, daring, and full of energy, though sometimes erring in excessive splendor of diction and imagery, if not indeed harsh or turgid. His plays have little or no plot, and his characters are drawn by a few powerful strokes.

References.—Plumptre's *Life of Æschylus;* English poetical translations of his plays by Blackie, Plumptre, Swanwick and Browning.

Æsop (*ē'sop*), celebrated fabulist, said to have been born in Phrygia about 620 B. C. Attached himself to the court of Croesus, King of Lydia. Sent by that monarch upon an embassy to Delphos, he so offended the inhabitants by the keenness of his sarcasms, that they hurled him from a rock into the sea. He died about 564 B. C.

Ætius (*ā-ē'shi-us*), Roman general, born about 396, in Moesia, in 433 became patrician, consul, and general-in-chief. His crowning victory was that at Chalons over Attila in 451; three years later the Emperor Valentinian III., jealous of his greatness, stabbed him to death with his own hand.

Agamemnon (*ag-à-mem'non*), king of Mycenae and Argos, son of Atreus and Eriphyle, brother of Menelaus, and commander-in-chief of the Grecian army at the siege of Troy. Returning from Troy, Agamemnon was treacherously murdered by his wife, who, during his absence, had formed an attachment with Ægisthus, son of the noted Thyestes.

Agassiz (*ag'à-sē*), **Alexander,** naturalist, born in Neufchatel, Switzerland, 1835; graduated at Harvard, 1855; Lawrence Scientific School, 1857; 1885-1910 engaged in zoölogical investigation. Appointed director Museum Comparative Zoölogy, Cambridge, 1902; appointed by Emperor William III. of Germany member Order of Merit, 1902; member of Academy of Science, Paris; president of National Academy of Science. Author: *Explorations of Lake Titicaca; List of the Echinoderms; Three Cruises of the Blake.* Died, 1910.

Agassiz, Louis Johann Rudolph, eminent naturalist, was born in Switzerland in 1807, the son of a Swiss Protestant clergyman. He studied medicine and graduated at Munich, but devoted himself principally to ichthyology, and was employed to classify and arrange the collection brought from Brazil by Martius and Spix. In 1846, he came to America, where he was well received, and in 1848 accepted the chair of zoölogy and geology at Harvard College. In 1865 he visited Brazil, and on his return placed the large collection he had made in the museum at Cambridge. He wrote *Glaciers, Outlines of Comparative Physiology, An Essay on Classification*, and numerous other valuable works, and was to the last a disbeliever in the Darwinian theory of evolution. Died, 1873.

Agesilaus (*à-jes-i-lā'us*), king of Sparta from 397 B. C., was one of the most brilliant soldiers of antiquity. He was born in 444 B. C., and died in Egypt in 360 B. C.

Agricola (*à-grik'ō-là*), **Cnaeius Julius,** a Roman of the imperial times, distinguished not less by his great abilities as a statesman and a soldier than by the beauty of his private character; born at Forum Julii (now Frejus, in Provence, France) 37 A. D. He was the first Roman general who effectually subdued Britain, and the only one who displayed as much genius and success in training the inhabitants to the amenities of civilization as in breaking their rude force in war; died, 93.

Agrippa (*à-grip'à*), **Marcus Vipsanius,** a Roman citizen, who lived 63-12 B. C., and rose to an exalted position. Rome owed to him the restoration and construction of several aqueducts and of the Pantheon, besides other public works of ornament and utility.

Aguinaldo, Emilio, Filipino general, was born in the island of Luzon, 1870. He was educated at St. Thomas University in Manila. In the rebellion of 1896 against Spain he was an important though unsuccessful leader. When the Americans finally overcame the Spanish fleet in 1898, he organized another insurrection, this time for Philippine independence, making himself president of the government and assuming powers of dictator. He was several times defeated and fled to the mountains, where he was captured by General Funston. The next month, April, 1901, Aguinaldo took the oath of allegiance to the United States.

Ainsworth (*ānz'wûrth*), **William Harrison,** English novelist, was born at Manchester, England, in 1805, and educated at the grammar school. He had contributed some articles to magazines prior to 1822, and his earliest success was *Rookwood*, with its vivid description of Dick Turpin's ride to York. By 1881 he had published no fewer than thirty-nine novels. Seven of them were illustrated by Cruikshank. He died at Reigate in 1882.

Airy (*âr'i*), **George Biddell,** English mathematician, astronomer, physicist, and engineer, was born at Alnwick, England, in 1801; was graduated at Trinity College, Cambridge, in 1823; soon after published his *Mathematical Tracts on the Lunar and Planetary Theories*, the *Figures of the Earth*, and the *Undulatory Theory of Optics*. As astronomer-royal at Greenwich he introduced the systematic observation of the magnetic elements, and carried on investigations in the Lunar Theory, the magnetism of iron ships, the density of the earth, the length of the seconds-pendulum, and in a great variety of other subjects. After his retirement from the direction of the Greenwich Observatory, in 1881, he was continuously engaged upon his Numerical Lunar Theory. He died in 1892.

Akbar (*ăk'bĕr*), celebrated Mogul emperor, was born at Amarkote in Sindh in 1542. He encouraged commerce, and had the land carefully measured so that the taxes should be fair. His people were of different races and religions, but he was just and tolerant to all. Measures like these gained for him the title of "Guardian of Mankind," and caused him to be held up as a model to Indian princes of later times. He died in 1605.

Akenside (*ā'ken-sid*), **Mark,** an English poet, was born in 1721, died in 1770. He owes his position among the poets chiefly to his *Pleasure of the Imagination*, a poem which at once became famous.

Alarcon Y Mendoza (*à-lär-kän' ē men-dō'thà*), **Don Juan Ruiz de,** one of the most distinguished dramatic poets of Spain, born in Mexico about the beginning of the seventeenth century. He went to Europe about 1622, and in 1628 published a volume containing eight comedies, and in 1634 another containing twelve. His *Tejador de Segovia*, (Weaver of Segovia), and *Las Paredse Oyen*, (Walls Have Ears), are still performed on the Spanish stage. He died in 1639.

Alaric I. (*al'à-rik*), king of the Visigoths, was born about the middle of the fourth century. In 396 he ravaged Greece, from which he was driven by the Roman general, Stilicho, but made a masterly retreat to Illyria. In 400 he invaded Italy, but was defeated by Stilicho at Pollentia in 403. Alaric made a second invasion of Italy, during which he besieged Rome thrice. The first time 408, the city was saved by paying a heavy ransom; the second, 409, it capitulated. Alaric led a third siege, and the city was taken in 410, and sacked for six days, Alaric, however, doing everything in his power to restrain the violence of his followers.

Albani (*ăl-bà'nē*), **Madame** (née **Emma La Jeunesse**), vocalist, was born in 1852 at Chambly, Canada, and was trained in music by her father. At twelve she made her début at Albany, N. Y., whence she assumed the professional name of Albani. In 1878 she married Mr. Ernest Gye, eldest son of the director of the Royal Italian Opera, London. Died, 1930.

Albert, prince of Saxe-Coburg-Gotha and husband of the late Queen Victoria of England, was born near Coburg, Germany, in 1819. He married Victoria in 1840; soon after was made field-marshal in the British army, and in 1857 received the title of prince consort. He acquired great influence in public affairs as the prudent and trusted adviser of the queen, and became popular throughout England. He died in 1861.

Albert I, king of Belgium, was born in 1875. Carefully educated, he traveled widely, urged many reforms in the Belgian Congo. In 1900 married the Duchess Elizabeth of Bavaria. His heroic leadership in resisting the Germans of 1914 made him the idol of the Belgian people, and commanded the respect of the civilized world. Following the expulsion of the Germans, he and his queen reentered Brussels, and at once proclaimed an independent Belgium. He was killed in 1934, while mountain climbing.

Alberti (*ăl-ber'tē*), **Leon Battista,** an Italian architect, and writer on art and poetry, was born at Florence, Italy, in 1404; died at Rome in 1472. He was much employed by Pope Nicholas V. He completed the Pitti Palace at Florence, and designed the church of St. Frances at Rimini. His chief book, *De Re Ædificatovia*, is highly valued.

Albertus Magnus (*ăl-ber'tus măg'nus*), Count of Bollstadt, the *Doctor Universalis* of the schoolmen, was born at Lauingen, in Swabia, about 1193, studied at Padua, and, entering the newly founded Dominican order, taught in the schools of Hildesheim, Ratisbon, and Cologne. Of his works the most notable are the *Summa Theologiat* and the *Summa de Creaturis*. Albertus excelled all his contemporaries in the wideness of his learning, and in legend appears as a magician.

Albuquerque (*ăl-bōō-kâr'kā*), **Affonso de,** an eminent Portuguese admiral, born in 1453, died in 1515. His career was extremely successful. He extended the Portuguese power over Malabar, Ceylon, the Sunda Islands, and the Peninsula of Malacca, and made the Portuguese name respected by all the nations and princes of India.

Alcæus (*al-sē'us*), of Mitylene, one of the greatest lyric poets of Greece, flourished about the end of the seventh or the beginning of the sixth century B. C. He was the inventor of the form of verse which after him is called the Alcaic, and which Horace, the happiest of his imitators, transplanted into the Latin language.

Alcibiades (*al-si-bi'à-dēz*), Athenian general, was born at Athens 450 B. C. His handsome person, his distinguished parentage, and the high position of Pericles procured him a multitude of friends and admirers. Socrates was one of the former, and gained considerable influence over him. After a distinguished career in military life in Greece and Persia he was put to death 401 B. C.

Alcott, Louisa May, daughter of Amos Bronson Alcott, a famous American authoress, was born in Germantown, Pa., in 1832. Her first volume was *Flower Fables*, published in 1855. During the Civil War she was a volunteer nurse in the South, and wrote *Hospital Sketches* in 1863. *Little Women* was published in 1868, and was followed at short intervals by *Little Men, Jo's Boys*, etc. She died in 1888 at Boston, Mass.

Alcuin (*al'kwin*), or **Flaccus Albinus,** the most distinguished scholar of the eighth century, the confidant and adviser of Charlemagne, was born at York about 735. At his death in 804 he left, besides numerous theological writings, a number of elementary works on philosophy, mathematics, rhetoric, and philology; also poems and a great number of letters.

Alden, Henry Mills, author, classical scholar and editor, was born at Mount Tabor, near Danby, Vt., 1836; graduated from Williams College in 1857, Andover Theological Seminary in 1860. Managing editor *Harper's Weekly* 1863-69. Died, 1919.

Alden, John, one of the Pilgrims to Plymouth, Mass., was born in England in 1599, died at Duxbury, Mass., in 1687. He was one of the signers of the compact in the cabin of the *Mayflower*. Alden married Priscilla Mullens, to whom his first proposal was in behalf of Miles Standish, but Priscilla indicated her preference for Alden over the soldier. He was a magistrate for more than fifty years, and greatly assisted in the government of the infant colony.

Alderman, Edwin Anderson, educator, president of the University of Virginia since 1904, was born at Wilmington, N. C., in 1861; graduated from the University of North Carolina, 1882; D. C. L.; LL.D.; professor of English, State Normal College, 1892; professor pedagogy, University of North Carolina, 1892-96; president of same 1896-99; president Tulane University, 1899-1904. He is well known as a speaker and lecturer. Author, *Life of William Hooper, signer of the Declaration; School History of North Carolina.* Died, 1931.

Aldrich, Nelson Wilmarth, former United States senator, was born at Foster, R. I., in 1841; received an academic education; president of the Providence common council, 1871-73; member of the Rhode Island general assembly 1875-76, elected to the House of Representatives of the Forty-sixth Congress and reëlected to the Forty-seventh Congress; elected, 1881, to the United States Senate to succeed Ambrose E. Burnside, and was reëlected 1886, in 1892, 1898 and 1905. For many years he was Republican leader of the Senate, and was co-author of the Payne-Aldrich Tariff bill. Died in 1916.

Aldrich, Thomas Bailey, poet and editor, was born in Portsmouth, N. H., 1836. While engaged in the office of a New York merchant he began to write verses, the success of which soon induced him to enter on a literary career. His first volume, miscellaneous poems, was published in 1855, and was called *The Bells;* afterward he published *Babie Bell*, several other volumes of poems, and *The Story of a Bad Boy*. He was on the editorial staff of the *Home Journal*, 1856-52, and *Every Saturday*. In 1881 he became editor of the *Atlantic Monthly*, but resigned in 1890. Died at Boston 1907.

Alexander the Great, or Alexander III., of Macedon, was born in 356 B. C., son of

Philip. He was educated partly by Aristotle, and early gave proofs of skill and courage. A revolt of Thebes at the commencement of his reign was promptly quelled with great severity; then crossing the Hellespont, he marched against the Persians, whom he repeatedly defeated, conquering Phenicia and Egypt. After the final defeat of Darius at Gaugamela, and the capture of Babylon, Susa, and Persepolis, Alexander commenced the conquest of India, but after crossing the Indus and penetrating as far as the Ganges, he was compelled to return to Babylon, but paused at Susa to celebrate his marriage with the daughter of Darius. He died at Babylon, after a reign of about thirteen years; his body was embalmed and taken to Alexandria, which city had been founded by him and named in his honor. Died 323 B. C.

Alexander I., emperor of Russia, 1801-25, was born at St. Petersburg in 1777. In 1793 he married Elizabeth, daughter of Karl Ludwig, crown prince of Baden, and, on the assassination of his father, Paul, in 1801, succeeded him on the throne. He encouraged education and science, and carried out many reforms. In 1805 he joined the coalition against Napoleon, and was present at the battle of Austerlitz. In 1808 he conquered Finland, and in 1806-12 waged a successful war against Turkey. He died at Taganrog, 1825.

Alexander II., emperor of Russia, 1855-81, was born in 1818. In 1841 married the Princess Marie, daughter of the Grand-duke of Hesse. He succeeded to the throne in 1855, and a year later the Crimean war was terminated by the peace of Paris. The grand achievement of his reign, which was in great measure his own deed, was the emancipation of the serfs—twenty-three million souls—in 1861. He resisted strenuously all foreign interference with Polish affairs during the insurrection of 1863, which was suppressed with great severity. During his reign, the Russian empire was widely extended in the Caucasus and in Central Asia. By his establishment of schools and internal improvements he did more to build up Russia than any emperor since Peter the Great. He was assassinated at St. Petersburg in 1881.

Alexander III., emperor of Russia, 1881-94, was born in 1845. He showed vigor in government and ability in repressing the Nihilists. The harsh laws against the Jews and the severe famine of 1892 are among the later events of his reign. In 1866 he married Princess Dagmar of Denmark, sister of the queen-dowager Alexandra of Great Britain. His son, Nicholas II., succeeded him when he died at Livadia, Crimea, in 1894.

Alexander, John White, American composer, was born in Allegheny City, 1856. He was an artist's apprentice on *Harper's Weekly* at eighteen, working with Abbey, Pennell, and Pyle. In 1877 he went to Munich where he studied and won numerous honors. His pictures, mainly portraits and figures, are exhibited in many galleries. He was president of the National Academy of Design from 1909 until his death in 1915.

Alexander, Nevski (*nef'ske*), Russian hero and saint, was born at Vladimir in 1219, the son of the grand duke Jaroslav of Novgorod. He received the surname of Nevski on account of the splendid victory over the Swedes which he achieved in 1240 on the Neva, in the province where Petrograd now stands. At the death of his father, in 1247, he became grand duke of Vladimir, when Pope Innocent IV. made a diplomatic attempt to reunite the Greek and Roman churches, and with this view sent an embassy to Alexander which proved ineffectual. He died in 1263 at Kassimcow.

Alexander Severus, Roman emperor, 222-235, born about 208, was the cousin, adopted son, and successor to Heliogabalus. Although a pagan he reverenced the doctrines of Christianity. During a campaign against the Germans on the Rhine, to defend the frontiers of the empire from their incursions, an insurrection broke out among his troops, headed by Maximin, in which he was murdered, 235.

Alexeieff (*a-leks-a'yef*), **Eugenii Ivanovitch,** Russian admiral, was born in 1844. He was educated in the naval school of Russia; chief of eastern fleet during Japanese-Chinese war, 1897. In 1898 he was made vice-admiral, and commander of Kwangtung province. In 1900-01 he was chief of the Russian Pacific squadron, but his conduct of affairs during the Russo-Japanese war led to his recall to Russia, 1904.

Alexius I. Comnenus (*a-lek'si-us kom-nē'nus*), one of the ablest Byzantine emperors, was born at Constantinople, 1048, was the nephew of the emperor Isaac Comnenus, and in 1081 was elevated by his soldiers to the throne. Died in 1118.

Alfieri (*ăl-fi-ā'rē*), **Vittorio, Count,** Italian dramatic poet, was born in Piedmont in 1749. He began at a mature age to learn Latin, and also to study the Tuscan dialect, for which purpose he went to Tuscany. On his journey thither he made the acquaintance of the countess of Albany, to whom he became deeply attached and to whom he was privately married. He left twenty-one tragedies and six comedies, besides various odes and sonnets. Died in Florence, 1803.

Alfonso V., king of Aragon, Naples, and Sicily, was born in 1385. He received the surname of "the Magnanimous" because on his accession to the throne he destroyed a document containing the names of all the grandees who were hostile to him. He honorably distinguished himself by his patronage of letters; died at Naples in 1458.

Alfonso X., surnamed "the Astronomer," "the Philosopher," or "the Wise," king of Leon and Castile, was born 1226; succeeded his father, Ferdinand III., in 1252; died at Seville, 1284. He was the most learned prince of his time, and acquired lasting fame through the completion of the code of laws commenced by his father.

Alfonso XIII., king of Spain, is the son of the late King Alfonso XII. and Queen Marie Christina, a daughter of the late Karl Ferdinand, archduke of Austria. He was born after his father's death in 1886, and his childhood was spent at Madrid and the Palace of Miramar, in San Sebastian. In Spain the sovereign comes of age at sixteen, and during the king's minority his mother reigned as queen regent. On May 17, 1902, the regency ceased, and Alfonso XIII. assumed his full powers. On May 31, 1906, he married Princess Ena of Battenberg. Abdicated the throne. 1931.

Alfred the Great, the youngest son of Ethelwolf, king of the West Saxons, born 849. After the death of his brother, Alfred mounted the throne of England in 871, at a time when the kingdom was a prey to the invasion of the Danes, and to domestic dissensions. After several unfortunate actions with the Danes, Alfred concealed his misfortunes for a year under the dress of a peasant, till the success of one of his chiefs, Odun, earl of Devon, in defeating a body of Danes, drew him from his retirement. The Danes were completely defeated at Eddington, in 878. After the victory, Alfred behaved with great magnanimity to his foes, giving up the kingdom of the East Angles to those of the Danes who embraced Christianity. From that time, however, though the Danes occasionally repeated their depredations, the mind of Alfred was not shaken from its noble purpose of enlightening his subjects, and giving stability to their independence. He is said to have been engaged in 56 battles, by sea and land, although his valor as a warrior has excited less admiration than his wisdom as a legislator. He composed a body of statutes, instituted the trial by jury, and divided the kingdom into shires and tithings. He was so exact in his government that robbery was unheard of, and valuable goods might be left on the highway without danger. He founded, or, according to others, restored the University of Oxford, and filled the professional chairs with men of taste, genius, and erudition. He was himself a learned prince, and composed several works. To Alfred, also, England is indebted for the foundation of her naval establishments, and he was the first to send out ships to make the discovery of a north-east passage. In private life he was benevolent, pious, cheerful, and affable, and his deportment was both dignified and engaging. After a reign of over 28 years, he died, 901. He left by his queen, Elswitha, two sons and three daughters, and was succeeded by his second son, Edward, surnamed the Elder.

References.—The *Anglo-Saxon Chronicle* is the best authority on Alfred. There are *Lives* by Asser, Powell, Spelman, Bicknell, Reinhold Pauli and Thomas Hughes. See also Alfred's Laws in Thorpe's *Collection* and Turk's *Legal Code of Alfred the Great.*

Algardi (*ăl-gär'dē*), **Alessandro,** noted Italian sculptor, was born at Bologna, Italy, 1602. His chief work is a colossal relievo, in St. Peter's of *Pope Leo Restraining Attila From Marching on Rome.* Died at Rome in 1654.

Alger (*ăl'jẽr*), **Russell Alexander,** soldier, capitalist; born in Ohio, 1836. Taught school two winters; admitted to bar 1859; began practice in Cleveland; removed to Michigan 1860; began lumbering in a small way; enlisted 1861, and served in Civil War from captain to major-general of volunteers. In lumber business after war. Was governor of Michigan, 1885 and 1886; candidate for president in republican national convention, 1888; secretary of war, 1897-99, resigned; United States senator, 1902-7. Author: *The Spanish-American War.* Died, 1907.

Alison, Sir Archibald, lawyer and historian; was born at Kenley, England, 1792. He was admitted to the bar in 1814, occupied subsequently prominent legal positions, and was a writer on law, politics, and literature. His chief work, however, is *The History of Europe During the French Revolution,* which was exceedingly popular. He was created a baronet in 1852 and died near Glasgow, Scotland, 1867.

Allegri (*ăl-lā'grē*), **Gregorio,** musical composer, was born at Rome about 1584. He studied under Napani, and was a friend of Palestrini. He composed motets and sacred pieces; and was retained in the choir of the Sistine chapel, Rome, by Urban VIII., until his death, 1652.

Allen, Charles Grant Blairfindie, author and naturalist, born at Kingston, Canada, in 1848, graduated from Merton College, Oxford, in 1871. After four years at Queen's College, Jamaica, as professor of logic and principal, 1873-77, he returned to England, and, adopting a literary career, published *Physiological Æsthetics, Color Sense, Evolutionist at Large, Darwin,* and several clever novels—*Babylon; In all Shades; The Woman Who Did; An African Millionaire,* etc. He also wrote several books on travel. Died, 1899.

Allen, Ethan, soldier, was born at Litchfield, Conn., about 1737, and distinguished himself early in the Revolutionary War by the surprise and capture of Fort Ticonderoga in 1775. He next did good service in Montgomery's expedition to Canada, but was taken prisoner, and not exchanged until 1778. He was afterward a member of the Vermont legislature. He was author of a deistical work *Reason the Only Oracle of Man.* Died, 1789.

Allen, James Lane, author, born in Kentucky, 1849; graduate of Kentucky University; taught in Kentucky University; later professor of Latin and higher English, Bethany, West Virginia College; after 1886, he gave his entire attention to literature. Author: *Flute and Violin; The Blue Grass Region and Other Sketches of Kentucky; John Gray, The Kentucky Cardinal; Aftermath; A Summer in Arcady; The Choir Invisible; The Reign of Law, The Mettle of the Pasture,* etc. Died, 1925.

Allen, Viola, actress, born in New Orleans, La., 1867; was educated in Boston and at Wykham Hall, Toronto, and boarding school in New York. Made debut, Madison Square theater, New York, in *Esmeralda,* at age of fifteen; after few months joined John McCullough company, playing Virginia, Desdemona, Cordelia, etc. Subsequently played leading classical Shakespearean, and comedy rôles with Lawrence Barrett Tommaso Salvini, Joseph Jefferson, and William J. Florence. Leading lady at Boston Museum for a season; also at Empire theater in 1893, and four years following, creating and playing rôles in *Liberty Hall; Sowing the Wind; The Masqueraders; Under the Red Robe,* etc. Starred, 1898, as Gloria Quayle in *The Christian,* and in 1900 produced *In the Palace of the King;* and, in 1902, as Roma in *The Eternal City.* In 1903 began series of Shakespearean revivals, producing *Twelfth Night, A Winter's Tale, As You Like It.*

Allenby, Gen. Sir Edmund (Henry Hynman), (1861—), English General served in Bechuanaland expedition 1884-5, Zulu War, 1888, South African War, 1899-1902, and in the World War. British Armies under Allenby captured Jerusalem from the Turks, December 10, 1917. A decisive and crushing victory at Samaria, September 18-22, 1918, over 100,000 Turks. Died, 1936.

Allison, William Boyd, lawyer, American legislator, was born in Ohio, 1829; educated at Western Reserve College and practiced law until 1857; emigrated to Iowa; served in the Civil War; was sent to Congress while that struggle was going on, and remained as representative and senator from that time, save in 1872-73. His influence was marked and salutary on the legislation of his day. Died, 1908.

Allston, Washington, American painter, was born in South Carolina, in 1779; graduated at Harvard in 1800, and went the next year to London to study art. In 1803 he went to Paris, and in 1805 to Rome, where he formed a close intimacy with Thorwalsden and Coleridge. Elected an A. R. A. in 1819, he had the year before returned finally to America, and fixed his residence at Cambridge, Mass., where he died in 1843.

Alma-Tadema (*ăl'mä-tä'de-mä*), **Sir Laurence,** painter of classical subjects, born in Dronryp, Friesland, in 1836; studied at the Royal Academy of Antwerp, and was afterwards pupil and assistant of Baron Henry Leys. He settled in England in 1873, where his pictures found a ready welcome. He was elected A. R. A. in 1879. Died, 1912.

Almqvist (*ălm'kvist*), **Karl Jonas Ludvig,** Swedish author, was born at Stockholm in 1793, and died at Bremen in 1866. His romances as a whole, are considered the best in the Swedish language. *The Book of the Thorn-Rose* is regarded as the best.

Alstroemer (*ăl'strē-mẽr*), **Jonas,** Swedish industrial reformer, was born in 1685, and is noted for the great commercial improvements which he introduced into his native country. So extensive

and successful were the manufacturing and agricultural resources which he introduced, that the state ennobled him, made him chancellor of commerce, and erected a statue to his honor on the Stockholm Exchange. Died, 1761.

Alva, Fernando Alvarez, de Toledo, duke of, Spanish governor of the Netherlands under Philip II. of Spain, was born in 1508. Alva was recalled in 1573, but he was soon given the command of Portugal, which he quickly conquered. Though his pride and cruelty were excessive, he was undoubtedly one of the greatest generals of his age. Died, 1582.

Alvarado (*äl-vä-rä'dō*), **Alonzo,** one of the Spanish conquerors of Mexico and Peru under Pizarro, was born at Burgos about 1490; he was defeated and made prisoner by the Incan leader, Almagro. He afterward joined De Castro, and was lieutenant-general of the armed force which suppressed the rebellion of Gonzalo Pizarro in 1548. Died, 1554.

Alvarado, Pedro d', Spanish cavalier, was born in Badajoz, 1485. He took part in the expedition and victories of Cortez, and was intrusted with the command of the city of Mexico, and afterward made governor of Guatemala and Honduras. He explored California, and was killed soon after his return in an expedition against Jalisco. Died, 1541.

Alverstone, First Baron, Sir Richard Everard Webster, Lord Chief Justice of England since 1900, was born in 1842. He was graduated at Trinity College, Cambridge, and holds the degrees M.A., LL. D., D. C. L.; Q. C., 1878; Attorney-general, 1885-86, 1886-92, and 1895-1900; M. P. Isle of Wight, 1885-1900; Master of the Rolls, 1900. He was knighted in 1885, and created a baronet and baron in 1900. Died, 1915.

Alzog (*älˈtsōg*), **Johann Baptist,** Roman Catholic historian, was born in Ohlan, Silesia, 1808. He was professor of church history in the University of Freiburg, and wrote a *Manual of General Church History*, which is known in many languages. He was also the author of an *Outline of Pathology*, and in 1869 was a member of the commission on dogma which prepared the work for the vatican council. Died at Freiburg, Baden, 1878.

Ambrose (*am'brōz*), **St.,** a doctor in the Latin Church of the fourth century, was born at Treves, Gaul, 340. Consecrated archbishop of Milan, 374. Ambrose was repeatedly, in the discharge of his duty to the Church, brought into direct conflict with the highest secular authority. To him we owe the noble hymn, *Te Deum Laudamus*. No father of the Church has a wider fame. Died at Milan in 397.

Amerigo Vespucci (*ä-mä-rēˈgō ves-pōōtˈchē*). See **Vespucci.**

Ames (*āmz*), **Fisher,** American lawyer and politician, was born at Dedham, Mass., 1758. He was graduated from Harvard in 1774; began the practice of law in 1781; sat in the Massachusetts convention, and was afterward a member of Congress, and famed for his eloquence. He retired from public life with Washington, and devoted himself to literary pursuits; was elected president of Harvard College in 1804, which he declined. Died, 1808.

Ames, James Barr, dean Harvard Law School, 1895-1910; born at Boston, Mass., 1846; graduate of Harvard, 1868; Harvard Law School, 1872; LL.D., University of the City of New York, University of Wisconsin, 1898; Harvard, 1904. Instructor in history, 1872-73; associate professor of law, 1873-77, became professor of law, 1877, Harvard. Compiled collections of cases on torts, pleading, bills and notes, partnership, trust suretyship, admiralty and equity jurisdiction; was author of numerous articles in *Harvard Law Review* and other law reviews. Died, 1910.

Ames, Joseph Sweetman, physicist, professor of physics and director Physical Laboratory Johns Hopkins, was born at Manchester, Vt., 1864; graduated from Johns Hopkins in 1886; Ph.D., 1890. Author: *Theory of Physics; Manual of Experiments in Physics; Elements of Physics; Free Expansion of Gases.*

Amherst (*am'erst*), **Jeffrey, Lord,** British general, was born at Riverhead, England, 1717. As major-general he served on the continent and in America, where he succeeded Abercrombie as commander-in-chief. Here he was remarkably successful and, after many victories, Montreal surrendered and Newfoundland was recovered from the French. He was raised to the peerage in 1776, and was appointed field marshal in 1796. Died, 1797.

Ami, Henry M., assistant palæontologist, Geological Survey of Canada, 1882, was born at Belle Riviere, near Montreal, 1858; graduated from McGill University, B. A., 1882; M.A., 1885; D.SC., Queen's, 1892; McGill, 1907.

Amundsen, Roald (1872-1928), Norwegian explorer, discoverer of the South Pole and first to fly over North Pole in a dirigible, was born at Borge, Norway, 1872. At twenty-five he went as mate on the Belgian Antarctic Expedition. He sailed on his own expedition in 1903 and in 1905 located the Northwest Passage and the North Magnetic Pole. On Dec. 14, 1911, he planted the flag of Norway at the South Pole. He reached the North Pole by dirigible, the *Norge*, in 1926. Flying to the relief of Nobile in 1928, Amundsen lost his life. Author, *The North-west Passage*; *The South Pole*; *My Life as an Explorer*.

Amontons (*ä'mōNˈtōN'*), **Guillaume,** French physicist, born in Paris, 1663. In France, is considered the inventor of the telegraph; and, almost at the same time with Halley in England, he found that the boiling point of water varies with the elevation. Died, 1705.

Ampere (*ăNˈpâr*), **Andre Marie,** a distinguished mathematician and naturalist, was born at Lyons in 1775. In 1805, after he had been engaged for some time as private mathematical tutor at Lyons, he was called to Paris, where he distinguished himself as an able teacher in the polytechnic school and wrote his essay on the *Mathematical Theory of Chances*. Died, 1836.

Amurath (*ä-mōō-rätˈ*), or **Murad I.,** sultan of Turkey, was born about 1319. He succeeded his father, Orkhan, in 1360. He was the first to lead Turkish arms into Europe, and in 1361 took Adrianople. Urban V. preached a crusade against him, but the venture was disastrous to the Christians. He lost his life in the battle of Kossovo, 1389.

Amurath, or **Murad II.,** sultan of Turkey, was born about 1403. He succeeded Mohammed I. in 1422. He invaded Albania and the Peloponnesus, where George Castriot (*Scanderbeg*) defeated him; but retreated only to gain a great victory over his former adversary, Hunniades, at Kossovo, in 1448; in his reign poetry, jurisprudence, and theology began to flourish. Died of apoplexy at Adrianople, 1451.

Anacreon (*ä-nakˈrē-ŏn*), celebrated Greek lyric poet, was born at Teos in Ionia, about 563 B. C. He was patronized by Polycrates, the tyrant of Samos, and Hipparchus, the tyrant of Athens. He died at Abdera, about 478 B. C., suffocated by a grape-stone while in the act of drinking. His poems are chiefly devoted to the praises of love, pleasure, and wine.

Anastasius I. (*an-as-tāˈshi-us*), emperor of the East, was born 430 at Dyrrachium, in Epirus, and proclaimed emperor at the age of sixty. He suppressed the cruel and degrading spectacles where men fought with wild beasts, abolished the sale of offices, built a wall on the west side of Constantinople to defend it from the incursions of the barbarians. Died, 518.

Anaxagoras (*an-aks-agˈō-rās*), Greek philosopher of the Ionian school, was born at Clazomenae about 500 B. C. He studied under Anaximenes, and, after traveling through all the known parts of the globe, in search of knowledge, established himself at Athens, where he opened the first school of philosophy. Pericles, Socrates, and Euripides were among his pupils. Died, 428 B. C.

Andersen, Hans Christian, novelist, poet, and writer of fairy tales, was born at Odense, in Funen, 1805. He completed his *Agnes and the Merman* in Switzerland; and one of his best works, *The Improvisatore*, a series of scenes depicted in a glowing style and full of poetic interest, was the fruit of a visit to Italy. In the end of 1840 he commenced a somewhat lengthened tour in Italy and the East, of which he gave an account in *A Poet's Bazar*, 1842. His works have all been translated into German and English. His *Dying Child* has been translated into the language of Greenland; and on his seventieth birthday he was presented with a book containing one of his tales in fifteen languages. He died in 1875.

Anderson, Mary. See **Navarro, Mary Anderson de**

Anderson, Rasmus Bjorn, author, diplomat; born at Albion, Wisconsin, of Norwegian parentage, 1846; graduate of Luther College, Decorah, Iowa, 1866; University of Wisconsin, 1869; LL.D., 1888; professor of Scandinavian languages and literature, 1875-83; United States minister to Denmark, 1885-89. Editor and publisher of *Amerika* since 1898. Author: *Norse Mythology; Viking Tales of the North; America Not Discovered by Columbus; The Younger Edda; First Chapter of Norwegian Immigration*, 1821-1840; also many translations of Norse books, and author of several works in Norwegian.

Anderson, Sherwood, Author of short stories, was born at Camden, Ohio, 1876. Of poor parents "always on the road," with small commercial ventures, he obtained what education he could at public schools and through his own reading. Today he is preeminent as a story teller in the realistic vein. In his *Winesburg, Ohio*, and *The Triumph of the Egg*, both very candid in their subjects and treatments, he displays masterly vision and force. Other works are *Windy McPherson's Son*, *Many Marriages*, *A Story Teller's Story*, and *Dark Laughter*.

Andrassy (*onˈdrä-shē*), **Count Gyula,** Hungarian statesman, was born 1823, of an ancient and noble family. In 1867, when the right of self-government was conceded to Hungary, he was appointed premier of the New Hungarian ministry. He was a member of the Presburg Diet in 1847-48; lord-lieutenant of the county of Zempton, and Hungarian ambassador to Constantinople. Died, 1890.

Andre (*ănˈdrā* or *anˈdrē*), **John,** British soldier, born in London, England, 1751; served in the war with America, and rose to the rank of major. He conducted the negotiations with Benedict **Arnold for the betrayal of West Point, but being** discovered in disguise, was arrested and put to death as a spy. His remains lie in Westminster Abbey, where a cenotaph was erected to his memory. Executed, 1780.

Andrews, Elisha Benjamin, educator, author; born at Hinsdale, N. H., 1844; served private to second lieutenant of Union army in Civil War; graduate of Brown University, 1870; professor history and political economy, Brown University, 1882-88; professor political economy and finance, Cornell, 1888-89; president Brown University, 1889-98; superintendent schools, Chicago, 1898-1900; chancellor University of Nebraska, 1900-1909. Author: *Institutes of Constitutional History, English and American; Institutes of General History; Institutes of Economics;* etc. Died, 1917.

Andros (*anˈdros*), **Sir Edmund,** was born at London, England, in 1637; died, 1714. He was governor of the colony of New York for eight years, beginning in 1674. He was harsh and ruled without any regard to the wishes of the colonists.

Angelico (*ănˈjelˈē-kō*), **Fra,** the name by which we best know the great friar-painter, Guido di Pietri, whose monastic name was Giovanni. He was born in 1387 at Vecchio in Tuscany. His most important frescoes are those in the Florentine convent of San Marco (now a museum), at Orvieto, and in the Nicholas Chapel of the vatican. Of his easel pictures, the Louvre possesses a splendid example, *The Coronation of the Virgin*, and the London National Gallery a *Glory, or Christ*.

Angell (*ānˈjel*), **James Burrill,** educator, diplomat; born at Scituate, R. I., 1829; graduate of Brown University, 1849; professor modern languages and literature, Brown, 1853-60; editor *Providence Journal*, 1860-66; president of University of Vermont, 1866-71; president University of Michigan, 1871-1909; member Anglo-American International Commission on Canadian Fisheries, 1887; chairman Canadian-American Commission on Deep Waterways from Lakes to Sea, 1896; appointed minister to Turkey, 1897, but resigned May, 1898. President, University of Michigan, 1898-1909. Author: *Progress in International Law, The Higher Education*, etc. Died, 1916.

Angell, James Rowland, born Burlington, Vt., 1869, son of James Burrill Angell; graduate of University of Michigan, 1890; Harvard, A.M., 1892. Studied in Universities of Berlin, Halle, Leipzig and Vienna; famed as psychologist; author of textbook on psychology; dean University of Chicago, 1911-1918, and acting president, 1918-1919; member Adjutant General's staff on classification of personnel in Army, 1917-1918; president Carnegie Foundation. 1919-1921. President Yale University since 1921.

Angelo (*anˈjē-lō*), **Michael de Buonarotti.** See Michelangelo.

Anglin (*anˈglin*), **Margaret Mary,** actress, was born at Ottawa, Canada, 1876; educated at Loretto Abbey, Toronto, and Convent of the Sacred Heart, Montreal. Made professional début in *Shenandoah*, New York, 1894; leading woman with E. H. Sothern, 1897-98, Richard Mansfield, 1898-99, and in Empire Theatre Stock Co.; starred in *Zira*, 1905-06; with Henry Miller, in *The Great Divide*, 1906-07.

Anna Comnena (*kom-nēˈnȧ*), a learned Byzantine princess, author of one of the most valuable works to be found in the collection of the Byzantine historians, was the daughter of the emperor Alexander I. (Comnenus), born 1083. She framed a conspiracy against the life of her brother then ruling as emperor in 1118. Her brother spared her life, but punished her by confiscation of her property, which, however, he soon after generously restored. Disappointed and ashamed, she withdrew from the court and sought enjoyment in literature. Died, 1148.

Anne of Cleves, the fourth wife of Henry VIII., to whom she was married in 1540, was born at Cleves, Germany, 1515. She was the daughter of John, third duke of Cleves. The match was projected by Cromwell, and was partly the cause of that minister's ruin. Henry put her aside, settled on her a liberal annuity, with which she was well satisfied, and she spent the remainder of her days in England, where she died in 1557.

Anne, Queen of England, was the second daughter of King James II., by his first wife, Anne Hyde, and was born in London, England, in 1664. Anne ascended the throne on March 8, 1702. During her reign, which was made illustrious by the military triumphs of the duke of Marlborough, Sir George Rooke and Sir Cloudesley Shovel conquered the fortress of Gibraltar, a possession which Spain has never been able to regain; and the legislative union of Scotland with England was effected. The glorious galaxy of writers, in almost every branch of learning, who flourished in her time, has caused it to be considered the Augustan age of British literature. She died in 1714.

Annunzio (*ȧn-n ōōnˈtsē-ō*), **Gabriele d'.** See **D'Annunzuo, Gabriele.**

Anthony of Padua, St., born at Lisbon, 1195, was at first an Augustinian monk, but in 1220 he entered the Franciscan order, and became one of the most active propagators. He was canonized by Gregory IX. in the following year. According to legend, he preached to the fishes when

men refused to hear him; hence he is the patron of the lower animals, and is often represented as accompanied by a pig.

Anthony the Great, St., the founder of monastic institutions, was born 251 near Heraclea, in Upper Egypt. In 205, having sold all his property and given the proceeds to the poor, he withdrew into the desert whither a number of disciples were attracted by his reputation for sanctity; and thus was formed the first order of monks. Died, 356.

Antigonus (*an-tig'ō-nus*), **Cyclops,** or "one-eyed," a distinguished general of Alexander the Great, on whose death he became governor of Phrygia, Lycia, and Pamphylia; after defeating and slaying Eumenes, and waging other successful wars, he assumed the title of king. His ambitious schemes united his rivals, and he was slain in the battle of Ipsus. Died, 301 B.C.

Antiochus (*an-ti'ō-kŭs*) **III.,** surnamed **the Great,** was born about 238 B. C.; succeeded his father, Seleucus Callinicus, as king of Syria in 223 B. C., and was the most distinguished of the Seleucidae. He became involved in war with the Romans, who had conquered Macedonia, but declined to invade Italy at the instigation of Hannibal, who had come to his court of refuge. Peace was granted him only on condition of his yielding all his dominions east of Mount Taurus, and paying a heavy tribute. To raise the money, he attacked a rich temple in Elymais, when the people rose against him, and killed him in 187 B. C.

Antiochus IV., surnamed **Epiphanes,** became king of Syria in 175 B. C. He fought against Egypt and conquered a great part of it. He twice took Jerusalem; and, endeavoring there to establish the worship of Greek gods, excited the Jews to a successful insurrection under Mattathias and his heroic sons, the Maccabees. Died, 164 B. C.

Antipater (*an-tip'ă-tẽr*). Of the many persons who bore this name in antiquity the most celebrated was one of the generals of King Philip of Macedon, born about 400 B. C. When Alexander led his troops into Asia he left Antipater, who, along with Parmenion, had endeavored to dissuade him from the expedition, as governor of Macedon. He died, 319 B. C.

Antoinette (*ăn-twă-net'*), **Marie.** See **Marie Antoinette, Josephe Jeanne.**

Antoninus (*an-tō-ni'us*), **Marcus Aurelius,** See **Marcus Aurelius Antoninus.**

Antoninus Pius (**Titus Aurelius Fulvus**), Roman emperor, was born 86 A. D. In 120 he was made consul; afterward was sent by Hadrian as proconsul into Asia, where the wisdom and gentleness of his rule won for him a higher reputation than had been enjoyed by any of his predecessors. In 138 he was adopted by the Emperor Hadrian, in consequence of merit alone, and came to the throne in the same year. He died at Lorium, Italy, in 161.

Antony, Mark, celebrated Roman general, was born at Rome in 83 B. C. He took part in Caesar's great victory of Pharsalia, and with him was made consul in 44 B. C. After Caesar was killed, Antony with Augustus and Lepidus, formed a government called the *triumvirate,* which defeated the republican army of Brutus and Cassius at Philippi. Some time after, Antony visited Greece and Asia and met Cleopatra. His love for her made him forget the provinces he was to govern. When at last he turned his attention to them, his rule was so despotic that Augustus sent a force against him and defeated him in the naval battle of Actium, during the progress of which he was deserted by the Egyptian fleet. He took his own life in 30 B. C.

Apelles (*ă-pel'lēz*), the most celebrated painter in ancient times, the son of Pythias, was probably born at Colophon, Asia Minor. He flourished in the latter part of the fourth century B. C., and he united the fine coloring of the Ionian, with the accurate drawing of the Sicyonic school.

Apollodorus (*ă-pol-ō-dō'rus*), a great architect of the second century, was born at Damascus. He worked at Rome for the Emperor Trajan, and built the Forum and Column which bear that monarch's name, but his greatest work was a huge bridge over the Danube at its confluence with the Alt. He was banished and put to death by Hadrian.

Apollonius (*ap-ol-lō'ni-us*), of Perga, in Asia Minor, called "The Great Geometer," lived in the second half of the third century, B. C. He is generally considered one of the founders of the mathematical sciences.

Apollonius, called the Rhodian (Apollonius Rhodius), was born in Alexandria 230 B. C. He presided over an academy at Rhodes, was an eminent rhetorician, and wrote a poem, in four books, on the expedition of the Argonauts, and other poems.

Apponyi, Count George, Hungarian statesman, was born 1808. He was a member of the Presburg Diet of 1843, and chancellor of Hungary in 1847, when he opposed the revolutionary movements then breaking out, and which caused his retirement. In 1859 he was made a member of the imperial council in Vienna, and was instrumental in bringing about the reconciliation between Austria and Hungary. He is classed among the ablest of European statesmen. Died, 1899.

Apuleius (*ap-ū-lē'yus*), a satirical writer of the second century, born at Numidia, Africa, about A.D. 125, studied at Carthage. He was so extremely popular that the senate of Carthage and other states erected statues in his honor.

Aquinas (*a-kwī'nas*), **St. Thomas** celebrated scholastic divine, born about 1227, died in 1274, was descended from the counts of Aquino, in the Kingdom of the Two Sicilies. He was educated at the Benedictine monastery at Monte Casino, and at the University of Naples, where he studied for six years. About the age of seventeen he entered a convent of Dominicians, much against the wishes of his family.

He attended the lectures of Albertus Magnus at Cologne, in whose company he visited Paris in 1245 or 1246. Here he became involved in the dispute between the university and the Begging Friars as to the liberty of teaching, advocating the rights claimed by the latter with great energy. In 1257 he received the degree of doctor from the Sorbonne, Paris, and began to lecture on theology, rapidly acquiring the highest reputation. In 1263 he is found at the Chapter of the Dominicans in London. In 1268 he was in Italy, lecturing in Rome, Bologna, and elsewhere. In 1271 he was again in Paris lecturing to the students; in 1272 professor at Naples. In 1263 he had been offered the archbishopric of Naples by Clement IV., but refused the offer. He died on his way to Lyons to attend a general council for the purpose of uniting the Greek and Latin churches.

He was called, after the fashion of the times the *angelic doctor,* and was canonized by John XXII. The most important of his numerous works, which were all written in Latin, is the *Summa Theologiae,* which, although only professing to treat of theology, is in reality a complete and systematic summary of the knowledge of the time. His disciples were known as *Thomists.*

References.—Vaughan's *Life of St. Thomas of Aquin;* Townsend's *Schoolmen of the Middle Ages;* and *Histories of Philosophy* by Erdmann and Ueberweg.

Arabi Ahmed (*ä-rä'bē*) ("Arabi Pasha"), leader of the military insurrection in Egypt in 1882, was born in Egypt about 1841. He proclaimed to his troops that he was inspired by the prophet to undertake a holy mission, the motto of which was, "Erypt for the Egyptians," and he thus became the leader of a great rebellion. After his defeat Arabi was banished to Ceylon, but was permitted to return in 1901. Died, 1911.

Arago (*ar'ă-gō*), **Dominique,** celebrated French philosopher, was born at Estagel, France, 1786. In 1806 he was engaged with Biot in measuring an arc of meridian. His subsequent life was distinguished by an ardent and successful devotion to science. In 1018 appeared his *Recueil d' Observations géodéciques, astronomiques, et physiques.* He died in 1853.

Arbaces (*ăr-bē'sēz*), one of the generals of Sardanapalus, and the founder in 876 B. C. of the Median empire. The dynasty of Arbaces lasted until 559 B. C., when Cyrus overthrew it.

Arbuthnot (*ăr-buth'not* or *ăr'buth-not*), **John,** British physician and wit, the much-loved friend of Swift and Pope, was born at Arbuthnot, Scotland, 1675. He studied at Aberdeen and University College, Oxford, but took his M.D. degree at St. Andrews, 1696. In 1705 he was appointed physician to the queen, and her death in 1714 was a severe blow to his prosperity. In 1715, along with Pope, he assisted Gay in *Three Hours After Marriage,* a farce. Utterly careless of literary fame, Arbuthnot was the chief, if not the sole author of the brilliant *Memoirs of Martinus Scriblerus,* first published in Pope's works. He wrote, also, the celebrated *History of John Bull.* Died, 1735.

Arc, Joan of. See **Joan of Arc.**

Archimedes (*ăr-ki-mē'dēz*), the most celebrated mechanican of antiquity, was born in Syracuse, Sicily, about 287 B. C., and died 212 B. C. He is said to have visited Egypt in early life, and to have invented there several hydraulic machines, including the Archimedean screw, which he applied to drainage and irrigation. Vitruvius relates that he discovered the principle of specific gravity while pondering the means of detecting a supposed fraud in the debasement of a golden crown of King Hiero with silver, by observing that his body would displace its own bulk of water in a full bath tub, and ran home naked exclaiming, *Eureka, eureka.* "I have found it I have found it." His purely mathematical works show that he far excelled all who preceded him.

Argand (*ăr'gaN'*, Eng. *ăr'gand*), **Aime,** Swiss physician and chemist, was born in Geneva about the middle of the eighteenth century. He invented the "Argand lamp," which was brought out in England in 1782. Died in Switzerland in 1803.

Argyll (*ăr-gil'*), **Archibald Campbell, Earl of,** was the descendant of Sir Colin Campbell of Lochow or Loch Awe, who was knighted in 1286. Archibald was born in 1598, and in 1619, his father having turned Catholic and quitted Scotland, became the sole potentate of all the broad lands of his line. In 1640 he marched with 4,000 men through Badenoch, Athole, Mar, and Angus, enforcing subjection to the Scottish parliament. Charles, on his visit to Scotland in 1641, created him marquis. After the defeat of Worcester he defended himself for nearly a year in his castle of Inveraray against Cromwell's troops; but in 1652 he submitted to the protector. At the restoration he was committed to the Tower, from there taken by sea to Leith in 1661, and beheaded. A gorgeous monument was erected to him in 1895 in St. Giles's cathedral.

Ariosto (*ă-rē-ōs'tō*), **Ludovico,** one of the greatest of Italian poets, born at Reggio, 1474, died at Ferrara, 1533. In 1503 he was introduced to the Cardinal Hippolytus d'Este, who employed him in many negotiations. Here he produced his poem *Orlando Furioso,* which was published in Farrara in 1516.

Aristarchus (*ar-is-tär'kus*) **of Samos,** an Alexandrian astronomer, flourished 280-264 B. C. He seems to have anticipated Copernicus, maintaining that the earth moves round the sun. He wrote a treatise on the magnitude and distance of the sun and moon.

Aristides (*ar-is-ti'dēz*), surnamed "the just," was the son of Lysimachus. He was one of the ten leaders of the Athenians against the Persians at the battle of Marathon, 490 B. C. In 477 B. C. he introduced a change of the constitution by which all citizens, without distinction of rank, were admitted to political offices. Died, 468 B. C.

Aristippus (*ar-is-tip'pus*), the founder of the Cyrenaic school of philosophy among the Greeks, was the son of Artiades, a wealthy gentleman of Cyrene, in Africa, and was born in that city about 425 B. C. He was a pupil of Socrates.

Aristophanes (*ar-is-tof'ă-nēz*), the most celebrated of the ancient Athenian writers of comedy, was contemporary with Socrates and Plato. He was born at Athens, probably about 448 B. C. He wrote, in all, fifty-four comedies, but only eleven have come down to us. *The Knights* and *The Clouds* are among his most admired pieces. Others are *The Wasps, The Birds,* and *The Frogs.* One of his finest plays, *The Clouds,* is a satire against Socrates. He died about 380 B. C.

Aristotle, (*ar'-is-tot'l*) celebrated Greek philosopher, born in Stagira, Macedonia, in 384, B.C. and died at Chalcis, Euboea, in 322 B.C. At 17 years of age he went to Athens, where he resided for 20 years. Plato, his teacher, called him the "intellect of his school." About 343 Philip of Macedon made him the teacher of his son Alexander. His influence on both was for many years great and salutary. Alexander after the conquest of Persia presented him with 800 talents. During his marches he sent him plants and animals, and other things unknown in Greece, for scientific examination. Aristotle returned to Athens about 335 B.C. and taught in the Lyceum, a gymnasium near the city. His school is called the Peripatetic, because he taught while walking up and down, or in shady walks. His friendly relations with Alexander were interrupted, yet the Athenians suspected him of partisanship for Macedon, accused him of impiety, and forced him to flee to Chalcis. The most important of his writings bear the titles *Organon* or *Logic, Rhetoric, Poetics, Ethics, Politics, History of Animals, Physics, Metaphysics, Psychology,* and *Meteorology.* His writings on mathematics, economy, and history are lost, as well as his letters, and a work called *Politiai,* on constitutions. Many books bearing his name are spurious. No other philosopher has exerted so large an influence on so many centuries and nations.

References.—Zeller's *Aristotle and the Earlier Peripatetics;* The chief English works are Grote's *Aristotle,* dealing with the life of Aristotle, the *Organon, De Anima* and *Metaphysics;* G. H. Lewes's *Aristotle; a Chapter from the History of Science,* dealing chiefly with the physics and biology; Sir Alexander Grant's edition of the *Nicomachean Ethics* and introduction to Newman's edition of the *Politics;* Butcher's *Aristotle's Theory of Poetry and Fine Art;* and Cope and Sandys' edition of the *Rhetoric.*

Arius (*ă'ri-us* or *ă-rī'us*), founder of Arianism, was born in Libya about 256 A. D., was trained in Antioch, and became a presbyter in Alexandria. Here about 318 he maintained, against his bishop, that the Son was not co-equal or co-eternal with the Father, but only the first and highest of all finite beings, created out of nothing by an act of God's free-will. He defended his views before the council of Nicaea, 325, but they were condemned. Died at Constantinople, 336.

Arkwright, Sir Richard, noted English inventor, was born 1732, and died 1792. Until the age of 28 he was a barber and afterward a dealer in hair, and in a dye of his own invention. In 1768 he produced the model of his famous cotton-spinning frame, by which thread could be spun of any required fineness and strength and with immense velocity. Need and Strutt (the latter the inventor of the stocking frame) took an interest in it, and a machine driven by a horse was soon in operation. The first patent was granted in 1769. In 1775 Arkwright obtained a new patent, which after litigation was confirmed in 1785. He encountered bitter hostility, especially from the manufacturers, who at one time refused to buy his yarns, and tried to ruin him by mischievous legislation; but he was indomitable, showed remarkable capacity for management, and accumulated a fortune of $2,500,000. He acquired the rudiments of learning after he was 50 years old, and was knighted in 1786, on presenting an address to the king. In 1787 he was high sheriff of Derbyshire.

References.—Lewis' *Heroes of Science;* Coleridge's *Biographia Borelis;* and the *Triumphs of Steam.*

Arliss, George, actor, born 1868, in London, England. First appeared on the London stage in 1887; made his American debut in Mrs. Patrick Campbell's company in 1901. He is especially noted for his sympathetic character portrayals of middle and old aged gentility in "Disraeli," "The Green Goddess" and "Old English," among others.

Arminius (*ăr-mĭnĭ-us*), a German chieftain, prince of the Cherusci, was born about 18 B. C., and died by assassination in 21 A. D. He became a Roman citizen and served as a soldier in the Roman army. The majority of his life was devoted to the cause of German independence. He defeated the Roman Varrus, twice routed Germanicus, and finally drove the legions beyond the Rhine, thereby winning the title "German Liberator."

Arminius, Jacob, teacher of the system of Arminianism, born 1560, at Oudewater, a small town in Holland. He was ordained at Amsterdam in 1588, and soon became distinguished as a preacher. In 1589 he consented to answer a book which attacked the doctrine of Calvanism. Died, 1609.

Armour, John Ogden, capitalist, packer, was born in Milwaukee, 1863. President Armour & Company, Director C. M. & St. P. Ry.; I. C. Ry.; and National City Bank (New York). Died, 1927.

Armour, Philip D., merchant, capitalist, head for many years of the great firm of Armour & Company, pork packers and dealers in dressed meats and provisions, was born at Stockbridge, N. Y., 1832, and died at Chicago in 1901. His chief philanthropy was Armour Institute of Technology in Chicago, which was opened in 1893.

Armstrong, John, American soldier and writer, was born at Carlisle, Pa., 1758; died, 1843. He served in the revolutionary war, leaving the service with the rank of major. He wrote the *Newburgh Letters,* setting forth the hardships of the revolutionary soldiers in respect to pay. United States senator from New York, 1800-04; minister to France, 1804-10; brigadier-general in war of 1812; and secretary of war, 1813-14. He was charged with inefficiency in consequence of the capture of Washington, and resigned in September, 1814.

Armstrong, Sir William George, British inventor, was born in 1810 at Newcastle, England. In 1840 he produced much improved hydraulic engine, in 1842 an apparatus for producing electricity from steam, and in 1845 the hydraulic crane. Armstrong offered to his government all his inventions. He was knighted in 1859, and in 1887 was created Baron Armstrong; in 1894 he purchased Bamborough castle, to convert it into a retreat for cultured poverty. Died, 1900.

Arnauld I(*ăr'nō*), **Antoine,** known as "the great Arnauld," French philosopher and Jansenist theologian, was born at Paris in 1612. Entering the Sorbonne he became a pupil of Lescot, the confessor of Cardinal Richelieu, and afterward bishop of Chartres. His published works number 100. He died at Brussels in 1694.

Arndt (*ărnt*), **Ernst Moritz,** German poet and patriot, was born in the then Swedish island of Rügen, 1769. He received an excellent education at Jena, but in 1805, after traveling over a great part of Europe, he became professor of history at Griefswald. His *Geschichte der Leibeigenschaft in Pommern und Rügen* led to the abolition of serfdom; and in his *Geist der Zeit* he attacked Napoleon with such boldness that, after Jena, he had to take refuge in Stockholm. *Was ist des Deutschen Vaterland?* and others of his fiery songs, did not a little to rouse the spirit of Germany. Vigorous in mind and body, beloved and revered by the whole German people as "Father Arndt," he died at Bonn in 1860.

Arne (*ărn*), **Thomas Augustine,** composer, was born in London in 1710, and educated at Eton. He wrote his first opera, *Rosamond,* which was performed with great success in 1733. Next followed his comic operetta, *Tom Thumb;* and afterward his *Comus. Rule Britannia,* originally given in *The Masque of Alfred,* is his, as well as two oratorios and two operas, *Eliza* and *Artaxerxes.* He died in London in 1778.

Arnold, Benedict, an American general and traitor, was born in Connecticut, 1741. Joined Ethan Allen against Ticonderoga, and later succeeded Montgomery after the attack on Quebec, 1775, becoming a brigadier-general. Refused promotion by congress, and consented to remain in the army only at Washington's request. He secured command of West Point and entered into treasonable negotiations with Sir Henry Clinton for its betrayal. The capture of Major André exposed the plot, and Arnold fled at once. He became a brigadier-general in the British army and commanded several minor attacks. He was pensioned by the English government, but despised and neglected by the English people, except the royal family. Died in London, 1801.

Arnold, Bion Joseph, electrical engineer, inventor, was born at Casnovia, Mich., 1861; graduated from Hillsdale College, B. S., 1884, chief designer, Iowa iron works, Dubuque, Iowa; since 1893 independent consulting engineer. Designer and builder intramural railway, World's Columbian Exposition; consulting engineer Wisconsin state railway commission, 1905-07; devised plan for electrically operating trains of New York Central railroad in and out of New York, and member electric traction commissioners engaged in carrying on the work; consulting engineer for city of Chicago to revise street railway systems of city, 1902; chief engineer rebuilding Chicago traction system at cost of $40,000,000, 1907, and chairman of board of supervising engineers of the same.

Arnold, Sir Edwin, English author and journalist, was born in 1832; educated at King's College, London, and at Oxford; was appointed second master at King Edward VI's. school at Birmingham; resigned this for position of principal in the Sanskrit College of Poona, British India. In 1861 he became connected with the *London Telegraph;* noted as the author of several books, among them *Poets of Greece,* etc., and later his well-known poem, *The Light of Asia.* Died, 1904.

Arnold, Matthew, English poet and critic, eldest son of Dr. Arnold of Rugby, was born in Middlesex, England, 1822; was educated at Winchester, Rugby, and Balliol College, Oxford. He was elected fellow of Oriel College in 1845, and in 1851, after having been for some time private secretary to Lord Lansdowne, he was appointed lay inspector of schools under the committee of council on education. For ten years, 1857-67, he held the chair of poetry at Oxford. As a critic he holds a very high place. His later works were chiefly theological, being attempts to grapple with the supernatural aspects of Christianity from a rationalistic standpoint. Died, 1888.

Arnold, Sarah Louise, educator, born at North Abington, Mass., 1859; graduated State Normal School, Bridgewater, Mass., 1878; A.M., Tufts, 1902; taught in Massachusetts, Pennsylvania, Vermont, and New Hampshire; dean Simmons College since 1902.

Arnold, Thomas, educator and historian, was born in 1795, in the Isle of Wight, and educated at Winchester, and Corpus Christi College, Oxford; in 1815 he became Fellow of Oriel. After taking holy orders, he passed nine years at Laleham, near Staines, in literary occupations, and in preparing young men for the universities. Appointed head master of Rugby school in 1828, he raised that institution beyond all precedent, both by the remarkable success of his pupils and by the introduction of new branches of study into the Rugby course. The best known of Dr. Arnold's works are his edition of *Thucydides,* and his sermons delivered in the chapel of Rugby school. Died, 1842.

Arnold of Winkelried, a Swiss of Unterwalden, who, according to tradition, made a way for his comrades into the enemies' ranks at Sempach, in 1386, by grasping an armful of Austrain spearheads and plunging them into his own bosom.

Arrhenius (*ăr-rā'nĭ-us*), **Svante August,** Swedish chemist, was born in 1859. At nineteen he received the degree of doctor of philosophy from the University of Upsala. His most important contributions are in physical chemistry, more particularly in the theory of solutions, although his study of comets has added greatly to our knowledge of that subject. Received Nobel prize of chemistry, 1903. Died, 1927.

Arrian (*ar'i-an*), or **Flavius Arrianus,** Greek historian, was born in Nicomedia, Bithynia, about 100 A. D. The emperor Hadrian made him a Roman citizen and governor of Cappadocia, in 136. When fifty years old he settled in his native city for the rest of his life. He died about 180.

Artaxerxes I. (*ăr-taks-ûrk'sēz*), king of Persia, surnamed Longimanus, the second son of Xerxes, escaped from the conspiracy of Artaban and others, and ascended the throne in 465 B. C. His long reign, extending to 425, was marked by a decline of power. Died, 425 B. C.

Artaxerxes II., surnamed Mnemon, succeeded his father, Darius II., in 405 B. C. After gaining the victory over his brother, Cyrus, he became involved in a war with Sparta, which ended with the Antalcidean treaty of peace. Died, 361 B C.

Artaxerxes III., surnamed Ochus, was the son and successor of Artaxerxes II., and reigned in the true style of oriental despotism until 338 B. C. One of his most daring exploits took place in Egypt, where he caused the divine bull Apis to be slaughtered and cooked as ordinary beef. He was poisoned in 338 by his eunuch, Bagoas.

Artevelde (*ăr-te-vel'dē*), **Jacob Van,** popular Flemish leader of the fourteenth century, was a brewer in Ghent. His wealth, eloquence, and talents made him the most prominent man on the side of the citizens in their struggles against Count Louis of Flanders. His power was secure for ten years, but in 1335 he made a treaty with Edward III. of England, persuading him to assume the title of king of France. To strengthen this alliance, he tried to make Edward, the black prince, count of Flanders, when the people rose in rebellion and Artevelde was slain, 1345.

Arthur, Chester Alan, twenty-first president of the United States, son of a Baptist minister, was born in Franklin county, Vt., 1830; graduated from Union College in 1848; was admitted to the bar; appointed United States collector of the port of New York, 1871, served until 1878; was elected vice-president of the United States in 1880, and on the death of President Garfield, 1881, he became president. Died, 1886.

Arthur, Julia, actress, was born in Hamilton, Ontario, 1869, of Irish and Welsh parentage; real name, Ida Lewis; first New York success at Union Square theater in *The Black Masque;* London début, 1895, in Henry Irving's company, playing rôles next to Miss Terry. Married, 1898, Benjamin P. Cheney, Jr.

Asbury (*az'bĕr-i*), **Francis,** the first bishop of the Methodist Episcopal church ordained in America, was born in 1745. In 1765 he was appointed general assistant by John Wesley. He brought new life into the work, and at the outbreak of the revolution, when many other ministers returned to England, he kept on in his labors. At the end of the war it was decided to found an independent Methodist Episcopal church for America, and he was ordained in 1784 as bishop by his colleagues who had already been ordained by Wesley in England. For more than thirty years he worked earnestly and successfully, and the wonderful progress of Methodism in America, was largely due to his efforts and ability. He died in 1816.

Ascham (*as'kam*), **Roger,** English writer and classical scholar, was born in 1515 at Kirby Wiske, in Yorkshire. He wrote, in 1545, a treatise entitled *Toxophilus,* the pure English of which ranks it among the classical pieces of English literature. For this treatise, which was dedicated to Henry VIII., he was awarded a pension. In 1548 he became master of languages to Lady Elizabeth, afterward queen, and was subsequently appointed Latin secretary. Died, 1568.

Ashburton, Lord, Alexander Baring, English diplomat, was born in 1774, eldest son of the eminent merchant, Sir Francis Baring. Having been employed as special ambassador from England to the United States to settle the northeastern boundary question in August, 1842, he concluded the famous treaty called the Ashburton treaty, by which the frontier line was definitely settled. Died, 1848.

Ashhurst, John, Jr., American surgeon, educator, and author, was born at Philadelphia, Pa., 1839; acting assistant surgeon of United States army, 1862-65; professor of clinical surgery in University of Pennsylvania, elected in 1877. His two principal works are *Injuries to the Spine,* and *Principles and Practice of Surgery.* Died, 1900.

Ashmole, Elias, British antiquary, was born at Litchfield, England, 1617; held the appointment of Windsor herald, and published the *History of the Order of the Garter.* He left many works, and presented to the University of Oxford his valuable collection of coins, specimens, and manuscripts. Died, 1692.

Aspasia (*as-pā'shi-ă*), a beautiful Athenian woman, said to have been a native of Miletus in Asia Minor. Socrates is said to have been one of her admirers. In order to marry her, Pericles repudiated his wife. An affront offered to Aspasia is said to have caused the Peloponnesian war.

Asquith (*as'kwith*), **Rt. Hon. Herbert Henry,** prime minister of England, was born in 1852, and entered the British parliament in 1886. He was educated at Balliol College, Oxford, and was admitted to the bar, Lincoln's Inn, 1876, D. C. L., Oxford; LL.D., Edinburgh and Glasgow. On the defeat of the Rosebury ministry in 1895, he resumed practice at the bar. He was one of the most effective speakers on the liberal side during 1903 on the education question and the war commission's report, and during 1903, 1904, and 1905 in opposition to Chamberlain's fiscal policy, Chancellor of the exchequer, 1905. He became prime minister, 1908. Died, 1928.

Astor, John Jacob, American merchant, founder of the American fur company, was born near Heidelberg, Germany, 1763. After spending some years

in London he sailed to America in 1783, and soon invested his small capital in furs. By economy and industry he so increased his means that after six years he had acquired a fortune of $200,000. From this period, in spite of the war of 1812 and other temporary obstacles, his commercial connections extended over the entire globe, and his ships were found in every sea. He died in 1848, leaving property amounting to $20,000,000.

Astor, John Jacob, capitalist, great-grandson of John Jacob Astor, was born at Rhinebeck, N. Y., 1864; graduated at Harvard in 1888; traveled abroad, 1888-91; in 1897 he built the Astoria hotel, New York, adjoining the Waldorf hotel, which was built by William Waldorf Astor, his cousin, the two now forming one building under the name of Waldorf-Astoria hotel. Was colonel, staff of Governor Levi P. Morton, and, 1898, lieutenant-colonel of United States volunteers, in the Cuban war. Drowned at sea 1912.

Astor, William Waldorf, capitalist, author, was born in New York, 1848; son of John Jacob, second, and Charlotte Augusta (Gibbes) Astor; great-grandson of John Jacob, founder of the Astor fortune. Educated by private tutors, finishing in Europe; entered office of the Astor estate, 1871; succeeded his father, 1890, as head of the Astor family. Member of New York legislature, 1878-81; United States minister to Italy, 1882-85; removed to England. 1890; became owner *Pall Mall Gazette.* Died, 1919.

Athanasius (*ath-ā-nā'shi-us*), **Saint,** was born in Egypt about the year 296, entered the church at an early age, and was chosen bishop of Alexandria in 326. He is esteemed one of the most eminent among the ancient fathers of the church. He was a violent opponent of Arius; and his earnest advocacy of the Catholic faith, more particularly of the doctrine of the Trnity, subjected him to much persecution from the emperors Constantine and Julian, by both of whom he was several times exiled. Died in 373.

Athenagoras (*ath-ē-nag'ō-rās*), a Christian philosopher, born at Athens, who lived toward the close of the second century. His conversion to Christianity has been likened to that of St. Paul.

Atherton, Gertrude Franklin, novelist, was born at San Francisco, California, 1858, the daughter of Thomas L. Horn. She was educated at St. Mary's Hall, Benicia, California; Sayre Institute at Lexington, Kentucky; married George H. Bowen Atherton, deceased. Author: *The Doomswoman; Before the Gringo Came; A Whirl Asunder; Patience Sparhawk and Her Times,* etc.

Atticus (*at'ti-kus*) **Herodes, Tiberius Claudius,** a rich Athenian, born about 104 A. D. He was educated by the best masters, devoting special attention to oratory, in which he greatly excelled. His fame rests mainly upon immense expenditures for public purposes. Died, 180 A. D.

Atticus, Titus Pomponius, born at Rome 109 B.C., was educated with Cicero and the younger Marius. In 85 B. C. he withdrew to Athens; and, after 65 B. C., when Sulla induced him to return to Rome, he still devoted himself chiefly to study and the pleasures of friendship. None of his own writings have been preserved, but we have 396 epistles addressed to him by Cicero. Died, 32 B. C.

Attila (*at'i-la*), king of the Huns, who lived in the fifth century. He styled himself "the scourge of God," and devastated Lombardy. The city of Venice was founded by those who fled before him. On his death, in 453, his body was buried in three coffins, made of gold, silver, and iron. The captives who dug his grave were put to death.

Atwood, George, British mathematician, was born, 1746; died in London, 1807. He was educated at Cambridge University, became tutor of Trinity College, Cambridge, and invented a machine to illustrate the relations of time, space, and velocity in the motion of a body falling under the action of gravity.

Auber (*ō'bār'*), **Daniel Francois Esprit,** French composer of operas, was born at Caen, in Normandy, 1782. His opera *Masaniello* is considered his best. Among his works are the well-known operas, *Fra Diavolo, Le Domino Noir, Manon Lescant,* etc. In 1842, after the death of Cherubini, he was appointed director of the conservatory of music, Paris. Died, 1871.

Aubigne (*ō-bēn'yā'*), **Jean Henri Merle d'.** See **Merle d'Aubigne.**

Audubon (*ô'doo-bon*), **John James,** celebrated American naturalist of French descent, was born near New Orleans, La., in 1780; from childhood devoted to natural history, but it was not until 1830 that the first of the four volumes of his great work, *The Birds of America,* appeared. This magnificent collection of plates, which was sold for $1,000 a copy, was quickly followed by explanatory letterpress under the title of *American Ornithological Biography.* Died in New York, 1851.

Auenbrugger von Auenbrug (*ou'en-broog-gēr fŏn ou'en-brook*), **Leopold,** Austrian physician, was born in 1722. He originated the method of examining the lungs by percussion of the chest, and published the results of his investigations in a treatise which marks an epoch in the history of medicine. He died, 1809.

Auerbach (*ou'ĕr-bāk*), **Berthold,** German author, was born at Nordstetten in 1812. Having abandoned the study of Jewish theology, he devoted his attention to literature. His first publications were *Judaism and Modern Literature,* and a translation of the works of Spinoza. By some his *Auf der Hohe,* "On the Heights," is regarded as his best novel. *Das Landhaus am Rhein,* is known by the English title, *The Castle on the Rhine.* Died at Cannes, France, 1882.

Auersperg (*ou'-ĕrs-perk*), **von, Anton Alexander,** famous Austrian statesman and poet, whose pen-name was "Anastasius Grün"; was born at Laibach, Austria, in 1806. He was a member of the Frankfort parliament of 1848, and later of the Austrian Reichsrath. Died at Gratz, 1876.

Augereau (*ō-zh-rō'*), **Pierre Francois Charles,** duke of Castiglione, marshal and peer of France; one of the most brilliant and intrepid of that band of general officers whom Napoleon gathered around himself; was born in 1757. His services were so conspicuous that in less than three years he was made general of a division. In 1797 he was appointed to the command of the army of the Rhine; but after a few months the directory made him commander of the tenth division at Perpignan. In 1800 he received the command of the army in Holland, and was active in several engagements. In 1804 he was made a marshal and in the following year he commanded a division of the army which reduced the Vorarlberg. Died in La Houssaye, 1816.

Augustine (*ô'gus-tin*) **AureliusAugustinus, St.** a renowned father of the Christian church, was born at Tagaste, in Africa, in 354, his mother Monica being a christian, his father Patricius a pagan. His parents sent him to Carthage to complete his education, but he disappointed their expectations by his neglect of serious study and his devotion to pleasure. A lost book of Cicero's, called Hortensius, led him to the study of philosophy; but dissatisfied with this he went over to the Manichaeans. He was one of their disciples for nine years, but left them, went to Rome, and thence to Milan, where he became a teacher of rhetoric.

St. Ambrose, the bishop of Milan, converted him to the faith of his boyhood, and the reading of Paul's epistles wrought an entire change in his life and character. He retired into solitude, and prepared himself for baptism, which he received in his thirty-third year from the hands of Ambrose. Returning to Africa, he sold his estate and gave the proceeds to the poor, retaining only enough to support him. At the desire of the people of Hippo, Augustine became the assistant of the bishop of that town, preached with extraordinary success, and in 395 succeeded to the see. He entered into a warm controversy with Pelagius concerning the doctrines of free-will, grace, and predestination, and wrote treatises concerning them, but of his various works his *Confessions* is most secure of immortality. He died August 28, 430, while Hippo was besieged by the Vandals.

He was a man of great enthusiasm, self-devotion, zeal for truth, and powerful intellect, and though there have been fathers of the church more learned, none have wielded a more powerful influence. His writings are autobiographical, polemical, homiletic, exegetical. The greatest is the *City of God* (*De Civitate Dei*), a vindication of Christianity. His *Confessions* also gained wide fame.

Augustus, Caius Julius Caesar Octavianus, Roman emperor, born 63 B. C., was the son of Caius Octavius and Accia, niece of Julius Caesar, by whom he was adopted when but four years of age. He was in Epirus when Julius Caesar was assassinated, but speedily returned to claim his inheritance. At the age of thirty-six he became emperor, with the title of Augustus. His reign was fortunate, good laws were framed in it, and the arts flourished under his protection. He died, 14 A. D.

Aurelianus (*ô-rē-li-ān'us*), **Claudius** or **Lucius Domitius,** emperor of Rome, was born in Pannonia, 212 A. D., the son of a peasant; entered the Roman army, his exploits in which attracted the notice of the emperors Valerian and Claudius, and on the death of the latter in 270 he was proclaimed emperor. The emperor's severity made him feared even by his friends, who, as they deemed in pure self-defense, conspired against him and put him to death, 275 A. D.

Aurungzebe (*ô-rung-zeb'*), emperor of India, known as the Great Mogul, was born in 1618. As emperor, his career was brilliant. His sons disturbed his latter days by attempting to depose him. He died in 1707.

Austen, Jane, English novelist; born in 1775, at Steventon, Hants, England, of which parish her father was rector. Her principal productions are *Pride and Prejudice; Sense and Sensibility; Emma; Mansfield Park; Northanger Abbey;* and *Persuasion.* They are distinguished for originality, naturalness, and fidelity of delineation, qualities in which the literature of her time was most deficient. She died at Winchester in 1817.

Austin, Alfred, English poet, novelist, and journalist; born at Headingley, near Leeds, 1835; took his degree at the University of London, 1853; admitted to the bar, 1857; published *The Season a Satire; The Human Tragedy; Interludes; Savonarola; English Lyrics,* and many other poems, plays, and political papers; made fifteenth poet laureate of England, 1896. Died, 1913.

Avebury (*ā'bĕr-i*), **Lord.** See **Lubbock, Sir John.**

Averroes (*ā-ver'ō-ēz*), originally Ibn Roshd, or, more fully, Mohammed-Ibn-Roshd, the most famous of Arabian philosophers, was born at Cordova, Spain, 1126. Died about 1198.

Avery, Elroy McKendree, author, historian, born at Erie, Monroe county, Mich., July 14, 1844; graduate of University of Michigan, Ph.B., 1871; served in Civil War; mustered out as close as sergeant-major of 11th Michigan volunteer cavalry. Member of many historical and economic societies. Author: *Elementary Physics; Elements of Natural Philosophy; Physical Technics; History of the United States;* etc.

Avicenna (*av-ē-sen'ā*), properly Ibn Sina or, more fully, Abu Ali Al-Hossein ibn Abdallaa Ibn Sina, a famous Arabian philosopher and physician, whose authority for many centuries passed as indisputable; born 980, at Charmatain, a village near Bokhara. Died, 1037.

Avogadro (*ä-vō-gä'drō*), **Amadeo,** Italian chemist and physicist, was born at Turin, Italy, 1776; died there, 1856. Professor of physics at Turin; formulated his celebrated law concerning the atomic theory in 1811.

Ayeshah (*ī'ē-shä* or *ä'ē-shä*), the favorite wife of Mohammed, was born at Medina in 610 or 611 A. D. She was only nine years of age when she married the prophet. In his last illness Mohammed, by his request, was carried to her house and expired in her arms. After the prophet's death Ayeshah took active part in the plot which deprived Caliph Othman of his power and life, and headed a force to resist the accession of Ali. Died, 678.

Babbitt, Isaac, American inventor, was born at Taunton, Mass., 1799. Being a goldsmith he became interested in the manufacture of alloys and in 1839 discovered the combination of copper, tin, and antimony known as Babbitt's Metal. In recognition of this service he was voted $20,000 by Congress. He died in 1862.

Baccio della Porta. See **Bartolommeo, Fra.**

Bach, Johann Sebastian, (*bäk*) in some respects the greatest musician that ever lived, son of Johann Ambrosius, was born 1685, and died July 30, 1750. He was treble singer in a choir at Luneburg until his voice changed, when he became a violinist of the court at Weimar. When twenty years old he was organist at Arnstadt, in 1708 became court organist at Weimar, and in 1714 concert master to the duke, with the additional duty of composing and conducting the vocal music of the ducal chapel. After a period of service as chapel master to the court at Kothen, the city authorities of Leipsic elected him in 1723 musical director of the Thomas School, where he labored for the remainder of his life. Bach published few works, but left a great number in manuscripts. The Bach society at Leipzig was engaged from 1850 to 1900 in publishing a complete collection of his compositions, which embrace a great variety of church music, both vocal and instrumental, and many other works for the organ, harpsichord, orchestra, and every solo instrument in use a century ago. As a virtuoso upon keyed instruments he had no rival.

References.—The most complete edition of his works is that issued at Leipzig by the Bach Society, in 59 folio volumes. See his *Life* by Miss Kay Shuttleworth, and the greatest work on the subject, *J. S. Bach,* by J. A. P. Spitta.

Bach, Karl Philipp Emanuel, German composer, second son of Johann Sebastian, was born at Weimar, in 1714; died at Hamburg in 1788. He was probably the most highly gifted of eleven brothers, and his influence on the development of certain musical forms gives him a prominent place in the history of the art. His most ambitious composition is the oratorio *Israel in the Wilderness.*

Bache, Franklin, physician and chemist, was born at Philadelphia, Pa., 1792; he published *System of Medicine* in 1819; was professor of chemistry

in the Philadelphia College of Pharmacy, 1831; held same chair in Jefferson Medical College, Philadelphia, in 1841. Died, 1864.

Bacheller, Irving, novelist, was born at Pierpont, N. Y., 1859; graduated from St. Lawrence University, 1882, actively connected with press of New York for years; was one of the editors of the *New York World*. Author of *Eben Holden; The Handmade Gentleman;* etc.

Bacon, Augustus Octavius, lawyer, United States senator from Georgia; born in Bryan county, Georgia, 1839; graduate of University of Georgia, 1859; in law practice in Macon, Georgia, 1866-1914; delegate national democratic convention, 1884; presidential elector, 1868. Elected to the United States senate, 1895; reelected, 1901 and 1913. He was for many years a trustee of the University of Georgia, and one of the regents of the Smithsonian Institution. Died, 1914.

Bacon, Benjamin Wisner, biblical writer and critic; professor new testament criticism and exegesis in Yale University since 1896; was born at Litchfield, Conn., 1860; graduated from Yale, 1881; B. D., Yale, 1884. Director of the American School of Oriental Research in Jerusalem, Syria, 1905-06. Author: *The Genesis of Genesis; Triple Tradition of the Exodus; Introduction to Literature of the New Testament; The Sermon on the Mount.*

Bacon, Francis, Baron Verulam and Viscount St. Albans, English lawyer, statesman and philosopher, was born at York House, London, 1561. In 1576 he went to France with Sir Amyas Paulett, the English ambassador, and stayed there until his father's death in 1579 recalled him to England. Then he began to study law at Gray's Inn, and in 1584 started on a parliamentary career as member for Melcombe Regis, in Dorsetshire, and soon became distinguished in the House as an orator. The great blot in his career during the reign of Elizabeth was, according to Macaulay and others, his prosecution of his friend Essex, which they maintain was undertaken "voluntarily"; but for this there is no proof.

After the queen's death, in 1603, Bacon rapidly rose in fortune and favor. He was knighted in 1603, became solicitor-general in 1607, attorney-general in 1613, privy councillor in 1616, lord high chancellor and Baron Verulam in 1618, and Viscount St. Albans in 1620.

But his fall was as rapid as his rise. The Parliament of 1620 took up the question of the obnoxious patents consisting in alehouses and inns, and monopolies of gold and silver thread, in which both the king and Buckingham's family were interested. This led to their abolition, on the initiative of Bacon; and his enemies at once started a crusade against "the reformer of abuses." A committee was appointed to inquire into "the abuses of the courts of justice;" and though Bacon denied that he took "rewards to pervert justice," and maintained that he only "partook of the abuse of the times," he was condemned by his peers.

But the sentence on him was never carried into effect; his imprisonment lasted only four days; his huge fine of $200,000 was remitted; his pardon was passed under the great seal—delayed till 1623, because he refused to give up York House, the place of his birth, to Buckingham; a pension of $6,000 a year was granted to him; and he was summoned to resume his seat in the house of lords in 1624.

It was after he retired from political life that Bacon practically began his literary career as one of the world's great philosophers. Up to that time his only acknowledged works had been several editions of his *Essays*—rewritten and augmented on every occasion with infinite care—his *Advancement of Learning*, in 1605, and his *Novum Organum* in 1620. The last five years of his life were full of work. In March, 1622, he produced his *History of Henry VII.;* in November, 1622, his *Historia Ventorum;* in January, 1623, his *Historia Vitae et Mortis;* in October, 1623, his *magnum opus*, entitled *De Augmentis Scientiarum*, a Latin translation, with large additions, of *The Advancement of Learning;* in December, 1624, *his Apophthegms;* and in 1625 his *Translation of the Psalms*. His last work, *Sylva Sylvarum* (1627), was published posthumously along with the *New Atlantis*.

Bacon was great as a moralist, a historian, a writer on politics, and a rhetorician; but it is as the father of the inductive method in science, as the powerful exponent of the principle that facts must be observed and collected before theorizing, that he occupies the grand position he holds among the world's great. His moral character, however was not on a level with his intellectual, self aggrandizement being the main aim of his life

References.—The chief authority on his life, and work is James Spedding, who edited *The Letters and Life of Bacon*, in 7 volumes, and his *Works*, also 7 volumes. His *Evenings with a Reviewer* is also worthy of perusal. See also Church's *Life of Bacon*, in the English "Men of Letters Series."

Bacon, Nathaniel, lawyer and member of Governor Berkeley's council in Virginia, leader of an alleged insurrection against the colonial government under pretense of resisting aggressions of the Indians, was born in England about 1642. Berkeley was forced to make many concessions to demands for better government; but he broke his promises, and a brief civil war followed, in which Jamestown was burned, 1676, and the governor took shelter in an English vessel. Died in Virginia, 1677.

Bacon, Roger, English scientist and publicist, was born about 1214. The most learned man of his day, he is reputed to have advocated the change since made in the calendar, to have invented gunpowder, and is known to have manufactured magnifying glasses. Died, 1294.

Baden-Powell (*bā'den-pō'el*, or *pou'el*), **Robert Stephenson Smyth,** British general and inspector-general of cavalry, was born 1857, and educated at Charterhouse, London. In 1876 he joined the 13th English hussars, and served as adjutant of that regiment in India, Afghanistan, and South Africa. In the Boer war he was given command of the 5th dragoon guards, and with a force of 1,200 men was besieged in Mafeking, which he held against the Boers from a few days following the outbreak of the war until May 18, 1900, the longest siege recorded in modern warfare; afterward organized the South African constabulary. He is the author of works on *Reconnoissance and Scouting, Vedette Duty, Cavalry Instruction, The Downfall of Prempeh, The Matabele Campaign*, and on *Pig-Sticking* or *Hog-Hunting*.

Baedeker (*bā'dē-ker*), **Karl,** German publisher at Coblentz, the originator of a series of admirable guide books, published since 1872 at Leipzig. Born, 1801; died, 1859.

Baekeland, Leo Henrik, chemist and inventor, was born at Ghent, Belgium, 1863. He studied at the University of Ghent, then won a traveling scholarship to Great Britain, Germany, and the United States. After teaching some years at Ghent and Bruges, he began the manufacture of photographic papers. He soon sold his invention to the Eastman Kodak Company and devoted himself to research. Among his discoveries are bakelite, a substitute for hard rubber, used especially in electrical apparatus, improvements in electric insulation, and synthetic varnishes. He was made president of the American Chemical Society in 1924.

Baer, George F., railway official, lawyer; born in Somerset county, Pa., 1842; educated at Franklin and Marshall College. Raised volunteer company in 1862; elected captain. Joined army of Potomac at second battle of Bull Run and took part in all engagements up to and including Chancellorsville, when he was detailed as adjutant-general, second brigade; counsel for Philadelphia & Reading, 1870, and later a director. For years confidential legal adviser in Pennsylvania of J. Pierpont Morgan; elected, 1901, president of Philadelphia & Reading railway company, Philadelphia & Reading Coal and Iron company, and Central Railroad company, of New Jersey. Died, 1906.

Baer, Karl Ernst von, Russian naturalist, founder of modern embryology, was born in Esthonia, Russia, 1792; died at Dorpat, 1876. He was educated in Germany and became a professor in the University at Königsberg, where, in 1828, he published *The Development of Animals*, a set of careful observations, and philosophical reflections that are most remarkable for clearness and thoroughness.

Baeyer (*bā'yĕr*), **Adolf,** German chemist, was born at Berlin, Prussia, 1835. In 1872 he became professor of chemistry at the University of Strassburg, and was Liebig's successor at Munich in 1875. He discovered cerulein, eosin, and indol, besides making other valuable contributions to the chemistry of dye-stuff. Died, 1917.

Bagehot (*bag'ut* or *baj'ut*), **Walter,** English economist and journalist, was born at Langport, Somerset, 1826. From a school at Bristol he passed in 1842 to University College, London, where he took his M.A. degree in 1848; in 1852 he was admitted to the bar, but joined his father as a banker and shipowner at Langport. His works include *The English Constitution; Physics and Politics; Lombard Street; Literary Studies; Economic Studies*, and *Biographical Studies*. Died, 1877.

Baggesen (*bag'ge-sen*), **Jens,** Danish poet and author, was born at Korsör, in the island of Zealand, 1764, and died at Hamburg, 1826. His German works fill 5 volumes; his Danish 12 volumes. Chief among them are his *Comic Tales, Labyrinthen*, and *Parthenais*.

Bailey, Edward Hodges, English sculptor, and member of the Royal Academy, was born in Bristol, 1788; died in London, 1867. The statue of Nelson in Trafalgar square, London, and the bas-reliefs on the south side of the marble arch in Hyde Park are both the work of Bailey.

Bailey, Joseph Weldon, lawyer, United States senator, 1901-13; born in Copiah, county, Miss., 1863; admitted to bar, 1883; presidential elector, 1884; removed to Texas, 1885, and began practice of law at Gainesville; presidential elector at large, 1888. He was chosen United States senator to succeed Hon. Horace Chilton in 1901; reëlected in 1907. Died, 1929.

Bailey, Liberty Hyde, scientist, director of College of Agriculture at Cornell since 1903; born in South Haven, Mich., 1858; graduated at Michigan Agricultural College, M.S., 1882; LL.D.; assistant to Asa Gray, Harvard, 1882-83; professor of horticulture and landscape gardening at Michigan Agricultural College, 1883-88; professor of horticulture, Cornell, 1888-1903. Author: *Survival of the Unlike; Evolution of our Native Fruits; Lessons With Plants; Botany, an Elementary Text for Schools; Principles of Fruit Growing*, etc.

Baillie (*bā'lī*), **Joanna,** Scotch poet and dramatist, was born in 1762, in Bothwell manse. In 1784 she went to reside in London, and in 1806 took up her residence at Hampstead, where she remained until her death in 1851. Her greatest achievement is undoubtedly the nine *Plays on the Passions*. Her *Family Legend*, produced at Edinburgh under Scott's auspices in 1810, was a great success.

Bain, Alexander, Scottish writer on mental philosophy, was born at Aberdeen, Scotland, in 1818. In 1860 he became professor of logic in the University of Aberdeen, and lord rector there. His chief works are: *The Senses and the Intellect; The Emotions and the Will; Logic; Mind and Body;* and *Education as a Science*. Died, 1903.

Bain, Robert Nisbet, assistant librarian British Museum, since 1883, was born at London in 1854; was educated privately. In business in London until 1883. He has published numerous translations from the Russian, Ruthenian, Roumanian, Hungarian, Swedish, Danish, and Finnish, chiefly fairy tales and novels.

Bainbridge, William, American naval officer, was born at Princeton, N. J., 1774, and died at Philadelphia, 1833. He was actively engaged in the Mediterranean in successive command of the frigates *George Washington, Essex*, and *Philadelphia*, was once captured by the French, and had to surrender his ship in the Tripolitan war. In the war of 1812 he captured the British frigate *Java*, for which congress voted him a gold medal. During the remaining months of the war he had charge of the Charlestown navy-yard.

Baird, Spenser Fullerton, American naturalist, was born at Reading, Pa., 1823. He was educated at Dickinson College, Carlisle, Pa., and was afterward professor of natural science in that institution. He wrote many papers on birds, reptiles, fishes, etc., and under his direction the national museum was begun in 1850. In connection with other editors, he published *The Birds of North America, The Mammals of North America*, and a *History of the Birds of North America*, in five volumes. He died, 1887.

Bajazet I. (*baj-a-zet'*), sultan of the Turks, was born in 1347. In 1389 he succeeded his father, Murad I., who fell in battle near Kossova, fighting against the Servians. In three years he conquered Bulgaria, a part of Servia, Macedonia, and Thessaly. From the rapidity with which these extraordinary conquests were effected he received the name of Ilderim, *i. e.*, lightning. Died, 1403.

Baker, Alfred, scientist, educator, professor of mathematics at the University of Toronto; was born at Toronto; graduated from the University of Toronto, B.A., with gold medal in mathematics. Elected by graduates a member of senate of University of Toronto, 1887-1906; retired from queen's own rifles, 1883, with rank of captain; F. R. S. Canada; and of the American mathematical society; president of the Ontario educational association, 1895; president of section III. royal society of Canada, 1905. Author of articles relating to quaternions, geometry of position, and foundations of geometry in the proceedings of the royal society of Canada; also elementary treatises on synthetic and analytical geometry.

Baker, James H., educator, was born at Harmony, Maine, 1848; educated at Bates College, Lewiston, Maine. President national council of education, 1892; president national association of state universities, 1907; became president of the U. of Colo. in 1892. Author of *Elementary Psychology; Education and Life*, and *American Problems*. Died, 1925.

Baker, Ray Stannard, author, was born at Lansing, Mich., 1870; graduated at Michigan Agricultural College, B.S., 1889; took partial law course and studies in literature at University of Michigan. Has traveled extensively. Member National Institute of Arts and Letters. Contributor of many articles and stories to American and English magazines. Was associate editor of *McClure's Magazine*, and of *American Magazine*.

Baker, Sir Samuel White, British African explorer, was born at London, 1821. He explored the western arm of the Nile and discovered the Albert Nyanza lake; organized an extensive agricultural

colony in Ceylon; He wrote *Eight Years' Wanderings in Ceylon; The Albert Nyanza; The Nile Tributaries; Ismailia*, etc. Died at Newton Abbot, England, 1893.

Balard, Antoine Jerome, French chemist, was born at Montpellier in 1802. He started out as a pharmacist, but soon became assistant professor at the faculty of sciences in his native town, then professor at the royal college. In 1826 he discovered in sea water the element bromine. This brought him great fame and a chair in the faculty of sciences in Paris. Later he was appointed to the College de France. He died in 1876.

Balboa, de, Vasco Nunez, Spanish conqueror, was born at Xeres de-Caballeros in 1475. After leading rather a dissolute life in his youth, he took part in the great mercantile expedition of Rodrigo de Bastidas to the new world. An insurrection which took place obtained for Balboa the supreme command in Darien, but he was soon succeeded by Pedrarias Davila, by means of the intrigues of the Spanish court, and in a subordinate situation Balboa made several successful expeditions. On September 25th of 1513 he obtained the first sight of the Pacific Ocean from a mountain-top in the isthmus of Panama. He took possession of it in the name of his sovereign. He was executed in 1517 on the charge of a contemplated revolt.

Baldung (*bal'-doong*), **Hans,** called also Hans Grün, German painter and wood-engraver, contemporary of Albrecht Durer, was born in Gmund, Swabia, 1476, died at Strassburg, 1545. His masterpiece, a painting of the crucifixion, is in the cathedral of Freiburg; his wood-engravings are numerous.

Baldwin, James Mark, psychologist; born in Columbia, S. C., 1861; graduate of Princeton, 1884; A.M., 1887; Ph.D., 1889; Sc.D., Oxford University, England, 1900; professor psychology Princeton, 1893-1903; professor philosophy and psychology, Johns Hopkins, 1903-1909. Author: *Social and Ethical Interpretations in Mental Development; Story of the Mind; Fragments in Philosophy and Science; Development and Evolution.* Editor-in-chief: *Dictionary of Philosophy and Psychology.*

Baldwin, Simeon Eben, jurist, governor, was born at New Haven, Conn., 1840; graduated from Yale, 1861; studied law at Yale and Harvard law schools LL.D., Harvard, 1891; admitted to bar, 1863. Member faculty, Yale law school since 1869, and now professor of constitutional and private international law; associate justice, 1893-1906, chief-justice 1906-1910, supreme court of errors, Connecticut; governor, 1911-1915.

Balfe (*balf*), **Michael William,** British composer, born at Dublin, Ireland, 1808. After singing at Paris in the Italian opera under Rossini, Balfe returned to Italy and produced in 1840 several operas. In 1835 he went to England as a vocalist composer, and after five years of successful composition he produced two operas in Paris. Died, 1870.

Balfour (*bal'foor*), **Arthur James,** British statesman and author, was born in 1848; died, 1930. Educated at Eton, and Trinity College, Cambridge; secretary for Scotland, with a seat in the cabinet, 1886;87; chief secretary for Ireland, 1887-91, and carried the crimes act through parliament; first lord of the treasury and leader of the house on the death of W. H. Smith, 1891, and again in 1895-1905. On the retirement of Lord Salisbury, in 1902, he became prime minister and lord privy seal, retaining the office of first lord of the treasury. When Chamberlain made his fiscal proposals, 1903, Balfour, holding that the country was not ripe for the taxation of food, committed himself and the government only to a policy of retaliation. At the end of 1905 he and his cabinet resigned. Author of *A Defense of Philosophic Doubt; Essays and Addresses; The Foundations of Belief, Being Notes Introductory to the Study of Theology.*

Balfour, Francis Maitland, British biologist, born at Edinburgh, 1851; educated at Trinity College, Cambridge. Between 1879 and 1882 he brought together all that was known about the development stages of animals in his *Comparative Embryology*, a work of the greatest value to students of embryology. In 1882 he and his single guide were killed on the Alps by slipping, while attempting to climb one of the spurs of Mont Blanc.

Ball, Sir Robert Stawell, British scientist, Lowndean professor of astronomy and geometry, Cambridge, director of the Cambridge observatory after 1892, was born in Dublin, Ireland, 1840; graduated from Trinity College, Dublin. Hon. M. A., Cambridge, 1892; LL.D., Dublin. Royal astronomer of Ireland, 1874-92. Author: *A Treatise on the Theory of Screws;* works on astronomy. Died, 1913.

Ballantine (*bal'lan-tin*), **William,** British lawyer, was born in London, 1812; admitted to the bar in 1834, and soon obtained a large practice, chiefly in criminal cases. He wrote *Experiences of a Barrister's Life*, and *Old World and the New.* Died, 1887.

Ballou (*bal-lōō'*), **Hosea,** American preacher and founder of the Universalists, was born in New Hampshire, 1771. He was self-educated; was expelled from his father's church on declaring his belief in the final salvation of all men. He started the *Universalist Magazine* in 1819, and in 1831, with his grandnephew, began the *Universalist Expositor*, a quarterly publication. Died, 1852.

Balmaceda (*bāl'mā-sā'thā*), **Jose Manuel,** Chilean statesman, was born in 1840; president of the republic of Chili 1886-91. In the civil war between the congressional party and himself, he was defeated, and committed suicide in 1891.

Baltimore (*bôl'ti-mōr*), **George Calvert, first Lord,** born at Kipling, in Yorkshire, about 1580, entered parliament in 1609, was knighted in 1617, and in 1619 became secretary of state. As early as 1621 he had despatched colonists to a small settlement in Newfoundland, and in 1627 he visited the place. The severe winter induced him to sail southward in search of a more genial country; but his attempts to settle in Virginia led to disputes, and he returned home to obtain a fresh charter. He died in 1632, and the patent was granted in June of the same year to his son, Cecil, second Lord Baltimore.

Balzac (*bāl'zāk*), **Honore de,** a celebrated French novelist, was born at Tours in 1799; died, 1850. Before completing his twenty-fourth year he had published a number of novels under various assumed names, but the success attending all was very indifferent; and it was not till 1829, by the publication of *Le Vernier Chouan*, a tale of La Vendée, and the first novel to which Balzac appended his name, that the attention of the public was diverted to the extraordinary genius of the author. A still greater popularity attended his *Physiologie de Mariage*, a work full of piquant and caustic observations on human nature. He wrote a large number of novels, all marked by a singular knowledge of human nature and distinct delineation of character, but apt to be marred by exaggeration.

Among his best-known works are: *Scenes de la Vie de Province; Scenes de la Vie Parisienne; Le Pere Goriot; Eugenie Grandet;* and *Le Medecin de Campagne.* The publication of this last, in 1835, led to a correspondence between Balzac and the Countess Eveline de Hanska, a Polish lady whom, after about fifteen years, he visited and married. A collected edition of his works under the title *La Comedie Humaine* began to appear in 1899. Numerous English translations have appeared, of which the best is the series by Miss Wormeley (1890-3), with a memoir of Balzac.

References.—Saintsbury's *French Novelists*, and Balzac's *Life*, written by his sister; Théophile Gauthier's *H. de Balzac;* Sainte-Beuce's *Contemporary Portraits;* Taine's *Essays;* and *Saltus's Balzac.*

Bancroft, George, American historian, was born in 1800, near Worcester, Mass.; graduated from Harvard College in 1817; proceeded in 1818 to Göttingen, where he studied history and philology. Subsequently he traveled through Germany and formed an acquaintance with Goethe and Schlosser. He soon became celebrated as a democratic politician, and was made collector of customs at Boston. When Polk was elected president, in 1845, he appointed Bancroft secretary of the navy. In the autumn of 1846 he was sent by Polk as ambassador to England, where he remained until 1849, carefully collecting materials for his *History of the United States.* He published the result of his labors in his *History of the Revolution in North America.* He had already published his *History of the Colonization of the United States of North America.* The whole of these writings are included in the author's *History of America*, a work of solid excellence, the tenth and last volume of which appeared in 1874. Died, 1891.

Bancroft, William Amos, railway president, was born at Groton, Mass., 1855; graduated from Harvard, 1878; studied at Harvard law school, 1879-81; overseer, Harvard, 1893; Massachusetts volunteer militia, 1875; private to major-general; appointed brigadier-general, United States volunteers, during war with Spain. Was President Boston Elevated Railway Company. Died, 1922.

Bandinelli (*bän'dē-nel'lē*), **Baccio,** Italian sculptor, was born 1488, at Florence, the son of a famous goldsmith. His talent secured him many patrons, and Pope Clement VII. bestowed on him an estate. He died in 1560.

Baner (*bā-nār'*), **Johan,** Swedish commander, of a distinguished family, born in 1595. He was so much addicted to literary studies that Gustavus Adolphus styled him his "learned general." He gained many victories; was revered for his humanity, and, having acquired a high reputation, died at Haldberstadt in 1641.

Bangs (*bangz*), **John Kendrick,** author, humorist, was born at Yonkers, N. Y., 1862; graduated from Columbia, 1883; studied law, 1883-84; associate editor *Life*, 1884-88; editor of *Literature*, 1898-99; *Harper's Weekly*, 1898-1900; *Metropolitan Magazine*, 1902-03; *Puck*, 1904-05. Vice-president Yonkers board of education, 1897; Author: *Roger Camerden; Katharine; The New Waggings of Old Tales; Three Weeks in Politics; The Idiot; A House Boat on the Styx; The Pursuit of the House Boat; Ghosts I Have Met; Cobwebs from a Library Corner; Mr. Munchausen; Olympian Nights;* also many stories contributed to syndicates and magazines. Died, 1922.

Banks, Sir Joseph, English naturalist, born, according to some accounts, at Beversby abbey, in Lincolnshire; according to others, in London, in 1743; died 1820. In 1766 he made a voyage to Newfoundland and Labrador, collecting plants; and from 1768-71 he sailed with Cook around the world in the capacity of naturalist. He wrote a work on the diseases of plants.

Banks, Thomas, the first eminent English sculptor, was born at Lambeth, England, 1735. The monuments of Sir Eyre Coote in Westminster abbey, and of Captains Burgess and Westcott in St. Paul's cathedral were among his last works. Died at London, 1805.

Barbarossa (*bär-bä-ros'ä*). See **Frederick I.**

Barbour (*bär'bēr*), **John,** father of Scottish poetry and history, was born about 1316; paid several visits to England and France; and was archdeacon of Aberdeen from 1357, or earlier, until his death in 1395. His national epic, *The Brus*, was first printed at Edinburgh in 1571.

Barclay de Tolly (*bär'klā dē tō'lē*), **Prince Michael,** one of the most distinguished Russian generals, was born in Livonia, 1761. In the year 1806, at Pultusk, as major-general he commanded Benningsen's advance guard. He lost an arm at the battle of Eylau. Although hated by the Russian national party, because regarded as a German, he was appointed minister of war by the emperor Alexander in 1810—an office which he held until 1813. He died in 1818.

Barham (*bär'am*), **Richard Harris,** English poet and humorist, was born at Canterbury, 1788; died in London, 1845. The *Ingoldsby Legends* constitute his chief claim to fame, and were first contributed to *Bentley's Miscellany.*

Baring-Gould (*bā'ring gōōld'* or *bär'ing*), **Sabine,** English clergyman and writer, was born at Exeter, England, 1834; graduated from Clare College, Cambridge; M.A., 1860; vicar, Dalton, Yorkshire, 1866; rector of East Mersea, Essex, 1871; succeeded to rectory of Lew-Trenchard on death of his uncle, 1881. His works cover a wide range of subjects, mythical, legendary, imaginative, historical, religious, and descriptive. Died, 1924.

Barker, George Frederick, physicist, professor of physics, University of Pennsylvania, 1872-1900, was born at Charlestown, Mass., 1835; graduated from Sheffield scientific school, Yale, 1858; M.D., Albany, 1863; LL.D., McGill University, Montreal, 1900; United States commissioner Paris electrical exhibition, 1881; legion of honor of France. Expert in poisons, criminal cases. Member National Academy of Sciences; president of the American association for the advancement of science, 1879; hon. member Royal Institution of Great Britain. 1899. Died, 1910.

Barker, Harley Granville, English actor, dramatist and manager, was born in London, 1877. For many years he was associated with the Elizabethan Stage Society, acting and producing, and with Mrs. Patrick Campbell's company. From 1904 he managed the Court theatre and produced plays of his own and of Shaw, Galsworthy, Barrie, and other new dramatists. *Waste* and *The Madras House* are among his plays.

Barlow, Joel, American poet and politician was born at Connecticut in 1755. He served as a military chaplain during the war of independence. In 1787 he published a poem called *The Vision of Columbus* which in 1805 appeared anew in an enlarged form as *The Columbiad.* He was appointed ambassador to France in 1811; died, 1812, at Zarnawicz, near Cracow, when on his way to a conference with the emperor Napoleon at Wilna.

Barnabas (*bär'na-bas*), **Saint,** a disciple of Jesus, whose name was Joses or Joseph, but received from the apostles the surname of Barnabas. He accompanied St. Paul on a religious mission to Antioch, and afterward visited Cyprus with St. Mark.

Barnard (*bär'närd*), **Edward Emerson,** scientist, professor of astronomy, University of Chicago, and astronomer Yerkes observatory; born at Nashville, Tenn., 1857; graduate of Vanderbilt University, 1887; astronomer Lick observatory, California, 1887-95. His principal discoveries are the fifth satellite of Jupiter and sixteen comets. Died, 1923.

Barnard, Frederick Augustus Porter, American mathematician, physicist, and educator, was born at Sheffield, Mass., 1809; graduated at Yale in 1828; professor, president, and chancellor, 1854-61, University of Mississippi. In 1864 was elected president of Columbia College, New York; resigned in 1888. Died, 1889.

Barnard, George Grey, American sculptor; born at Bellefonte, Pa., 1863; educated at Chicago Art Institute, and at Paris. His statue, the *Two Natures*, is in the Metropolitan Museum, New York, and his *God Pan* in Central park.

Barnard, John Gross, military engineer, was born at Sheffield, Mass., 1815, died 1882. He graduated at West Point 1833; served for seventeen years on the gulf coast, then in the war with Mexico. In the Civil War served at Bull Run, in

the army of the Potomac, as chief engineer of the defenses of Washington, and on General Grant's staff until Lee's surrender; received the rank of major-general in the United States army.

Barnby, Sir Joseph, English composer and organist; born at York, England, 1838; chorister in Yorkminster; organist St. Andrew's, Wells street, London, 1863-71; percentor and director of musical instruction in Eton College, 1875. His *Rebekah*, a sacred idyll, and *The Lord is King*, both with orchestra; numerous highly interesting "services" and anthems, such as *King All Glorious*, for the church, as well as several secular choruses and songs, have rendered him famous both in England and America. Knighted 1892. Died, 1896.

Barneveldt (*bär'nē-velt*), **John van Olden,** grand pensionary of Holland, was born in 1547. Chosen pensionary of Rotterdam in 1576. He was appointed grand pensionary of Holland, and, after a severe contest with the stadtholder Maurice of Nassau and his party, obtained from the Spaniards the recognition of the independence of Holland and in 1609 concluded a truce for twelve years. Arrested in 1618, he was tried by a special commission, and condemned to death; this sentence, both illegal and unjust, being confirmed by the synod of Dort, the venerable and patriotic statesman was beheaded, 1619.

Barnum, Phineas Taylor, American showman, was born in Bethel, Conn., 1810. At thirty-one he bought the American museum in New York, where he exhibited his famous dwarf General Tom Thumb. He eventually became proprietor of Barnum's Circus, an institution familiar to all Americans. He died in 1891.

Barr, Robert, novelist, editor of the *Idler*, was born at Glasgow, Scotland, 1850. He was educated at the Normal school, Toronto, Canada; school teacher in Canada until 1876. Founded the *Idler* magazine with Jerome K. Jerome in 1892, from the co-editorship of which he retired in 1895. Author: *In a Steamer Chair; The Face and the Mask; The Unchanging East; The Tempestuous Petticoat; A Rock in the Baltic.* Died, 1912.

Barras (*bä'rä'*), **Count Paul Francois Jean Nicolas,** French revolutionist, was born 1755, at Fos-Emphoux in Var. An original member of the Jacobin club, he represented Var in the national convention, voted for the king's execution, and had a share in the Girondists' downfall. On subsequent occasions he acted with decision against both royalists and Jacobins; and in 1795, being appointed dictator, he called his young friend Bonaparte to his aid, who assured his own future with the historical "whiff of grape-shot." The directory being appointed, Barras was nominated one of the five members. Once more dictator 1797, he guided the state almost alone, until his covetousness and love of pleasure had rendered him so unpopular that Bonaparte, with Sieyes' help, overthrew him, 1799. In 1815 he returned, and purchased an estate near Paris with part of the great fortune acquired in the revolution. He died in 1829.

Barrett, John, diplomatist, was born at Grafton, Vt., 1866; graduated from Dartmouth College, 1889. Assistant editor of the *Statistician*, San Francisco; on editorial staff newspapers San Francisco, Tacoma, Seattle; associate editor of the *Telegram*, Portland, Ore., 1891-94; American minister to Siam, 1894-98, settling by arbitration claims involving $3,000,000. American plenipotentiary to the international conference American republics, Mexico, 1901-02. American minister to Argentina, 1903-04, to Panama, 1904-05, to Columbia, 1905-06; director international bureau of American republics since 1906.

Barrett, Lawrence, American actor, was born at Paterson, N. J., 1838; first appearance at Detroit, 1853; from 1864 until his death in 1891 continued as star actor and manager; from 1886 closely associated with Edwin Booth.

Barrett, Wilson, English actor and manager, was born in Essex, England, 1846; in 1879 became manager of the Court theater, London, and in 1881 of the Princess. *The Silver King; Claudian; Hamlet; Hoodman Blind*, and his own Christian melodrama, *The Sign of the Cross*, are among the best plays in which he acted. He died in 1904.

Barrie (*bar'i*), **James Matthew,** novelist, dramatist, was born at Kirriemuir, Scotland, 1860; educated at Edinburgh University, taking his M.A. degree in 1882. After a year and a half as a journalist in Nottingham, he settled in London, and became a regular contributor to the *St. James' Gazette, British Weekly, National Observer, Speaker*, etc. In *Auld Licht Idylls* he opened a new and rich vein, the humor and the pathos of his native village. *The Little Minister*, first novel, came out in *Good Words*, in 1891; it was dramatized in 1897; *Jane Annie* was written with Sir Conan Doyle. Other successful pieces have been *The Professor's Love Story*, his own setting of the *Little Minister; The Admirable Crichton; Little Mary; Peter Pan; Quality Street*, and *What Every Woman Knows.*

Barringer, Paul Brandon, educator, president Virginia Polytechnic Institute, was born at Concord, N. C., 1857; attended University of Virginia, M.D., 1877; University of New York, LL.D., 1878; honorary LL.D., Davidson College, N. C. In 1888 became professor of physiology and materia medica, and 1896-1903, chairman of faculty, University of Virginia.

Barrows, David Prescott, born Chicago, 1873; graduate Pomona College, 1894; University of California, 1895; U. of Chicago, Ph.D., 1897. Supt. of schools, Manila, 1900 and Gen. Supt. of Education for Philippine Islands, 1903-1909. Dean U. of Cal., 1911-1919 and president, 1919-23. Major of Cavalry in National Army, 1917-1918; Lt. Col. Cavalry U. S. A., 1918; active duty in P. I. and Siberia, 1918.

Barrows, John Henry, educator, Presbyterian clergyman, president Oberlin College, Ohio, was born at Medina, Mich., 1847; graduated from Olivet College, Mich., 1867. During the World's Columbian Exposition he was chairman of the general committee on religious congresses. In 1896 he resigned his pastoral charge in Chicago and proceeded to India, to lecture on religious subjects, under the auspices of the Haskell endowment of the University of Chicago. On his return he became lecturer at the latter on comparative religions, and was also lecturer at the Union theological seminary, New York. In 1898 he became president of Oberlin College. Died, 1902.

Barrows, Samuel June, legislator, author, clergyman, was born at New York, 1845; graduated from Harvard divinity school, 1875; D.D., Howard University, Washington, D. C., 1897. Editor *Christian Register*, 1881-97; member of congress, tenth district, Massachusetts, 1897-99. President of international prison congress, 1905. Author: *Shaybacks in Camp; Isles and Shrines of Greece;* etc. Died, 1909.

Barry, Sir Charles, English architect, designed the two houses of parliament, the Manchester Athenæum, and the grammar school of King Edward VI., at Birmingham. In London he also designed the Travelers' club and the Reformed club, both in Pall Mall, and the college of surgeons, Lincoln's Inn Fields; born at Westminster, 1795. Died at Clapham, 1860.

Barrymore, Ethel, actress, born at Philadelphia, Pa., 1879; daughter of late Maurice and Georgiana (Drew) Barrymore. Made début in John Drew's company, 1896; played *Priscilla* in *Secret Service*, London; later appeared in leading rôles with Henry Irving.

Barrymore, John (John Blythe), actor, born February 15, 1882, son of Maurice Barrymore (Herbert Blythe) and Georgiana (Drew). Married Katherine C. Harris. Debut at Cleveland's theatre, Chicago, October 31, 1903. First appearance in New York, December, 1903; also played in London.

Barrymore, Lionel, actor, son of the late Georgie (Drew) and Maurice Barrymore, made his first appearance on the stage in 1893 in *The Rivals*. In 1912, toured in vaudeville, in *The Still Voice*.

Barthelmess, Richard, moving picture actor, born in New York City. His first picture was "War Brides." His later appearances include "Broken Blossoms," "Tol'able David," "Classmates."

Bartholdi (*bär-tōl'dē*), **Frederic Auguste,** sculptor, was born at Colmar, Alsace, of Italian ancestry on his father's side, in 1834. His best-known work is the colossal bronze "Liberty Enlightening the World," which was unveiled on Bedloe's island, New York harbor, in 1886. Died, 1904.

Bartlett, Paul Wayland, American sculptor; born at New Haven, Conn., 1865; studied at Boston under Fremiet and in Paris under Cavalier; produced statues as well as many other works in the art collections of Philadelphia, Boston, Chicago and Paris. Died, 1925.

Bartolommeo (*bär'tō-lōm-me-ō*), **Fra** (properly Baccio della Porta), one of the most distinguished masters of the Florentine school of painting, was born near Florence in 1475. His subjects are mostly all religious, and by far the greater part of his pictures belong to the later years of his life. He was a warm adherent of Savonarola, after whose tragical end he in 1500 assumed the Dominican habit. Bartolommeo died at Florence in 1517.

Barton, Clara, philanthropist, founder and organizer of national Red Cross Society in the United States, president 1881-1904; born in Oxford, Mass., 1821; graduate of Clinton liberal institution, New York. During Civil War did relief work on battlefields and organized search for missing men; laid out grounds for national cemetery, Andersonville, 1865; secured adoption of treaty of Geneva, 1882; first president American Red Cross; inaugurated American amendment of Red Cross, to provide for greater calamities of peace; distributed relief Johnstown flood, 1892; at request of president of United States carried relief to Cuba, 1898; did personal field work, Spanish-American war. Died, 1912.

Barye (*bä-rē*), **Antoine Louis,** French sculptor, born at Paris, in 1795. He was at first an engraver and metal-worker. His famous bronze of a lion struggling with a snake secured for him the cross of the legion of honor. He died at Paris in 1875.

Bascom, John, American educator, former president of the University of Wisconsin, was born at Genoa, N. Y., 1827; graduated in 1849 from Williams College, and six years later from Andover theological seminary; was for twenty years professor of rhetoric at Williams, and for thirteen years president of Wisconsin University. He retired from Wisconsin, 1887, and accepted the chair of political science at Williams, from which he resigned, 1901. Author: *Political Economy; Aesthetics; Philosophy of Rhetoric; Principles of Psychology; Philosophy of Religion; Comparative Psychology.* Died, 1911.

Bashford, James Whitford, bishop of Methodist Episcopal church since 1904; was born at Fayette, Wis., 1849; graduated from University of Wisconsin, 1873, A.M., 1876; pastor M. E. churches in Boston, Auburndale, Mass.; Portland, Maine; Buffalo, N. Y., 1875-89; president Ohio Wesleyan University, 1889-1904. Died, 1919.

Basil (*baz'il* or *bā'zil*), **Saint,** surnamed the Great, bishop of Cæsarea, where he was born about 329, is one of the most eminent of the Christian fathers. The attempts which St. Basil made to re-unite the two hostile churches of the East and West were unsuccessful. Died, 379.

Baskerville, Charles, chemist; born in Noxubee county, Miss., 1870; graduated from University of Virginia, 1890; professor of chemistry, college of the city of New York. Author: *School Chemistry; Key to School Chemistry; Radium and Its Applications in Medicine.* Died, 1922.

Baskerville, John, English printer and letter-founder, born, 1706, in Worcestershire; began about 1750 to make experiments in letter-founding, and succeeded in making types which have scarcely yet been excelled. Died, 1775.

Bassett, John Spencer, educator; born at Tarboro, N. C., 1867; graduated from Trinity College, N. C., 1888; Ph.D., Johns Hopkins, 1894; professor of history, Trinity College, N. C., 1893-1906, Smith College, Mass., since 1906. Author: *Constitutional Beginnings of North Carolina; Slavery in the State of North Carolina; The War of the Regulation.* Killed by a street car in 1928.

Bastable, C. F., economist, professor of political economy, Dublin University; professor of jurisprudence and international law, Dublin University, born at Charleville, County Cork, 1855; graduated from Trinity College, Dublin. George Rae lecturer, University College of North Wales, 1905. Author: *Theory of International Trade; Commerce of Nations; Public Finance;* contributor to *Encyclopædia Britannica; Harmsworth Encyclopædia.*

Bastian (*bäs'tē-än*), **Adolf,** German traveler and anthropologist, author of nearly sixty works, was born at Bremen, 1826. In 1866 he became professor of ethnology at Berlin and curator of the ethnological museum. Died, 1905.

Bastian (*bast'yan*), **Henry Charlton,** English physiologist, was born at Truro, Cornwall, 1837, and from a private school at Falmouth proceeded to University College, London, where he became professor of pathological anatomy, 1895, professor of the principles and practice of medicine. He is the champion of the doctrine of spontaneous generation. He wrote *Evolution and the Origin of Life; The Brain as an Organ of Mind; Paralyses—Cerebral, Bulbar, and Spinal.* Died, 1915.

Bates, Blanche, actress; born in Portland, Ore., 1873. First appearance on stage at Stockwell's theater, San Francisco, 1894; played leading parts in various comedies, 1896-98; appeared in Shakespearian rôles Augustin Daly's company, 1898; later starred in *The Great Ruby, Madame Butterfly*, and in *The Darling of the Gods.*

Bates, John Lewis, governor, lawyer; born at North Easton, Mass., 1859; graduated from Boston University, 1882, law department of same in 1885. Member Boston common council, 1891-1892; lieutenant-governor of Massachusetts, 1900-1-2; governor of Massachusetts, 1903-04; director United States trust company, president board of trustees, Boston University.

Bates, Katharine Lee, author, educator; born Falmouth, Mass., 1859; graduated Wellesley College, 1880; 1885-88 instructor English literature; 1888-91 associate professor, and in 1891 professor in charge, Wellesley College. Died, 1929.

Bauer (*bou'ĕr*), **Bruno,** German philosophical and historical writer, and biblical expositor of the Hegelian school, was born at Eisenberg, Germany, 1809, and died near Berlin, 1882. His writings embrace a number of critiques on the gospels and Pauline epistles; one on Strauss's *Life of Jesus.* On theological subjects Bauer has been called the "Voltaire of Germany."

Baumgarten (*boum'gär-ten*), **Alexander Gottlieb,** the founder of the science of æsthetics, or the philosophy of the beautiful, was born at Berlin, 1714, studied at Halle under Wolf, and was appointed professor of philosophy at Frankfort on-the-Oder, where he died, 1762.

Baumgartner (*boum'gert-nĕr*), **Karl Heinrich,** German physiologist, was born at Baden, 1798, and died at Baden-Baden, 1886. From 1824 to 1862 he was professor of clinical medicine at Freiburg.

Baur (*bour*), **Ferdinand Christian von,** German theologian, born 1792, at Schmiden, near Stuttgart, was the founder of the Tübingen school of theology. In 1826 he was called to the chair of protestant theology at Tübingen, which he held until his death in 1860.

Bax, Ernest Belfort, barrister-at-law, Middle Temple; author; born at Leamington, England, 1854; was educated privately in London and Ger-

many. In 1885 helped to start the socialist league in conjunction with the late William Morris, and for some time co-edited with him the weekly journal *Commonweal*. Author: *Jean-Paul Marat; Kant's Prolegomena; The Problem of Reality; Socialism, Its Growth and Outcome; The Peasants' War in Germany; Essays in Socialism, New and Old; The Roots of Reality*. Died, 1926.

Bayard (*bā'yär'*), **Pierre Du Terrail Chevalier De,** French knight, was born near Grenoble, in 1475. He served under Charles VIII., in an expedition against Naples, and in the wars against the English and Spaniards he distinguished himself by his bravery and nobleness of character. He was killed in a battle at the river Sesia, Italy, in 1524. He is known as "the knight without fear and without reproach."

Bayard, Thomas Francis, American statesman, was born at Wilmington, Del., 1828. He was privately educated and began the practice of law in his native city in 1851; entered Cleveland's cabinet as secretary of state in the latter year. In 1893 was appointed ambassador to England, the first to hold that rank as a representative of the United States. Died, 1898.

Bayes, Nora, actress, exceedingly popular, was originally associated with Keith theatres. Formed a show of her own, 1917, selecting her songs from a repertoire of 144 songs, having committed the words and music to memory. Played leading parts in *Cohan Revue*, 1918. Died, 1928.

Bazaine (*bā'zen'*), **Francois Achille,** a marshal of France; born at Versailles, 1811; distinguished himself in Algiers, the Crimea, and Mexico. Died at Madrid, 1888.

Beach, Rex Ellingwood, author, playwright; born at Atwood, Mich., 1877; educated at Rollins College, Winter Park, Fla., 1891-96, Chicago College of Law, 1896-97. Author: *Pardners; The Spoilers; The Silver Horde;* etc.

Beaconsfield, Earl of. See **Disraeli, Benjamin.**

Beale (*bēl*), **Joseph Henry, Jr.,** lawyer, educator; born in Dorchester, Mass., 1861; graduated from Harvard, 1882, A.M., LL.B., 1887; LL.D. Practiced law, Boston, 1888-92; teacher of law, Harvard law school, assistant professor, 1892, became professor of law in 1897. Author: *Cases on Criminal Law; Cases on Damages; Cases on Carriers; Innkeepers;* etc.

Beatrice Portinari (*bē'a'trēs pôr'te-nä'rē*), Dante's poetical ideal, daughter of a Florentine noble, remarkably graceful and accomplished. Dante first saw her when she was but nine years old, and but seldom afterward; but in his vivid imagination she grew to be the personification of divine truth, and so appears in the *Divine Comedy*. In 1287 she married a citizen of Florence. Born in 1266; died, 1290.

Beattie (*bē'ti*), **James,** Scottish poet and writer on philosophy, born at Laurencekirk, Scotland, 1735; died, 1803. Professor of moral philosophy in Marischal College, Aberdeen, 1760-97. His fame now rests almost wholly on *The Minstrel*, a descriptive poem written in the Spenserian stanza.

Beatty, John W., director of fine arts, Carnegie Institute, Pittsburg, Pa., born at Pittsburg, 1851; student of Munich Academy of Fine Arts; A.M., Western University of Pennsylvania, 1900; member of many art societies. Died, 1924.

Beaufort (*bū'fert*), **Henry,** cardinal and bishop of Winchester, born about 1370; was half-brother to King Henry IV. He was educated in England and Germany, and in 1405 became bishop of Winchester. In 1431 he conducted the young king, Henry VI., to France, to be crowned in Paris as king of France and England. Died, 1447.

Beauharnais (*bō'är'ne'*), **Eugene de,** viceroy of Italy during the reign of Napoleon I., and afterward duke of Leuchtenberg, and prince of Eichstadt, born 1781, the son of the vicomte Beauharnais. After his mother's marriage with Bonaparte, he accompanied him in his campaigns in Italy and in the expedition to Egypt; and in 1805, after the erection of the imperial throne, he was made a prince of France and viceroy of Italy. The victory of Lützen was decided by his conduct in that battle. Died, 1824.

Beauharnais, Hortense Eugenie de, daughter of Josephine; born in 1783; was married against her will to Louis, brother of Napoleon Bonaparte, from whom she separated in 1810. Her son by him was the late Napoleon III. Died, 1837.

Beaumarchais (*bō'mär'she'*), **Pierre Augustin Caron de,** French dramatist and poet, was the son of a watchmaker named Caron, and was born at Paris, 1732; married a widow, Madame Franquet in 1757, and from a little property of hers took the aristocratic name of Beaumarchais. Meanwhile devoting himself to literature, he produced *Eugenie*, a drama in five acts; *Les Deux Amis, ou Le Negociant de Lyon; Le Barbier de Seville;* and *Le Mariage de Figaro*. He died in 1799.

Beaumont (*bō'mont*), **Francis,** English poet and dramatist, best known by his literary partnership with John Fletcher, was born at Grace Dieu Leicestershire, in 1586; died, 1616.

Beauregard (*bō'rē-gärd*), **Pierre Gustave Toutant,** general of the army of the Confederate States during the Civil War, was born near Orleans, La., 1818. At the secession of Louisiana he resigned his commission in the regular army; in 1861 he was appointed by the confederate government to the command at Charleston, S. C., where, on April 12-13th, he commenced the war by the bombardment of Fort Sumter; July 21st he won the battle of Bull Run; after the war he became a railroad president, and in 1878 adjutant general of Louisiana. Died, 1893.

Bebel (*bā'bel*), **Ferdinand August,** German social democrat, was born at Cologne, 1840, and in 1860 removed to Leipzig, where in 1864 he established himself as a master turner. He was an effective speaker and writer. Died, 1913.

Beccaria (*bek'kä-rē'ä*), **Cesare, Marchese, di,** Italian economist and jurist, was born at Milan, 1738. In 1764 he published anonymously his work on *Crimes and Punishments*, in which he argued against capital punishment and torture. He was among the first to advocate the beneficial influence of education in lessening crime. In 1768 he was appointed professor of political philosophy at Milan; in 1791 he was made a member of the board for the reform of the judicial code. He died, 1793.

Becher (*bek'er*), **Johann Joachim,** German chemist, was born at Spires in 1635, and lived successively at Mainz, Vienna, Munich, Würzburg, Haarlem, London, where he died in 1682. His *Physica Subterranea* was the first attempt made to bring physics and chemistry into close relation. Died, 1682.

Beck, James M., lawyer, born at Philadelphia, Pa., 1861; graduate of Moravian college, Bethlehem, Pa., 1880. Was admitted to bar, 1884; United States attorney for eastern district of Pennsylvania, 1896-1900; assistant attorney-general of United States, 1900-1903. As master, appointed by United States court, sold, 1902, the *Philadelphia Record* for $3,000,000—highest price ever brought by an American newspaper at public sale. Member law firm of Shearman & Sterling, New York, 1903-1917; Beck, Crawford & Harris, New York, 1917-1921; 1921-5, U. S. Solicitor General. Died, 1936.

Becker, Wilhelm Adolf, German author and philologist, was born at Dresden in 1796, died, 1846. In 1840 he traveled through Italy; in 1837 was appointed professor of archæology at the University of Leipzig. His lively fancy, aided by a thorough knowledge of the classic languages, enabled him to make a novel use of antiquity. In his *Charikles* he ventured to reproduce the social life of old Greece; and in his *Gallus* to give sketches of the Augustan age at Rome.

Becket, Thomas a, celebrated English prelate, was born at London in 1118, studied at Oxford, Paris, and Bologna, and on his return home entered the church. Henry II. made him high chancellor and preceptor to Prince Henry in 1155, admitted him to the closest intimacy and confidence, and in 1162 raised him to the archbishopric of Canterbury. Becket now entirely gave up his courtier habits, assumed a rigid austerity of manner, and became a stubborn champion of the exorbitant privileges of the clergy. A violent contest ensued between the sovereign and the prelate, and the latter was at length obliged to fly from the kingdom. In 1170, however, he was restored, and he instantly recommenced his resistance to the monarch. He was murdered in Canterbury cathedral, 1170.

Beckford, William, an eccentric man of genius, was born at Fonthill, England, 1759. When he was about nine years of age his father died, and he inherited estates in Jamaica, and Fonthill, in Wiltshire. In 1784 he published *Vathek* in French. During all his life he was a hard-working student, but was of a most erratic disposition. Died, 1844.

Becquer (*bā-kār'*), **Gustavo Adolfo,** Spanish poet and novelist, was born at Seville, 1836. His weird and fantastic tales are written after the manner of Poe and Heine, and have proved very popular. He left three volumes of poems and legends, of which the best known is *Leyendas Espanolas*. Died at Madrid in 1870.

Becquerel (*bek'rel'*), **Antoine Cesar,** French physicist, born at Loiret, France, 1788. While studying the physical properties of yellow amber he had occasion to make experiments on the liberation of electricity by pressure; the result of his inquiries was the overthrow of Volta's theory of contact, and the construction by him of the first constant pile. He is, besides, one of the creators of electrochemistry, and invented a method of electrotyping. Died, 1878.

Beddoe, John, physician, anthropologist, born at Bewdley, England, 1826; was educated at Bridgnorth, University College, London, and Edinburgh University, graduating B.A., London, in 1851, and M.D., Edinburgh, in 1853. He served as a surgeon during the Crimean war, and afterward practiced at Clifton, 1857-91. He is the author of *Stature and Bulk of Man in the British Isles; The Races of Britain; Anthropological History of Europe*. Died, 1911.

Bede (*bēd*), or **Baeda** (*bē'dä*), surnamed "the venerable," English monk, scholar, and church historian, was born, 673, in the county of Durham, and died at Jarrow, at the monastery of St. Paul, in 735. He is said to have been the most learned Englishman of his day, and in the seclusion of his cell he wrote, besides his important *Ecclesiastical History of England*, which was translated from the Latin by King Alfred into Anglo-Saxon, a number of commentaries, homilies, hymns, and lives of the saints.

Bedford, John, Duke of, third son of Henry IV., was born in 1389. In 1414 his brother, Henry V., created him duke of Bedford; and during the war with France he was appointed lieutenant of the kingdom. After Henry's death in 1422, Bedford became guardian of the kingdom, and regent also of France; and, Charles VI. dying two months afterward, he had his nephew proclaimed king of France and England as Henry VI. In the wars with the dauphin which followed, Bedford displayed great generalship and defeated the French at Verneuil in 1424. The appearance of Joan of Arc was followed by disaster to his arms; and in 1435 a treaty was negotiated at Rouen between Charles VII. and the duke of Burgundy, which ruined English interests in France. Bedford's death at Rouen was mainly occasioned by anxiety and vexation. Died, 1435.

Beecher, Catherine Esther, eldest child of Lyman Beecher, was born at East Hampton, L. I., 1800. In 1822 she opened a school at Hartford, Conn., and ten years later a seminary for young women in Cincinnati, but was compelled to give it up on account of ill-health two years afterward. She made it the business of her life to improve and advance the intellectual, physical, and practical education of women. She organized societies and schools for training teachers and sending them to new states and territories. In pursuit of this object she published a series of books. Died, 1878.

Beecher, Henry Ward, preacher, theologian, lecturer, orator, was born at Litchfield, Conn., 1813; graduated at Amherst college in 1834, studied theology under his father at Lane seminary, Cincinnati. After a pastorate of ten years in two churches in Indiana, he removed to Brooklyn and assumed charge of Plymouth church, "an organization of orthodox Congregational believers." He for many years drew one of the largest and most influential regular congregations in the United States, and his published sermons soon became a power in this and other countries. His reputation as a writer is second only to his celebrity as a preacher. For nearly twenty years he was editor of the New York *Independent*, and in 1870 he became editor of the *Christian Union*, also a religious weekly. His most important works are: *Lectures to Young Men, Industry and Idleness, Life Thoughts*, being selections from his extemporaneous sermons, revised by himself; *The Star Papers*, these last being composed of articles contributed to the New York *Independent*, and the *Life of Christ*. He also edited the *Plymouth Collection of Hymns*. Died at Brooklyn, N. Y., 1887.

Beecher, Lyman, preacher and theologian, was born at New Haven, Conn., 1775; graduated from Yale college, studied theology for a year, and began preaching at East Hampton, L. I. where he remained until 1810. He then went to Litchfield, Conn., where were born his two most famous children, Henry Ward and Harriet (Mrs. Stowe), though nearly all of his thirteen children are well known. He was one of the first pulpit orators of the time. After sixteen years he was called to Hanover Street church, Boston, and during his six years of hard work there engaged in a theological discussion with Dr. Channing. He spent twenty years at the head of Lane theological seminary, Cincinnati. Died at Brooklyn, N. Y., 1863.

Beerbohm, Max, English caricaturist and writer, was born in London in 1872. He was educated at Oxford, then became a contributor to the *Yellow Book* and critic on the *Saturday Review*. He is best known by his incisive caricatures of prominent men in society, *Caricatures of Twenty-five Gentlemen* (1896), *The Second Childhood of John Bull* (1901), *Fifty Caricatures* (1913), and others. Among his published writings are *Zuleika Dobson* (1911), *Seven Men* (1919), and *Even Now* (1920).

Beers (*berz*), **Henry Augustin,** author, professor of English literature at Yale; was born at Buffalo, N. Y., 1847; graduated from Yale, 1869. Author: *A Century of American Literature; Odds and Ends* (verse); *Nathaniel Parker Willis; The Thankless Muse* (verse); *From Chaucer to Tennyson; Initial Studies in American Letters; A Suburban Pastoral and Other Tales; The Ways of Yale; A History of English Romanticism in the Eighteenth Century; A History of English Romanticism in the Nineteenth Century; Points at Issue;* contributor to leading magazines.

Beethoven, van (*vän bā'tō-ven*), **Ludwig,** one of the greatest musical composers of modern times, was born at Bonn in 1770. His genius was very early displayed, and his musical education was begun by his father, and continued by the court organist who introduced him to the works of Sebastian Bach and Handel. He soon attempted com-

position, and showed wonderful facility in improvisation. About 1790, he settled at Vienna, where Mozart quickly recognized his marvelous powers. When about 40 years of age, he was attacked with deafness which became total, and lasted through life. He became, gradually, the victim of morbid irritability, and hopeless melancholy, ending in confirmed hypochondria, and, finally, dropsy and delirium. He continued to compose, however, long after he had ceased to hear himself play, and received homage and honors from all parts of Europe. Died, unmarried, at Vienna, in 1827. The works of Beethoven are very numerous, and in every variety of style—orchestral, chamber-music, pianoforte, and vocal music. Among the most celebrated are the opera of *Fidelio;* the oratorio of the *Mount of Olives;* the cantata *Adelaide; Sinfonia Eroica* (heroic symphony); *Sinfonia Pastorale*—(Pastoral symphony); *Concerto in C Minor; Sonata Pathetique;* and the *Sonata with Funeral March.* Vast power, intense passion, and infinite tenderness are manifested in all his compositions, which abound no less in sweetest melodies than in grand and complicated harmonies. A statue of Beethoven, by Hülmel, was erected at Bonn in 1845.

Begas (*bā'gäs*), **Karl,** German painter, born at Hernsberg, near Aix-la-Chapelle, 1794; became a pupil of Gros at Paris in 1813; studied afterward at Rome, and was a member of the academy and court painter at Berlin from 1825 until his death in 1854. His pictures are partly biblical, partly romantic, and partly genre pieces. Of the first may be mentioned his *Baptism of Christ,* in the style of the old Florentines, which was placed in the garrison church at Potsdam, and his fine fresco of Christ and the four evangelists surrounded by a choir of angels in the church of Cracow. Specimens of the other classes are the *Lorelei, Girls Under the Oak Tree, The Vine Dressers,* etc. He is chiefly memorable as a master of light and shade.

Begas, Reinhold, German sculptor, was born in Berlin, 1831; son of Karl Begas. Educated under Rauch and Wichmann, 1846-51; studied in Italy, 1856-58. Principal works; statue of Borussia for hall of glory; Neptune fountain on Schlossplatz; statue of Alexander von Humboldt; statue of Schiller for Gendarmen market, all in Berlin; sarcophagus of Emperor Frederick III. in Friedenskirche, Potsdam, and sarcophagus of Empress Frederick; national monument to Emperor William; statue of Bismarck before the Reichstag Gebäude; several statues in the Siegesalle, Berlin. He died in 1911.

Behaim (*bā'hīm*), or **Behem** (*bā'hem*), **Martin,** German navigator and geographer, was born at Nuremberg about 1459, died about 1506; probably a pupil of Regiomontanus; visited Portugal about 1480, and in 1484 was made geographer of an expedition for the exploration of western Africa; knighted by John II. of Portugal. In 1492 he made a terrestrial globe, a gift to his native city, where it is still preserved.

Behring, Emil Adolph von, German physician, was born at Hansdorf, 1854. He studied in Berlin, became a surgeon in the army for a time, then was appointed professor at the University of Halle, 1894. In 1895 he became director of the Institute of Hygiene at Marburg. He discovered diphtheria serum, for which he was awarded the Nobel prize, 1901. A later discovery was bovivaccine, which prevents tuberculosis in cattle. Died, 1917.

Bekker (*bek'ĕr*), **Immanuel,** German scholar and philologist, was born at Berlin, 1785; died there, 1871. He became professor of philology at Berlin, and edited critical editions of Plato, the Attic orators, Aristotle, Thucydides, Aristophanes, Herodotus, Livy, Tacitus, and other classic writers. His chief independent work was *Anecdota Graeca.*

Belasco (*bē-las'kō*), **David,** dramatic author, was born at San Francisco, 1862; educated at Lincoln college, California. Author (plays): *Zaza; The Heart of Maryland; The Wife; The Charity Ball; Lord Chumley; May Blossom; Men and Women; LaBelle Russe; The Girl I Left Behind Me; Valerie; Hearts of Oak; The Darling of the Gods; Du Barry; Sweet Kitty Belairs; Adrea.* Manager of Mrs. Leslie Carter, David Warfield, Blanche Bates, and Frances Starr. Died, 1931.

Belisarius (*bel'i-sā'ri-us*), the great general of Justinian, was born in Illyria about 505. After commanding an expedition against the king of Persia about 530, he suppressed an insurrection at Constantinople, conquered Gelimer, king of the Vandals, and put an end to their dominion in Africa. In 535 he was sent to Italy to carry on war with the Goths, and took Rome in 536. He was afterward sent against the Persians and Huns, and in 563 was charged with conspiracy against Justinian, but was acquitted. That he was deprived of sight and reduced to beggary appears to be a fable of late invention. Died, 565.

Bell, Alexander Graham, scientist, inventor, born in Edinburgh, Scotland, 1847; educated at Edinburgh and in London University; LL.D., Ph. D.; invented telephone, for which patent was granted February 14, 1876; invented the graphophone, 1883. Regent Smithsonian institution. Officer French legion of honor. Member national academy of sciences and other scientific organizations. Author of many scientific and educational monographs. Died, 1922.

Bell, Alexander Melville, educator, was born in Edinburgh in 1819. He studied with his father, an authority on phonetics, and himself became a famous lecturer on elocution in the university of Edinburgh. He came to this country in 1870, teaching for ten years at Queen's University, Kingston, Ontario, then going to Washington, D. C. Here he developed his system of "visible speech" for the use of deaf mutes. Among his many books are *Letters and Sounds, Visible Speech, The Fundamentals of Elocution.* He died in 1905.

Bell, Sir Charles, British physician and anatomist, famous for his discoveries in the nervous system, was born at Edinburgh, Scotland, 1774. In 1807 he distinguished between the sensory and motor nerves in the brain. In 1812 he was appointed surgeon to the Middlesex hospital, which his clinical lectures raised to the highest repute. To study gunshot wounds, he went to Haslar hospital after Corunna in 1809, and after Waterloo took charge of a hospital at Brussels. Knighted in 1831, was appointed professor of surgery at University of Edinburgh in 1836; he died in 1842.

Bell, Henry, who introduced steam navigation into Europe, was born at Torphichen, Linlithgowshire, 1767. In 1812 he launched the *Comet* on the Clyde, the first steam vessel on European waters. The engine, at first of three horsepower, was afterward increased to six. He died at Helensburg, 1830.

Bell, James Franklin, army officer, was born at Shelbyville, Ky., 1856; graduated from United States military academy, 1878; served on plains in 7th United States cavalry, 1878-94; organized 36th infantry, United States volunteers, in Philippine Islands, 1899; appointed brigadier general of United States army, 1901; returned to United States in 1903; commandant of infantry and cavalry school, signal school and staff college to April, 1906; major-general, 1907. Died, 1919.

Bell, John, English sculptor, born in 1811, first exhibited in 1832, and has produced numerous admirable works in monumental, religious, and imaginative art. His last great work was the group *The United States Directing the Progress of America,* for the base of the Prince Consort memorial, in London. Died, 1895.

Bell, John, American politician, was born near Nashville, Tenn., 1797; was admitted to the bar, 1816; member of congress from Tennessee, 1827-41; nominated by the constitutional union party for president, 1860, and received the electoral vote of Tennessee, Kentucky, and Virginia. Died, 1869.

Bell, Robert, chief geologist geological survey of Canada; acting director, 1901-06; was born at Toronto, Ontario, 1841; was educated at McGill and Edinburgh Universities; D.Sc., McGill; LL. Queen's; F. R. S., 1897. Joined geological survey of Canada, 1857; made very extensive topographical and geological surveys in nearly all parts of the Dominion; was Canadian correspondent of the Royal Scottish Geographical Society from its foundation, and a member of many scientific societies; was a royal commissioner on the mineral resources of Ontario, 1888-89; professor of chemistry and natural science in Queen's University, Kingston, 1863-67. Died, 1917.

Bellamy (*bel'ā-mi*), **Edward,** American novelist and economist, born at Chicopee Falls, Mass., 1850. He was educated in Germany; admitted to the bar; was on the staff of the New York *Evening Post* in 1871-72; and on his return from the Sandwich Islands in 1877 founded the Springfield *News.* Author of *Looking Backward,* etc. Died, 1898.

Bellarmine (*bel'lär-mīn* or *mēn*), **Robert,** celebrated Roman Catholic theologian; was born at Monte Pulciano, in Tuscany, 1542. He entered the order of Jesuits in 1560, and in his twenty-seventh year, when he went to Louvain as professor of theology, began that long controversy with *heretics,* which formed the main business of his life. In 1599 he was made a cardinal against his own inclination. Died, 1624.

Bellew (*bel'ū*), **Harold Kyrle-Money,** English actor; was born in Calcutta, 1857; made stage début at Theater Royal, Brighton; became leading man and star in London; came to United States as leading man in Wallack's theater, New York, October, 1885. Headed exploration expedition in northern Queensland, 1900-02, returning to stage at head of own company in United States, October, 1902. Died, 1911.

Bellini (*bel-lē'nē*), **Gentile,** Venetian painter, was born about 1427, died 1507. He was employed, with his brother, Giovanni, to decorate the great council-chamber of the Venetian senate-house.

Bellini, Giovanni, Venetian painter, brother to Gentile Bellini, and with him the founder of the Venetian school of painting, was born 1426; died 1516. His best works are altar pieces. Among his more famous pictures are his *Infant Jesus; Holy Virgin,* and *Christ and the Women of Samaria.*

Bellini, Vincenzo, Italian composer of operas, was born at Castania, in Sicily, in 1802. He was sent to the conservatoire of Naples, where he studied composition. He visited Paris and London, and died near Paris in 1835. Among his best works are *Norma, I Puritani,* and *La Sonnambula.*

Bellmann (*bel'mān*), **Karl Mikael,** Swedish poet, was born at Stockholm, 1740; became court-secretary in 1775, and died in 1795. His later and more brilliant pieces are chiefly bacchanalian, idyllic, or humorous songs, for which he also furnished original melodies. A monument was erected to his memory at Stockholm in 1829.

Belloc (*be-lok'*), **Hilaire, Joseph Peter,** English writer and politician, was born in 1870; graduated from Balliol College, Oxford, 1895. Author: *Verses and Sonnets; The Bad Child's Book of Beasts; More Beasts for Worse Children,* etc.

Bellows, Henry Whitney, Unitarian divine and writer, was born at Walpole, N. H., 1814; graduate of Harvard and of Cambridge divinity school; in 1838 became pastor of All Souls church, New York; was instrumental in establishing the *Christian Enquirer* in 1846. He did excellent service as presiding officer of the sanitary commission during the war of the rebellion. Died, 1882.

Bell-Smith, Frederic Marlett, artist; president of the Ontario society of artists; born at London, 1846; studied drawing at South Kensington, London; went to Canada, 1867; charter member society of Canadian artists, 1867; director Toronto art school, 1889-91; lecturer and writer on art subjects.

Belmont, August, banker, was born at New York, 1853; son of prominent banker of the same name; graduate of Harvard, 1874, and at once entered the bank; became head of August Belmont & Company, American representatives of European banking firm of Rothschilds. Died, 1924.

Belmont, August, American politician and financier was born at Alzey, Germany, 1816; representative of the Rothschilds in the United States; art collector and turfman; United States minister to the Netherlands, 1854-58. Died, 1890.

Belmont, Perry, lawyer; was born at New York, 1851; graduated from Harvard in 1872; studied civil law, University of Berlin; LL.D., Columbia Law School, 1876; practiced law until 1881; member of congress, 1880-87; chairman committee on foreign affairs, 1885-87; United States minister to Spain, 1887-88. Inspector general with rank of major, 1st division, 2d army corps, United States volunteers, 1898.

Belshazzar (*bel-shaz'ar*), the last king of Babylon of the Chaldæan dynasty, began to reign about 554 B. C. The hand-writing on the walls of his palace, its interpretation by Daniel, the taking of Babylon by Cyrus the Great, and Belshazzar's death in 538 B. C. are familiar to all Bible readers.

Bem (*bem*), **Joseph,** Polish general, born in Galicia in 1795; served in the French campaign against Russia; 1812; took part in the Polish insurrection of 1830; joined the Hungarian army in 1848, defeated the Austrians in several battles, and after the defeat of Temesvar took refuge in Turkey, became a Mohammedan, and was made a pasha. Died, 1850.

Bembo (*bem'bō*), **Pietro,** Italian scholar, was born at Venice, 1470, and died at Rome, 1547, having in 1513 been made secretary to Leo X., and in 1539 a cardinal by Paull II., who afterward appointed him to the diocesses of Gubbio and Bergamo.

Bemis, Edward Webster, educator, economist, was born at Springfield, Mass., 1860; graduated from Amherst, 1880; A. M., 1884; Ph. D., Johns Hopkins, 1885; professor of history and political economy, Vanderbilt University, 1887-92; associate professor political economy, University of Chicago, 1892-95; now consulting engineer for cities, states and other public bodies upon public utilities of water, light, street railways and telephones.

Bendemann (*ben'dē-mān*), **Eduard,** German painter of the Düsseldorf school, was born at Berlin in 1811. From 1859 until 1867 he was director of the Düsseldorf Academy. He died in 1889.

Benedek (*bā'ne-dek*), **Ludwig von,** Austrian general, born at Odenburg, in Hungary, 1804. After having served with great distinction he obtained in 1866 the command of the Austrian army against Prussia, and lost the decisive battle of Sadowa on July 3d. Died, 1881.

Benedict, Saint, one of the originators of monastic institutions in the West, was born at Nursia, in Italy, 480. Early in life he retired into a desert and spent three years in a cavern. Being discovered, his sanctity drew to him such numbers of people that he founded twelve convents. In 529 he went to Monte Cassino, built a monastery on the site of the temple of Apollo, gave rise to the Benedictine order, and died in 543.

Benedict XIII., Pope, son of the duke of Gravina, a Neapolitan nobleman, was born in 1649, and was raised to the papal chair in 1724. He was pious, virtuous, and liberal. A fruitless attempt

which he made to reconcile the Roman, Greek, Lutheran, and Calvinist churches, bears testimony to his tolerant spirit. He died in 1730.

Benedict XIV., Prospero Lambertini, the most worthy to be remembered of all the pontiffs so named, was born at Bologna in 1675; began his pontificate with several wise and popular reforms; revived the Academy of Bologna; executed several public works in Rome; caused the best English and French books to be translated into Italian, and in various ways gave encouragement to literature and science. Died, 1758.

Benedict XV., Pope, was elected to the Holy See, September 3, 1914, as Cardinal Giacoma della Chiesa. He was of noble blood, and was born November 21, 1854, at Pegli, Italy, a son of the Marchese della Chiesa; ordained a priest, 1878; was secretary of the nunciature in Spain, 1883-1887; secretary to Cardinal Rampolla, 1887-1901; substitute secretary of state at the Vatican, Rome, 1901; adviser to the Holy Office and Archbishop of Bologna, 1907; and made Cardinal, 1914. He is described as a man of pronounced spiritual character, a firm opponent of modernism, quiet and reserved in manner, but the possessor of a very active mind. His first public utterance was an exhortation for the peace of the world. Died, 1922.

Benedict, Sir Julius, German composer, was born at Stuttgart, Wurtemberg, 1804, died at London, 1885. His operas include *The Gipsy's Warning; The Bride of Venice; The Crusaders; The Lily of Killarney.*

Bennett, Enoch Arnold, English author and journalist, born at North Staffordshire, 1867. Educated at Newcastle Middle School. Studied law, but in 1893 turned to journalism and editorial work. This he gave up in 1900 to devote himself to literature exclusively. The influence of environment and industrial association has attracted him in the majority of his best novels such as *The Old Wives Tale, Clayhanger* and *Mr. Prohack.* Life is grim in Mr. Bennett's eyes, but in the sadness of his vision his humor is rich and moves surely through the sombre lives of his characters. Died, 1931.

Bennett, James Gordon, American journalist; was born in Scotland in 1795 and died in 1872. In 1819 emigrated to America, and became a journalist in New York. In 1835 he issued the first number of *The Herald,* a journal which, through his great ability and enterprise, soon commanded world-wide attention. The first speech ever reported in full by telegraph was sent to *The Herald.*

Bennett, James Gordon, journalist, capitalist, proprietor of *New York Herald;* was born in New York, 1841, son of journalist of same name, inherited *The Herald* and a large fortune in 1872; inaugurated publication in England of storm warnings transmitted from the United States; sent Henry M. Stanley to Africa to find Livingstone, 1874-77; prominent yachtsman. Died, 1918.

Benson, Edward White, English prelate and primate of all England, 1882-96, was born in 1829 and died in Flintshire, Wales, 1896; graduated at Trinity College, Cambridge; taught for a while at Rugby; in 1877 was consecrated bishop of Truro. In 1882, on the recommendation of Gladstone, the crown appointed him successor to Dr. Tait in the archbishopric of Canterbury. He held this high office in the church until his death.

Bentham, Jeremy, English writer on ethics and jurisprudence; born at London in 1748; admitted to the bar in 1772. In all his ethical and political writings the doctrine of utility is the leading and pervading principle; and his favorite vehicle for its expression is the phrase *the greatest happiness of the greatest number.* He died in 1832.

Benton, Thomas Hart, American statesman, born in North Carolina in 1782, commenced legal practice at Nashville, Tenn., in 1811, and settled at St. Louis, Mo., in 1815; was elected United States senator in 1820, when he became a prominent supporter of General Jackson. He held a seat in congress for a period of thirty years, during which he voted for the annexation of Texas, and against the doctrines of nullification and state rights. Died, 1858.

Beranger (*bā'rĀN'zhā*), **Pierre Jean de,** French lyric poet, born in Paris, 1780, was of humble parentage, and became apprenticed to a printer. In 1815 he began to bring out a collection of national and other songs. His poems contributed in no small degree to the revolution of 1830. In 1833 a fifth series of his lyrics appeared, and in 1848 he was elected to the assembly, but declined to serve. Died in 1857.

Beresford (*ber'es-fĕrd*), **Lord Charles William de la Poer,** British admiral, was born in Ireland, 1846; educated at Bayford school, Rev. Mr. Foster's, Stubbington, Fareham, Hants. Entered *Britannia* as cadet, 1859; rear-admiral, 1897; naval A. D. C. to the queen, 1896-97; M. P. Waterford, 1874-80; commanded *Condor,* bombardment Alexandria, 1882; in command of naval brigade at battles of Abu Klea, Abu Kru, and Metemmeh; a lord commissioner of the admiralty, 1886; visited China on a special mission, at request of associated chambers of commerce of Great Britain, 1898-99; rear-admiral, Mediterranean, 1900-02; commanded channel squadron, 1903-05; admiral, 1906. Author: *Life of Nelson and His Times.* Died, 1919.

Bergman (*berK'mān*), **Torbern Olof,** Swedish chemist and naturalist, was born at Katharinberg, Sweden, 1735; studied at Upsala, and in 1761 was appointed adjunct in mathematics and natural philosophy; professor of chemistry, 1766. Died, 1784.

Bergson, Henri Louis, French philosopher, was born in Paris, 1859. He was educated at the Lycee Corot and at the Ecole Normale. He was professor of philosophy for many years at lycees and from 1900 to 1921 at the College de France, Gifford lecturer in the meantime at Edinburgh. His most noted works are *Creative Evolution, Time and Free Will, Matter and Memory,* a pamphlet during the war *La Significance de la Guerre,* and *Mind-Energy.*

Beriot (*bā'rē-ō*), **Charles Auguste de,** Belgian composer and violinist, born in Louvain, 1802. In 1836 he became the husband of the famous singer, Malibran. In 1842 he was made professor in the Brussels conservatorie, but resigned ten years after in consequence of failing eyesight. Died, 1872.

Berkeley, George, British divine and philosopher, and bishop of Cloyne, was born in Ireland in 1685. On his return from a visit to America, he was raised to the episcopate. In philosophy he was an idealist, and his doctrines are the natural reaction against the prevalent materialism of his age. Died, 1753.

Berkeley, Sir William, governor of the colony of Virginia, was born at London, England, 1610. He was appointed governor of Virginia in 1641 but resigned in 1651, upon the accession of Cromwell. He was the author of *A Discourse and View of Virginia,* and a drama called *The Lost Lady.* Died, 1677.

Berlichingen (*ber'liK-ing-en*), **Gotz** or **Gottfried von,** German knight, was born in 1480. He took part in the war of the peasants against the nobles, and was sentenced by Maximilian I. to pay a heavy fine. Goethe made his achievements the subject of one of his dramas. He died in 1562.

Berlioz (*ber'lē-ōs*), **Hector,** French composer, was born at La Cote St. Andre, 1803, and died in 1869. His best productions are the symphonies *Harold* and *Romeo and Juliet.*

Bernadotte, Jean Baptiste. See **Charles XIV.**

Bernard (*ber'nār'*), **Claude,** French physiologist, born near Villefranche, 1813; studied medicine at Paris, and in 1841 became assistant at the College de France to Magnedie, with whom he worked until his own appointment in 1854 to the chair of general physiology, and whom he succeeded in 1855 as professor of experimental physiology. He was elected to the academy in 1869, and died at Paris, 1878. His *Lecons de Physiologie Experimentale* is still a standard work.

Bernard (*bĕr'nard* or *bĕr-nded'*), **Saint,** of Clairvaux, was born of a noble family at Fountaines, near Dijon, in Burgundy, 1091; in 1113 entered the Cistercian monastery of Citeaux, and in 1115 became the first abbot of the newly-founded monastery of Clairvaux, in Champagne, where he died, 1153. He was canonized in 1174. His studious, ascetic life and stirring eloquence made him the oracle of Christendom. He was one of the greatest of the Latin hymn writers, many modern hymns being based on his *Jesu Dulcis Memoria.*

Bernardin de St. Pierre (*bār'nār'daN' dē saN' pyār'*), **Jacques Henri,** French writer, the admired author of *Paul and Virginia, Studies of Nature,* etc., was born at Havre in 1737. He was an engineer in Russia and France, 1767-1771, settling in Paris the latter year. He then became professor of morals at the normal school and a member of the institute. Died, 1814.

Bernhardt, Rosine Sarah, famous French tragic actress, widow of M. Jacques d'Amala, was born at Paris in 1844. Her parents were Jews, but she was educated in Grandchamp convent at Versailles. She made her first appearance on the stage in 1862, at the Théâtre Français. In 1867 her playing the part Marie de Neuberg in Victor Hugo's *Ruy Blas* made her famous. Died March 26, 1923.

Bernini (*ber-nē'nē*), **Giovanni Lorenzo,** known as the Cavaliere Bernini, was born in Naples in 1598. He was eminent as a painter, an architect, and a sculptor; and his merit entitled him to the rewards which he had the good fortune to receive from Louis XIV. He died in 1680.

Bernoulli (*ber-nōō'yē*), **Daniel,** Swiss mathematician and physicist, was born at Groningen in 1700, died at Basel in 1782. He was the son of John, and like his father devoted himself to medicine as well as to mathematics. At Basel he occupied in succession the chairs of anatomy and botany, and of experimental and speculative philosophy. He published various works between 1730 and 1756.

Bernoulli, James B., was born at Basel in 1654, where he also died, 1705. He devoted his life to the study of mathematics of which he became professor in the University of Basel. Among his triumphs are to be recorded his solution of Leibnitz's problem of the isochronous curve, and investigation of the properties of isoperimetrical figures.

Bernoulli, John B., brother of the preceding, was born at Basel, 1667. He and James were the first two foreigners honored by the Academy of Sciences at Paris. In 1694 he became a doctor of medicine, and soon after professor of mathematics at Groningen. His forte was pure mathematics, in which he had no superior in Europe in his day. He died in 1748.

Bert (*bār*), **Paul,** French physiologist and republican anti-religious statesman, was born at Auxerre, 1833, and died at Tongking, 1886. He was minister of public instruction in Gambetta's cabinet, 1881-82.

Berthelot (*ber't'-lō'*), **Pierre Eugene Marcellin,** French chemist, was born at Paris, 1827, and in 1860 became professor of organic chemistry in the Ecole de Pharmacie: in 1865 in the College de France; in 1889 perpetual secretary of the Academie des Sciences. He did very important work in synthetic chemistry, and wrote a history of alchemy. He died in 1907.

Berthier (*ber'ty'ā*), **Louis Alexandre,** prince of Neuchatel and Wagram, and marshal of the French empire, was born at Versailles, 1753. He entered the army in 1770, and fought with LaFayette in the American revolutionary war. Berthier was Napoleon's proxy in the marriage of Maria Louisa, at Vienna, 1810. In the campaigns of 1812, 1813, and 1814 he was constantly by the emperor's side, and acted both as chief of staff and as quartermaster-general. Died, 1815.

Bertillon (*ber'tē'yŏN'*), **Alphonse,** French anthropologist, head of indentification department in the perfecture of police of the Seine; born at Paris, 1853; founded his system of mensuration, known as the *Bertillon System,* in 1880. Author: *Ethnographie Moderne, les Races Sauvages; L'Anthropometire Judiciarie a Paris en* 1889. Died, 1914.

Berwick, James Fitzjames, Duke of, was born in 1670, at Moulins, France, and served with distinction in Hungary, Ireland, and Flanders. In four subsequent campaigns he successfully defended dauphine against the attempts of the duke of Savoy. His last service in the succession war was the reduction of Barcelona. Died, 1734.

Berzelius (*bĕr-zē'li-us*), **Johan Jakob,** Swedish chemist, was born at Westerlosa, in East Gothland, Sweden, 1779; died, 1848. He was a baron and senator of the kingdom. He was the author of what is known as the dualistic (or binary) theory of the chemical constitution of compounds, and devised the form of symbolic notation now employed. His reputation was world-wide, and his accurate investigations exerted very great influence on the development of scientific chemistry.

Besant (*bez'ant* or *bes'ant*), **Annie,** president British theosophical society; author and lecturer on religious, philosophical, and scientific subjects; was born in London in 1847. Founded in 1898 the Central Hindu College at Benares; 1904, the Central Hindu Girls' School, Benares; 1907, the University of India. Author: *Re-incarnation; The Wisdom of the Upanishats,* etc. Died, 1933.

Besant (*bē-sant'*), **Sir Walter,** English novelist, was born at Portsmouth, England, 1836. He studied at King's College, London, and at Christ's College, Cambridge. His first work, *Studies in French Poetry,* appeared in 1868. Sir Walter wrote *All Sorts and Conditions of Men; All in a Garden Fair; Dorothy Foster; Children of Gibeon; Armorel of Lyonesse; The Ivory Gate; Beyond the Dreams of Avarice; The Master Craftsman,* etc. Knighted in 1895, he died in 1901.

Bessel (*bes'el*), **Friedrich Wilhelm,** German astronomer, was born at Minden, Prussia, 1784, died at Königsberg, 1846. He attracted the attention of Olbers by his computation of the orbit of the comet of 1607 from observation which had just been discovered; appointed director of the new observatory at Königsberg, where the rest of his active life was passed. His investigations into the length of the seconds-pendulum and that of standards of length were of the highest importance.

Bessemer (*bes'ĕ-mĕr*), **Sir Henry,** English engineer and inventor, born at Charlton, England, in 1813; of his many inventions the chief is the process named after him, of converting pig-iron into steel at once by blowing a blast of air through the iron while in fusion until everything extraneous is expelled, and only a definite quantity of carbon is left in combination. He was knighted in 1879, and died in 1898.

Bessey, Charles Edwin, scientist, was born on a farm in Milton, Ohio, 1845; graduate of Michigan Agricultural College, 1869; Ph. D., LL. D.; acting chancellor of University of Nebraska 1888-91 and 1899-1900. Botanical editor of *American Naturalist,* 1880-97, was appointed prof. of botany in U. of Neb. in 1884. Author: *The Essentials of Botany; Botany for High Schools and Colleges,* etc. Died, 1915.

Bethmann-Hollweg (*bāt'mān hol'vāk*), **Dr. Theobald von,** statesman, philosopher, imperial chancellor of the German empire, was born at Hohenfinnow, near Berlin, Prussia, in 1856; of Jewish lineage; educated at the University of Bonn; elected to the Reichstag in 1890; named imperial chancellor, in succession to Prince von Bulow, 1909, Died, 1921.

Beust (*boist*), **Friederick Ferdinand, Count,** German statesman, was born at Dresden in 1809. He

devoted himself to politics and was employed by his government in different services in Berlin, Paris, and London. He completely reorganized the Austrian empire, and the present constitution was his work. He was Austrian ambassador at London, 1871-78. He died in 1886.

Beveridge, Albert Jeremiah, lawyer, writer, United States senator from Indiana, 1889-1911. Born in 1862; graduated from De Pauw University, Indiana, 1885; read law in office of Senator McDonald, became managing clerk; admitted to bar and was associated with McDonald & Butler until he began practice for himself. Died, 192-.

Beza (*bē'zä*), **Theodore,** Genevese reformer, was born at Vezelay, Burgundy, 1519, and studied Greek and law at Orleans. In 1549-59 was Greek professor at Lausanne. In 1559 he was appointed a theological professor and president of the College at Geneva; on Calvin's death the care of the Genevese church fell upon his shoulddrs. In 1574 he was sent by Conde on a mission to the court of the palatinate. He died in 1605.

Bichat (*bē'shä'*), **Marie Francois Xavier,** celebrated French physician and anatomist, was born at Thoirette (Jura), 1771. He devoted himself to anatomy, physiology, and surgery; and established with several of his friends *La Société Médicale d' Emulation*, through the medium of which he gave to the world many highly original and important memoirs, notably those on the tissues of the human body. He was nominated physician of the Hôtel-Dieu in 1799, and died in 1802, his premature death being hastened in great part by his incessant labors. His three great works are the *Traité des Membranes*, the *Recherches Physiologiques sur la Vie et la Mort*, and the *Traité d' Anatomié Générale*.

Biddle, A. J. Drexel, author, explorer, and lecturer, born at Philadelphia, Pa., 1874. He was educated at Heidelberg, Germany. Revived Philadelphia *Sunday Graphic* in 1895 and became its editor; head of publishing house of Drexel Biddle, in New York, Philadelphia, and San Francisco, 1895-1904. Author: *A Dual Rôle; All Around Athletics; The Flowers of Life; The Madeira Islands; The Land of the Wine.*

Biddle, John, the founder of English Unitarianism, born in 1615, at Wooton-under-Edge, in Gloucestershire. Twice during the commonwealth, he suffered for his creed, and even the protector himself, in order to save his life, was compelled to banish him to one of the Sicily isles. Died in jail, 1662.

Biddle, Nicholas, American commander, was born at Philadelphia, Pa., 1750, and took a conspicuous part in the revolutionary war. During the action of his ship, the *Randolph*, with the British ship, *Yarmouth*, in 1778, the former was blown up and he was killed.

Biela (*bē'lä*), **Wilhelm von,** German astronomer and military officer, was born near Stolberg, Germany, 1782. He is chiefly noted for his discovery, in 1826, of the comet named for him. Died, 1856.

Bierce, Ambrose, author, journalist; born in Ohio in 1842; served as line officer during Civil War; brevetted major for distinguished services; went to California, 1866; went to London, 1872, contributing to *Fun* fables, purporting to be translations from Zambri, the Parsee, afterward published as *Cobwebs from an Empty Skull.* Author of numerous sketches, essays and studies. Died, 1914.

Bierstadt (*bēr'stät*), **Albert,** landscape painter; born near Düsseldorf, Germany, 1830. Came in infancy to New Bedford, Mass., and married; studied four years in Europe, 1853-57; made repeated visits to the West and to Europe; specialty was pictures of scenes in Rocky Mountains, Sierras, and Switzerland. Died, 1902.

Bigelow, John, author and diplomat, was born at Malden, N. Y., 1817; graduated from Union College, 1835; LL. D., Union and Racine College 1886; College of City of New York, 1839; admitted to bar; one of the editors *New York Evening Post* 1849-61; consul at Paris, France, 1861-64; secretary of state, New York, 1875-77. Author: *France and Hereditary Monarchy; Writings and Speeches of Samuel J. Tilden;* etc. Died, 1911.

Bigelow, Melville Madison, lawyer, author, dean Boston University law school; born at Eaton Rapids, Mich., 1846; graduated from University of Michigan, A. B., 1866, LL. B., Ph. D., LL. D., Northwestern University, 1896. Author: *The Law of Estoppel; Leading Cases in the Law of Torts; The Law of Bills, Notes and Cheques; The Law of Wills.* Died, 1921.

Bigelow, Poultney, author, journalist; born in New York, 1855; graduate from Yale, 1879; Columbia law school, 1882; admitted to New York bar, 1882; was correspondent for *London Times* during Spanish-American war. Author: *The German Emperor and his Neighbors; Paddles and Politics Down the Danube; White Man's Africa; Children of the Nations.*

Billings, John Shaw, surgeon, librarian; was born in Switzerland county, Indiana, 1839; graduated from Miami University, 1857; M. D., LL. D.; D. C. L., Oxford, 1889; served in army as assistant surgeon and surgeon, reaching rank of lieutenant-colonel and deputy surgeon; later medical inspector army of Potomac; professor of hygiene, University of Pennsylvania, 1893-96; 1896 he became director New York public library, Astor, Lenox and Tilden foundations; chairman board Carnegie Institution, Washington. Author: *Principles of Ventilation and Heating; National Medical Dictionary;* and many other works. Died, 1913.

"Billings, Josh." See **Shaw, Henry W.**

Binet (*bē'nē'*), **Alfred,** French psychologist; born at Nice, France, 1857. He was one of the editors of *L'Année Psychologique*, and director of the psychological laboratory at the Sorbonne, Paris. His works include many themes in physiological psychology. Died, 1911.

Binns, Charles Fergus, educator and writer on ceramics, was born at Worcester, Eng., 1857; graduated King's Scholar, 1870; studied analytical chemistry, Birmingham, England, and decorative art, Worcester, 1872-5. Entered royal porcelain works, Worcester, England, 1872; superintendent successively chemical laboratory, department of painting, London depot of sales, department of clay working and pottery; principal technical school of science and art, Trenton, N. J., 1897-1900; director New York state college of clay working and ceramics beginning 1900. President American Ceramic society, 1901. Author: *Ceramic Technology; The Story of the Potter; The Potter's Craft,* etc.

Biot (*bē'ō'* or *b'yō'*), **Jean Baptiste,** French astronomer, optician, and natural philosopher, was born at Paris, 1774. He is especially celebrated for his researches in the circular polarization of light. Died, 1862.

Birrell (*bĕr'el*), **Rt. Hon. Augustine,** chief secretary to the lord lieutenant of Ireland since 1907; M. P. North Bristol since 1906; was born near Liverpool, 1850; graduated at Cambridge, 1872; LL. D., St. Andrews; barrister, 1875; bencher Inner Temple, 1903; editor of *Boswell's Life of Johnson; Collected Essays; Miscellanies; William Hazlitt; In the Name of the Bodleian,* etc.

Bishop, Sir Henry Rowley, English composer, was born at London, 1786; early devoted himself to the composition of dramatic music, and in 1809 produced his *Circassian Bride*, which was a great success. In 1840 his last dramatic piece, *The Fortunate Isles*, was produced at Covent Garden in honor of the queen's wedding; in 1842 he was knighted; and in 1848 became professor of music at Oxford. Died, 1855.

Bismarck-Schonhausen (*bis'märk-shen'hou-zen*), **Otto Eduard Leopold, Prince,** born of a noble family, at Shonhausen, April 1, 1815; studied at Gottingen, Berlin, and Greifswald; entered the army and became lieutenant in the Landwehr. After a brief interval devoted to his estates and to the office of inspector of dikes, he became in 1846 a member of the provincial diet of Saxony, and in 1847 of the Prussian diet.

In 1851 he was appointed representative of Prussia in the diet of the German federation at Frankfort, where with brief interruptions he remained till 1859, exhibiting the highest ability in his efforts to checkmate Austria and place Prussia at the head of the German states. From 1859-62 he was ambassador at St. Petersburg, and in the latter year, after an embassy to Paris of five months' duration, became first minister of the Prussian crown.

The lower house persistently refusing to pass the bill for the reorganization of the army, Bismarck at once dissolved it (October, 1862), closing it for four successive sessions until the work of reorganization was complete. When popular feeling had reached its most strained point the Schleswig-Holstein question acted as a diversion, and Bismarck—by the skillful manner in which he added the duchies to Prussian territory, checkmated Austria, and excluded her from the new German confederation, in which Prussia held the first place—became the most popular man in Germany.

As chancellor and president of the federal council he secured the neutralization of Luxembourg in place of its cession by Holland to France; and though in 1868 he withdrew for a few months into private life, he resumed office before the close of the year. A struggle between Germany and France appearing to be sooner or later inevitable, Bismarck, having made full preparations, brought matters to a head on the question of the Hohenzollern candidature for the Spanish throne. Having carried the war to a successful issue, he became chancellor and prince of the new German empire. Subsequently, in 1872, he alienated the Roman Catholic party by promoting adverse legal measures and expelling the Jesuits. He then resigned his presidency for a year, though still continuing to advise the emperor. Towards the close of 1873 he returned to power retaining his position until, in March, 1890, he disagreed with the emperor and tendered his resignation. In 1878 he presided at the Berlin Congress, in 1880 at the Berlin Conference, and in 1884 at the Congo Conference. Two attempts were made to assassinate him—at Berlin in 1866, and at Kissingen in 1874. He died July 31, 1898.

Bispham (*bis'pam*), **David S.,** operatic baritone, was born at Philadelphia, Pa., 1857; educated at Haverford College, Pa.; made début as the Duc de Longueville in *The Basoche*, given by the Royal English Opera, 1891; then with the Royal Company, New York, singing principal rôles German, French, and Italian. Died, 1921.

Bispham, George Tucker, lawyer, author; born at Philadelphia, 1838; graduate of University of Pennsylvania, 1858; law department, same, 1862; admitted to bar, 1861; later admitted to bar of United States supreme court. Author: *Principles of Equity*, and other books on law. Died, 1906.

Bissell, George Edwin, sculptor; born at New Preston, Conn., 1839; educated at Northville, Conn.; academy; acting assistant paymaster, United States navy, 1863-65. In marble business with father and brother at Poughkeepsie, New York, 1866; began career as sculptor there; studied art, Paris, Rome, and Florence, 1875-76; had studio in Paris at different times, for about six years, between 1884-96. Died, 1920.

Bitter, Karl Theodore Francis, sculptor, was born at Vienna, Austria, 1867; educated in gymnasium there; came to United States, 1889; won prize in competition for Astor memorial gates, Trinity church, New York. Director of sculpture at the Pan-American exposition, Buffalo, 1901; gold medal Pan-American exposition, 1901. Died, 1915.

Bizet (*bē'ze*), **Georges,** French composer, was born at Paris, 1838, died in 1875; studied at the conservatoire under Halevy, and in Italy. His best works are *Les Pecheurs de Perles*, *La Jolie Fille de Perth*, *L'Artésienne Djamileh*, the overture *Patrie*, and *Carmen.*

Bjornson (*by ĕrn'sun*), **Bjornstjerne,** Norwegian poet, novelist, dramatist, was born in Osterdalen in 1832. In early life a historical drama of his, called *Valborg*, was accepted by the royal theatre, but its author withdrew the piece. In 1856 the international students' reunion at Upsala stimulated him again to an effort to produce a national poetry, free from foreign influences. He began with *Synnöve Solbakken*, a story of peasant life, which was followed by *Arne* and many other pieces. *Marie Stuart* and *Sigurd Slembe* are both well-known plays, and he has written, besides his dramas, a series of folk plays, an epic, and much beautiful lyric poetry. Died, 1910.

Black, John Charles, lawyer, was born at Lexington, Miss., 1839; educated in common schools, Danville, Ill., and at Wabash College, Crawfordsville, Ind.; M.A.; LL. D.; private to colonel and brevet brigadier-general United States volunteers; commissioner pensions, United States, 1885-89; member of congress, 1893-95; United States attorney, 1895-99; commander-in-chief, G. A. R. 1903-04. Was president of United States civil service commission. Died, 1915.

Black, Joseph, eminent British chemist, was born in 1728 at Bordeaux, France. Between 1759 and 1763 he evolved the theory of *latent heat* on which his scientific fame chiefly rests, and made other important discoveries. Died, 1799.

Blackie, John Stuart, Scotch philosopher, was born at Glasgow in 1809; studied to be a lawyer, but devoted himself largely to literary pursuits; was a zealous educational reformer; took an active interest in everything affecting the welfare and honor of Scotland; spoke much and wrote much in his day on manifold subjects. He died in 1895.

Blackmar, Frank Wilson, economist, sociologist, was born at West Springfield, Pa., 1854; graduated University of the Pacific, 1881; graduate student and fellow, Johns Hopkins, 1886-9; Ph. D., 1889. Professor history and sociology, 1889-99, of sociology and economics, 1899, dean of graduate school 1896-1922, University of Kansas. Author: *Federal and State Aid to Higher Education in the United States; Spanish Colonization; Spanish Institutions in the Southwest; The Study of History and Sociology; The Story of Human Progress; Economics; The Elements of Sociology; Economics for High Schools,* etc.

Blackmore, Richard Doddridge, British novelist, was born at Longworth, Berkshire, and educated at Exeter College, Oxford. He graduated in 1847, afterward studied law, was admitted to the bar at the Middle Temple in 1852, and practiced for a time as a conveyancer. *Poems by Melanter* was the first of several volumes of verse;

his first distinct success was *Lorna Doone, a Romance of Exmoor*, which reached many editions. He died in 1900.

Blackstone, Sir William, celebrated English jurist, was born at London, in 1723. He was a judge, a member of parliament, and author of the well-known *Commentaries on the Laws of Engand*. Subsequently, having married, he vacated his fellowship and was appointed principal of New-In hall. That office, with his Vinerian professorship, he resigned in 1766. In 1770 he became one of the judges of the common pleas. Died, 1780.

Blaine, James Gillespie, American statesman, was born at Brownsville, Pa., 1830. At seventeen he entered Washington Collega, Pa. In 1854 he went to Maine to engage in journalism. In 1862, he was elected to congress and remained there eighteen years. He was balloted on for the presidency at the convention of 1876, and received 351 votes out of a total of 754. He was then appointed United States senator to fill an unexpired term, and four years later was again a candidate for the presidency. President Garfield appointed him secretary of state, which office he held until after the death of the president. In 1889 he again became secretary of state, in the cabinet of President Harrison. He died in 1893.

Blake, Robert, English admiral, who, more than any other, contributed to render England mistress of the seas, was born at Bridgewater, in Somersetshire, 1599. In 1649, in conjunction with two other officers of equal rank, he was appointed "general of the sea." In 1652 he was made sole admiral of the fleet for nine months, and during that year he fought and won four engagements with Dutch fleets under Tromp, Ruyter, and DeWitt. In 1654 Blake was appointed by Cromwell to command an English fleet in The Mediterranean. In 1657 he defeated the Spaniards at Santa Cruz. Died, 1657.

Blake, William, English artist and poet, was born at London, 1757. After studying art for some years, he began to paint in water colors and to engrave illustrations for magazines. At the same time he wrote poetry which showed great power and beauty. *Poetical Sketches, Songs of Experience*, and *Songs of Innocence*, are among his best works. He died at London in 1827.

Blanc (*blăN*), **Jean Joseph Louis,** French historian and socialist writer, was born at Madrid, 1813, started as a journalist. Member of the chamber of deputies in 1871. Blanc wrote an elaborate and well-written history of the French revolution. Died at Cannes, 1882.

Blanche of Castile, queen of Louis VIII., of France and daughter of Alphonso IX., king of Castile, was born about 1186. After carrying on the government during the absence of her son, Louis IX., in the holy land, she died in 1252.

Blanqui (*blăN'kē'*), **Louis Auguste,** French socialist was born at Puget-Theniers, France, 1805, and made himself conspicuous by his passionate advocacy of the most extreme political opinions. He died in 1881, having spent thirty-seven years of his life in prison.

Blashfield, Edwin Howland, artist. Born in New York, 1848; educated in Boston latin school; studied at Paris, 1867, under Léon Bonnat, also, receiving advice from Gérome and Chapu; exhibited at Paris salon, yearly, 1874-79, 1881, 1891, 1892; also several years at Royal Academy, London; returned to United States in 1881; exhibited genre pictures, and portraits. Died, 1936.

Blauvelt (*blo'velt'*), **Lillian Evans,** prima donna soprano; was born at Brooklyn, N. Y., 1873; educated in public schools; studied under M. Jacques Bouhy in New York and Paris. Sang in concerts in France and Belgium, later in Moscow, with philharmonic society; made début in opera at Théâtre de la Monnaie, Brussels, in *Mirelle;* received decoration of order of St. Cecilia at Rome, 1901 (only woman ever so honored).

Blavatsky (*blă-văts'ki*), **Madame Helena Petrovna** Russia theosophist, was born in Russi in 1831. She was of noble descent. She visited Thibet, where she claims she received the theosophical doctrines connected with her name. From 1873 to 1879 she was a resident of New York, became a naturalized American citizen, and founded the theosophical society. She died, 1891.

Blennerhassett (*blen'ĕr-has'et*), **Harman,** noted for his connection with Aaron Burr's conspiracy, was born in England about 1764; of Irish descent. When Burr was arrested and brought to trial, Blennerhassett was also arrested, but on the acquittal of Burr he was released. He died on the island of Guernsey in 1831.

Bliss, Cornelius Newton, merchant, politician, was born at Fall River, Mass., 1833. Was member Pan-American conference; was president protective tariff league; chairman New York republican state committee, 1887-88; declined to be a candidate for governor of New York, 1885 and 1891; secretary of the interior, in cabinet of President McKinley, 1897-99. Died, 1911.

Bliss, Gen. Tasker Howard (1853-1930), graduate U. S. Military Academy and U. S. Artillery School, has held many military commissions. Served in Philippines, 1905-9. Appointed Chief of Staff, and commissioned Major General, 1915. Rank of General, 1917. Member of Allied Conference and Supreme War Council, 1917.

Bloomfield, Maurice, philologist, professor Sanskrit and comparative philology Johns Hopkins; was born at Bielitz, Austria, 1855; S. C.; A. M.; Ph. D.; LL. D., Princeton, 1896. Edited for first time from original Sanskrit MSS. the *Sutra of Kaucika;* translated the *Atharva-Veda* in the sacred books of the East (edited by Max Müller); author of *The Atharva-Veda* and the *Gopatha Brahmana*. Died, 1928.

Bloomfield, Robert, English pastoral poet, was born in 1766, at Honington, Suffolk, where his father was a poor tailor. His chief works are *The Farmer's Boy* (composed in a London garret), *Rural Tales*, and *Wild Flowers*. Died, 1823.

Blouet (*blo͞o-e'*), **Paul,** better known as "Max O'Rell," French author, writer, and lecturer, was born at Brittany, France, in 1848; was educated in Paris; was French master at St. Paul's school, 1876-84, and after 1887 lectured and acted in the United Kingdom, United States, and colonies. Author of *John Bull and His Island; A Frenchman in America*. Died, 1903.

Blowitz (*blō'rits*), **Henri George Adolphe Opperde,** journalist, was born of Jewish ancestry at Blowitz, in Bohemia, 1825; during 1849-60 was a German teacher in various French schools. He was made officer of the legion of honor in 1878. Died, 1903.

Blucher (*blu'kĕr*), **Gebhard Lebrecht von,** Prussian field marshal and prince of Wahlstadt, was born at Rostock, Germany, 1742; first entered the Swedish, but soon passed to the Prussian army He went through the Polish campaign of 1772. In the Waterloo campaign he commanded the Prussian army in Belgium, and was severely defeated by Napoleon at Ligny. However, by out-manœuvring Grouchy, he was able to arrive at Waterloo in time to decide the victory for the allies and pursue the routed French army. He then retired from active service and died, 1819.

Blumenbach (*blo͞o'men-băk*), **Johann Friedrich,** German naturalist and ethnologist, was born at Gotha in 1752; became professor at Göttingen, an office he filled for nearly sixty years. His works gave a great impulse to scientific research in all directions, the chief of which were *Institutiones Physiologicae; Manual of Natural History; Manual of Comparative Anatomy and Physiology*. Died, 1840.

Blumenthal (*blo͞o'men-tăl*), **Leonhardt, Count von,** Prussian general, was born in 1810, died in 1900. He was chief of the general staff of the Prussian army in 1849; was chief of staff in the Franco-Prussian war; and became general field marshal in 1888.

Bluntschli (*blo͞ontsh'lē*), **Johann Kaspar,** jurist, economist, was born at Zurich in 1808; in 1833 became professor in its newly-founded university; in 1848 he went to Munich as professor of civil and international law; in 1861 removed to Heidelberg. He died at Karlsruhe in 1881.

Blythe, Samuel George, writer, journalist; was born at Geneseo, N. Y., 1868; educated at Geneseo state normal school; managing-editor of *Buffalo Express*, 1893-96; editor-in-chief of *Buffalo Enquirer* and *Courier*, 1897-98; chief Washington correspondent New York *World*, 1900-07; chairman standing committee of Washington correspondents, 1906-07. On staff of *Saturday Evening Post* since 1907.

Boabdil (*bō'ăb-dēl'*), properly Abu-Abdallah, the last Moorish king of Granada, dethroned his father, Abu-el-Hasan in 1481, and two years later was defeated, and taken prisoner by the Castilians near Lucena. The spot from which he looked his last on Granada, after giving up to Ferdinand the keys of the city, still bears the name of *el ultimo sospiro del Moro*, "the last sigh of the Moor." He died in 1536.

Bobadilla (*bō-vă-dēl'yă*), **Francisco,** was sent in 500 by Ferdinand and Isabella to investigate the work of Columbus in Hispaniola. He put Columbus in chains and sent him to Spain. Bobadilla was drowned on the return voyage in 1502.

Boccaccio (*bō-kă'chō*), **Giovanni,** Italian raconteur, the author of the *Decameron*, was born probably in Paris in 1313. He styled himself *Da Certaldo*, from the Italian village from which his family sprang. In 1350 he formed an intimate friendship with Petrarch. It is said that he was the first Italian who ever procured from Greece a copy of the *Iliad* and the *Odyssey*. While in Naples, about 1334, he fell passionately in love with a young woman, called by him Fiammetta, who was generally supposed to be a daughter of King Robert. To gratify her he wrote *Il Filocopo* a prose-romance, and afterward, *La Teseide*, the first attempt at romantic epic poetry, of which Boccaccio may be considered the inventor. He composed his famous *Decameron* in Naples, to please Joanna, the daughter and successor of King Robert. Petrarch's death deeply affected him, and he died the year after, 1375.

Boecklin (*bûk'lĭn*), **Arnold,** Swiss painter of romantic subjects, was born at Basel, Switzerland, 1827. His principal pictures are the *Sea Idyl; A Nymph and Fauns*, and several landscapes. He was seen at his best at Munich. Died at Fiesole, Italy, 1901.

Bode (*bō'dĕ*), **Johann Elert,** German astronomer, was born at Hamburg, 1747; at the age of eighteen he calculated an eclipse of the sun. In 1776 he commenced the *Astronomical Year Book*, which is still continued. But his fame rests chiefly on the *Uranographia*, published in 1801, in which he gives observations on 17,240 stars, or 12,000 more than can be found in any previous charts. He died at Berlin in 1826.

Bodenstedt (*bō'den-shtet*), **Friedrich Martin von,** German poet, author, journalist, was born at Peine, Hanover, 1819, and died at Wiesbaden 1892, having lived at Moscow, traveled in the Crimea, Turkey, Greece, and Asia Minor, edited the *Weser Zeitung*, filled the chairs of Slav languages and Old English at Munich, and was director of the Meiningen court theater.

Bodin (*bō'dăN'*), **Jean,** French publicist and economist, was born at Angers in 1530, and died of the plague at Laon, 1596. According to Bodin's greatest work, *Les Six Livres de la Republique*, property and the family form the basis of society and a limited monarchy is the best possible form of government.

Bodley, Sir Thomas, the restorer of the library originally established at Oxford by Humphrey, duke of Gloucester, now called the Bodleian library, was born in 1545. On the accession of Elizabeth he completed his studies at Oxford, took the degree of M. A., and was afterward elected a proctor, devoting himself to the extension of the library. Died, 1613.

Boehm (*bĕm*), **Sir Joseph Edgar,** Hungarian-English sculptor, was born at Vienna, 1834; educated 1848-51 in England, and finally settled there in 1862. In 1867 he executed a colossal statue of the queen; of his seated statue of Thomas Carlyle, enthusiastically praised by Ruskin, a replica was erected at Chelsea. Boehm became an A. R. A. in 1878, sculptor-in-ordinary to the queen in 1881, an R. A. in 1882, and a baronet in 1889. Died, 1890.

Boehm von Bawerk (*bĕm fŏn bă'verk*), **Eugen,** Austrian political economist, was born at Brünn, Austria, 1851. Educated at the Universities in Vienna, Heidelberg, Leipzig, and Jena. In 1884 was appointed a professor at Innspruck. Died, 1914.

Boehme, Jakob, German theosophist and mystic, was born of poor parents at Altseidenberg near Görlitz in upper Lusatia, in 1575, and in boyhood herded cattle. About 1612 he published *Aurora*, contining revelations and meditations upon God, man, and nature, and showing a remarkable knowledge of scripture and of the writings of alchemists. He died at Görlitz in 1624.

Boerhaave, (Dutch, *bo͞or'hä-ve*), (Eng., *bōr'hāv*), **Hermann,** the most celebrated physician of the eighteenth century, was born near Leyden, Holland, 1668. In 1689 he was made doctor of philosophy, and in 1690 began the study of medicine, reading carefully Hippocrates among the ancients, and Sydenham among the moderns. Peter the Great of Russia visited him at Leyden, and it is even said that a Chinese mandarin sent him a letter, addressed "Herr Boerhave, Celebrated Physician, Europe." His fame rests principally on his *Institutiones Medicae*, and *Aphorismi de Cognoscendis et Curandis Morbis*. Died at Leyden, 1738.

Boethius (*bō-ē'thi-us*), **Anicius Manlius Torquatus Severinus,** Roman philosopher, born about 475, was profoundly learned, and filled the highest offices under the government of Theodoric the Goth. Falsely accused of a treasonable correspondence with the court of Constantinople, he was executed in 524, after a long and rigorous imprisonment. His *Consolations of Philosophy*, written in prison, abounds in the loftiest sentiments, clothed in fascinating language.

Bogardus, James, American inventor, was born in Catskill, N. Y., 1800. Among his inventions are an 8-day clock, a dry gas meter, and an engraving machine for engine turning. His machine for making postage stamps received the prize offered by the British government in 1839. He died in 1874.

Boileau-Despreaux (*bwă'lō'dā'prā'ō'*), **Nicholas** French poet and critic, was born at Paris in 1636. He was a friend of Molière, LaFontaine, and Racine, and was pensioned by the king. He did much as a critic to purify and refine the French language, had a great influence on French literature. He was a member of the French Academy. He died at Paris in 1711.

Boito (*bō'ē-tō*), **Arrigo,** Italian composer and poet, was born in 1842 at Padua, and studied at the Milan conservatory. His first important work was the Wagnerian opera *Mefistofele*, which, at first an acknowledged failure, has since steadily grown in popularity. He wrote his own libretti and published several songs. Died, 1918.

Bok, Edward William (1863-1930), born in Holland. Came to United States at early age; educated in Brooklyn public schools. Editor, *The Ladies Home Journal* 1889-1919. Degree of LL.D. from Pope Pius, 1907. Built the Singing Tower at Lake Wales, Florida, as an expression of his thanks to the American Flag.

Boker (*bō'kĕr*), **George Henry,** American poet and dramatist, was born at Philadelphia in 1823, and died there in 1890. He wrote several plays, which were successful on the stage, among them

Calaynos, a tragedy, and *Francesca da Rimini*. In 1882 published a volume of verse, *The Book of the Dead*.

Boleyn (*bōōl'in*), **Anne,** queen of England and daughter of Sir Thomas Boleyn, subsequently earl of Wiltshire and Ormond; was born about 1507 and was brought up at the French court. She became maid of honor to Queen Catharine of England. King Henry VIII. was attracted by her beauty, had his marriage with Catharine declared void, and was married privately to Anne. She soon lost his favor, and on a charge of unfaithfulness was tried, condemned, and beheaded, 1536. She was the mother of Queen Elizabeth.

Bolingbroke (*bol'in-brook*), **Henry St. John Viscount,** English statesman, was born in 1678. Having studied at Oxford, he entered parliament in 1701, and in 1704 became secretary of war. He afterward became secretary of state for foreign affairs, and negotiated the treaty of Utrecht. On the accession of George I. he fled the country, and became secretary of state to the first pretender. He was attainted and his estate seized; but in 1723 he was permitted to return. His estates were restored, but he was not allowed to sit in parliament. He again withdrew to France in 1735, but returned to England on the death of his father, and died in 1751.

Bolivar (*bol'i-vär*), **Simon,** South American statesman, founder and first president of the republic of Columbia, known as "the liberator of South America." Born in Venezuela, 1783, he was educated in Madrid. When the revolt against the Spanish yoke broke out in Venezuela, he joined it. In 1822 Bolivar went to help the Peruvians in their struggle for liberty, and was given the chief command. After a long campaign he won the great battle of Ayacucho. Upper Peru was constituted a separate republic, with the title of Bolivia. Died, 1830.

Bonaparte, Charles Joseph, lawyer, ex-secretary of the navy, and ex-attorney general, United States, was born in Baltimore, 1851; graduate of Harvard in 1871; Harvard law school in 1874: chairman council of national civil service reform league; president of national municipal league; overseer, Harvard, 1891-1903; awarded Lætare medal by University of Notre Dame, 1903; was secretary of the navy, 1905-06; attorney general of United States, 1906-09. Died, 1921.

Bonaparte, Charles Lucien Jules Laurent, prince of Canino and Musignano, Lucien's eldest son, by his second marriage, was born at Paris in 1803. He acquired a considerable reputation as a naturalist, and especially as a writer on ornithology. Died, 1857.

Bonaparte, Jerome, youngest brother of Napoleon I., was born at Ajaccio in 1784. He served as naval lieutenant in the expedition to Hayti. He was employed by Napoleon in the liberation of Genoese prisoners who had been captured by the dey of Algiers. In the war with Prussia he commanded, in concert with General Vandamme, the 10th corps in Silesia, and in 1807 was made king of Westphalia. He was appointed governor of the Invalides in 1848, and in 1850 was made a French marshal. In 1852 provision was made by the French chambers, in default of issue of Napoleon III., by which the right of succession was confirmed to Jerome and his heirs. Died, 1860.

Bonaparte, Joseph, eldest brother of Napoleon I., was born at Corte, in Corsica, 1768, and was educated at Autun. In 1800, having proved his ability in several offices of state, he was chosen by the first consul as plenipotentiary to conclude a treaty of friendship with the United States. After the coronation of Napoleon, Joseph was made commander-in-chief of the army of Naples; in 1805, ruler of the Two Sicilies; and in 1806, king of Naples. In 1808 he was summarily transferred by his brother to the throne of Spain, and Murat took his place as king of Naples. After the battle of Waterloo he accompanied Napoleon to Rochfort, whence they intended to sail separately for the United States. He died in Florence in 1844.

Bonaparte, Josephine (wife of Napoleon I.). See **Josephine.**

Bonaparte, Louis, brother of Napoleon I., was born in 1778. After rising from honor to honor he was nominally made king of Holland, being little more than a governor subordinate to his brother. After the restoration of the house of Orange, Louis considered himself free from all responsibility, and returned to Paris, 1814. On the escape of his son, Louis Napoleon, from the prison of Ham, Louis was removed as an invalid to Livorno. Died, 1846.

Bonaparte, Lucien, brother of Napoleon, and prince of Vanino, was born in 1775; received his education in the College of Autun. Shortly before the 18th Brumaire he was elected president of the council of five hundred, and was the hero of that day. His opposition to Napoleon's progress toward monarchy involved the brothers in many quarrels. In 1810 he sailed for America, but fell into the hands of the English, was taken to England, and after a debate in parliament was declared a prisoner, but treated with distinction. After his brother's downfall he returned to Rome. Died, 1840.

Bonaparte, Napoleon. See **Napoleon I.**

Bonaparte Napoleon Eugene Louis Jean Joseph, son of Napoleon III. and of the empress Eugenie, born in 1856; was educated under his father's care at Paris and Versailles. On the abdication of Napoleon III., and on the declaration of a republic in France, the youth and his mother, the empress Eugenie, took refuge at Chiselhurst, England. When the Zulu war in South Africa commenced the young man volunteered his services to the British government, and was killed in 1879.

Bonaparte, Napoleon Joseph Charles Paul, nicknamed Plon-Plon, son of Jerome Bonaparte and Sophia Dorthea, was born in 1822; married, 1859, Princess Clothilde of Sardinia. By virtue of the decree of the French senate, 1852, Napoleon Joseph became in 1879, on the death of Prince Napoleon, son of the emperor, the representative of the Bonapartist claim to the French throne. Died, 1891.

Bonar (*bon'ar*), **Horatius,** hymn-writer, was born at Edinburgh in 1808; from the high school passed to the university, and became minister at Kelso Free Church, 1837-66, and then at Edinburgh. He edited the *Christian Treasury* and other magazines, and published some forty religious works, but is best known as the author of *Hymns of Faith and Hope*. He died in 1889.

Bonaventura (*bō'nā-ven-t ōō'rā*), **Saint,** cardinal, surnamed the "seraphic doctor," his real name John Fidenza, was born in Tuscany in 1221; entered Franciscan order; was a mystic in theology; ascribed knowledge of the truth to union with God, such as existed between man and his Maker prior to the fall. Died, 1274.

Bond, Carrie Jacobs, American song writer, was born in Wisconsin, 1862. She began publishing groups of songs in 1903 and soon won great popularity through the simplicity and humanness of her compositions. She is probably best known by her song "A Perfect Day."

Bond, Rt. Hon. Sir Robert, premier and colonial secretary of Newfoundland 1900-1909, was born in 1857; was educated for the bar but entered politics before being admitted; entered the legislature, 1882; appointed a delegate to British government by the government of Newfoundland on the French treaties question, 1890; appointed chairman of the deputation sent by the government to the "Ottawa conference," 1895; special delegate to conference on French treaties in Downing street, 1901; assisted in drafting regulations for carrying out Anglo-French convention, 1904; honorary LL.D., Edinburgh. Died, 1927.

Bonet-Maury (*bō'nā' mō'rē'*), **Amy-Gaston,** theologian, author, educator, vice-dean of protestant school of divinity of Paris; was born 1842; educated Lycee Henry IV., Paris; Schools of Divinity, Geneva and Strassburg; he served as protestant minister at Beauvais, where he erected the first church, and at St. Denis; lecturer in church history at protestant school of divinity of Paris, 1879. French delegate at congress of health and education, London, 1884; the parliament of religions, Chicago, 1893; the congress of religious sciences at Stockholm, 1897; corresponding member of the Institut de France, 1908. Died, 1919.

Bonheur (*bō'n ēr'*), **Marie Rosalie** (more commonly called Rosa), French artist, was born in Bordeaux in 1822. Her first master was her own father. In 1841 she contributed for the first time two small pictures to the French exhibition, *Two Rabbits*, and *Goats and Sheep*. In 1853 her famous *Horse Fair* was the principal attraction of the Paris exhibition. From 1849 she directed the gratuitous school of design for young girls. During the siege of Paris, 1870-71, her studio and residence at Fontainebleau were spared and respected by special order of the crown prince of Prussia. Died, 1899.

Boniface (*bon'i-fās*), **Saint,** was born at Credition, in Devonshire, 680. He was one of the most noted saints of the Roman Catholic church, generally styled "the apostle of Germany." For many years he engaged with much success in preaching and establishing churches in Germany, but was finally killed in 755 by a mob of armed pagans at Dokkum, in West Friesland. He was appointed archbishop of Mainz by Pope Gregory II.

Boniface VIII., previously Benedetto Gaetano, was born about 1228, and elected pope in 1294. He failed in his attempts to assert a feudal superiority over Sicily, and to exercise his papal authority in the disputes between France and England, and died, 1303.

Bonnat (*bō'nā'*), **Leon Joseph Florentin,** French painter, was born at Bayonne, 1833, and studied at Madrid, in Paris, and in Italy. He became famous for religious pictures, and latterly is best known as a great portrait painter. Died, 1922.

Bonner, Edmund, English prelate, bishop of London, was born about 1500. The reputation he gained at Oxford by his knowledge of the canon law recommended him to the notice of Wolsey, who promoted him to several offices in the church. In 1540 he was made bishop of London. After the accession of Elizabeth he refused to take the oath of supremacy. He was accordingly deposed from his bishopric and shut up in the Marshalsea, where he died in 1569.

Bonnet (*bō'nē'*), **Charles,** French naturalist and philosopher, was born at Geneva, 1720. He published several works on psychology. His *Considérations sur les Corps Organisés* is devoted to an examination of the theories of generation. He was for some years a member of the council of his native city. Died, 1793.

Bonnivard, de (*dē bō'nē'vär'*), **Francois,** French historian and hero of Byron's *Prisoner of Chillon;* was born near Geneva, 1496; educated at Turin, and became piror of St. Victor, near Geneva, 1510, at the age of fourteen years. Having fallen into the hands of robbers, who delivered him into the power of the duke of Savoy, he was imprisoned in 1530 in the castle of Chillon. The Genevese, aided by the Bernese, effected his liberation in 1536. He died about 1570.

Boone, Daniel, American hunter and pioneer, was born in Bucks county, Penn., 1735. The boy had but little education, but he knew the woods and Indian life. When thirty-four years old he went with five others into the wilds of Kentucky. He built a fort on the Kentucky river which he named Boonesborough. The Indians attacked the fort several times, but were driven off. He continued to live there until 1792, then went to Missouri, where he died in 1820.

Booth, Ballington, general-in-chief and president Volunteers of America, was born at Brighouse, England, 1859; son of Rev. William and Catherine Ballington. Commander Salvation Army, Australia, 1885-87; United States, 1887-96; founded, 1896, the Volunteers of America. Ordained presbyter, Chicago, 1896. Writer, public speaker, philanthropist.

Booth, Edwin Thomas, American actor, son of Junius Brutus Booth, was born in Baltimore, Md., 1833, appeared first on the stage in 1849, in *Richard III.* He speedily rose in his profession, visited England and the continent of Europe in 1861, 1881, and 1883, and met with enthusiastic receptions. He opened Booth's theater in New York, 1869, and did more than any other individual to keep the tone of dramatic art up to a moral and literary standard. Died, 1893.

Booth, Junius Brutus, actor, was born in England in 1796; first appeared on the stage in 1813, in the *Honeymoon*, and within four years became famous in London as *Richard III.* His American career was a triumph. He died in 1852.

Booth, Maud Ballington (née Charlesworth) wife of Ballington Booth, general-in-chief, Volunteers of America. Author: *After Prison—What? The Curse of Septic Soul Treatment; Twilight Fairy Tales.*

Booth-Tucker, Frederic St. George de Lautour, commander of Salvation Army in the United States; was born at Monghyr, Bengal, India, 1853; inaugurated Salvation Army work in India, 1882; had charge there until 1891; secretary for international work, Salvation Army, London, 1891-96; March, 1896-1904, in charge of United States; married in 1888 Emma Moss, daughter of General William Booth, of Salvation Army. Adopted name of Booth-Tucker. Author: *The Life of Catherine Booth; Life of General William Booth* and *In Darkest India*. Died, 1929.

Booth, William, general and commander-in-chief of Salvation Army; was born in Nottingham, England, 1829; became a minister of the Methodist New Connection in 1852; in 1865 organized the Christian mission in the densely populated east end of London. Out of this grew the Salvation Army, whose ramifications spread throughout the world. He is the author of *Orders and Regulations for Officers and Soldiers; Letters to My Soldiers.* Publications: newspapers entitled *War Cry, Young Soldier, Social Gazette*, etc. Died, 1912.

Bopp (*bop*) **Franz,** celebrated German philologist and Sanskrit scholar, was born at Mainz, 1791; was professor of oriental literature and general philology at Berlin. He was in 1842 made a knight of the newly erected French *Ordre du Mérite*, and in 1857 foreign associate of the French institute. Died, 1867.

Borah, William Edgar, lawyer, United States senator, was born in 1865, in Wayne county, Ill.; educated at the Southern Illinois academy, and at the Kansas State University, Lawrence; was admitted to practice law in 1890 at Lyons, Kan.; and devoted his entire time since then exclusively to practice of the law, until elected to the United States senate in 1907.

Borden, Sir Frederick William, Canadian National Statesman; M. P.; was born in 1847; King's College, Windsor, Nova Scotia, B.A.; Harvard, M.D.; appointed assistant surgeon 68th battalion King's county militia, 1869; surgeon lieutenant-colonel and hon. colonel of Canadian army medical corps; first elected to house of commons, 1874. Died, 1917.

Borden, Robert Laird, lawyer, premier, was born at Grand Pré, Nova Scotia, 1854; educated at Acacia Villa Academy, Horton. Began the study of law, 1874; admitted to bar, 1878; Q. C., 1891; president of Nova Scotia barristers' society, 1893-1904; hon. D. C. L., LL. D., 1905; member for the city and county of Halifax, 1896-1900; in 1901, upon the resignation of Sir Charles Tupper, elected leader of conservative party in the Dominion house of commons; premier, 1911-20.

Borden, William Cline, surgeon, educator; was born at Watertown, N. Y., 1858; graduated medical department Columbian University, Washington, 1883; appointed assistant surgeon, U. S. A. 1883; major and brigade surgeon, 1898: during Spanish-

American war commanded United States army general hospital, Key West, Fla.; dean medical department, George Washington University. Author: *Use of the Röntgen Ray by the Medical Department of the United States in the War with Spain.*

Borgia (*bôr'jä*), **Caesare,** Italian master of statecraft of great but evil fame, was born in 1476, the fourth son of Pope Alexander VI., by Rosa Vanozza. He compassed the death of his brother, Giovanni, who was the duke of Candia, in order to gain complete ascendency in the papal government; and in 1498, having been sent as nuncio to Louis XII. of France, he was created duke of Valentinois and married the daughter of Jean d'Albret, king of Navarre. He was sent in 1504 a prisoner to Spain by Pope Julius II., but escaped and joined the king of Navarre's army against Castile. In this campaign he was killed in 1507.

Borgia, Lucrezia, sister of the preceding, and like him the possessor of an infamous reputation, was born in 1480. Her father compelled her twice to marriage and divorce before she became the wife of the duke of Bisceglia. After her third husband had been murdered by Cæsare Borgia, she married Alfonso of Este, and passed her life in the court of Ferrara, cultivating literature and art. Died, 1523.

Borglum, John Gutzon de la Mothe ("Gutzon, Borglum"), sculptor, painter, born in Idaho, 1867; studied art in San Francisco; went to Paris, 1890. Exhibited as painter and sculptor in Paris salon; settled in New York since 1902. Exhibited in London and Paris, 1896-1901.

Borglum, Solon Hannibal, sculptor, was born at Ogden, Utah, 1868; pupil in Cincinnati art school and under Louis Rebisso and Fremiet, Paris; honorable mention, Paris salon, 1899; silver medal, Exposition Universelle, Paris, 1900; silver medal, Buffalo exposition, 1901; gold medal, St. Louis exposition, 1904; member national sculpture society. Died, 1922.

Borodin, Alexander Porfyrievich, composer, was born in St. Petersburg, 1834. He was educated for the medical profession and was all his life intensely active in this field, writing several books on chemistry, lecturing, and promoting schools of medicine for women. But he is most known as a composer of music. His symphony *In the Steppes* (1880) and his *Prince Igor* (completed after his death by Rimsky-Korsakov and Glazounov) are probably his best works. He died in 1887.

Borromeo (*bôr'rō-me'ō*), **Carlo, Count,** cardinal and archbishop of the Roman Catholic church, who exercised great influence during the pontificate of Pope Pius IV., was born at the castle of Arona, on the Lago Maggiore, northern Italy, 1538. Many supposed miracles at his tomb led to his being canonized thirty years after his death. Several memoirs of him have been published. Died, 1584.

Borrow, George, English author and traveler, was born in Norfolk in 1803. He made the gypsies one of the principal subjects of his study. His first important work was *The Zincali, or An Account of the Gypsies in Spain.* Died, 1881.

Bosanquet (*bō'sǎN'kā'*), **Bernard,** educator, formerly fellow of University College, Oxford; M.A.; LL.D.; born at Alnwick, England, 1848; Balliol College, Oxford, 1871-81; professor of moral philosophy, St. Andrews, 1903-08. Author: *Logic, or Morphology of Knowledge; History of Æsthetics; Philosophical Theory of the State,* etc. Died, 1923.

Boscawen (*bos'kâ-wen*), **Edward,** the admiral "Old Dreadnought," was born in Cornwall, England, 1711, the son of Viscount Falmouth. In 1755 he intercepted the French fleet off Newfoundland, capturing two 64-gun ships and 1,500 men. Boscawen crowned a long and victorious career by his signal victory over the French Toulon fleet in Lagos Bay, 1759. He received the thanks of parliament, a pension of 3,000 pounds a year, a seat in the privy council, and the command of the marines. He died at his Surrey seat, Hatchlands Park, 1761.

Bossuet (*bō'sü'e'*), **Jacques Benigne,** a distinguished orator and prelate of the Roman Catholic church, was born in Dijon, France, 1627. He was the author of several controversial works, all in defense of the Roman Catholic doctrines; but his fame rests chiefly on his *Sermons.* Died, 1704.

Boswell, James, the biographer of Johnson, was born in Edinburgh, 1740. He fell in with Johnson on a visit to London in 1763, and conceived for him the most devoted regard; made a tour with him to the Hebrides in 1773, the *Journal* of which he afterward published; settled in London, and was called to the English bar; succeeded, in 1782, to his father's estate, Auchinleck, in Ayrshire, with an income of 1,600 pounds a year. Boswell's *Life* appeared five years after Johnson's death. He died in 1795.

Bosworth, Joseph, Anglo-Saxon scholar, was born at Derbyshire in 1789, and died at Oxford in 1876, having been professor of Anglo-Saxon there from 1858. His chief works were *Elements of Anglo-Saxon Grammar* and *An Anglo-Saxon Dictionary.*

Botha (*bō'tä*), **Rt. Hon. Louis,** Boer soldier, statesmen, born in 1863 at Greytown in Natal, was a member of the Transvaal Volksraad, succeeded Joubert as commander-in-chief of the Boer forces during the war, and in 1907 became prime minister of the Transvaal colony under the new constitution. Died, 1919.

Botta (*bōt'tä*), **Carlo Giuseppe Guglielmo,** Italian historian, was born in 1766; studied medicine, and was imprisoned in 1792 as a revolutionary. He wrote *The History of Italy Between* 1789 *and* 1814, and a *History of the American War of Independence.* Died, 1837.

Botta, Paul Emile, French archæologist and traveler, son of preceding, was born in 1802. In 1830 he went to Egypt, where he entered into the service of Mehemet Ali as a physician. From Alexandria he was sent as consular agent to Mosul, where he commenced a series of discoveries which form an epoch in archæological science. He returned to France in 1868, and died at Acheres in 1870.

Botticelli (*bot'tē-chel'lē*), **Alessandro,** Italian painter, was born in 1437. In response to the invitation of Pope Sixtus IV., he went to Rome and executed some paintings for the chapel of the vatican. On returning to Florence he became a devoted follower of Savonarola. Died, 1515.

Bougainville (*bōō'gaN'vēl'*), **Louis Antoine de,** French navigator, was born in Paris, 1729. In 1734 he went as secretary of the French embassy to London. He took a voyage round the world with a frigate and a St. Malo transport, the first the French ever accomplished, which he described in his *Voyage Autour du Monde.* Died 1814.

Boughton (*bō'tun*), **George Henry,** artist, was born in England, 1834, and brought to the United States when three years old. He studied in New York, Paris, and London, and was a member of the National Academy of New York, and an associate of the Royal Academy after 1879. Died, 1905.

Bouguereau (*bōō'gē-rō'*), **William Adolphe,** French painter, was born at La Rochelle in 1825. In 1850 he gained the prix de Rome, and went to Italy to study. From that time his reputation was made. He painted some portraits, but his subjects are chiefly ideal, idyllic, and religious. He was made a member of the institute in 1876. Died, 1905.

Bouillon (*bōō'yôN'*), **Godfrey de,** duke of lower Lorraine; was born about 1061. He gained distinction in the armies of the emperor Heinrich IV., and was the great leader of the first crusade, and was unanimously proclaimed king of Jerusalem on its capture in 1099, but declined the title. He died in 1100, and was buried on Mount Calvary. His virtues are extolled in Tasso's *Jerusalem Delivered.*

Boulanger (*bōō'lǎN'zhā'*), **George Ernest Jean Marie,** French general and politician, was born in 1837; made colonel during the siege of Paris, general of brigade in 1880, and minister of war in 1886. A threat of prosecution drove him into exile, and he committed suicide at Brussels, in 1891.

Boulger (*bōl'jer*), **Demetrius Charles,** British historian and writer, was born in London 1853; educated at Kensington grammar school and private tuition. Has contributed to all the leading journals on questions connected with the Indian empire, China, Egypt, and Turkey since 1876; has also closely studied military questions, especially those connected with the French frontiers and the position of Belgium.

Boulton (*bōl'tun*), **Matthew,** English mechanician, born in 1728 at Birmingham. He founded the famous Soho iron and steel plant near Birmingham. Died, 1809.

Bourbaki (*bōōr'bä'kē'*), **Charles Denis Sauter,** French general, born at Pau, 1816, fought in the Crimea and Italy. In 1870 he commanded the imperial guard at Metz; and under Gambetta organized the army of the North and commanded the army of the Loire. He retired in 1881 and died in 1897.

Bourbon (*bōōr'bôN'*), **Charles,** French general known as "the constable de Bourbon," was born 1490; for his bravery at the battle of Marignano in 1515 he was made constable of France. With George of Frundsberg he led the mixed army of Spanish and German mercenaries that stormed and plundered Rome in 1527. Bourbon was struck down in the fierce struggle by a bullet, said to have been fired by Benvenuto Cellini.

Bourdaloue (*bōōr'dä'lōō'*), **Louis,** great French preacher, was born at Bourges, 1632, where, after being educated by the Jesuits for the church, he lectured in the academy for some time on humanity, theological ethics, etc. His sermons, based chiefly on the texts of Isaiah, St. Paul, and St. Augustine, were marked by profound moral earnestness and great logical power. His later years were spent in the preaching and practice of charity. He died at Paris in 1704.

Bourget (*bōōr'zhe'*), **Paul,** French poet, critic, and novelist, member of the French academy, was born at Amiens, 1852. He wrote many eminently realistic and analytical books, chiefly studies of the scientific and pessimistic tendencies of the age. Among them are: *Cosmopolis; Pastels of Men; Impressions of America.*

Bourinot (*bōō'ri-nō'*), **Sir John George,** Canadian author and parliamentarian, was born at Sydney, Nova Scotia, in 1837; educated at Trinity College, Toronto; established the Halifax *Reporter,* and in 1880 became clerk of the Dominion house of commons. Among his works are *How Canada Is Governed; Constitutional History of Canada; Parliamentary Practice and Procedure.* Died, 1902.

Boutell, Henry Sherman, lawyer, was born at Boston, Mass., 1856; moved with parents to Chicago in 1863; graduated from Northwestern University, 1874, and from Harvard University, 1876; admitted to the bar in Illinois, 1879, and the supreme court of the United States, 1886; was member of the board of trustees of Northwestern University, and in 1904 received the degree of LL.D. Served in Congress 1898-1911. Died, 1926.

Boutwell, George Sewall, legislator, political reformer, was born at Brookline, Mass., 1818; was self-instructed after a common school course. He began the study of law at eighteen, but never practiced. He was governor of Massachusetts 1852-53; member of congress 1863-69; secretary of the treasury 1869-73; and United States senator from Massachusetts 1873-77. Died at Groton, Mass., 1905.

Bowditch (*bou'dich*), **Charles Pickering,** trustee, archæological student; born at Boston, Mass., 1842; graduated at Harvard in 1863. Served in Civil War 1863-64; member of many archæological, historical, and other learned societies. Died, 1921.

Bowditch, Henry Pickering, physiologist; born at Boston, 1840; graduated from Harvard, 1861; Harvard Medical School, 1868; D.Sc., 1898; LL.D.; studied physiology in France and Germany, 1868-71; assistant professor, 1871-76, and 1876-1906, professor physiology at Harvard Medical school. Died, 1911.

Bowditch, Nathaniel, American astronomer, was born in 1773 at Salem, Mass. He showed at a very early age a great inclination for mathematics, in which he attained great proficiency, without ever attending a university. His work, *The New American Practical Navigator,* was received with great favor. He was later chosen professor of mathematics and astronomy in Harvard College. He died in 1838.

Bowell (*bou'el*), **Hon. Sir Mackenzie,** Canadian statesman; premier of Canadian parliament, 1894-95; was born at Rickinghall, Suffolk, 1823; removed to Canada, 1833. Entered Canadian parliament, 1867; minister of customs, 1878-91; minister of militia and defense, 1891; of trade and commerce, 1892-94; president of privy council, 1895-96; elected to the senate, 1892. Died, 1917.

Bowen, Francis, writer of political economy and philosophy, was born in Massachusetts in 1811; graduate of Harvard and later instructor there in political economy and intellectual philosophy. In 1843 he became editor of the *North American Review.* In 1854 he succeeded Dr. Walker in the Alford professorship of natural religion, moral philosophy, and civil polity. Died, 1890.

Bowles (*bōlz*), **Samuel,** journalist, for more than thirty years editor of the *Springfield Republican,* was born at Springfield, Mass., 1826; died, 1878. He traveled widely over the United States and was always warmly interested in political affairs, though never holding office. He was an accomplished and fascinating conversationalist, cosmopolitan in taste, and liberal in opinion.

Bowne (*boun*), **Borden Parker,** educator, writer on philosophy; was born at Leonardville, N. J., 1847; A.B., 1871, A.M., 1876; LL.D., Ohio Wesleyan, 1881; assistant professor of modern languages College of the City of New York, 1875-76, Author *The Philosophy of Herbert Spencer; Studies in Theism; Metaphysics; Introduction to Psychological Theory; The Christian Life; The Atonement.* Died, 1910.

Boyle, Robert, physicist, was born at Lismore castle, Ireland, 1626. Settling at Oxford in 1654, he experimented in pneumatics, and improved the air-pump. As a director of the East India company he worked for the propagation of Christianity in the East. He discovered "Mariotte's law" seven years before Mariotte. Died, 1691.

Bozzaris (*bōt'sä-rēs*) (often, *bō-zar'is*), **Marcos,** Greek patriot who distinguished himself in the early part of the struggle for Greek independence, was born at Suli, in the mountains of Epirus, toward the close of the eighteenth century. He died in battle while successfully leading a body of 1,200 men against the Turco-Albanian army, 4,000 strong, in 1823.

Bracton, Henry de, British ecclesiastic and jurist, was a "justice itinerant"; in 1264 became archdeacon of Barnstaple and chancellor of Exeter Cathedral; Died in 1268. His *De Legibus et Consuetudinibus Angliae* was the earliest attempt at a systematic treatment of the body of English law.

Braddock, Edward, British major-general, was born in 1695; commander against the French in America in 1755; with a force of 2,000 British regulars and provincials, he moved forward to invest Fort du Quesne, now Pittsburg, Pa.; his troops fell into an ambuscade of Indians, while they were attacked in the front by the French, and half of them slain, among the mortally wounded being Braddock.

Bradford, William, one of the pilgrims, and second governor of Plymouth colony was born in England in 1590, died at Plymouth, Mass., 1657. He sailed from Leyden, Holland, in the Mayflower. One of

his first acts, as the successor of Governor Carver, was to confirm the treaty with Massasoit, just in time to suppress a dangerous Indian conspiracy. He was governor for thirty-one years. He was author of *History of Plymouth Colony from 1602 to 1647*.

Bradlaugh (*brad'lô*), **Charles,** English politician, was born in London in 1833; in 1853 he entered a solicitor's office. His lectures in the hall of science, London, on social, political, and religious questions, were very popular. In 1872 he published his *Impeachment of the House of Brunswick*. In 1880 he was returned to parliament for Northampton, but refusing to take the oath, he was not allowed to take his seat until after the general election of 1885. Died, 1891.

Bradley, James, distinguished astronomer, was born in Gloucester, England, in 1693; in 1727 he published his theory of the aberration of the fixed stars, containing the important discovery of the aberration of light. His next discovery was that the inclination of the earth's axis to the ecliptic is not constant. Latterly he became astronomer-royal at Greenwich, and laid the foundations of modern astronomy. He died in 1762.

Brady, Alice (1895——), motion picture actress, educated in a New Jersey Convent, studied opera in Boston. She joined a musical comedy, encountering opposition from her father, William A. Brady, the director. Later he placed her in *Little Women*, her success being instantaneous. Her versatility and dramatic power are well shown in *Red Head*, and *The Fear Market*.

Bragg, Braxton, American general, born in Warren county, N. C., 1817, served with distinction under General Taylor in the Mexican war, and retired to private life in 1859. He became a brigadier-general in the confederate army in 1861, and succeeded General Beauregard in command of the army in Mississippi, with the rank of general, May, 1862. Died, 1876.

Brahe (*brā*; Dan. *brā'e*), **Tycho,** Danish astronomer, was born at Knudsthorp, 1546; studied at Copenhagen. The great merit of Brahe as an astronomer lies in the rare industry and assiduity with which he observed and recorded the position of stars and planets, and it was partly due to these observations that Kepler was led to the conception of his three famous laws. Died, 1601.

Brahms (*brāms*), **Johannes,** German musical composer, was born at Hamburg, 1833. Schumann early expressed the highest opinion of Brahms' genius, but for many years he was not appreciated in Germany. In 1861 he went to Vienna, where he acquired a high reputation, and held several important musical posts. Died, 1897.

Braille, Louis, French teacher of the blind, was born at Coupvray, 1809. He became blind at an early age but attained proficiency in music and was organist in a Paris church. In 1828 he began teaching the blind and eventually devised a system of point writing for literature and music known as the Braille system, now used extensively for the instruction of the blind throughout the world. He died in 1852.

Bramante (*brä-män'tä*), the assumed name of Donato Lazzari, celebrated Italian architect, born near Urbino in 1444. He was employed at Rome by Popes Alexander VI. and Julius II., for the latter of whom he planned, and partly executed, the buildings connecting the Belvedere and the Vatican, and subsequently designed the great church of St. Peter's, completed by Michael-angelo. Died, 1514.

Brande (*brand*), **William Thomas,** English chemist, born at London, 1788, died in 1866, having become an F. R. S. in 1809, professor of chemistry to the Apothecaries' company in 1812, Davy's successor at the Royal Institution in 1813, and head of the coinage department of the mint in 1854.

Brandeis, Louis Dembitz, born 1856 in Louisville, Ky., American jurist. In 1877 was graduated from Harvard Law School and in 1916 was appointed associate justice of the United States Supreme Court.

Brandes (*brän'des*), **George,** literary critic, was born of Jewish parentage, 1842, in Copenhagen, where he graduated at the university in 1864. Among his works are *French Romanticism; Impressions of Poland and Russia;* and *Main Currents of Nineteenth-century Literature*, etc. Died, 1927.

Brandl, Alois, professor of English philology in the University of Berlin since 1895; born at Innsbruck Tyrol, 1855; educated at Innsbruck; Ph.D.; LL.D.; extraordinary professor in the German University of Prague, 1884-88; ordinary professor in the University of Göttingen, 1888-92; of Strassburg, 1892-95; member of Berlin Akademie, 1904. Author of *Middle English Literature, Shakespeare, Schlegel-Tieck's Shakespeare*, etc.

Brant, Joseph, Indian chief of the Mohawk nation, was born in Ohio about 1742; held a commission in the British service, and fought against the American colonists in the revolution. He died in 1807.

Branting, Karl Hjalmar, Swedish statesman, was born at Stockholm, 1860. He was educated at Upsala University, then turned to journalism and became active in politics. He was elected to the Riksdag in 1896, was prime minister in 1920, was chairman of the Stockholm convention of Socialists for promoting peace, 1917, and attended as delegate from Sweden the meeting of the League of Nations at Geneva, 1920. He received the Nobel Peace Prize in 1921. Died, 1925.

Brassey, Thomas, English engineer and railroad contractor, was born in 1805 at Brerton, Cheshire, England; died in 1870. After building part of the Grand Junction and the London and Southampton railroads, he contracted, 1840, in partnership with another, to build the railroad from Paris to Rouen. In partnership with Betts and Peto he undertook the Grand Trunk of Canada, 1,100 miles in length, including the great bridge at Montreal.

Brassey, Thomas, Lord, English political economist and authority on seamanship, was born at Stafford in 1836, son of Thomas Brassey, the great contractor; educated at Rugby and at Oxford; was civil lord of the admiralty 1880-84; secretary to the admiralty 1884-85; governor of Victoria, Australia, 1895-1900. He was an enthusiastic yachtsman, interested in the British seamen, a writer on the British navy, and in 1893-95 was president Institute of Naval Architects. Died, 1918.

Bray, Frank Chapin, editor, born at Salineville, Ohio, 1866; graduated at Wesleyan University, Conn., 1890; apprenticed to printer's trade, 1878; editor: *Topics of the Day* department of the *Literary Digest*, New York, 1894-99; editor *The Chautauquan* 1899; 1902, editor-in-chief; 1906-1914, editor-manager *Chautauqua Press* and other publications.

Brazza (*brät'sä*), **Pierre Savorgnan de,** explorer, was born of Italian descent at Rio de Janeiro in 1852. In 1878 the French government gave him 100,000 francs for exploring the country north of the Congo, where he secured vast grants of land for France, and founded several stations; by 1886 he had established twenty-six stations. He continued to explore until 1897, being in 1888-97 governor of French Congo. He died in 1905.

Breckinridge, John Cabell, American politician, was born in Kentucky in 1821; entered congress in 1851, and in 1856 was elected vice-president under Buchanan. He became United States senator in 1861, was given a command in the confederate army, and rose to the rank of major-general Died, 1875.

Bremer (*brē'mĕr*), **Frederika,** Swedish novelist, was born in Finland in 1801, but was brought up near Stockholm, Sweden. Her first important novel *The Neighbors*, gave her a wide fame. She has been called the "Jane Austen" of Sweden. Among her best books are *The Diary, The President's Daughter*, and *Brothers and Sisters*. Died, 1865.

Brent, Charles Henry, Protestant Episcopal bishop of the Phillipines, was born at Newcastle, Ontario, 1862; graduated from University Trinity College, Toronto, 1884, A.M., 1889, D.D., 1901; associate rector St. Stephen's, Boston, 1891-1901. On editorial staff *The Churchman*, 1879-1900; William Belden Noble, lecturer, Harvard, 1907. Author: *With God in the World*. Died, 1929.

Breton (*brē'tôn'*), **Jules Adolphe,** French painter, distinguished as the artist of rural life, was born in 1827; died, 1906. His reputation greatly increased after the extraordinary sale of one of his pictures, *The First Communion*.

Breton de los Herreros (*brā-tōn' dā lōs er-rā'rōs*), **Don Manuel,** the most popular of modern Spanish poets, born 1796 at Quel, in the province of Logrono. In 1824 a comedy entitled *A la Vejez Viruelas*, was staged with great success. Henceforward he furnished theatrical managers with over 150 pieces, most of which have been highly popular. Died, 1873.

Brewer, David Josiah, jurist, associate justice of the United States supreme court, was born at Smyrna, Asia Minor, 1837; was graduated from Yale College in 1856 and from the Albany Law School in 1858; in 1861 was appointed United States commissioner; during 1863 and 1864 was judge of the probate and criminal courts of Leavenworth county; in 1870 was elected a justice of the supreme court of Kansas, and reëlected in 1876 and 1882; in 1884 was appointed judge of the supreme court of the United States in 1889; president of the Venezuelan boundary commission, appointed by President Cleveland; president international congress of lawyers and jurists, St. Louis, 1904. Author: *The Pew to the Pulpit; The Twentieth Century from Another View Point; American Citizenship; The United States a Christian Nation*. Died, 1910.

Brewer, William Henry, scientist, professor of agriculture, Sheffield Scientific School, Yale, 1864-1903; born at Poughkeepsie, N. Y., 1828; graduated at Yale Scientific School, 1852; first assistant on geological survey of California, 1860-64; president Arctic club of America; United States forestry commission, 1896; scientific survey of the Philippine Islands, 1903, etc. Died, 1910.

Brewster, Sir David, British natural philosopher, born at Jedburgh, Scotland, 1781. He was educated for the church of Scotland, but undertook the editorship of the *Edinburgh Encyclopædia*. In 1819 the Royal Society awarded him the Rumford gold and silver medals for his discoveries on the polarization of light; in 1832 he was knighted, and had a pension conferred upon him; in 1849 he was elected one of the eight foreign associates of the French institute, the highest scientific distinction in Europe. In 1859 he was chosen vice-chancellor of Edinburgh University. Died, 1868.

Brian, Boroihme (*bri'an bō-roim'*), or **Brian Boru** (*bō-rōō'*), king of Ireland, was born 926; ascended the throne in 978. Some time afterward he became supreme ruler of Ireland. He defeated the Danes in upward of twenty pitched battles. In the battle of Clontarf, 1014, in which he was killed, he gained a signal victory over a united army of revolted natives and Danes.

Briand, Aristide, French statesman, was born at Nantes, 1862. Through his writings in socialist journals, he was elected to the Chamber of Deputies in 1902. He rose rapidly into the ranks of influence, was instrumental in bringing about equanimity in the separation of Church and State (1905), became Minister of Public Instruction, Minister of Justice, then Prime Minister in 1909. His greatest work for France was in mobilizing the railway strikers in 1910 and during the war. When he was elected prime minister in 1921 it was for the seventh time. In that year he was spokesman for France at the disarmament conference at Washington. Died, 1932.

Bridges, Robert, English physician, dramatist and poet, was born in 1844. He studied and practiced medicine. Later he turned to literature. Appointed poet laureate, 1913. Among his plays are *Ulysses, Demeter* and *Nero*. His best known poems are *Prometheus* and *Eros and Psyche*. Died in 1930.

Bridgewater, Duke of (Francis Egerton) (1736-1803), called "the father of British internal navigation," was noted for establishing canals in England.

Bridgman, Frederick Arthur, artist; was born at Tuskegee, Ala., 1847; apprentice in engraving department American bank note company, New York, 1864-65; knight Legion of Honor, 1878; officer Order of St. Michael of Bavaria. Author: *Winters in Algeria; Anarchy in Art; The Idol and the Ideal*.

Briggs, Charles Augustus, clergyman, theologian, was born in New York in 1841; studied in University of Virginia, 1857-60; Union theological seminary, 1861-63. Editor *Presbyterian Review*, 1880-90; was tried for heresy and acquitted by presbytery of New York, 1892, but suspended by general assembly, 1893; ordained priest by Protestant Episcopal bishop of New York, 1899. Author: *Biblical Study; American Presbyterianism; Messianic Prophecy; Whither, etc.* Died, 1913.

Briggs, Le Baron Russell, educator; was born at Salem, Mass., 1855; graduated from Harvard, 1875; A. M., 1882; hon. LL.D., Harvard, 1900; Western Reserve, 1906; assistant professor English, 1885-90, professor English since 1890, dean of college, 1891-1902, dean faculty of arts and sciences. Boylston professor rhetoric and oratory since 1904, Harvard; president Radcliffe College, 1903-1923. Has edited and annotated a number of English classics.

Bright, John, eminent orator and radical statesman, was born of Quaker parentage, 1811; entered parliament for Durham, being afterward returned from Manchester, and losing that seat through his opposition to the Crimean war. He joined Gladstone's government which disestablished the Irish church, but opposed his home rule policy in 1886, Died, 1889.

Bright, Richard, English physician, was born 1789, died 1858; educated at Edinburgh; practiced with great success in London. His specialty was morbid anatomy and the connection between morbid symptoms and alterations of structure of the internal organs. His publications on this topic were made in 1836-40.

Brinton, Daniel Garrison, American ethnologist, was born at Thornbury, Pa., 1837, and died at Atlantic City, N. J., 1899. He graduated from Yale in 1858, and from Jefferson Medical College in 1861. In 1865 he settled in Philadelphia. There he undertook for a time the professorship of ethnology in the Academy of Natural Sciences and in 1886 was professor of American linguistics in the University of Pennsylvania.

Brisbane, Arthur, editor and writer on present day topics; was born at Buffalo, N. Y., 1864; educated American public schools, and five years in France and Germany. Began newspaper work in 1883; seven years on New York *World* as managing editor of different editions; editor New York *Evening Journal*, 1897-1921.

Bristol, Frank Milton, Methodist Episcopal bishop; was born in Orleans county, N. Y.; graduated Northwestern University, Ph.B., 1877; A.M.; D.D.; five times member general conference Methodist Episcopal church, and in 1908 elected bishop. Author: *Providential Epochs; The Ministry of Art*, etc.

Bristow, Joseph Little, journalist, United States senator, was born in Wolfe county, Ky., 1861; graduated from Baker University, Kansas, 1886; private secretary to Governor Morrill (Kansas), 1895-97; fourth assistant postmaster-general, 1897-1905; had charge of investigation of Cuban postal frauds and reorganization of Cuban postal service, 1900. Appointed by the president special Panama railroad commissioner, 1905; elected United States senator for the term 1909-15.

Brock, Sir Isaac, British officer, was born in Guernsey in 1769. In the war of 1812, when an American army, under General Hull, invaded Canada, the Americans surrendered without striking a blow. He was killed in the battle of Queenstown, Canada, 1812.

Brockhaus (*brok'hous*), **Friedrich Arnold,** founder of the famous publishing firm of Brockhaus in

Leipzig, and original publisher of the *Conversations-Lexikon*, was born at Dortmund in 1772; from 1811 to 1817 he carried on business in Altenburg, and finally moved to Leipzig, where he died, 1823.

Brodeur, Hon. Louis Philippe, Canadian statesman, minister of marine and fisheries in the Dominion government 1906-1911, was born at Beloeil, in the province of Quebec, 1862; educated at the college of St. Hyacinth; LL.D.; K.C., 1899; deputy-speaker of the house of commons, 1896-1900; speaker, 1900-04; minister of inland revenue, 1904-06; member of the imperial conference; one of the ministers who negotiated the Franco-Canadian treaty of 1907.

Bronte (*bron'te*), **Charlotte,** English authoress, was born at Thornton, 1816, died, 1855. After some experience as a governess she engaged with her sisters in the writing of novels, and in 1846 published with them a small volume of poems. In 1847 she published the well-known story, *Jane Eyre*. Her second story, *Shirley*, was published in 1849, and her third and last, *Villette*, in 1853. In 1854 she married Rev. Mr. Nicholls, but soon after her marriage died of consumption.

Brooke, Rupert, poet, born at Rugby, England, in 1887. He was educated at Rubgy and Kings College, Cambridge. At the beginning of the World War he enlisted in the British army. He died in 1915 on a hospital ship at Lemnos. His first volume of poems apeared in 1911. A second, called *1914 and Other Poems*, was published in 1915, shortly after his death. Many of the sonnets from this volume portray the unselfish exaltation which possessed so many young men at the beginning of the war.

Brooke, Stopford Augustus, British Unitarian preacher and man of letters, was born near Dublin 1832; educated at Trinity College and received degrees M.A. and LL.D. In 1872 appointed chaplain in ordinary to the queen. He published *Life and Letters of Frederick W. Robertson; Theology in the English Poets; History of English Literature; Study of Tennyson;* etc. Died in 1916.

Brooks, Phillips, preacher and orator, was born at Boston, Mass., 1835; graduate of Harvard, 1855; 1870-91 rector of Trinity church, Boston; from 1891 to 1893, bishop of Massachusetts. His freedom from the ordinary sectarian trammels, his liberal views of doctrine, with his profound convictions as to vital Christian truths, and his deeply spiritual, yet intensely practical preaching, gave him great popular power. He died in 1893.

Brougham (*brōō'am* or *brōōm*), **Henry Peter,** Lord Brougham and Vaux, British jurist, philosopher, and statesman, was born at Edinburgh, 1779. In 1808 he joined the English bar, and speedily acquired high reputation as an advocate. In 1810 he entered parliament, where he became a chief of the liberal party. In 1830 he became the acknowledged champion of parliamentary reform, was called to the house of peers, and appointed lord high chancellor of England, which office he resigned in 1834. He devoted the remainder of his life almost exclusively to science and literature at his chateau at Cannes, France. Died, 1868.

Brown, Calvin Smith, university professor, was born in Tennessee, 1866; graduated at Vanderbilt, 1888; D.Sc., 1892; studied at the Universities of Paris and Leipzig, 1894-5; Ph.D., University of Colorado, 1899; traveled in Spain, Italy, Greece, 1903-04. Professor of English, comparative literature, modern languages, Vanderbilt University, University of Colorado, and University of Missouri, 1889-1905; professor Romance language, 1905-9, acting professor German language and literature, 1908, professor since 1909, University of Mississippi. Editor: Tennyson's *Enoch Arden* and the two *Locksley Hall* poems; *The Later English Drama*, etc.

Brown, Charles Brockden, early American novelist, was born at Philadelphia, Pa., 1771, and died there in 1810. His two best known stories are *Wieland, or the Transformation*, and *Arthur Mervyn*.

Brown, Elmer Ellsworth, educator, chancellor of New York University since 1911; was born at Kiantone, Chautauqua county, N. Y., 1861; graduated from the Illinois State Normal University, 1881; University of Michigan, 1889; Ph.D.; associate professor, University of California, 1892-93; professor same, 1893-1906; U. S. commissioner of education, 1906-1911; chancellor N. Y. Univ., 1911—.

Brown, Francis, educator, was born in 1849; was appointed Davenport professor of Hebrew and the cognate languages, Union theological seminary, New York, in 1890; president of the faculty, Union theological seminary, 1908. Author of *Assyriology: Its Use and Abuse;* also many articles and reviews. Died, 1916.

Brown, Henry Billings, jurist, associate justice of the United States supreme court, 1891-1906; born at South Lee, Mass., 1836; graduate of Yale, 1856; LL.D., Yale, 1891; United States judge for eastern district of Michigan, 1875-90; resigned from United States supreme court bench, 1906. Died, 1913.

Brown, Henry Kirke, American sculptor and painter of great versatility; author of the colossal statue of General Washington in Union square, New York; *The Angel of the Resurrection*, in Greenwood cemetery, Brooklyn. He was born in 1814. Died, 1886.

Brown, John, leader of the Harper's Ferry insurrection, 1859, designed to incite the slaves of the southern states to rebellion; was born at Torrington, Conn., in 1800. In 1854 he went to Kansas. After the slavery agitation in that state was settled by a general vote, he traveled through the southern and eastern states, declaiming against slavery, and endeavoring to organize an armed attack upon it. In 1859, at the head of seventeen white men and five blacks, he commenced active hostilities by a descent upon Harper's Ferry. Instead of retreating to the mountains with arms and hostages, as his original design had been, Brown lingered in the town until evening, by which time 1,500 militiamen had arrived. He was captured, tried for treason, and executed in 1859.

Brown, Norris, lawyer, United States senator, was born in 1863, at Maquoketa, Iowa; graduated from Iowa State University, 1883, and two years later received the degree of M.A.; admitted to practice law in Iowa, 1883; moved to Kearney, Neb., 1888; attorney-general, 1904-06; was elected to the United States senate for the term 1907-13.

Browne, Charles Farrar, American humorist and satirist, known by the pseudonym of "Artemus Ward," was born at Waterford, Maine, 1834. He traveled over America lecturing, carrying with him a whimsical panorama as affording texts for his numerous jokes, which he took with him to London, and exhibited. He died in England in 1867.

Browne, Sir Thomas, English physician and author, was born at London in 1605. During the civil wars and the protectorate he remained in learned seclusion, indifferent to either party. He was knighted in 1671, and died on his birthday in 1682. His chief works are *Religio Medici;* and *Pseudodoxia Epidemica*.

Browning, Elizabeth Barrett, English poetess, was born at London in 1806; died at Florence, Italy, 1861. In 1846 she married Robert Browning. In 1850 Mrs. Browning published her collected works, together with several new poems. *Aurora Leigh*, her longest production, was published in 1856. *Poems Before the Congress* appeared in 1860.

Browning, John M., American inventor, was born at Ogden, Utah, 1854. His father was a gunsmith. He designed his first patented gun in 1879, then devoted himself to designing sporting rifles and automatic pistols for the Remington, Winchester and Colt companies for large royalties. He received high honors for his pistols and the Browning machine gun used during the World War. Died, 1926.

Browning, Oscar, English historian and critic, was born at London, 1837; educated at Eton, and King's College, Cambridge; master at Eton, 1860-75; college and university work at Cambridge from 1876. Died, 1923.

Browning, Robert, British poet, born at Camberwell, May 7, 1812; died Dec. 12, 1889. After completing his education at University College, London, he went to Italy, where he made diligent study of its mediæval history and the life of the people. In 1846 he married Elizabeth Barrett, and resided chiefly in Italy, making occasional visits to England.

His first poem, *Pauline*, was published in 1833; followed by *Paracelsus* in 1835; *Strafford, a Tragedy* (1837), produced at Covent Garden, Macready and Helen Faucit playing the chief parts. *Sordello* appeared in 1840, followed by the series called *Bells and Pomegranates*, including the three plays *Pippa Passes, King Victor and King Charles*, and *Colombe's Birthday;* four tragedies: *The Return of the Druses, A Blot on the Scutcheon, Luria*, and *A Soul's Tragedy;* and a number of dramatic lyrics, among them the well-known *Pied Piper Of Hamelin*, and *How they Brought the Good News from Ghent to Aix* (1841-46). Between 1846 and 1868 appeared *Men and Women; Christmas Eve and Easter Day; Dramatis Personae*, and some shorter poems. *The Ring and the Book* (1869), his longest poem, was followed by *Balaustion's Adventure;* and *Prince Hohenstiel-Schwangau* (1871); *Fifine at the Fair* (1872); *Red Cotton Nightcap Country* (1873); *Aristophanes' Apology; Inn Album* (1875); *Dramatic Idylls; People of Importance in Their Day* (1887); and *Asolando* (1889). He received the degree of D.C.L. from Oxford in 1882.

A Browning Society for the study of his works was formed in 1881, under whose auspices several of his dramas have been performed. His poems are often difficult to understand from the quick transitions of thought, and they are not infrequently rugged and harsh in expression, yet they are among the chief poetic utterances of last century.

Brown-Sequard (*sē'kär*), **Edouard,** physiologist, was born at Port Louis, Mauritius, 1818. In 1864 he became professor of physiology at Harvard; in 1873 became a medical practitioner in New York, and in 1878 succeeded Claude Bernard as professor of experimental medicine at the College de France. He published lectures on *Physiology and Pathology of the Nervous System*. He died in Paris in 1894.

Brubacher, Abram Royer, American educator, was born at Lebanon, Pa., in 1870. He was educated at Yale University, receiving the degree of Ph.D. in 1902. From 1908-14 he was Superintendent of Schools in Schenectady, N. Y., resigning to become President of State College for Teachers at Albany, N. Y., which position he holds at the present time. He was president of the N. Y. State Teachers Association in 1913-14. Besides various educational articles in magazines he is author of several English textbooks, of a general text in Education. advisory editor of the Volume Library.

Bruce, Robert, king of Scotland, born 1274, did homage for a time to Edward, but joined the national party; stabbed Comyn in a quarrel at Dumfries, 1306, and was that same year crowned king at Scone. In 1328, fourteen years after the great victory of Bannockburn, the independence of Scotland was acknowledged as well as Bruce's right to the crown. He died in 1329, in the thirty-third year of his reign.

Brugsch (*brooksh*), **Heinrich Karl,** German Egyptologist, Prussian consul to Cairo, was born in 1827. He organized the first Egyptian University, was an eminent authority on Egyptian archæology, and wrote numerous works covering many phases of that subject. Died, 1894.

Brummel, George Bryan, "Beau Brummel," was born at London in 1778; in his day the prince of dandies, was patronized by the Prince of Wales (afterward George IV.); quarreled with the prince; fled from his creditors to Calais, where, reduced to destitution, he lived some years. He settled at length in Caen, where he died insane in 1840.

Brunelleschi (*brōō'nel-les'kē*), **Filippo,** Italian architect, was born at Florence in 1377, is reckoned the first who established on a sound basis the theory of perspective. Brunelleschi's dome in the cathedral at Florence, measured diametrically, is the largest in the world, and served as a model to Michaelangelo for that of St. Peter's. Died, 1446.

Brunhilde (*brün'hēld'*) (Brunehaut), daughter of the Visigothic king, Athanagild; married King Sigebert of Austrasia in 561, and was afterward regent for her two grandsons, Theodebert II., king of Austrasia, and Theodoric II., king of Burgundy. Died, 613.

Bruno (*brōō'nō*), **Giordano,** a restless speculative thinker, was born at Nola, near Naples, in 1548, was trained a Dominican, but, doubting the dogmas, fled to Geneva, whence Calvinist suspicion of his scepticism drove him to Paris, where he lectured; in 1592 in Venice he was arrested by the officers of the inquisition and conveyed to Rome in 1593. There, in 1600, he was burned as an obstinate heretic.

Bruno, Saint, founder of the Carthusian order, was born at Cologne about 1040; became rector of the cathedral school at Rheims, but, oppressed by the wickedness of his time, withdrew in 1084 to the wild mountain of Chartreuse, near Grenoble. Here with six friends he founded the austere Carthusians. In 1094 he established a second Carthusian monastery at Della Torre in Calabria, where he died, 1101.

Brutus, Lucius Junius, figures in the history of early Rome as the hero who overturned the monarchial, and established the republican form of government. That his character as a stern old Roman hero might be complete, the legend adds that he sacrificed to the new republic his own sons, detected in a conspiracy to restore the monarchy. He fell in mortal combat against the Tarquins about 507.

Brutus, Marcus Junius, was born in 85 B. C., and died 42 B. C. He joined Pompey in his war against Cæsar; but after Pompey's defeat he was kindly treated by Cæsar, and made governor of Cisalpine Gaul. In 44 B. C., in his eagerness to preserve the liberty of the republic against Cæsar's apparent purpose of being made emperor, he was persuaded by Caius Cassius to join a conspiracy, and helped in Cæsar's assassination, although the latter had given him many honors and promised him others. Soon after, he and Cassius were defeated at Philippi by Antony and Octavius. Feeling that their cause was lost, Brutus at once flung himself upon his sword and died.

Bryan, William Jennings, editor, orator, and publicist; born in Salem, Ill., 1860; graduate of Illinois College, Jacksonville, 1881; Union College of Law, Chicago, 1883; member of congress, 1891-95; delegate to national democratic convention, 1896; wrote the "Silver plank" in its platform, made a notable speech, and was nominated for president of United States; received 176 electoral votes against 271 for William McKinley. Nominated for president in 1900 by democratic populist and silver republican conventions; again defeated by McKinley; later he established a weekly political magazine, *The Commoner*. Nominated for president in 1908, but defeated by W. H. Taft. Appointed Secretary of State by President Wilson, 1913. Resigned in 1915, after outbreak of World war. Died, 1925.

Bryan, William Lowe, educator; born near Bloomington, Ind., 1860; graduated from Indiana University, 1884; Ph.D.; LL.D.; vice-president 1893-1902, president since 1902, Indiana University. President American psychological association, 1903. Author: *Plato the Teacher*, edited with notes and introduction; *The Republic of Plato, with Studies for Teachers;* and many contributions on psychological subjects in current periodicals.

Bryant, William Cullen, poet and journalist, born at Cummington, Hampshire county, Mass., 1794; at eighteen he composed his *Thanatopsis*. He established *The New York Review*, to which he contributed many of his best poems. In 1826 he became principal editor of *The Evening Post*. The first collected edition of his poems appeared in 1832. In 1842 he published *The Fountain, and Other Poems*. In 1858 appeared a new edition of his poetical works, and in 1869 a metrical translation of the *Iliad*, followed in 1871 by that of the *Odyssey*. He afterward collaborated in writing the *History of the United States*. Died, 1878.

Bryce (*bris*), **Rt. Hon. James,** British historian, diplomat, statesman, was born at Belfast, Ireland, in 1838; educated at Glasgow University and Trinity College, Oxford; D.C.L., LL.D., F.R.S. He was admitted to Lincoln's Inn, 1867; became regius professor of civil law at Oxford University, 1870-93; under-secretary for foreign affairs for five months in 1886; chancellor of the duchy of Lancaster, 1892-94; president of the Board of Trade, 1894-95; chief secretary for Ireland, 1905-07. He was appointed ambassador to the United States, 1906. He took a deep interest in the condition of the eastern Christians and their emancipation from Turkish misrule. He strongly opposed the war in South Africa, and the education act of 1902. Author of *The American Commonwealth*. Died, 1921.

Buchanan (*bu-kan'an* or *bu-kan'an*), **James,** fifteenth president of the United States, was born in Pennsylvania, 1791; admitted to the bar, 1812; member of congress, 1821-31; minister to Russia, 1832-34; United States senator, 1834-35; secretary of state, 1845-49; minister to England, 1853-56; president, 1857-61. He spent the remainder of his life at his home in Lancaster, Pa. He died in 1868.

Buck, Dudley, organist, composer; born Hartford, Conn., 1839; studied at Trinity College, then Leipzig conservatory of music, and at Dresden and Paris; was organist Holy Trinity church, Brooklyn, and director and organist Apollo club, twenty-five years; retired, 1903. Among his compositions are the *Centennial Cantata; Golden Legend; Voyage of Columbus*, and *Light of Asia*. Died, 1909.

Buckingham (*buk'ing-am*), **George Villiers, Duke of,** the favorite of James I. and Charles I. of England, born at Brookesley, Leicestershire, 1592. On the accession of Charles I., in 1625, Buckingham maintained his ascendency at court, but after the ill-fated expedition against Cadiz he became odious to the nation. He was assassinated by a discontented officer named Felton, 1628.

Buckle, Henry Thomas, English historian, was born at Lee, Kent, 1821, the son of a London shipowner. In 1840 he found himself master of 1,500 pounds a year; by 1850 he knew eighteen foreign languages, and had amassed a library of 22,000 volumes, chosen mostly to help him in a *magnum opus*, of which all that was ever published was but a fragment: *An Introduction to the History of Civilization in England*. In 1862, after six months' wandering in Egypt and Palestine, he died of typhoid fever at Damascus.

Buckley, James Monroe, clergyman, editor *New York Christian Advocate*, born in Rahway, N. J., 1836; educated at Wesleyan University; M.A., D.D.; LL.D.; pastor in vicinity of New York until 1880. Died in 1920.

Budde (*bōōd'de*), **Karl,** theologian, professor of old testament theology, University of Marburg; born Bensberg, near Cologne, 1850; educated at Bensberg at Essen gymnasium in the Universities of Bonn, Berlin, Utrecht; passed the two examinations for church service at Coblenz in 1871 and 1874; professor extraordinarius in 1879 at Bonn; was promoted 1889 to the professorship at Strassburg; accepted a call to Marburg in 1900.

Buddha (*bood'ha*), ("the Wise" or the "Enlightened"), the sacred name of the founder of Buddhism, an Indian sage who appears to have lived in the 5th century B.C. His personal name was Siddhartha, and his family name Gautama; and he is often called also Sakyamuni (from *Sakya*, the name of his tribe, and *muni*, a Sanskrit word meaning a sage). His father was king of Kapilavastu, a few days' journey north of Benares.

Siddhartha, filled with a deep compassion for the human race, left his father's court, and lived for years in solitude till he had penetrated the mysteries of life, and become the Buddha. He then began to teach his new faith, in opposition to the prevailing Brahmanism, commencing at Benares. Among his earliest converts were the monarchs of Maghada and Kosala, in whose kingdoms he chiefly passed the latter portion of his life, respected, honored, and protected. Buddha did not leave his doctrines in writing; he declared them orally, and they were carefully treasured up by his disciples, and written down after his death. The determination of the canon of the Buddhist scriptures as we now possess them was the work of three successive councils, and was finished two centuries at least before Christ.

References.—Rhys David's *Buddhism;* Lillie's *Buddha and Buddhism*.

Budge, Ernest A. Wallis, English archæologist, keeper of Egyptian and Assyrian antiquities, British museum, was born in Cornwall, 1857; educated at Christ's College, Cambridge. Has conducted excavations at Aswan in Egypt, at Gebel Barkal, on the island of Meroe, and at Semna in the Sudan, and at Ninevah and Der.

Buffalo Bill—See **Cody, W. F.**

Buffon (*bü'fŏn'*), **Georges Louis Leclerc, Count de,** French naturalist, was born 1707, died 1788. He was educated for the law; but, after traveling for a time devoted himself to science. In 1739 he was elected a member of the academy of sciences, and appointed director of the royal garden. He was one of the pioneers of the modern doctrine of evolution.

Bulfinch, Charles, American architect, was born in Boston, Mass., 1763. His chief works are the Massachusetts state house, at Boston; McLean hospital, Somerville; Massachusetts general hospital, Boston; and the west porticos of the capitol at Washington. He died, 1844.

Bull, Ole Bornemann, famous violinist; born in Bergen, in Norway, 1810; he secured great triumphs both throughout Europe and in America by his wonderful playing. He afterward settled down at Cambridge, Mass., and had also a summer residence in Norway, where he died in 1880.

Buller (*bool'lĕr*), **Sir Redvers,** British general, was born in England in 1839, and as an officer of the 60th rifles saw much service in the China expedition of 1860. In the Boer war, 1899-1901, he had chief command of the first army corps sent from England to South Africa. He was successively adjutant-general, lieutenant-general, and commander-in-chief of the British forces. Retired, 1901. Died, 1908.

Bülow (*bü'lō*), **Prince Bernhard von,** German statesman, chancellor of the empire, 1900-09, was born at Klein-Flottbeck in 1849. At the conclusion of the Russo-Turkish war he was appointed one of the secretaries of the Berlin congress, and after more diplomatic service in Paris and St. Petersburg, he was appointed minister to Roumania, 1888, and ambassador to Italy, 1893. In 1899 he concluded the treaty with Spain, whereby the Caroline, Marianne, and Pelew islands were ceded to Germany, and upon this achievement he was created Count Bülow. In 1900, on the resignation of Prince Hohenlohe, he succeeded him as chancellor of the German empire, prime minister and minister of foreign affairs of Prussia, and, on June 6, 1905, he was raised to the dignity of prince. He resigned the chancellorship in 1909. He died in 1929.

Bülow, Friedrich Wilhelm, Baron von, Prussian general, was born at Falkenberg, 1755, died at Königsberg, 1816. His victories over Oudinot and Ney at Grossbeeren and Dennewitz saved Berlin; he acted a conspicuous part in the battle of Leipzig, and, by taking possession of Montmartre finished the campaign of 1814. In 1815 he joined Blücher by forced marches, and headed the column that first came to Wellington's aid at Waterloo.

Bulwer (*bool'wĕr*), **Edward George Earle Lytton.** See **Lytton, Lord.**

Bulwer, Sir Henry Lytton Earle, famous English diplomatist and author, an elder brother of Lord Lytton, usually known as Sir Henry Bulwer, was born 1804. In 1843 he was made minister plenipotentiary to the court of Madrid, and concluded the peace between Spain and Morocco in the following year. In 1849 he came to Washington, where he evinced equal art in concluding the Clayton-Bulwer treaty; died 1872. Among his works were *An Autumn in Greece; France, Social, Literary, and Political; Life of Byron* and *Historical Characters*.

Bunsen (*boon'sen*), **Baron, Christian Karl Josias,** German statesman and scholar, born, 1791, at Korbach, in the principality of Waldeck, died at Bonn, 1860. He is known in literature by his *Constitution of the Church of the Future; Christianity and Mankind; God in History*, and many other works.

Bunsen, Robert Wilhelm, German chemist, was born at Göttingen, 1811. He was the first to produce magnesium in large quantities, and in 1860 invented the magnesium light. His greatest discovery was that of spectrum analysis, made in conjunction with Kirchhoff. Bunsen will always be remembered by physicists and chemists from their constant use of the photo-meter and gas-burner, which are such useful adjuncts to laboratory apparatus, and which bear the "Bunsen burner" name. Died, 1899.

Bunyan, John, English writer, was born at Elstow, near Bedford, in 1628. After a short service in the Parliamentary army, he married at the age of nineteen. His marriage was followed by his conversion, or religious "awakening." In 1655 he became a member of the Baptist congregation at Bedford, and, subsequently, its pastor. After the restoration, he was convicted under the act against conventicles, 1660, and thrown into Bedford jail, where he remained for upward of eleven years, supporting his family by making tagged laces, and writing *The Pilgrim's Progress;* he was released from prison, 1672, becoming again pastor of the Bedford congregation. This position he held till his death, which took place, 1688. Of Bunyan's other works, the chief are his *Grace Abounding to the Chief of Sinners*, an autobiography, and the *Holy War*.

Burbank, Luther, naturalist, horticulturist; born in Lancaster, Mass., 1849. Moved to Santa Rosa, Cal., 1875; conducted Burbank's experiment farms. Was special lecturer on evolution at Leland Stanford Jr. University. Died, 1926.

Burdette (*bûr-det'*), **Robert Jones,** American journalist, humorist, and lecturer, was born in Pennsylvania in 1844. Served with the 47th Illinois volunteers as a private, in the Civil War. His humorous sketches won him an audience far and wide. He began to lecture in 1876, and was licensed a minister of the Baptist church, 1887; held a pastorate at Los Angeles until 1909, when he was incapacitated by an accident. He was the author of *Hawkeyeisms; Chimes from a Jester's Bells; Smiles Yoked with Sighs;* etc. Died, 1914.

Burdick, Francis Marion, lawyer, educator, Dwight professor law, Columbia University, 1891-1920; born at De Ruyter, N. Y., 1845; graduated from Hamilton College, 1869; LL.D.; professor law and history, Hamilton College, 1882-87; professor law, Cornell University School of Law, 1887-91. Mayor of Utica, 1882-83. Author: *The Essentials of Business Law; Cases on Torts; Cases on Sales; Law of Sales;* etc. Died, 1920.

Burgess, Frank Gelett, writer, illustrator; born Boston, 1866; graduated at Massachusetts Institute of Technology, B.S., 1887; draughtsman with Southern Pacific railway, 1887-90; instructor topographical drawing, University of California, 1891-94; designer, 1894-95; writer for various magazines in New York, 1897-98; removed to London, 1898, to San Francisco, 1900, to Boston, 1904; now lives in New York. Author: *Vivette; The Lively City Ligg; Goops and How to Be Them; A Gage of Youth; Burgess Nonsense Book*.

Burgess, John William, educator; born in Connersville, Tenn., 1844; attended Cumberland University, Lebanon, Tenn.; graduate of Amherst, 1867. Admitted to bar, Springfield, Mass., 1869; professor political science and constitutional law 1876-1912; dean faculty of political science 1890-1912, Columbia University; Roosevelt professor of American history and institutions, University of Berlin, 1906-07. Author: *Political Science and Comparative Constitutional Law; The Middle Period; The Civil War and the Constitution; Reconstruction and the Constitution*.

Burgoyne (*bûr-goin'*), **John,** British general, was born 1722; entered early into the army; and in 1762 displayed much talent and enterprise in command of a party of the British troops in Portugal. In the American war, he led the army which was to penetrate from Canada into the revolting provinces. At first, he was successful; but was ultimately compelled to surrender at Saratoga, 1777. He died in 1792.

Burke, Edmund, British statesman and orator, was born at Dublin, about 1729; graduated at Trinity College, Dublin. Going to London, he attracted attention by his essays on the *Sublime and Beautiful*, and devoted himself to literature. In 1766, entering parliament, his speeches on American affairs created a great sensation in the house of commons. Returned for Malton, he produced in 1780 his great plan of economical reform; and in 1782 he became paymaster under Lord Rockingham's government. He again took office in the duke of Portland's coalition ministry, when he made his famous speech on the India bill. In the impeachment of Warren Hastings, Burke played a leading part, his opening speech extending over four days. In 1794 he retired from parliamentary life, though he continued to produce his pamphlets on political affairs. His other chief works are *A Vindication of Natural Society; Reflections on the Revolution in France;* and some *Letters*. Died at Beaconsfield, England, 1797.

Burleigh (*bĕr'li*), **William Cecil, Lord.** See **Cecil, William, Lord Burleigh.**

Burleson, Albert Sydney, lawyer, postmaster-general, was born 1863, at San Marcos, Texas; was educated at agricultural and mechanical college of Texas; admitted to the bar in 1884; appointed by the governor of Texas attorney of the twenty-sixth judicial district in 1891; elected to said office 1892-96; elected to the fifty-sixth, fifty-seventh, fifty-eighth, fifty-ninth, sixtieth, sixty-first and sixty-second congresses.

Burlingame, Anson, American diplomatist; born in Chenango county, N. Y., 1820. He was elected member of congress in 1854-56-58. In 1861 he was sent as minister to China, and in 1868 he visited this country at the head of a Chinese embassy, and concluded a liberal treaty between the United States and China, which was promptly ratified by the Chinese government. Died, 1870.

Burne-Jones, Sir Edward, English painter, was born of Welsh ancestry at Birmingham, England, 1833. He was educated at Exeter College, Oxford, where William Morris, the poet, was his friend. About 1870 he began to be known as an oil painter, and his works henceforth are inspired by the earlier art of the Italian renaissance, and show more of grace and less of emphasis than his former paintings. Among his pictures are *The Days of Creation; The Beguiling of Merlin; The Mirror of Venus.* He furnished striking designs for stained glass at Christ Church, Oxford. He became D. C. L. 1881, A. R. A. 1885 (resigned 1893), and a baronet 1894. He died, 1898.

Burnett (*bûr-net'*), **Frances Hodgson,** author, playwright; born (Frances Eliza Hodgson), Manchester, England, 1849; began writing for magazine 1867; married Dr. L. M. Burnett, 1873; settled in Washington, 1875. Author (novels): *That Lass o'Lowrie's; Dolly, a Love Story; Kathleen; Surly Tim and Other Stories; A Little Princess.* Plays: *Little Lord Fauntleroy; Phyllis; The Snowman's Daughter; Esmeralda; The First Gentleman of Europe; Nixie; A Lady of Quality; The Shuttle;* etc. Died, 1924.

Burnham, Daniel Hudson, architect; born Henderson, N. Y., 1846; removed to Chicago, 1856; educated there and in Massachusetts; A.M., Sc.D. Architect Field's retail store and many other buildings in Chicago and elsewhere, including the Mills building, San Francisco; Ellicott Square, Buffalo; Society for Savings, and First, Third, and Fourth National Banks, Cleveland; chief architect and director of works, World's Columbian Exposition, 1890-93; chairman commissions for beautifying Washington and Cleveland, Ohio. Died, 1912.

Burns, Robert, Scottish poet, was born at Alloway, near Ayr, Scotland, 1759; died at Dumfries, 1796. He was the son of a small farmer, and was brought up amidst indigence and adversity. He received, however, the advantages of a common school education, though his chief advances in general knowledge he owed to the books he read, among which were *The Spectator,* the works of Pope, and the poems of Allan Ramsay. When sixteen years of age he fell in love, and his feelings, as he tells us, at once burst into song. His first volume of poetry was issued in 1786, from Kilmarnock, and at once became popular. The success of this volume, which was speedily republished in Edinburgh, induced him to take the farm of Ellisland, near Dumfries, where he married his "bonny Jean"; he removed to Dumfries in 1791 and, having been appointed to a position as exciseman, which had been obtained for him by a friend and an admirer of his genius, he subsisted entirely upon his income from that office, which yielded only about $350 a year. In 1792 he wrote about a hundred songs, as accompaniments to the melodies of Scotland; intemperance gradually gained upon him, while want threatened him; and, in his thirty-seventh year, he sank into an untimely grave.

Burnside, Ambrose Everett, American general, born at Liberty, Indiana, 1824; graduated at West Point in 1847. He commanded a brigade at Bull Run, and in February, 1862, captured Roanoke island. He commanded the Army of the Potomac, Nov. 1862-Feb. 1863, and was defeated at Fredericksburg, 1862. In 1863 he successfully held Knoxville, and in 1864 led a corps under Grant through the battles of the Wilderness and Cold Harbor. Resigning in April, 1865, he was elected governor of Rhode Island (1866-68), and United States senator in 1875 and 1881. He died at Bristol, R. I., 1881.

Burr Aaron, American statesman, was born 1756, died, 1836; he was a lieutenant-colonel in the revolutionary war; attorney-general of New York 1789; United States senator, 1791-97; mortally wounded Alexander Hamilton in a duel 1804; vice president of the United States 1801-05; tried on a charge of treason, 1807, but acquitted.

Burr, George Lincoln, educator, librarian; born Oramel, N. Y., 1857; graduated from Cornell, 1881; student Leipzig, Paris and Zürich; LL.D.; Litt.D. Librarian the President White library since 1878; member Cornell faculty. Writer on history of superstition and persecution.

Burr, William Hubert, engineer, professor civil engineering, Columbia University since 1893; born Watertown, Conn., 1851; graduated Rensselaer Polytechnic Institute, C. E., 1872; professor engineering, Harvard, 1892-93; consulting engineer to department of public works, 1893-95, of parks, 1895-97, of docks, 1895-97, and now department of bridges, and board of water supply, New York. Appointed, 1899, by President McKinley, member isthmian canal commission. Appointed, 1904, by President Roosevelt, member isthmian canal commission; consulting engineer to board of water supply, New York. Awarded first place in national competition, 1900, for proposed memorial bridge across Potomac at Washington.

Burritt, Elihu, "the learned blacksmith," was born at New Britain, Conn., 1810. He worked as a blacksmith in his native place and at Worcester, Mass., but devoted all his leisure to mathematics and languages—Latin, Greek, Hebrew, Arabic, and most of the modern European languages. He took a prominent part in advocating an ocean penny-postage. For many years he lived in England, in 1865-70 as United States consul at Birmingham. He died at New Britain, Conn., 1879.

Burroughs (*bûr'ōz*), **John,** essayist, naturalist; born Roxbury, N. Y., 1837; received an academic education, and taught school about eight years; treasury clerk, 1864-73; national bank examiner, 1873-74. From 1874 till his death he lived on a farm, devoting his time to literature and fruit culture. Author: *Notes on Walt Whitman as Poet and Person; Locusts and Wild Honey; Fresh Fields; Riverby; The Light of Day; Squirrels and Other Fur Bearers; Far and Near; Ways of Nature.* Died, 1921.

Burton, Ernest de Witt, theologian, critic; professor of new testament interpretation, University of Chicago, born Granville, Ohio, 1856; University of Leipzig, 1887; served many years as associate editor or editor of the *Biblical World;* editor (with others) of the *American Journal of Theology.* Author: *Constructive Studies in the Life of Christ* (with S. Mathews); *A Short Introduction to the Gospels;* etc. Died, 1925.

Burton, Sir Richard Francis, English traveler, was born 1821, at Barham House, Hertfordshire, and educated in France and England. After visiting Somaliland and service in the Crimea, he in 1856 set out with Speke on the journey which led to the discovery of Lake Tanganyika, 1858, and afterward traveled in America. He was subsequently consul at Santos in Brazil, at Damascus, and at Trieste. In 1876-78 he visited Midian, and in 1882 Guinea; and he was knighted in 1886. He died at Trieste, 1890.

Burton, Theodore Elijah, U. S. Senator, lawyer; born in Jefferson, Ohio, 1851; graduate of Oberlin College, 1872; admitted to bar, 1875; since then in practice at Cleveland; member congress, 1889-91, and 1895-1909; United States senator, 1909-15. Author: *Financial Crises and Periods of Industrial and Commercial Depression,* and *Life of John Sherman.* Died, 1929.

Bury (*ber'i*) **John B.,** British historian; regius professor of modern history, Cambridge University since 1902; was born 1861; graduate Trinity College, Dublin; M.A., Litt.D.; LL.D.; professor of modern history in Dublin University, 1893-1902; regius professor of Greek, 1898. Author: *History of the Later Roman Empire from Arcadius to Irene; Student's History of the Roman Empire from Augustus to Marcus Aurelius;* etc.

Butler, Benjamin Franklin, American politician, and general, was born in New Hampshire, 1818, studied law and settled in Massachusetts, where he became recognized as the leading democrat of New England. He promptly entered the service at the outbreak of the Civil War, and had command of the departments of the gulf and of the south Atlantic, acquiring no military fame but great notoriety for his arbitrary civil regulations; governor of Massachusetts, 1882. Died, 1893.

Butler, Joseph, eminent English divine, was born 1692 at Wantage, in Berkshire; died 1752. In 1718 he was appointed preacher at the Rolls chapel, where he preached those remarkable sermons which he published in 1726. His great work, the *Analogy,* of which the germs were contained in his three sermons, was published in 1736.

Butler, Nicholas Murray, educator; born Elizabeth, N. J., 1862; graduated, Columbia, 1882, Ph.D., 1884; student at Berlin and Paris, 1884-85; LL.D.; Litt.D.; dean faculty of philosophy, Columbia University, 1890, professor philosophy and education, and president since 1902. Editor of the *Educational Review;* the *Great Educators Series;* the *Teachers' Professional Library, etc.*

Butler, Samuel, English satirist, was born at Strensham, England, 1612. The experiences of this time furnished him with the material for his famous work, *Hudibras,* the first part of which appeared in 1663, and achieved the widest popularity. Died, 1680.

Butler, Samuel, an English writer, born, 1835, at Nottingham. Educated at Oxford; did work among the London poor for several years. In 1859, he left England to raise sheep in New Zealand. On his return to England in 1864, he painted a number of pictures which were exhibited in the Royal Academy; but letters finally claimed his devotion. His best known book is *The Way of All Flesh.*

Byrd, Richard Evelyn, American aviator, naval officer (ret.), was born at Winchester, Virginia, in 1888. He was educated at Shenandoah Valley Military Institute, Virginia Military Academy, University of Virginia, and graduated at the U. S. Naval Academy in 1912. At the age of twelve he made a trip around the world alone. He was the commander of the avaition unit of the Macmillan Polar Expedition of 1925. In 1926 he made, with Floyd Bennett, the first flight to the North Pole. He was advanced through grades to the rank of lieutenant commander after the polar flight. In 1927, with three companions, he made a 4,200 mile transatlantic flight to France. With the most complete equipment ever assembled for such a purpose Byrd left in 1928 for the South Pole areas. He discovered and mapped many new sections. On Nov. 29, 1929, he flew over the South Pole.

Byron, Lord, George Gordon, English poet, was born in London in 1788. He attended Trinity College, Cambridge. The criticism of his first work, *Hours of Idleness,* stung him into writing *English Bards and Scotch Reviewers;* in 1812 he published the first two cantos of *Childe Harold,* with immense success. Six months' stay at Geneva produced the third canto of *Childe Harold* and *The Prisoner of Chillon. Manfred* and *The Lament of Tasso* were written in 1817. The next year he was at Venice, and finished *Childe Harold* there. During the next three years he produced the first five cantos of *Don Juan,* and a number of dramas of various merit. In 1822 he removed to Pisa, and worked there at *Don Juan,* which poem, with the exception of *The Vision of Judgment,* occupied his pen almost up to the close of his life. In the summer of 1823 he sailed for Greece, to aid the struggle for independence with his influence and money. He arrived at Missolonghi on the 4th of January, 1824. On the 9th of April he was overtaken by a shower while on horseback, and fever and rheumatism followed. After twenty-four hours' insensibility, he expired on the evening of the 10th of April, 1824. His body was conveyed to England; and, denied a resting-place in Westminster abbey, was interred in Hucknall-Torkard churchyard near Nottingham.

Bystrom (*boo'strĕm*), **Johan Niklas,** a Swedish sculptor, born at Filipstad, in the province of Wermeland, 1773, worked three years under Sergell of Stockholm, applying himself chiefly to the study of the antique, and gained the academy's prize in 1809. He proceeded to Rome the following year, whence he soon sent home his *Drunken and Reposing Bacchante.* He returned to Stockholm in 1815, and exhibited his colossal statue of the prince-royal. He died at Rome, 1848.

Cabanis (*ká'bá'nēs'*), **Pierre Jean Georges,** physician and philosophical writer, born at Cosnac, France, 1757. He furnished Mirabeau with material for his speeches on public education; and Mirabeau died in his arms. Cabanis died near Meulan, 1808. His chief work is his once-famous *Rapports du Physique et du Moral de l' Homme.*

Cabell, James, author of novels and tales, born at Richmond, Va., 1879. While he was instructor of French and Greek at William and Mary College he started his preparation for authorship, especially in genealogy of the South, conducting genealogical research work for the Virginia Society of Colonial Wars, 1916, and the Virginia Society of the Sons of the American Revolution. Opposed in thought and feeling to the impressionistic and realistic attitudes in contemporary letters, Mr. Cabell cultivated a highly classical and exquisite style. His fiction consists of the biography of a legendary hero, traced through his various descendants to contemporary Virginia. The portions dealing with mythological characters, including *Figures of Earth, Jergen, The High Place, The Silver Stallion,* and two philosophical essays, *Beyond Life and Straws and Prayerbooks* are the better known. He is a master of delicate, graceful and subtle language.

Cabet (*kă'bā'*), **Etienne,** French communist, was born at Dijon, 1788, and died at St. Louis, Mo., 1856, having gone out to Texas in 1848 to found an "Icarian community," so named after his *Voyage en Icarie,* a "philosophical and social romance," describing a communistic Utopia.

Cable, George Washington, author, was born in New Orleans, 1844; educated in public schools; M.A., Litt.D., Yale, Bowdoin; served fourth Mississippi cavalry, Confederate States army, 1863-65; devoted to literature. Author: *Old Creole Days; The Grandissimes; Madame Delphine; The Creoles of Louisiana; Dr. Sevier; The Silent South;* etc. Died, 1925.

Cabot (*kab'ut*), **George,** American shipmaster, afterward merchant, was born 1751, died 1823. He was a member of the Massachusetts state constitutional convention, and of that which ratified the federal constitution; U. S. senator 1790-96.

Cabot, John, born 1450 (?); **Cabot, Sebastian,** born 1474, two Venetians, father and son, were both celebrated navigators and discoverers. John probably died 1498; Sebastian died 1557.

Caedmon (*kad'mun*), the father of English song, was the first Anglo-Saxon who composed in his own language works which are still existant. The date of his birth is unknown, but his death occurred about 680 A.D. He was originally a cowherd, attached to the monastery of Whitby, and according to a legend was commanded in a dream to sing *"The Beginning of Created Things."*

Caesalpinus (*ses'al-pī'nus*), **Andreas,** Italian physiologist; born at Arezzo 1519; was professor of medicine and botany at Pisa, physician to Pope Clement VIII., and published several medical works. He developed several new ideas on the circulation of the blood which are now well recognized. Died, 1603.

Caesar, Caius Julius, a great Roman general, statesman, and historian, was born B.C. 100, died B.C. 44. He was the son of the praetor Caius Julius Caesar, and of Aurelia, a daughter of Aurelius Cotta. At the age of sixteen he lost his father, and shortly after he married Cornelia, the daughter of Lucius Cinna, the friend of Marius. This connection gave great offence to Sulla, the dictator, who proscribed him for refusing to put away his wife.

His friends obtained his pardon with difficulty, and Caesar withdrew from Rome, and went to Asia, serving his first campaign under M. Minucius Thermus, the praetor in Asia.

On the death of Sulla, Caesar returned to Rome, where he distinguished himself as an orator. He afterwards visited Rhodes, when he was taken by pirates, and compelled to pay fifty talents for his release. To revenge himself, he fitted out some vessels at Miletus, overtook the pirates, made the greater number of them prisoners, and had them crucified before Pergamus. He then returned to Rome, where his eloquence and liberality made him very popular. He was pontifex maximus in 63 B. C., praetor in 62 B. C., and governor of Spain in 61 B. C. On his return to Rome, having united with Pompey and Crassus in the memorable "first triumvirate," he became consul, and then obtained the government of Gaul with the command of four legions.

His military career was rapid and brilliant. He compelled the Helvetii, who had invaded Gaul, to retreat to their native country, subdued Ariovistus, who at the head of a German tribe had attempted to settle in the country of the Aedui, and conquered the Belgae. In nine years he reduced all Gaul, crossed the Rhine twice (B. C. 55 and 53), and twice passed over to Britain, defeated the gallant natives of this island in several battles, and compelled them to give him hostages. The senate had continued his rule in Gaul for another period of five years, while Pompey was to have the command of Spain, and Crassus that of Syria, Egypt and Macedonia for five years.

The death of Crassus in his campaign against the Parthians dissolved the triumvirate; and about the same time the friendship between Caesar and Pompey cooled. The senate, influenced by Pompey, ordered that Caesar should resign his offices and command within a certain time, or be proclaimed an enemy to the state, and appointed Pompey general of the army of the Republic. Upon this Caesar urged his soldiers to defend the honor of their leader, passed the Rubicon (49 B. C.), and made himself master of Italy without striking a blow, Pompey retiring into Greece. Caesar then levied an army with the treasures of the state, and hastened into Spain, which he reduced to submission without coming to a pitched battle with Pompey's generals. He next conquered Massilia (now Marseilles), and returned to Rome, where he was appointed dictator. He then followed Pompey into Greece, and defeated him at Pharsalia, from which Pompey escaped, only to be assassinated in Egypt.

In Rome the senate and the people strove eagerly to gain the favor of the victor. They appointed him consul for five years, dictator for a year, and tribune of the people for life. When his dictatorship had expired he caused himself to be chosen consul again, and without changing the ancient forms of government ruled with almost unlimited power. In 46 B. C. he crossed to Africa, defeated the Pompeians, Scipio and Cato, at Thapsus, and returning to Rome he was received with the most striking marks of honor. The term of his dictatorship was prolonged to ten years, the office of censor conferred on him alone; his person was declared inviolable, and his statue placed beside that of Jupiter in the capitol.

He soon after was honored with four several triumphs, made perpetual dictator, and received the title of *imperator* with full powers of sovereignty. In February, 44, B. C. he declined the diadem which Antony publicly offered him, and next morning his statues were decked with diadems. His glory, however, was short-lived, for a conspiracy was set on foot by his enemy Cassius, and joined by many of his own friends, including M. Brutus; and, notwithstanding dark hints had been given to him of his danger, he attended a meeting of the senate on 15th (ides) March, 44 B. C., and fell beneath the daggers of the conspirators.

Caesar was undoubtedly the foremost man of his time, being great as a statesman, a general, an orator, a historian, and an architect and engineer, and his assassination was brought about more by jealousy and envy than by real patriotism.

Cagliari (*kăl'yä-rē*), **Paolo Veronese,** an Italian painter of great eminence, was born at Verona in 1532. The church of San Sebastiano, in Venice, contains many of his productions, which are reckoned the most important of his earlier period—*i. e.,* the period before he visited Rome, when he first became acquainted with the masterpieces of Raphael and Michelangelo. He died in 1588. The most celebrated of his productions are the *Marriage Feast at Cana of Galilee,* and the *Presentation of the Family of Darius to Alexander.*

Caine, Thomas Henry Hall, British novelist and dramatist; born in 1853, of Manx and Cumberland parentage; was educated at schools in Isle of Man and Liverpool; became a journalist, and was for six years an editorial writer on Liverpool *Mercury.* His first novel was the *Shadow of a Crime;* his success came with *The Deemster; The Manxman; The Christian; The Eternal City.* Published in 1908 *My Story,* an autobiographical narrative of the earlier years of his literary life. He is justice of the peace in the Isle of Man, where, in 1901, he was returned by a large majority to the house of keys for Ramsey. Died, 1931.

Caird (*kārd*), **Edward,** Scottish philosopher, was born at Greenock, Scotland, 1835; educated at Glasgow University; Balliol College, Oxford; LL.D.; D.C.L.; fellow and tutor of Merton College, Oxford, 1864-66; professor of moral philosophy, Glasgow University, 1866-93; master of Balliol College, Oxford, 1893-1907. Author: *Philosophy of Kant; Hegel,* in Blackwood's series; *Critical Philosophy of Emmanuel Kant.* Died 1908.

Caird, John, Scottish preacher, born at Greenock, in 1820; studied at Glasgow, and became minister (1845). He received the degree of D.D. in 1860, was appointed professor of divinity in 1862, and was principal of Glasgow University, 1873-98. He published a volume of *Sermons; Spinoza;* etc. He died, 1898.

Cairnes (*kārnz*), **John Elliot,** British economist, was born at Castle Bellingham, Ireland, 1823, studied at Trinity College, Dublin, where he graduated B.A. in 1848. An accident in the hunting-field in 1860 led to a breakdown in health; and, having resigned his chair in 1872, he died at Blackheath, 1875. Cairnes may be regarded as a disciple of Mill, though differing from him on many points.

Caius Gracchus (*kā'yus grak'us*). See **Gracchus.**

Cajetan (*kaj'ē-tan*), **Cardinal,** properly Jacopo Thomas de Vio, born at Gaeta, Italy, 1469; in 1508 became general of the Dominicans, in 1517 cardinal, in 1519 bishop of Gaeta, and in 1523 legate to Hungary. He died at Rome, 1534.

Calderon (*kŏl'dĕr-on*) **de la Barca, Pedro,** Spanish dramatist, and one of the greatest of all time, was born at Madrid in 1600, and was educated at the University of Salamanca. He entered the army and served several campaigns in Italy and in Flanders, gaining a knowledge of men and things which he afterward made use of in his plays. He became a priest and royal chaplain, and died in 1681, still working at his literary labors. In later life he wrote many religious plays.

Calderon, Ignacio, diplomat; was born at La Paz, Bolivia, 1848; graduate University of La Paz; secretary of Bolivian legation at Rome, 1868-70. Traveled through United States, and for a time acted as consul-general of Bolivia at New York; returned to Bolivia, 1886, to manage affairs of large importing and exporting company; minister from Bolivia to United States 1904-1920.

Calderwood (*kŏl'dĕr-wo͝od*), **Henry,** British philosopher and educator, was born at Peebles in 1830; from 1856 to 1868 was minister of Greyfriars, Glasgow, and then became professor of moral philosophy at Edinburgh. He died in Edinburgh, 1897.

Calhoun (*kal-hōōn'*), **John Caldwell,** American statesman of Irish Presbyterian descent, was born in Abbeville county, South Carolina, 1782; graduated at Yale, 1804, and became a successful lawyer. He was elected to congress, 1811. In 1817 he entered Monroe's cabinet as secretary of war, and did good work in reorganizing the war department. In 1829 he declared that a state can nullify unconstitutional laws. On the passing by South Carolina in 1832 of the nullification ordinance he resigned the vice-presidency, and entered the United States senate, becoming a leader of the states-rights movement, and a champion of the interests of the slave-holding states. He died at Washington, 1850. Henry Clay, Daniel Webster, and Calhoun were "the great triumvirate" of American political orators.

Caligula (*ka-lig'ū-la*), **Caius Caesar Augustus Germanicus,** Roman emperor, 37-41 A. D., the youngest son of Germanicus (nephew of Tiberius) by Agrippina, was born 12 A. D., at Antium. On the death of Tiberius, 37 A. D., who, it was suspected, had received foul play at his hands, it was found that he had been appointed coheir along with the grandson of Tiberius, but the senate and the people allowed Caligula supreme and sole authority; he was a spendthrift and barbarously cruel. Died, 41 A. D.

Callicrates, a Greek architect, who lived at Athens in the eighty-fourth Olympiad, was, in conjunction with Ictinus, the artist who constructed the famous Parthenon, the sculptures and decorations of which were the work of Phidias.

Callimachus (*ka-lim'ā-kus*), a native of Corinth, flourished about the year B. C. 540, and was celebrated as an architect, sculptor, and painter. To him is ascribed the invention of the Corinthian order.

Calvert, George, Lord Baltimore. See **Baltimore, George Calvert.**

Calvin, John, reformer and Protestant theological writer, born at Noyon, in Picardy, 1509, died at Geneva, 1564. His father, Gerard Calvin or Cauvin, *procureur-fiscal* and diocesan secretary, dedicated him early to the church, and he was presented with a benefice at the age of twelve. The income derived from this nominal office enabled him to proceed to Paris and enter on a course of regular study. He soon became dissatisfied with the teaching of the Roman Catholic Church; in consequence he gave up his cure, and took to the study of the law in Orleans.

In 1532 he returned to Paris a decided convert to the reformed faith, and was soon compelled to fly, when, after various wanderings, he found a protector in Margaret of Navarre. In 1534 he returned to Paris; but, finding that the persecution against those who were inclined to the doctrines of the reformers was still raging, he retired to Basel in the autumn of the same year. At Basel he published his great work, *The Institutes of the Christian Religion,* 1536.

Having gone to Italy, after a short stay at Ferrara he went to Geneva, where reform had just been established. In 1538, in company with Farel, he was expelled from Geneva in consequence of the reign of extreme strictness they had introduced, when he went first to Berne and then to Strasburg. Here he married a widow, Idelette de Burie, and had one son, who died early.

In 1541 his friends in Geneva succeeded in effecting his recall, when he laid before the council the draft of his ordinances respecting church discipline, which were immediately accepted and published. His college of pastors and doctors and his consistorial court of discipline formed a theocracy, with himself at the head of it, which aimed virtually at the management of all municipal matters and the control of the social and individual life of the people. Michael Servetus, passing through Geneva in 1553, was arrested, and through Calvin's instrumentality was burned alive because he had attacked the mystery of the Trinity in a book which was neither written nor printed at Geneva. This has been regarded as the great blot on Calvin's career, though approved of by many others of the reformers. His energy and industry were enormous; he preached almost daily, delivered theological lectures three times a week, attended all deliberations of the consistory, all sittings of the association of ministers, and was the soul of all the councils.

Up to 1561 the Lutherans and the Calvinists were as one, but in that year the latter expressly rejected the tenth article of the Confession of Augsburg, besides some others, and hence arose the name of *Calvinists.* Calvin retained his personal influence to the last; but a year or two before his death his health had broken down. As a theologian Calvin was equal to any of his contemporaries in profound knowledge, acuteness of mind, and in the art of making good a point in question. As an author he merits great praise. His Latin works are written with much method, dignity, and correctness. He was also a jurist and an able politician.

Cambaceres (*kăn'bä'sā'res'*), **Jean Jacques,** duke of Parma, French statesman and jurist, was born in Montpelier in 1753. He was brought up to the legal profession, and became president of the French convention in 1792. He was afterward president of the committee of public safety, and of the council of five hundred. When Napoleon Bonaparte was named first, Cambaceres was made second consul. He left France when the Bourbons

were a second time restored, but was permitted to return. Died, 1824.

Cambyses (*kam'bi'sēz*), second king of the Medes and Persians, succeeded his father, Cyrus, in 529 B. C. He put his brother Smerdis to death, and in 527 B. C. or 525 B. C. invaded and conquered Egypt. Died, 522. B. C.

Cameron (*kam'ĕr-un*), **Simon,** American politician; born Lancaster county, Pa., 1799; learned printing and became editor of a democratic paper at Harrisburg, Pa.; elected United States senator 1845, and again 1856; secretary of war under Lincoln, 1861-62; again United States senator 1866-77 when he resigned, and was succeeded by his son. Died, 1889.

Camillus (*kā-mil'us*), **Marcus Furius,** a famous patrician of early Rome; took Veii, a rival town, after a ten years' siege; was five times elected dictator, and gained a succession of victories over rival Italian tribes; died in 365 B. C., lamented by the whole nation, and remembered for generations after as one of the noblest heroic figures in Roman history.

Camoens (*kam'ō-ens*), **Luiz de,** the epic poet of Portugal, born 1524 at Lisbon, and studied the ancient classics at Coimbra; he was banished, 1556, to Macao, where he lived several years, and was engaged in writing his principal *Os Lusiadas* till recalled. He dedicated *The Lusiad* to the young king, Sebastian, who granted him a small pension (about $20); died in poverty and obscurity in the hospital at Lisbon, 1597.

Camp, Walter, athletic director and writer, was born at New Haven, Conn., 1859. He was graduated from Yale in 1880. He is considered the originator of modern American football, starting the rivalry with Harvard and improving rules. During the war he had direction of training camp athletics, out of which grew the famous Daily Dozen. He wrote much concerning sports. Died, 1925.

Campbell, Alexander, American theologian, was born at Shane's castle, Ireland, 1788. Attended Glasgow University; came to the United States, and served as pastor of a Presbyterian church in Washington county, Pa.; later became a Baptist. His followers are also known as "Christians," "Church of Christ," and "Campbellites." He died, 1866.

Campbell, Archibald. See **Argyll.**

Campbell, Hon. Archibald, Canadian capitalist, was born at Ridgetown, Ontario, 1846; educated at high school and collegiate institution of the county; elected member of parliament for West York, 1901 and 1904; chairman of the railway and transportation committee; elected to Dominion senate, 1907.

Campbell, Sir Colin, Lord Clyde, British general, was born in Glasgow, 1792. In 1808 he entered the army as an ensign. He distinguished himself greatly in the wars in the Peninsula, the United States, China, India, and the Crimean war. He reached the summit of his fame in 1857, when, as commander of the forces in India, he finally crushed the Sepoy mutiny and saved the English empire in India. He returned from India to England in 1860 and died 1863.

Campbell, Mrs. Patrick (Beatrice Stella Tanner), actress; born, Forest House, Kensington Gardens; married Patrick Campbell (killed in South Africa, 1900), 1884. Joined dramatic club "Anomalies," West Norwood, 1886-87; toured with Green's company, 1888; Ben Greet's company 1890-91; played engagements at the Adelphi St. James'; Haymarket; Garrick; Lyceum and other London theaters. She also made several visits to the United States.

Campbell, Thomas, a distinguished British poet, born in Glasgow, 1777. He wrote *The Pleasures of Hope.* The poem was published in 1799, and went through four editions in a twelvemonth. He died at Boulogne in 1844, and was buried in Westminster abbey.

Campbell-Bannerman, Rt. Hon. Sir Henry, late prime minister of Great Britain, was born in 1836. Educated at Glasgow University and Trinity College, Cambridge, B.A., 1858; M.A., 1861; secretary admiralty, 1882-84; secretary for war, 1886 and 1892-95; chosen leader of the liberal opposition in succession to Sir William Harcourt, February, 1899. On the resignation of the Balfour administration in December, 1905, he was summoned by the king and formed a liberal cabinet, himself becoming first lord of the treasury and prime minister; the general election which followed gave him a tremendous majority. Died in office, 1908.

Canisius (*kā-nē'sē-us*), **Petrus,** Dutch Jesuit missionary and scholar, was born at Nimeguen, Netherlands, 1521. He was the first provincial of the Jesuits in Germany, distinguished himself at the council of Trent, 1545, and was appointed court preacher to Ferdinand I. He wrote *Summa Doctrinae Christianae.* Died, 1597.

Canning, George, British statesman and orator, born in London, 1770. In 1796 he was appointed an under-secretary of state. In 1801 Pitt resigned office, and Canning joined the opposition against the Addington ministry. When the Portland ministry was formed, in 1807, Canning was appointed minister of foreign affairs. He arranged the relations of Brazil and Portugal; drew the French cabinet into agreement with the British respecting Spanish-American affairs; was the first to recognize the free states of Spanish America; contended earnestly for Catholic emancipation, and prepared the way for the repeal of the corn laws. Died, 1827.

Cannon, Joseph G., lawyer, ex-speaker the United States house of representatives; born in Guilford, N. C., 1836; admitted to Illinois bar; state's attorney, Vermilion county, Ill., 1861-68; member of congress, 1873-91, and again in 1893-1903, twelfth Illinois district, and in 1903-13, eighteenth district; chairman of committee on appropriations, 55th, 56th, and 57th congresses; speaker of 58th, 59th, 60th, and 61st congresses. Died, 1926.

Canova (*kā-nō'vā*), **Antonio,** Italian sculptor, was born, 1757, at the Venetian village of Possagno, and studied at Venice and Rome. His *Theseus,* 1782, was greeted as well worthy to vie with classic art, and he was regarded as the founder of a new school. In 1802 he was appointed by Pius VII. curator of works of art, and was called to Paris to model a colossal statue of Napoleon. Created marquis of Ischia. He died in Venice, 1822.

Canovas del Castillo (*kā'nō-vās del kās-tēl'yō*), **Antonio,** Spanish conservative statesman and historian, born at Malaga, 1826, became a member of the cortes in 1854, and was premier 1875-81, 1884-85, 1890-92, and from 1895 till the 8th of August, 1897, when, at the bath of Santa Aguida, Vittoria, he was shot by an anarchist in the presence of his wife.

Canrobert (*kaN'rō-bâr'*), **Francois Certain,** marshal of France, born 1809. After many years of effective service in the East, in the Crimea, and in Italy, when war was declared by France against Prussia, in 1870, he was one of the generals in command at Wœrth, where the French were defeated; senator 1876. Died, 1895.

Canterbury, Archbishop of. See **Davidson, Rev. Randall Thomas.**

Cantu (*kān-tōō'*), **Cesare,** modern Italian author, was born, 1805, at Brescia, in northern Italy, and was educated at Sondrio, where he was appointed professor of *belles-lettres.* His great work is the *Storia Universale* (35 vols., 1837-1842). Died, 1895.

Canute (*kā-nūt'*), or **Cnut** (*k'nōōt*), a king of England who succeeded to the rulership of the Danes in the north of England on the death of his father, Swein or Sweyn, was born 995. The sudden decease or assassination of Edmund made Canute sole ruler in 1017, and he continued to reign until his death in 1035.

Capet (*kā'pet*), **Hugh.** See **Hugh Capet.**

Capo D'Istria (*kā'pō dēs'trē-ā*), **John, Count of,** a Greek, who gained distinction as a diplomat, was born at Corfu in 1776; in 1813, in consideration of his meritorious labors, the emperor Alexander made him minister for foreign affairs. In 1827 he was made president of the new Greek government, where he fell by the hand of an assassin in 1831.

Caprivi (*kā-prē'vē*), **Count Georg Leo von,** German general, statesman, and chancellor, was born in 1831, and died in 1899. In 1883 he was given command of the 30th division of the imperial army at Metz; was subsequently given command of the 10th or Hanoverian army corps, the finest in the German army. In 1890 Emperor William made him chancellor. In 1894 he resigned office, and retired.

Caracalla (*kar'ȧ-kal'ȧ*) (properly Marcus Aurelius Antoninus Bassianus), Roman emperor, the son of the emperor Septimius Severus, born at Lyons, 188 A. D. After his father's death, 211 A. D., he ascended the throne as co-regent with his brother, Publius Septimius Antoninus Geta, whom he afterward caused to be murdered. In his famous constitution he bestowed Roman citizenship on all his free subjects not citizens—but simply in order to levy a greater amount of taxes on releases and heritages, which were paid only by citizens. He was assassinated, at the instigation of Macrinus, prefect of the prætorians, by one of his veterans named Martialis, 217 A. D.

Caracci (*kā-rä'chē*), or **Carracci, Agostino,** Italian painter, was born in Bologna in 1558, became a disciple of his cousin Ludovico. He dabbled in poetry and literature, and was a really great engraver on copper. His brother's jealousy is said to have driven him from Rome (where they did the frescoes in the Farnese palace) to Parma, where he died, 1602.

Caracci, Annibale, was born in Bologna in 1560, died, 1609; rapidly became a great painter under his cousin, and soon outstripped both him and his brother. The influence of Correggio and of Raphael largely molded his style. He was buried close to Raphael in the Pantheon.

Caracci, Ludovico, Italian painter, the son of a butcher, was born at Bologna in 1555, died, 1619, studied at Venice and Parma, and, with his two cousins, established in Bologna an "eclectic" school of painting.

Cardan (*kär'dan*), **Jerome,** Italian mathematician, naturalist, physician, and philosopher, was born at Pavia, 1501; graduated in medicine at Padua; and was professor of mathematics at Milan. He subsequently practiced medicine and gradually gained a high reputation. He died in Rome, 1576, a few weeks after finishing his candid autobiography, *De Propria Vita.*

Cardigan (*kär'di-gan*), **James Thomas Brudenell, Earl of,** was born 1797; died 1868; sat in the house of commons from 1818 to 1837, when he succeeded his father as seventh earl. He entered the army in 1824. From 1836 to 1847 he commanded the 11th hussars, on which he spent $50,000 a year, and which he made the crack regiment in the service. He commanded a cavalry brigade under Lord Lucan in the Crimea, and led the "Six Hundred" at Balaclava. He was inspector-general of cavalry 1855-60.

Carducci (*kär-dōōt'chē*), **Giosue,** Italian poet, was born, a physician's son, at Valdicastello, in the province of Pisa, in 1836, and died in 1907. In 1860 he became professor of Italian literature at Bologna, in 1876 was returned to the Italian parliament as a republican, and in 1890 was nominated a senator.

Carew, Mrs. James. See **Terry, Ellen.**

Carey (*kā'ri*), **Henry Charles,** political economist was born at Philadelphia, 1793. In 1836 he published an essay on the *Rate of Wages,* which was expanded into the *Principles of Political Economy.* In 1838 he published *The Credit System of France, Great Britain, and the United States;* and in 1848 *The Past, the Present, and the Future.* He was originally a free-trader, but was later recognized as the head of a new school of political economy. Died, 1879.

Carey, James F., socialist leader; born Haverhill, Mass., 1867; learned shoemaking trade; joined international boot and shoemakers' union; one of three leaders in unemployed agitation on Boston common, 1894; president Haverhill common council; member Massachusetts house of representatives; elected 1898, 1899, 1900, 1901, 1902; last four elections over combination of democratic and republican parties.

Carnart, Henry Smith, scientist, professor physics, University of Michigan, since 1886; born at Coeymans, N. Y., 1844; graduated from Wesleyan University, 1869; LL.D. Professor of physics and chemistry, Northwestern University, 1872-86; vice-president of St. Louis international electrical congress, and one of official delegates for the United States, 1904; accompanied the British association for the advancement of science to South Africa as a guest, 1905. Author: *Primary Batteries; Elements of Physics; University Physics; Electrical Measurements.* Died, 1920.

Carleton (*kärl'tun*), **Will,** author, lecturer; born at Hudson, Mich., 1845; graduated at Hillsdale College, B. S., 1869; A.M.; Litt.D.; became known as a poet, and lectured and gave author's readings through the United States, Great Britain and continental Europe. Author: *Farm Ballads; Rhymes of Our Planet; Songs of Two Centuries,* etc. Died, 1912.

Carlisle (*kär-līl'*), **John Griffin,** lawyer; born in Campbell county, Kentucky, 1835; common school education; admitted to Kentucky bar, 1858; lieutenant-governor of Kentucky, 1871-75; member of congress, 1877-89 (speaker, 1883-89); United States senator from Kentucky, 1890-93; secretary of treasury of United States, 1893-97; vice-president of anti-imperialist league. Died, 1910.

Carlyle, Thomas, English essayist, biographer, and historian, and one of the most remarkable writers of his age, was born in Scotland, 1795. He was educated at Edinburgh University, and commenced his literary career in 1823, by contributions of able essays to the *Edinburgh Encyclopedia* and the *Edinburgh Review.* Next followed his translations of Goethe's *Wilhelm Meister,* a work which showed a bent of reading destined to influence materially his future career. Succeeding these appeared his *Life of Schiller.* Between 1830 and 1833, Carlyle wrote his *Sartor Resartus,* and in 1837 he published *The French Revolution,* a history abounding in vivid and graphic descriptions. *Chartism,* and 5 volumes of his *Essays,* appeared in 1839, and in the next year he delivered a series of lectures on *Hero-Worship,* which were afterwards published in a collected form. His *Past and Present* was given to the world in 1843, and in 1850 the *Latter-Day Pamphlets,* essays suggested by the revolutionary convulsions of 1848. Carlyle's *Life of John Sterling* has been described as "one of the finest biographies ever written. In 1845 appeared his great work entitled *Oliver Cromwell's Letters and Speeches, with Elucidations,* which gave him a place among historians. In 1860-4 Carlyle brought out his *Life of Frederick the Great.* In 1865 he was elected Lord Rector of Edinburgh University.

Carlyle's leading characteristic is a rugged earnestness of expression, and a range of thought widened and deepened by his profound acquaintance with the writings of great German thinkers. He died at London, February 5, 1881.

Garnett, Hood, Nicoll, and Wilson's *Froude and Carlyle.*

Carman (*kär'man*), **William Bliss,** journalist, poet, was born at Fredericton, New Brunswick, Canada, 1861. Graduate of University of New Brunswick, B.A., 1881. Author: *Low Tide on Grand Pré; Songs from Vagabondia* (with Richard Hovey); *More Songs from Vagabondia* (with Richard Hovey); *By the Aurelian Wall; Last Songs from Vagabondia; Christmas Eve at St. Kavin's.* Died, 1929.

Carnarvon (*kär-när'vun*), **Earl of** (Henry Howard Molyneux Herbert), was born in London, Eng., 1831; was appointed governor of Carnarvon castle in 1854. He was the author of the British North America act, passed by both houses of parliament in 1867, whereby the Dominion of Canada was formed. Died, 1890.

Carnegie (*kär-neg'i*), **Andrew,** capitalist, manufacturer, philanthropist, author; born in Dunfermline, Fifeshire, Scotland, 1837; came with family to United States, 1848, settling in Pittsburg; learned telegraphy, entered employ of Pennsylvania railroad, and became telegraph operator, advancing by promotions until he became superintendent of Pittsburg division of Pennsylvania system; joined Woodruff, inventor of the sleeping car, in organizing Woodruff sleeping car company, gaining through it nucleus of his fortune; during Civil War served as superintendent of military railways and government telegraph lines in the east. After the war he developed iron works of various kinds and established, at Pittsburg, Keystone bridge works and Union iron works. Introduced into this country Bessemer process of making steel, 1868; interests were consolidated, 1899, in the Carnegie steel company, which, in 1901, was merged in the United States steel corporation, when he retired from business; married, 1887, Louise Whitfield, of New York. Gave libraries to many towns and cities in the United States and Great Britain, and large sums in other benefactions; total benefactions exceeding $75,000,000, including over $40,000,000 for nearly 1,500 municipal library buildings, and $10,000,000 for college professors' pension fund in United States, Canada, and Newfoundland. Lord rector of St. Andrew's University, 1903; LL.D., 1905. Died, 1919.

Carnot (*kär'nō'*), **Lazare Nicolas Marguerite,** was born in 1753 at Nolay, Burgundy, France. In 1791 he became a member of the legislative assembly, and in the convention voted for the death of Louis XVI. In 1797, having opposed the extreme measures of Barras, his colleague in the directory, Carnot, as a suspected royalist, was sentenced to deportation. He escaped into Germany, where he wrote his defense, which conduced to the overthrow of his colleagues in 1799. On his return to Paris he was made minister of war, 1800. Died, 1823.

Carnot, Nicholas Leonard Sadi, son of Nicolas, founder of thermo-dynamics, was born at Paris, 1796, died, 1832; in his *Reflexions sur la Puissance du Feu,* he enunciates the principle of reversibility, considered the most important contribution to physical science since the time of Newton.

Carnot, Marie Francois Sadi, French statesman, was born at Limoges, France, 1837. He was elected a member of the assembly in 1871, was twice a cabinet officer, and upon the resignation of President Grévy was chosen president of the French republic, 1887. He was assassinated by an anarchist, 1894.

Carpaccio (*kär-pät'chō*), **Vittore,** an early Venetian painter, was born in Istria, about 1450, and was influenced by the Vivarini and Gentile Bellini. In 1510 he executed for San Giobbe his masterpiece, the *Presentation in the Temple,* now in the Academia. Died about 1522.

Carpeaux (*kär'pō'*), **Jean Baptiste,** sculptor, was born at Valenciennes, 1827, in 1854 obtained the *Prix de Rome,* and died near Paris, 1875.

Carpenter, Frank George, journalist, traveler, author; born in Mansfield, Ohio, 1855; graduate of Wooster University, 1877. Began newspaper work as legislative correspondent for Cleveland *Leader,* at Columbus, 1879; newspaper tour to Mexico, 1891; to Russia, Germany, and England, 1892; to China, Japan, and Korea, 1894; spent 1900 in Philippines, China, Java, Australia and New Zealand. Author: *Carpenter's Geographical Readers—Asia, North America, South America. Europe, Australia, Our Colonies and Other Islands of the Seas, Africa;* etc. Died, 1924.

Carpenter, J. Estlin, theological writer, principal of Manchester College, Oxford; born 1844; second son of Wm. B. Carpenter, C.B., M.D., F.R.S., etc.; educated at University College school, London; University and Manchester New Colleges. M.A.; Litt.D.; D.D.; lecturer in Manchester College, London, and Oxford, 1875-1906; joint-editor with Professor Rhys Davids of the *Digha Nikaya,* and the *Sumangala Vilasini;* joint-author with Rev. P. H. Wicksteed of *Studies in Theology;* and other works.

Carpenter, William Benjamin, one of the most distinguished physiologists and writers on physiology of modern times; was born at Exeter, 1813, died at London, 1885. Graduate of Edinburgh University; M.D., LL.D., F.R.S. He took a chief part in the government expeditions which were sent out in 1868-69-70 for deep sea exploration in the north Atlantic.

Carpenter, Rt. Rev. William Boyd, bishop of Ripon, born at Liverpool, 1841; educated at Royal Institution school, Liverpool; St. Catharine's College, Cambridge; D.D., D.C.L.; vicar of St. James', Holloway, 1870-79; vicar of Christ church, Lancaster Gate, 1879-84; canon of Windsor; 1882-84; hon. chaplain to the queen, 1879-83; chaplain-in-ordinary, 1883-84. Author: *Commentary on Revelation; Thoughts on Prayer; Lecture on Preaching; Christian Reunion; Introduction to Study of the Bible.* Died, 1918.

Carranza, Venustiano; Mexican general and political leader, born in Coahuila, 1859. Educated for the law, but on account of defective eyes, took up farming. Joined Madero revolt against Diaz in 1910 and was appointed governor of his native state. Became leader of one of the Mexican factions. In 1915, recognized by United States as first chief of the Mexican de facto government. Died, 1920.

Carrel, Alexis, American surgeon and biologist, was born at Sainte-Foy-les-Lyons, France, in 1873. He studied medicine at Lyons and for several years was connected with French hospitals. In 1905 he came to this country and conducted laboratories at McGill University and at University of Chicago, then joined the Rockefeller Institute for medical research, New York city. His investigations in experimental surgery have proved the possibility of suturing (joining together by stitches) blood vessels and of transplanting whole organs and limbs from one person to another, for which he was awarded the Nobel Prize in 1912. His work during the World War was very outstanding. Among his publications are *The Preservation of Tissues, The Transplantation of Limbs, The Transplantation of Veins and Organs.*

Carroll, Charles, of Carrollton, American patriot, born at Annapolis, Md., 1737. He was elected a member of congress, 1776, and was among the first signers of the declaration of independence. He outlived all the other signers of the declaration of independence, and died in 1832 when ninety-five years old.

Carroll, Lewis, the pseudonym of Rev. Charles Lutwidge Dodgson, English humorist and author, born about 1833; graduate of Christ Church, Oxford, 1854; took orders in the church, 1861; lecturer at Oxford, 1855-81; wrote *Alice in Wonderland; Through the Looking-glass.* Died, 1898.

Carson, Christopher, popularly known as Kit Carson, an American frontiersman, born in Kentucky in 1809. During the Civil War he rendered important services in the territories, and was brevetted brigadier-general. Died in Colorado, 1868.

Carson, Rt. Hon. Sir Edward Henry, British lawyer, statesman; M. P. for Dublin University 1892-1918; Q. C., English bar, 1894; was born 1854; educated at Portarlington school; Trinity College, Dublin, M.A., LL.D. Solicitor-general for Ireland, 1892; solicitor-general of Great Britain, 1900-06.

Carson, Hampton Lawrence, lawyer, author; born at Philadelphia, 1852; graduate of University of Pennsylvania, 1871; A.M., LL.B., LL.D.; admitted to bar, 1874. Professor of law, University of Pennsylvania; attorney-general, Pennsylvania, 1903. Died, 1929.

Carson, Howard Adams, civil engineer; born at Westfield, Mass., 1842; B.S.; A.M., Harvard; principal superintendent of construction of Boston main drainage, 1878; chief engineer of Boston transit commission, 1894-1909, building the Boston subway, etc.

Cartier (*kär'tyā*), **Sir George Etienne,** Canadian statesman, born at St. Antoine, Canada, in 1814. In 1857 he became leader of the lower Canada section of the government, and in 1858, premier; and he held a cabinet office for several years afterward. Died at London, 1873.

Cartier, Jacques, French explorer, was born 1494. Employed by Francis I. to make explorations on the North American coast, in three successive expeditions, 1534-50; he completed the discovery and colonization of Canada. Died about 1557.

Cartwright, Edmund, inventor of the power-loom, was born at Marnham, England, 1743. A visit in 1784 to Arkwright's cotton-spinning mills resulted in his power-loom. Cartwright also took out patents for combing wool and various other inventions; he even joined Robert Fulton in his efforts toward steam navigation. He died at Hastings, in 1823.

Cartwright, Rt. Hon. Sir Richard John, Canadian statesman; minister of trade and commerce for Canada and member of parliament for South Oxford, 1896; born Kingston, Ontario, 1835; elected to parliament, 1863; finance minister, 1873-78; chief financial critic, and one of the leaders of the opposition in parliament 1879-96; acting premier and leader in the house of commons 1897; proposed a joint commission, and represented Canada on the Anglo-American joint high commission when it sat at Quebec in the summer of 1898, and Washington in the winter of 1898-99; acting premier during Sir Wilfrid Laurier's absence at colonial conference, 1907. Died, 1912.

Carus (*kā'rŏŏs*), **Paul,** philosophical writer, editor of *The Open Court* and *The Monist;* born at Illsenburg, Germany, 1852; graduate of University of Tübingen, Ph.D., 1876. Author: *The Ethical Problem; Fundamental Problems; The Soul of Man; Primer of Philosophy,* etc. Died, 1919.

Caruso (*Kah-roo-zo*), **Enrico,** the greatest operatic tenor, was born in 1873 in Naples. He made his debut in 1894 in Naples in "*L'amico Francisco.*" His success was immediate, and he sang in all the greatest operas. Died August 2, 1921.

Carver, John, the first governor of Plymouth colony, was born in England about 1575. He was one of the Pilgrims who came over in the *Mayflower,* and was chosen governor soon after landing. He assisted in settling his people in their new homes, but died within four months, in April, 1621.

Cary, Alice, American poet and prose writer, born 1820; commenced writing at eighteen. In connection with her sister Phoebe, born, 1824, she published her first volume in 1850, and from that time till her death continued to pour forth stories, poems, etc. Died, 1871.

Cary, Henry Francis, translator of Dante, was born at Gibraltar, 1772. He was educated at Rugby, Sutton, Coldfield, and Birmingham; in 1790 entered Christ Church, Oxford, and in 1796 took holy orders. In 1805 he published a translation of the *Inferno,* in 1814 of the whole *Divina Commedia.* Assistant librarian in the British museum 1826-37. He died in 1844, and was buried in Westminster abbey beside Samuel Johnson.

Cary, Phoebe, American poet, sister of Alice Cary, born near Cincinnati, 1824. She wrote about a third of the *Poems of Alice and Phoebe Cary,* and other poems. Her death quickly followed that of her sister in 1871.

Casabianca (*kä'zä-byäng'kä*), **Louis,** French naval officer, born in Bastia about 1755; in 1798 was captain of the flagship *L'Orient* in the expedition to Egypt. He was mortally wounded at the battle of the Nile, August 1, 1798.

Casaubon (*kä-sō'bun,* Fr. *käzō-bôn'*), **Isaac,** scholar and critic, born 1559 at Geneva, where, in 1582 he was appointed professor of the Greek language. Subsequently he held professorships at Montpelier, 1596, and at Paris, 1598. King James appointed him prebendary of Canterbury and Westminster. Died in London, 1614.

Casimir-Perier (*kä'zē'mēr'-pā'ryā'*), **Jean Paul Pierre,** French statesman, was born at Paris, 1847; served with distinction at the siege of Paris, 1871; entered the legislative chamber, 1874, and served both as vice president and president of that body; became premier of France, 1893, and president in 1894; resigned, 1895. Died, 1907.

Cassini (*käs-sē'nē*), **Giovanni Domenico,** Italian astronomer and savant, born at Perinaldo, near Nice, 1625; died 1712. In 1650 he was appointed to the astronomical chair in the University of Bologna. His first work related to the comet of 1652.

Cassini, Jacques, son of the preceding, born at Paris, 1677. In 1694 he was elected a member of the academy of sciences. On the death of his father he succeeded to the charge of the observatory at Paris, and died 1756. As an observer Cassini was eminently successful.

Cassius (*kash'i-us*), or in full, **Caius Cassius Longinus,** Roman general and politician, was quæstor to Crassus in the Parthian war, 54 B. C. After Pharsalia he was taken prisoner and pardoned by Cæsar. In 44 B. C. as prætor he attached to himself the aristocrats who resented Cæsar's supremacy, and won over Brutus; and in the same year Cæsar was murdered. Cassius fled to the East, united his forces with those of Brutus, and at Philippi, being routed, compelled his freedman Pindarus to kill him, 42 B. C.

Casson, Herbert Newton, editor, socialistic writer, born at Ontario, Canada, 1869; graduate of Victoria College; in 1893 went to Boston and with Morrison I. Swift organized the unemployed, and at head of 10,000 men marched to state house demanding relief.

Castle, Irene, dancer, movie actress, established a dancing school with her husband, Vernon Castle, which set the pace for dancing over all America. After her husband's death she retired for a time. Later she married Capt. Treman. Divorced. Married Frederic Mc Laughlin, 1924.

Castlereagh (*käs'l-rā', käs''l-rā*), **Robert Stewart, Lord,** British statesman, eldest son of the marquis of Londonderry; was born in 1769; president of the board of control in 1802; and secretary of war in 1805. During Lord Liverpool's administration, Lord Castlereagh again became a member of the government as foreign secretary, and concluded the treaty of Paris in 1814. He remained in office the remainder of his life, which was closed by suicide in 1822.

Catharine I., empress of Russia; born about 1685; was the outcast infant of a Livonian peasant girl, and became nurse in the family of the Protestant minister of Marienburg. In 1701 she married a Swedish dragoon, who soon afterward went with his regiment to Riga, and never returned.

After the capture of Marienburg by the Russians, Catharine became the mistress first to General Bauer, with whom she lived at Moscow, secondly Prince Menschikoff, and, finally, of Peter the Great, who married her privately near Warsaw in 1711, and publicly the next year at St. Petersburg. Shen then embraced the Greek religion, and took the name of Catharine. On the death of Peter in 1725, she was proclaimed czarina. Her death was the result of intemperance. Died, 1727.

Catharine II., empress of Russia; born in 1729. As empress she seized the Crimea, and took part in the dismemberment of Poland. She promoted the welfare of Russia by encouraging literature and commerce, but her reign was sullied by disgraceful amours. Died, 1796.

Catharine, Saint, of Siena, is a saint belonging to the fourteenth century, born about 1347. She was said to have been favored with extraordinary revelations, and the wounds of Christ were believed to have been impressed upon her body. Died, 1380.

Catharine of Aragon, queen of England; wife of Henry VIII.; born in 1485; daughter of Ferdinand of Aragon and Isabella of Castile. She was beautiful and virtuous, yet the king in 1527 sought a divorce on the ground that the marriage was uncanonical. After much temporizing on the part of the pope, the marriage was in 1533 pronounced invalid by Cranmer, archbishop of Canterbury, and his sentence was ratified by act of parliament. Died, 1536.

Catharine de Medici (*dā-mā'dē-chē*), born in 1519; great granddaughter of Lorenzo the Magnificent, niece of Pope Clement VII., and queen to Henry II. of France, acted as regent during the minority of her second son, Charles IX. She instigated the massacre of St. Bartholomew. Died, 1589.

Catiline (*kat'i-lin*), **Lucius Sergius,** Roman politician, born about the year 108 B. C.; died, 62 B. C. In the year 68 B. C. he was elected praetor; in 67 B. C. governor of Africa; and in 66 B. C. he desired to stand for the consulship, but was disqualified on account of the accusations brought against him of maladministration in his province. His political conspiracies were frustrated by Cicero, and he fled from Rome and took refuge with Manlius, who was in command of the army in Etruria. In 62 B. C. the army of the senate encountered that of Catiline near Pistoia, and after a desperate battle he was defeated and slain.

Catlin, George, ethnologist, was born at Wilkesbarre, Pa., 1796; studied law, but soon turned to drawing and painting. During 1832-40 he was studying the Indians of the far west; traveled, 1352-57, in South and Central America; and again lived in Europe until 1871. He died at Jersey City, 1872. His works include *Manners of the North American Indians, The North American Portfolio,* and *Last Rambles in the Rocky Mountains.*

Cato, Marcus Porcius, surnamed Censorius and Sapiens, afterward known as Cato Priscus, or Cato Major—to distinguish him from Cato of Utica—born at Tusculum in 234 B. C. In 184 B. C. he was elected censor, and discharged so rigorously the duties of his office that the epithet *Censorius,* formerly applied to all persons in the same station, was made his permanent surname. He repaired the water courses, paved the reservoirs, cleansed the drains, raised the rents paid by the publicans for the farming of the taxes. In the year 175 B. C. he was sent to Carthage to negotiate on the differences between the Carthaginians and the Numidian king, Masinissa; but having been offended by the Carthaginians he returned to Rome, where, ever afterward, he described Carthage as the most formidable rival of the empire, and concluded all his addresses in the senate house with the well-known words: "*Ceterum censeo, Carthaginem esse delendam.* (For the rest, I vote that Carthage must be destroyed.)" Cato died 149 B. C.

Cato, Marcus Porcius, named Cato the "younger," or Cato Uticensis, born 95 B. C. From Macedonia, where he was military tribune in 67 B. C. He quitted the questorship at the appointed time amid general applause. In 63 B. C. he was elected tribune, and also delivered his famous speech on the Catiline conspiracy, in which he denounced Cæsar as an accomplice of that political desperado, and determined the sentence of the senate. Died 46 B. C.

Catt, Carrie Chapman, suffragist, president international woman suffrage alliance; born Ripon, Wis., 1859; educated at State Industrial College of Iowa. State lecturer and organizer Iowa woman suffrage association, 1890-92; since then in service of national American woman suffrage association and international alliance.

Cattell (*ka-tel'*), **James McKeen,** educator, psychologist, professor of psychology, Columbia, 1891-1917; born Easton, Pa., 1860; graduate of Lafayette College, 1880, A.M., Ph.D.; professor psychology, University of Pennsylvania, 1888-91. President Psychol. Corpn. since 1921. Editor of *Science, The Popular Science Monthly,* and *Library of Philosophy, Psychology.*

Catullus (*ka-tul'us*), **Caius Valerius,** celebrated Roman lyric and elegiac poet, is supposed to have been born at Verona, Italy, B. C. 87, and to have died about B. C. 54; in the civic strife of the time he sided with the senate, and opposed to the length of directing against him a coarse lampoon.

Cavell, Edith, English nurse, was born in Norfolkshire, 1866. In 1907 she established a training school for nurses in Brussels. In August, 1915, she was suddenly arrested by the German governor, charged with having aided English and Belgian young men to escape. Found guilty in a German military court, she was secretly condemned and shot at 2 a.m., October 13, 1915.

Cavendish (*kav'en-dish*), **Henry,** English chemist and physicist, was born at Nice, France, 1731; died 1810. His most important work included the discovery of the composition of water, the composition of nitric acid, and the determination of the mean density of the earth.

Cavour (*kä'-vōōr'*), **Count Camilla Benso di,** distinguished Italian statesman of the nineteenth century; was born at Turin, 1810. He was educated for a military career, but his liberal tendencies being likely to prove an insuperable barrier to his promotion, retired during the stirring events of 1830-31, and devoted himself to agriculture, in which he introduced great improvements. In conjunction with Count Cesare Balbo, he, in 1847, established a political daily journal, in which he advocated the interests of the middle classes. On his suggestion the king was petitioned for a constitution, which was granted in February, 1848. As a member of the chamber of deputies, during the stormy period which succeeded Charles Albert's declaration of war against Austria, Cavour strenuously opposed the ultrademocrats. In the Marquis d'Azeglio's ministry, formed soon after the fatal battle of Novara, Cavour was successively minister of agriculture and commerce, minister of marine, and minister of finance; and in 1852 he was appointed to succeed d'Azeglio as premier. From this time until his resignation in 1859, in consequence of the conclusion of the peace of Villafranca, Cavour was the originator as well as the director of the Sardinian policy. The dispatches, which Cavour penned in reply to those of Austria prior to the outbreak of the Italian war are masterpieces of astute diplomacy. In 1860 he was again called upon to preside over the Sardinian government, the duties of foreign minister likewise devolving upon him, and temporarily those of the minister of the interior also. He continued to direct the Sardinian policy until his death, 1861.

Caxton, William, the founder of English printing, was born in 1422. During a residence in Flanders he acquired the new typographic art, and on his return set up a press in the almonry, Westminster, where he brought out the first printed book seen in England, the *History of Troy.* Died, 1491.

Cayley (*kā'li*), **Arthur,** English mathematician, was born at Richmond, Surrey, 1821. He was educated at King's College, London, and Trinity College, Cambridge. He was admitted to the bar at Lincoln's Inn in 1849, and established a practice as a conveyancer. He was president of the royal astronomical society, 1872-73, and of the British association in 1883. His chief book is an *Elementary Treatise on Elliptic Functions;* a ten volume edition of his *Mathematical Papers* was begun in 1889. He died at Cambridge, 1895.

Cecil (*ses'il* or *sis'il*), **William,** Lord Burleigh, English statesman, was born at Bourne, Lincolnshire, 1520. Entering Gray's Inn at the age of twenty-one devoted himself to the study of law. In 1547 Henry VIII. appointed him master of requests, and in the following year his talents procured for him the office of secretary of state. Elizabeth created him Baron Burleigh in 1571, and conferred on him the order of the Garter, when he was also made lord high treasurer. Died, 1598.

Cecilia (*sē-sil'i-ä*), **Saint,** a Roman lady of high descent, of the second or third century, who suffered martyrdom for her faith. From her skill in singing she is chosen the patroness of musicians, and especially of sacred music.

Cellini (*chel-lē'nē*), **Benvenuto,** Italian gold worker, sculptor, founder, and medailleur, was born at Florence in 1500, and first displayed skill as a chaser and gold-worker. At an early period he went to Rome, where he was employed by many distinguished patrons of art. He accompanied Cardinal Ferrara to France, and entered the service of Francis I. He executed several fine works in metal and marble—among them the celebrated bronze group of "Perseus with the Head of Medusa," now in the market-place in Florence. Died in 1570 or 1572.

Celsius (*sel'si-us*), **Anders,** Swedish astronomer, the constructor in 1742 of the centigrade thermometer, was born at Upsala, 1701. He was the grandson of Magnus Celsius, astronomer and decipherer of the Helsing runes, and nephew of Olof Celsius, professor of theology. He became in 1730 professor of astronomy at Upsala, where in 1740 a splendid observatory was erected for him. Died, 1744.

Celsus (*sel'sus*), an Epicurean philosopher, but tinged with Platonism, lived in the second century after Christ, and wrote, after 150 A. D., the *Logos Alethes.* He reproached Christians with their party divisions and ever-varying opinions and charged them with having wilfully altered their sacred writings.

Cenci (*chen'chē*), **Beatrice,** a noble Roman lady, whose tragic fate has served as the theme of one of Shelley's best tragedies, lived in the sixteenth century. The fine portrait of Beatrice, by Guido Reni, in the Barberini gallery, Rome, is well known. Died, 1599.

Cervantes Saavedra, Miguel de (Sp. *thāir-vän'tace sä-vä'thra*), Spanish author, was born at Alcala de Henares, 1547, died, 1616. In 1571 he joined the armament commanded by Don John of Austria against the Turks. In the battle of Lepanto (1571) he received a wound, which deprived him of the use of his left hand and arm; but he remained in active service till 1575, when, on his way from Italy to Spain, he was captured by Algerino corsairs. In 1580 his relatives and friends purchased his freedom. He returned to Madrid in his 34th year, when his literary career properly began.

He produced here his pastoral romance, *Galatea,* and several plays for the stage. From 1598 to 1603 all trace of him is lost, but he is supposed to have spent the interval in La Mancha, where he is said to have begun *Don Quixote* in prison. The first part was published at Madrid in 1605. In this work Cervantes hit the vulnerable point of his age, and gave the finishing stroke to the mummeries of knight-errantry. After his return to Madrid, while the publication of the first part of *Don Quixote* and its unprecedented success drew upon him the hostilities of those who resented the satire of his novel, he published his *Novelas ejemplares,* most of which had been written earlier. In 1614 he published the *Viaje al Parnaso.*

The second part of *Don Quixote* appeared in the beginning of 1615, and was received with the same enthusiasm which had greeted the first part. He had been living in great poverty, which the sale of this work relieved. But his health began to fail, and he had a presentiment of his death, indicated in the preface of his *Perseles y Sigismunda,* a serious romance which he prepared for the press at the beginning of 1616, though it was not published until 1617 by his widow. On April 19 he dictated to his wife a letter addressed to his friend Lemos, to whom he dedicated the work. Four days afterward he died, on the same day with Shakespeare.

References.—The best Spanish biography of Cervantes is that by Fernandez de Navarrete See also his *Life* by Roscoe, Kelly, and Watt.

Cesnola (*chās-nō'lä*), **Count Luigi Palma de,** archaeologist, was born near Turin, 1832. He served with the Sardinian contingent in the Crimean war, went to New York in 1860, and fought in the Civil War. Appointed American consul at Cyprus in 1865, he commenced a series of excavations; his splendid collection of statues, lamps, vases, inscriptions, etc., was purchased by the Metropolitan museum, New York, in 1873, of which he became director in 1879. He wrote *Cyprus, Its Ancient Cities, Tombs, and Temples.* Died, 1904.

Chadwick, George W., composer, born in Lowell, Mass., 1854. Director of the New England Conservatory of Music. He has composed several symphonies and overtures, including "*Rip Van Winkle,*" "*Thalia,*" "*Adonais,*" an opera "*Judith,*" and minor works. Died, 1931.

Chaffee (*chaf'ē*), **Adna Romanza,** American general; born in Orwell, Ohio, 1842; educated in public schools. Entered army, 1861, and served throughout the Civil War; commanded brigade, Santiago campaign, 1898; promoted major-general, United States volunteers, 1898. Honorably discharged as major-general, 1899. Appointed brigadier-general of the United States volunteers, 1900. Assigned to the command of United States forces for the relief of United States legation, Pekin, 1900; arrived at Pekin, China, August 14, 1900; promoted to major-general of the United States army, 1901. Detailed to general staff corps, 1903, and assigned to duty as assistant to chief of staff, Washington; promoted to lieutenant-general of United States army, 1904, and chief of staff until his retirement in 1906. Died, 1914.

Chaliapin, Feodor, basso, born in Kazan, Russia, 1873. After appearances in Petrograd, Paris and Italy he finally came to New York and joined the Metropolitan Opera Company in 1906.

Chalmers (*chä'mērz, chô'mērz*), **Thomas,** Scottish divine, was born in Fife, 1780; educated at St. Andrews, and ordained to preach at nineteen. He was subsequently professor of moral philosophy at St. Andrews, 1823, and of theology at Edinburgh, 1828. Died, 1847.

Chamberlain (*chām'bēr-lin*), **George Earle,** lawyer, United States senator; born near Natchez, Miss., 1854; graduate of Washington and Lee University, B.A., LL.B., 1876. Attorney-general

Oregon, 1891. Elected governor of Oregon for terms, 1903-07, 1907-11; elected United States senator for the terms 1909-15, 1915-21. Died, 1928.

Chamberlain, Rt. Hon. Joseph, British statesman, was born in London, 1836; educated in private school and University college, London; LL.D., D. C.L. On the death of his father he retired from the firm, in order to devote all his energies to public life. In 1876 he entered parliament and took his seat with the radicals; president of board of trade, with cabinet rank, 1880-85; president of local government board in 1885, until his divergence of views on the Irish policy of Gladstone caused his resignation, 1886; in 1895 took office under Lord Salisbury as colonial secretary. The negotiations with the Transvaal, which ended in war, occupied him fully during 1899, and his South African policy was one of the main controversial features of the general election of 1900 and during 1901. In 1902 he visited South Africa, and on his return received an address from the lord mayor and corporation of London, 1903. In 1903 he launched, at Birmingham, his scheme for the revision of the fiscal policy of the country and the adoption of a policy of preferential tariffs. His seventieth birthday and completion of thirty years' service as member of parliament for Birmingham were celebrated 1906. Died, 1914.

Chamberlin, Clarence Duncan, was born in Denison, Iowa, 1894. Studied engineering at Iowa State College. Joined the United States Signal Corps during World War and was commissioned in aviation. Gained his reputation while "barnstorming." Married Miss Wilda Bogert of Independence, Iowa. On Sunday, June 5th, 1927, he took off with Charles A. Levine as passenger in his plane "Columbia," landing at Eisleben, Germany, after 46½ hours of trans-Atlantic flying.

Chambers, Robert, Scottish publisher, was born in Peebles, 1802, began business as bookseller in Edinburgh in 1818 and gave his leisure to literary composition. In 1844 he published anonymously the *Vestiges of Creation*, which prepared the way for Darwin's *Origin of Species*. He received the degree of LL.D. from St. Andrews in 1863. The labor of preparing the *Book of Days* broke his health, and he died at St. Andrews, 1871.

Chambers, Robert William, author, artist; born in Brooklyn, 1856; educated at Julian's academy, Paris, 1886-93. First exhibited in salon, 1889; illustrations for *Life, Truth, Vogue*, etc. Author: *In the Quarter*; *The King in Yellow*; *The Red Republic*; *A King and a Few Dukes*; *The Maker of Moons*; *With the Band*. Died, 1933.

Chambers, William, Scottish publisher, was born at Peebles in 1800. In 1814 he was apprenticed to a bookseller in Edinburgh, and 1819 started business for himself, to book-selling afterward adding printing; in 1832 he started *Chambers' Edinburgh Journal*, and soon thereafter he united with Robert in founding the business of W. & R. Chambers, the best known of whose many publications are, besides the *Journal* and a numerous series of educational works, a *Miscellany*, *Papers for the People*, the *Cyclopædia of English Literature* (2 vols.), and *Chambers' Encyclopaedia* (10 vols.). He died in 1883, having shortly before received the offer of a baronetcy. He was made LL. D. of Edinburgh in 1872.

Chamisso (*shä-mē'sō*; French, *shä'mē'sō*), **Adelbert von,** German lyric poet, born in 1781 at the castle of Boncourt, in Champagne, France. As early as 1804-06, he, together with Varnhagen von Ense, published a *Musen Almanach*. In 1813 he wrote his original and amusing fiction called *Pleer Schlemihl*. Died, 1838.

Champlain (*sham'plān'*; French, *shaN'plăN'*), **Samuel de,** a French naval officer and explorer, of the seventeenth century. During the reign of Henry IV., of France, he visited many parts of America; discovered Lake Champlain, and formed the first French establishments at Quebec and Montreal. He was made governor of Quebec, from which he was driven by the English, in 1631. When peace was restored, he was reinstated. Died in 1635.

Champney, James Wells, an American painter and illustrator, born in Boston, Mass., 1843; studied at Paris, Antwerp, and Rome. He was especially distinguished as an illustrator and genre painter; elected an A. N. A. in 1882. Died, 1903.

Champollion (*shăN'pōl'yōN'*), **Jean Francois,** French Egyptologist and professor of history; born 1790; died, 1832. His greatest work was in the field of deciphering Egyptian hieroglyphics.

Channing, Edward, historian, born at Dorchester, Mass., 1856; died, 1832. Graduate of Harvard, 1878; Ph. D., 1880. Instructor in history, Harvard 1883; professor, 1897-1931. Life's work, a history of the United States, begun, 1895; seven volumes completed and final one in complete notes at death; won Pulitzer prize for sixth volume, *The War for Southern Independence*.

Channing, William Ellery, founder of American Unitarianism, was born in Newport, R. I., 1780; graduated from Harvard in 1798. He was termed the "apostle of Unitarianism." In 1821 he received the title of D.D. from Harvard, on account of the tractate on the *Evidences of Christianity*, his *Address on War*, and his *Sermons*. In 1822 he visited Europe, and made the acquaintance of great authors, notably Wordsworth and Coleridge. Coleridge said of him: "He has the love and the wisdom of love." He wrote essays and treatises, characterized by vigor, eloquence, taste, and a lofty tone of moral earnestness. Died, 1842.

Chaplin, Chas. Spencer, comedian, born near London, England, 1888. Mainly self educated; identified with theatre since seven years old; employed in vaudeville theatres, London; made screen debut, 1914, Keystone Film Co., Essanay, 1915, Mutual, 1916; signed with First Nat. Exhibitors' Circuit to make eight two-reel pictures for $1,000,000, 1917; directing his own productions since.

Chapman, Frank Michler, ornithologist; born in Englewood, N. J., 1864; academic education. Associate curator ornithology and mammalogy, American museum natural history since 1887. President Linnæan society New York, 1908; curator of ornithology since 1908.

Chapman, George, English poet, born 1559, died 1634. He published a translation of the *Iliad* in English ballad measure, and afterward translated the *Odyssey*, the Homeric hymns, and portions of Ovid, Terence, Musæus, and Petrarch, and wrote many plays.

Charcot (*shär'kō'*), **Jean Martin,** pathologist, was born at Paris, 1825, studied medicine at Paris, where he became a professor, doctor at the Salpetriere hospital, and a member of the institute. He contributed much to our knowledge of chronic and nervous diseases, and made hypnotism a scientific study. Died, 1893.

Charlemagne, or Charles the Great, emperor of the West and king of France, was born 742, and died, in Aix-la-Chapelle, 814. He was the second son of Pepin the Short, and the Frankish kingdom reverted to him and his brother Carloman on his father's demise, in 768. Carloman died three years later, and Charles secured the undivided sovereignty. Master of Gaul and western Germany, he now entered upon a wide career of conquest.

Incensed at the Lombard king Desiderius, and urged by Pope Adrian I., he crossed the Alps in 773, reduced Pavia, and secured the iron crown of Lombardy. Desiderius was exiled to the monastery of Corbie. A rebellion was put down, and Charlemagne appointed his second son, Pepin, to rule the country (776). The most terrific of his wars, that against the Saxons, had begun in 772, and with some intervals raged till 804. Invasions were repeated, new risings crushed, the greatest severities, as the slaughter of 4,000 prisoners at one time, were adopted, and Christianity was forced upon the people. Wittikind, the heroic leader of the Saxons, was finally compelled to surrender in 785, and was baptized, but it was only after fresh struggles that the nation was completely subdued.

In 778 Charlemagne crossed the Pyrenees to make war upon the Moors. The country as far as the Ebro was taken, but on his return his rear guard was destroyed by the Basques at Roncesvalles; the famous Roland being among the slain. The design of Duke Thassilo of Bavaria to unite the enemies of Charlemagne against him failed, and that country was placed under Frankish governors. War was waged against the Slavic tribes on the Baltic, and the subjection of the Avars was completed in 796. The territories of Charlemagne now extended from the Ebro to the Eider and Volturno, and from the Atlantic to the Oder and Thesis, and his aim of restoring the western Roman empire was achieved. On Christmas, 800, he was crowned at Rome by Pope Leo III., and henceforth styled himself emperor of the West, impressing Christian and Mussulman princes with his power.

He sought to establish a regular administration in his motley empire. Projected laws were submitted to great national assemblies, and the edicts known as capitularies evince his wisdom. The whole dominion was divided into counties, governed by earls, who were placed under imperial delegates. He increased the power of the clergy, but kept them under his control. He encouraged trade and industry, and established a uniform currency. Illustrious men, whose leading spirit seems to have been Alcuin, were invited from all countries to diffuse learning in his empire. Charlemagne himself was a diligent scholar and a patron of art. His favorite residence was Aix-la-Chapelle. His habits were active, frugal, and temperate. The only son who survived him was his successor, Louis le Débonnaire. The great emperor and his twelve legendary peers became the heroes of chivalric romance.

Charles I., king of England, second son of James I., was born in 1600, proclaimed king on the death of his father in 1625, and married to Henrietta Maria of France, daughter of Henry IV., in the May following. His reign is chiefly celebrated for the great civil war between the king and the parliament which began in 1641, and ended in the capture of the monarch, who was brought to trial in January, 1648, before a high court of justice, as a traitor to the country. Sentence of death being passed upon him, he was, on January 30, 1649, beheaded on a scaffold erected in the street near the windows of the banqueting house at Whitehall.

Charles II., king of England, son of Charles I., born in St. James palace, London, in 1630; was at The Hague, in Holland, when his father was beheaded. He assumed the royal title, and was proclaimed king by the Scots; landed in Scotland, and was crowned at Scone. Marching into England, he was defeated by Cromwell at Worcester, September 3, 1651, and fled to France. By the policy of General Monk, after Cromwell's death, he was restored to his crown and kingdom in 1660, an event known as the restoration. Died, 1665.

Charles V., surnamed "the wise," king of France 1364-80, was the son of King John II., and was born 1337. His father being made prisoner by the English at the battle of Poitiers, on September 19, 1356, he assumed the regency. His father died April 8, 1364, and Charles ascended the throne. Died, 1380.

Charles VI., "the mad," or the "beloved," born 1368, died October 21, 1422. He succeeded his father Charles V. in 1380, and France was under the oppressive rule of his uncles until he dismissed them in 1388. He reigned wisely till 1392, when his weak mind became deranged. Henry V. of England invaded the distracted land and won a great victory at Agincourt in 1415. Charles died, leaving most of France in English hands. His son by Isabella of Bavaria, Charles VII., succeeded him.

Charles VII., "the victorious," born 1403, died 1461. He was the fifth son of Charles VI. and Isabella, and became by the death of his brothers heir apparent in 1416. On the death of Charles VI. in 1422 Henry VI. of England was proclaimed king of France at St. Denis, and his authority was generally recognized. By 1453 the English had lost all but Calais. Charles' last years were embittered by his son Louis XI., who succeeded him.

Charles IX., king of France, second son of Henry II. and Catharine de' Medici, born 1550, died 1574. He succeeded his brother Francis II. in 1560, under the regency of his mother. Intervals of war and peace ensued. The battles of Jarnac and Moncontour were fought in 1569, after which an apparent reconciliation was effected, succeeded in 1572 by the massacre of St. Bartholomew. Charles manifested deep remorse, and died after terrible sufferings.

Charles X., king of France, the grandson of Louis XV., was born, 1757. He received the title Comte d'Artois, and in 1773 married Maria Theresa of Savoy. After the fall of the Bastille, in 1789, he headed the first emigration of nobles and took the lead in the attempts made to restore the monarchy. Under Louis XVIII., Artois headed the royalist party, and by the death of that monarch became king, under the title of Charles X. Charles was driven from the capital, and Louis Philippe declared king. Charles lived the remainder of his life in exile. He died at Görz, Austria, 1836.

Charles V. emperor of Germany, was born at Ghent, 1500, son of Philip, archduke of Austria, and of Johanna, daughter of Ferdinand and Isabella of Spain. He became in 1516, ruler of Spain, the Netherlands, Sicily, Naples, and the New World; and on the death of his grandfather, in 1519, added Austria to his dominions. His grandfather, Maximilian, had endeavored to secure for him also the succession to the imperial throne; but the electors were by no means anxious further to aggrandize his power, and at first rather favored the claims of the rival candidate, Francis I. of France. By dexterous policy, however, the honor was secured for the young Charles, who was crowned at Aix-la-Chapelle in 1520; and thus began that rivalry between Charles and Francis which is one of the determining factors of European history.

The war was waged in all quarters, but in Italy alone was it decisive; and the French were driven from the duchy of Milan in 1521,

and out of Italy altogether in 1522. The discomfiture of the French king was increased by the treachery of the Constable of Bourbon, who openly joined the side of Charles. Francis again invaded Italy and occupied Milan; but he was defeated and made captive at Pavia (Feb., 1525), and forced to sign the treaty of Madrid (1526), by which he resigned all his pretensions, and agreed to coöperate with Charles in suppressing heresy. But the terms were too humiliating, and war again broke out. Threatened by the Turks on his eastern frontier, and annoyed by the spread of heresy in Germany, Charles agreed to the peace of Cambrai (1529), which, however, left him master of Italy.

Hitherto Spain had been the residence and headquarters of Charles, but Germany now demanded his presence. The Diet of Worms in 1521 had settled nothing, save to show Charles as a faithful supporter of the papacy. He had issued an edict against Luther; but the only result was to organize German national sentiment against the emperor. Social and political disturbances, however, such as the Anabaptist movement and the Peasants' War, strengthened the hands of Charles, and at the Diet of Augsburg (1530) he renewed the Edict of Worms, and was met by the formation of the Schmalkaldic league of Protestant princes.

A threatened invasion by the Turks prevented Charles from taking immediate action, and, to secure the coöperation of the Protestants against the Turks, he was forced to make concessions (1532). But his policy was not changed; and although he was year after year diverted from his purpose—first by renewed war with Francis, which did not end till a joint invasion of rance by Henry VIII. of England and Charles forced Francis to sign a most unfavorable peace at Crespy (1544), and again by campaigns undertaken against the pirates of Tunis (1536) and Algiers (1541)—he never quite lost sight of it. The death of his rival, Francis I., in 1547, at last left him free; and the chief interest of the remaining years of his reign lies in his German dominions.

The two chief objects of his policy did not always harmonize, and his ultimate failure to secure either of them was, in part at least, due to this conflict between them. He wished to secure the reversion of the imperial throne for his son Philip; but in this he was disappointed, through the instance of his brother, Ferdinand of Austria, who claimed the empire for himself. The other object was to stamp out heresy, and restore Germany unbroken to the papacy.

Charles at first easily broke the power of the Protestant princes, and also made prisoners of their leaders; but the harsh manner in which an unsatisfactory compromise called the Augsburg Interim (1548) was enforced created discontent, and Charles found himself faced by the formidable opposition headed by Maurice of Saxony. At one time Charles almost fell into the hands of Maurice, and was driven a wanderer from Germany. He was forced to agree to the treaty of Passau (1552), and to the peace of Augsburg in 1555, which acknowledged the existing conditions, and established Protestantism over a great part of Germany.

The peace of Augsburg was the culmination of his reign. In 1556, disappointed in his ambitions and broken in health, he abdicated in favor of his son Philip, and retired to the monastery of San Yuste, near Plasencia, in Spain, where he died, 1558.

Charles X., king of Sweden, the son of the count Palatine, was born at Nyköping, 1622. He took part in the Thirty Years' war, and on the abdication of his cousin, Queen Christina, 1654, succeeded to the throne of a kingdom impoverished by her extravagance. In 1659 he was driven from an attack on Copenhagen by help of the Brandenburgers and the Dutch; and he died suddenly at Gothenburg, 1660.

Charles XII., king of Sweden, son of Charles XI., and a warlike prince, was born 1682. He ascended the throne at the age of fifteen. He had to cope with Denmark, Russia, and Poland combined against him; he foiled the Danes at Copenhagen, the Russians at Narva, and Augustus II. of Poland at Riga. Charles XII. was the last of the Swedish kings. Born in 1682, and died in 1718.

Charles the Bold, duke of Burgundy, son of Philip the Good, born, 1433, died, 1477. He fought at Gavre in his father's ranks in 1452, engaged in the "war of the public weal" in France, forcing Louis XI. to yield to the demands of the confederates, and after humbling Liege in 1466 and destroying Dinant, he succeeded Philip, in June, 1467, as duke of Burgundy. In 1472 Gelderland, his fifth duchy, was acquired. In 1476 he invaded Switzerland, but his forces were overwhelmed at Granson and at Morat, and he lost Lorraine. He attempted to recover it, and besieged Nancy. Here on January 5, 1477, Rene, duke of Lorraine, vanquished his army, Charles falling in the fight.

Charles Martel, duke of Austrasia, was born about A. D. 689; died, 741. He was the natural son of Pepin d'Heristal, and succeeded his father in the dukedom in 715. As mayor of the palace he possessed the whole regal power, which he administered with great success, and gained many victories the principal of which was over the Saracens in 732. It was in consequence of this victory that he was called *Martel*, or "the hammer." On the death of Thierry in 737, he omitted to declare a successor to the throne and continued to administer affairs with the title of duke of the Franks. At his death he divided his dominions between his sons Carloman and Pepin. The latter became the first king of France of the Carlovingian race; name was taken from the founder, Charles Martel.

Charlevoix (*shär'lē-vwä'*), **Pierre Francois Xavier de,** a noted French traveler and historian, born at St. Quentin, 1682. He became a member of the society of Jesuits when only sixteen years old. In 1720 he visited Canada, went up the St. Lawrence river and through the great lakes, and reaching the Mississippi through the Illinois river, sailed down to New Orleans, went from there to Santo Domingo, and thence to France, which he reached after an absence of two years. Died, 1761.

Charlton, John, English artist, was born at Bamborough Northumberland, 1849; studied at Newcastle school of arts and South Kensington; exhibited at royal academy, 1870, and regularly after that time.

Charron (*shä'rôn'*), **Pierre,** philosopher and theologian, born at Paris, 1541. After being admitted to the bar he took orders, and became a leader of the modern Catholics. He was a friend of Montaigne, from whose essays he borrowed freely. Died, 1603.

Chase, Salmon Portland, American jurist and statesman, was born in New Hampshire in 1808. He was sent to the house of representatives and to the United States senate from Ohio, and was elected governor of that state. Appointed secretary of the treasury by President Lincoln, at the outbreak of the Civil War, he conducted the finances with rare skill and success. Appointed chief-justice of the supreme court in 1864, he held this office at his death, in 1873.

Chase, Harry Woodburn, educator, was born in Groveland, Mass., 1883; received A.B. and A.M. degrees at Dartmouth; Ph.D. at Clark university, 1910; president of University of North Carolina, 1920-1930; president of National Association of State Universities, 1929; elected president of University of Illinois, 1930.

Chase, Susan Frances, educator, author, lecturer, was born in Shanghai, China; graduated from University of Wisconsin, 1895; Ph.D., University of Buffalo, 1898; taught at University of West Virginia; was instructor at University of Buffalo. Died, 1927.

Chase, William Merritt, American artist; was born at Franklin, Ind., 1849; early studied under B.F. Hayes in Indianapolis, J. O. Eaton, New York, A. Wagner and Piloty, Munich. Established studio in New York. Died, 1916.

Chateaubriand (*shä' tō' brē' dän'*), **Vicomte de Francois Auguste,** 1768-1848, French author, was born at St. Malo. At the flight of Louis XVI. he endeavored to stem the revolutionary tide, but failing, retired to England. In 1815 he was created a peer of France, was ambassador at London in 1822, and minister of foreign affairs, 1823-24.

Chatfield-Taylor, Hobart Chatfield, author, was born at Chicago, 1865; graduate Cornell, 1886. Editor: *America*, 1888-90; consul of Spain at Chicago, 1892-94; chevalier of the legion of honor and officer de l'Instruction Publique, France; chevalier of the order of Isabella, the Catholic, Spain; chevalier of the order of St. James, Portugal, etc. Author: *With Edge Tools; An American Peeress, Two Women and a Fool*, etc.

Chatterton, Thomas (1752-1770), English poet, began writing poetry when he was only 15, publishing several fine poems, showing brilliant imagination, invention, and fertility, under the name of Rowley. He went to London in 1769, but misfortune and starvation drove him to suicide by poison the following year.

Chatrian, Alexandre. See **Erckmann-Chatrian.**

Chaucer (*chô'sĕr*), **Geoffrey,** the "father of English poetry," was born about 1340. At one period he seems to have turned his attention to law, and to have become a member of the Inner Temple. In 1359 he served under Edward III. in his French campaign, and was made prisoner. The date of his return from captivity and of his subsequent marriage cannot now be ascertained. After his marriage he began to mix in public affairs. He was sent on an embassy to Genoa in 1372, and on his return was appointed comptroller of the customs for wools, and in the same year the king granted him a pitcher of wine daily for life. In 1377 he proceeded to Flanders in the retinue of Sir Thomas Percy, afterward earl of Worcester; and for several years thereafter he was employed in embassies and other business connected with the public service. He died at London in 1400 and was buried in Westminster abbey. His poems include *The Romaunt of the Rose; The Canterbury Tales; The Book of the Duchess; The House of Fame*, and *The Legend of Good Women.*

Cheops (*kē'ops*), or **Khufu,** a king of Egypt of the fourth dynasty. He built the great pyramid. He changed that government into a despotic tyranny which had previously been a limited monarchy, and died after reigning fifty-six years, hated by his people. According to Lepsius he lived about 2800-2700 B. C.

Cherubini (*kā'r ōō-bē'ne*), **Maria Luigi Carlo Zenobi Salvatore,** Italian composer, was born at Florence in 1760. He was naturalized in France, and settled in Paris, the scene of his greatest triumphs, where he composed operas, of which the chief were *Iphigenia in Aulis*, and *Les deux Journees*, or *The Water Carrier*, his masterpiece. Died, 1842.

Chesterfield, Philip Dormer Stanhope, Earl of, English politician, writer, and a man of fashion, was born in 1694, and educated at Cambridge. He was distinguished at the court of George II., and was sent as ambassador extraordinary to Holland in 1728. He was made a knight of the Garter in 1730. In 1745 he was appointed lord-lieutenant of Ireland, and afterward became secretary of state. He is now more known by his *Advice to His Son* than by his public services. Died, 1773.

Chesterton, Gilbert Keith, English journalist and author; born at Campden Hill, Kensington, 1874; educated at St. Paul's school; attended classes at Slade school; began reviewing art books for the *Bookman*, and then for the *Speaker;* since then has contributed to *Daily News, Literature, Pall Mall Magazine, Echo, World, Clarion*, Died, 1936.

Chevalier (*shĕ-vä'lyā'*), **Michel,** French economist, was born at Limoges, 1806, and trained as an engineer. He was sent by Thiers to inquire into water and railway communication in the United States; was made a councillor of state in 1838; and in 1840 professor of political economy in the Collège de France. As a freetrader he aided Cobden in carrying into effect in 1860 the commercial treaty between France and England, becoming a senator and grand officer of the legion of honor. He died at Montpelier, 1879.

Chevreul (*shĕ-vrül'*), **Michel Eugene,** French chemist, born at Angers, 1786, studied chemistry at the Collège de France in Paris. In 1826 he entered the academy of sciences, and in 1830 became director of the museum of natural history. Died in 1889, his hundredth birthday having been celebrated three years before with great enthusiasm.

Cheyne (*chā'nē*), **Thomas Kelly,** biblical scholar, joint-editor of the *Encyclopaedia Biblica*, and author of *Critica Biblica*, was born in London, 1841. Educated at Merchant Taylors school and Worcester college, Oxford, he became fellow of Balliol college in 1869; D.D. Litt.D. A member of the Old Testament Revision company, he contributed much to magazines and reviews. His chief books were *The Prophecies of Isaiah; Exposition of Jeremiah and Lamentations; The Book of Psalms*, etc. Died, 1915.

Cheyney, Edward ..otts, educator, author; born at Wallingford, Pa., 1861; graduate of University of Pennsylvania, 1883; professor European history, University of Pennsylvania. Author: *Social Changes in England in the Sixteenth Century; Social and Industrial History of England.*

Childs, George William, publisher and philanthropist, was born in Baltimore, 1829, became clerk in a book store in Philadelphia, and by 1850 was head of a publishing firm. Proprietor from 1864 of the Philadelphia *Public Ledger*. He died, 1894.

Chittenden (*chit'en-den*), **Russell Henry,** scientist, chemist, director Sheffield school, Yale, 1898-1922; born at New Haven, Conn., 1856; graduate Yale, Ph B, Ph.D., LL.D., Sc.D. Professor physiological chemistry, Yale. Member national academy sciences; president American physiological society, 1895-1904. Author: *Digestive Proteolysis; Studies in Physiological Chemistry*, 4 vols.; *Physiological Economy in Nutrition; The Nutrition of Man.*

Chitty (*chit'ti*), **Joseph,** English lawyer and legal writer; born 1776, died at London, 1841. His chief works are, *Treatise on the Parties to Actions and to Pleadings and Synopsis of Practice in the King's Bench and Common Pleas.*

Choate (*chōt*), **Joseph Hodges,** lawyer, diplomat, ambassador of United States to England, 1899-1905; born in Salem, Mass., 1832; graduate of Harvard and Harvard law school, 1852; LL.D., D.C.L.; one of the committee of seventy which broke up the Tweed ring, 1871; governor of New York hospital, 1877 (chairman of committee of elections). Author of *Addresses on Abraham Lincoln, Admiral Farragut*, etc. Bencher of the Inner Temple, England, 1905. Died, 1917.

Choate, Rufus, American lawyer, statesman, and orator, was born at Essex, Mass., in 1790. After graduating at Dartmouth college, he entered upon the study of law at Cambridge and in Washington. He was elected to the senate in 1841. After the death of Daniel Webster, Choate became the recognized leader of the Massachusetts bar. His foresight led him to anticipate the Civil War and to do more than was by some considered wise to conciliate the south. Died at Halifax, Nova Scotia, 1859.

Choiseul (*shwä-zül'*), **Stephen Francis, Duke of,** French statesman and diplomat, was born in 1719. He became prime minister of France, through the influence of Madame de Pompadour. In 1761 he negotiated the secret treaty with the king of Spain, known as the "family compact." In 1770 he was dismissed from office, and exiled to one of his estates. He died in 1785.

Chopin (*shō-paN'*), **Frederic Francois,** Polish pianist and composer, was born, 1810. His waltzes, mazurkas, and other compositions are peculiar in melody, rhythm, and harmony, and have a great charm. He was one of the first pianists. He spent most of his life in Paris, where he died, 1849.

Chosroes (*kos'rō-ēz*), or **Khosru I.,** king of Persia from A. D. 531 to 579. His reign was marked by great victories in war and wise conduct in peace. He enlarged his kingdom, and made his subjects love him by ruling justly and kindly. He lived to be eighty years old, and the forty-eight years of his reign have been called the golden age of Persia.

Chosroes II., king of Persia, grandson of Chosroes I., came to the throne in 591. He also was a great conqueror, but cared more for his own glory than for the good of the people. At last his subjects, led by his own son, rebelled against him, and put him to death, 628, after he had been king for thirty-seven years.

Christian II., king of Denmark and Norway, was born 1481, died 1559. In 1513 he succeeded his father John. He proceeded to subdue Sweden, where he expected aid from the treason of Gustavus Trolle. He was at first unsuccessful, but made a formidable invasion in 1520. Stockholm and Calmar held out, but both were soon reduced. Christian was crowned, and a fearful series of executions ensued. Sweden found a deliverer in Gustavus Vasa, while the Danes rose against Christian and gave their throne to Frederick, duke of Holstein. He attempted to recover his throne, and in 1531 was acknowledged king in Norway. He was soon forced to surrender to the Danes, and was imprisoned for the rest of his life.

Christian IV., king of Denmark and Norway and duke of Schleswig-Holstein, born in Zealand, 1577 and elected successor to the throne in 1580. He assumed the scepter in 1593. From 1610 he carried on a successful war, known as the Kalmarian war, against Charles IX. of Sweden, and his successor, Gustavus Adolphus, which ended in an advantageous peace in 1613. Died, 1648.

Christian IX., king of Denmark, 1863-1906, was born near Schleswig, 1818, died at Copenhagen, 1906. In 1864 he prosecuted a war against Austria, Prussia, and other German states, over the ownership of Schleswig and Holstein, which terminated against him. He was the father of Frederick VIII., Queen Alexandra of England, George I., king of Greece, and Dagmar, dowager empress of Russia.

Christie, James Elder, British artist; born Gardbridge, Fifeshire, 1847; educated at Paisley school of art, South Kensington art shcool, and at the Royal academy. Went to London, 1874; gold medal at South Kensington, 1875; gold medal at Royal academy, 1877, for historical painting. Chief pictures: *Tam o'Shanter; A Rose Among Thorns; Pied Piper of Hamelin; The May Queen;* etc.

Christina (*kris-tē'nȧ*), **Queen of Sweden,** born in 1626; succeeded her father, Gustavus Adolphus, in 1632. After her coronation in 1650, she fell under the influence of favorites, and ceased to interest herself in state affairs. She resigned the crown to her cousin, Charles Gustavus, in 1654, was baptized by the pope, and lived for some time at Paris. She died at Rome in 1689.

Christy, Howard Chandler, illustrator, writer; born in Morgan county, Ohio, 1873; educated at Duncan's Falls, Ohio; went East in 1893; then on New York illustrated periodicals; went to Cuba with second United States regulars and "rough riders"; saw the fighting before Santiago; his letters and illustrations published in *Scribner's Magazine; Harper's Magazine; Collier's Weekly,* and by R. H. Russell, publisher.

Chrysostom (*kris'os-tum* or *kris-os'tum*), **St. John,** one of the Greek fathers, born about 347. In 397 was made bishop of Constantinople. He was renowned for his eloquence and almsgiving. He was soon afterward deposed and conveyed to the Taurus mountains, whence he was ordered to proceed to Pityus, on the Euxine, but died on the journey at Comana in 407.

Church, Alfred John, English clergyman and writer, was born 1829; educated at King's college, London; Lincoln college, Oxford; professor of Latin in University college, London, 1880-88; rector of Ashley, Tetbury, Gloucestershire, 1892-97. Author: *Stories From Homer, Vergil, Greek Tragedians, Livy, Herodotus,* etc. Died, 1912.

Church, Frederick Edwin, American landscape painter, was born at Hartford, Conn., 1826. He first painted scenes from the Catskill mountains. He then traveled in South America, and painted. His *Tropical Scenery* and *View of Niagara Falls From the Canadian Shore* are among his best works. Died at New York, 1900.

Church, Richard William, English clergyman and writer, dean of St. Paul's, was born at Lisbon, 1815. He graduated from Wadham College, Oxford, in 1836, in 1838 was elected a fellow of Oriel, and in 1871 dean of St. Paul's. He died, 1890. Among his works, besides several volumes of sermons were *Essays and Reviews; Life of St. Anselm; The Beginning of the Middle Ages; Dante, an Essay; Spenser; Bacon,* etc.

Churchill, John. See **Marlborough, Duke of.**

Churchill, Winston, American novelist and writer; born at St. Louis, Mo., 1871; graduated, 1894, from the United States naval academy. An editor of the *Army and Navy Journal* of New York, 1894; managing editor of *Cosmopolitan Magazine,* 1895. Author: *The Celebrity; Richard Carvel; The Crisis; The Crossing; Coniston; Mr. Crewes' Career.*

Churchill, Rt. Hon. Winston Leonard Spencer, British statesman, author; was born, 1874; educated at Harrow and Sandhurst. Entered army, 1895, and served with Spanish forces in Cuba, and in South Africa, 1899-1900; member of parliament for Oldham, 1900-1906; for Manchester, 1906-1908. Author: *The Story of the Malakand Field Force; The River War; Savrola; London to Ladysmith via Pretoria; Ian Hamilton's March; Lord Randolph Churchill;* Died 1934.

Cibber (*sib'ėr*), **Colley,** actor, manager, and dramatist, was born in London, 1671. He was educated at Grantham, and in 1690 joined the Theatre Royal in Drury Lane, where he remained, with short intervals, during his whole theatrical career of forty-three years. In 1696 his first comedy, *Love's Last Shift,* was produced, the author playing Sir Novelty Fashion; it established his fame both as dramatist and actor. Poet laureate from 1730. He died suddenly, 1757.

Cicero, Marcus Tullius, Roman orator and statesman, was born in Arpinum in 106 B. C.; studied rhetoric under Milo and others; commenced pleading at the age of twenty-six, and offending Sulla by his successful defense of Roscius Amerinus, retired to Athens, where he studied under Antiochus; went as quaestor to Sicily in 76 B.C., and on his return impeached Verres, a former governor; was aedile in 69 B.C., praetor in 66 B.C., and, in 64 B.C., was elected consul in opposition to Catiline. His vigor in putting down the conspiracy of the latter gained for him the title of "Father of His Country." The measures passed by his enemy, the tribune Clodius, obliged him to withdraw to Greece. After about sixteen months, he was recalled by the senate, and, in 52 B.C., went as governor to Cilicia. He sided with the senate and afterward with Pompey against Caesar, but submitted to the latter after Pharsalia, and retiring to his Tusculan villa, wrote his *De Natura Deorum,* and other philosophical works. His defense of Caesar's murderers and the "philippic" orations directed against Marcus Antonius led to his proscription on the formation of the second triumvirate. He was murdered by Antonius' emissaries in 43 B. C.

Cid Compeador (*thēTH kăm-pā-ā-thōr'*), **Ruy,** or Rodrigo Dias de Bivar, hero of Spanish fiction, aided Sancho of Castile against his brother, Alfonso, king of Aragon, but on the death of Sancho acknowledged Alfonso as king of Castile. He lost the favor of Alfonso, and retired from his court, but obtained some aid from him in capturing the city of Valencia from the Moors, which he ruled till his death.

Cimabue (*chē-mā-bōō'ā*), **Giovanni,** Italian artist, one of the restorers of the art of painting in Italy, which had fallen into neglect during the barbarism of the dark ages; born at Florence in 1240; died about 1300. The exhibition of his table of *The Virgin* for the Rucellai chapel in Santa Maria Novella was the occasion of a public festival. Except the *Madonna,* little of his work remains.

Cimon (*si'mon*), Athenian commander, was the son of Miltiades, the conqueror at Marathon. With his patron Aristides, he was placed over the Athenian contingent to the allied fleet, which, under Pausanias, continued the war against Persia, 477 B. C. His greatest exploit was his encounter with a Persian fleet at the river Eurymedon, 466 B. C., when he destroyed or captured 300 out of 350 ships, and defeated the land forces on the same day. He likewise drove the Persians from Thrace, Caria and Lycia; and expended much of the money which he had obtained by the recovery of his patrimony in Thrace upon the improvement of Athens. At Athens he was opposed by the democracy, headed by Pericles, who procured his ostracism. He was recalled in 454 B. C., and was instrumental in obtaining a five years' armistice with Sparta. He died in 449 B. C. at the siege of a Cyprian town.

Cincinnatus (*sin-si-nā'tus*), **Lucius Quinctius,** a Roman consul, regarded by the later Romans as the model of antique virtue, born about 530 B. C. About 460 B. C. he was chosen consul, and two years later was made dictator. When the messengers from Rome arrived to tell him of his new dignity they found him plowing on his small farm. After a dictatorship of sixteen days he returned to his country life. He was again, when eighty years old, made dictator; died about 430 B. C.

Cinna, Lucius Cornelius, Roman patrician who supported Marius; Sulla, after driving Marius from Rome, and before setting out against Mithridates, allowed Cinna to be elected consul on his swearing not to disturb the existing constitution. No sooner, however, had he entered on office, 87 B. C., than he impeached Sulla, and agitated for Marius' recall. Cinna and Marius next declared themselves consuls after a cruel massacre of the Roman citizens. Marius died a few days later; and Cinna in 84 B. C. prepared to meet Sulla, but was slain by his own disaffected troops at Brundisium. During his fourth consulate his daughter Cornelia was married to Julius Cæsar.

Clapp, Moses Edwin, lawyer, United States senator, was born in Delphi, Ind., 1851; his parents removed to Hudson, Wis., in 1857; after obtaining a common school education, graduated from the Wisconsin law school in 1873; in 1878 was elected county attorney at St. Croix county, Wisconsin; in 1881 moved to Fergus Falls, Minn., and resided there until 1891; was elected attorney-general of Minnesota in 1887, 1889, and 1891, and removed to St. Paul and made that his permanent home in 1891; was elected to the United States senate in 1901 and 1911. Died, 1929.

Clarendon (*klar'en-don*), **Edward Hyde, Earl of,** English historian and statesman, was born, 1608 at Dinton, England. He sat in the short Parliament and in the long Parliament on the popular side, but during the civil war became a devoted royalist; was from 1641 one of the chief advisers of the king; on the failure of the royal cause, took refuge first in Jersey, and then in Holland with the prince of Wales; contributed to the restoration; came back with Charles, and became lord chancellor; fell into disfavor, and quitted England in 1667. He wrote, among other works, a *History of the Great Rebellion,* dignifiedly written, though often carelessly, but full of graphic touches and characterizations, especially of contemporaries. Died at Rome, 1674.

Clark, Alvan, American optician, engraver, and manufacturer of telescopes, was born at Ashfield, Mass., 1808, and died at Cambridge, Mass., 1887. Early in life he was a portrait painter; but in 1845 he turned his attention to the making of achromatic lenses and the manufacture of telescopes. Associated with his sons, he constructed object-glasses for universities, for the naval observatory at Washington, Lick observatory in California, the imperial observatory at Pulkowa, Russia.

Clark, Sir Andrew, British physician, was born at Wolfhill, near Coupar-Angus, Scotland, 1826; educated at Aberdeen and Edinburgh. In 1854 he settled in London, where he acquired a high reputation for his skill in the treatment of diseases affecting the respiratory, renal, and digestive organs. Among his patients were George Eliot and Gladstone. Created a baronet in 1883, he died 1893. He published several medical works.

Clark, Champ, congressman, lawyer; born in Anderson county, Kentucky, 1850; educated in common schools, Kentucky University, Bethany college, and Cincinnati law school; president Marshall college, West Virginia, 1873-74; admitted to the bar, 1875; city attorney of Louisiana, Mo., and later of Bowling Green, Mo.; prosecuting attorney of Pike county; presidential elector; member Congress, ninth Missouri district, 1893-95, and again after 1897; chairman Democratic national convention, St. Louis, 1904. In 1911 he was elected by his party speaker of the United States House of Representatives. Died, 1921.

Clark, Charles Edgar, naval officer; born Bradford, Vt., 1843; appointed to United States naval academy from Vermont, 1860, graduated, 1863, LL.D., University of Pennsylvania, 1905; commander battleship *Oregon* during the cruise from San Francisco to Key West and in the battle of Santiago, July 3, 1898. He was promoted rear admiral, 1902; retired, 1905. Died, 1922.

Clark, Charles Upson, born Springfield, Mass., 1875. Graduate, Yale University, B.A., 1897, Ph.D., 1903. Director, School of Classical Studies of American Academy in Rome, 1916-1919. Author: *Greater Roumania.* Lecturer and publicist.

Clark, Clarence Don, lawyer, United States senator, was born at Sandy Creek, Oswego county, N. Y., 1851; educated at Iowa State University; admitted to the bar in 1874; practiced law in Iowa until 1881; moved to Evanston, Wyo., was prosecuting attorney for Uinta county four years; upon the admission of Wyoming as a state was elected to the fifty-first and fifty-second Congresses; was defeated for reelection to the fifty-third Congress by a fusion of Democrats and Populists; was elected to the United States Senate, 1895-1917. Died, 1930.

Clark, Edwin Charles, English lawyer, regius professor of civil law, Cambridge, was born 1835; graduated at Trinity College, Cambridge, and was formerly scholar and fellow of Trinity; now professorial fellow at St. John's LL.D., F.S.A. Practiced for a short time as a conveyancer in London. Author: *Early Roman Law; Regal Period, Analysis of Criminal Liability; Practical Jurisprudence; A Comment on Austin; Cambridge Legal Studies; History of Roman Private Law.* Died, 1930.

Clark, Francis Edward (1851-1927), American clergyman, founder of United Society of Christian Endeavor. Born of New England parents in Quebec. Educated at Dartmouth College and Andover Theological Seminary. Founded society of Christian Endeavor, 1881. Devoted his time to the society as president, as president of the world organization, and as editor of *The Christian Endeavor World.*

Clark, George Rogers (1752-1818), American soldier and frontiersman, was born in Virginia, received a common school education, and became a land surveyor. He fought against the Indians. He moved to Kentucky and represented that district in the Virginia legislature. During the Revolution, Clark fought valiantly and successfully in the Northwest Territory. He captured Kaskaskia and other points. He forced the surrender of Gen. Hamilton. His services were of the utmost value, for in winning the Northwest land was preserved to the United States which otherwise would probably have passed to England or Spain.

Clark, Lindley D., editor United States bureau of labor, was born near Carthage, Ind., 1862; graduated from Earlham college, 1886; LL.B., LL.M., Columbian University. Author of *Legal Status of Organized Labor in the United States; Law of the Employment of Labor in the United States;* Summary of Labor Legislation, 1905-10; and has edited and compiled many reports and bulletins relating to labor.

Clark, Marguerite, actress, born Cincinnati, Ohio, educated at Ursuline Convent, Ohio. Debut in Baltimore, under management of Milton Aborn, 1900; featured with De Wolf Hopper Co., and Famous Players, loaned by latter to Lasky Co. Address: 50 Central Park W., New York, N. Y.

Clark, Thomas Arkle, university dean, was born at Minonk, Ill., 1862; graduated at the University of Illinois; 1890; graduate student, University of Chicago, 1894, Harvard, 1898-9. Instructor of English and Latin, University of Illinois Academy, 1891-3, instructor English, 1893-5, assistant professor rhetoric, 1895-9, professor rhetoric, 1899, acting dean, college literature and arts, 1900-1, dean undergraduates, 1901, dean of men since 1909, University of Illinois. Author: *English Composition in State Course of Study; English Composition in the Grades; Great American Authors; Great English Authors;* etc.

Clark, or **Clarke, William,** American explorer; born in Virginia, 1770, died at St. Louis, Mo., 1838. In 1804-06, in company with Lewis, he started on an exploring expedition from St. Louis to the mouth of the Columbia river; governor of Missouri territory 1813-21; superintendent of Indian affairs 1821 till his death.

Clark, William Andrews, capitalist, ex-United States senator; born near Connellsville, Pa., 1839; studied law at Mt. Pleasant, Ia., University; taught school, Missouri, 1859-60; went to Colorado, 1862; to Montana, 1863; afterwards merchant-banker, mine-owner, manufacturer, having large interests. President United Verde Copper Company of Arizona. President constitutional conventions, 1884 and 1889; commissioner from Montana to New Orleans Exposition 1884; Democrat candidate for delegate in Congress, 1888 (defeated); nominated by Democrats for United States senator, 1890, and claimed election, but was denied seat; elected to United States senate by legislature for term 1901-07. Died, 1925.

Clark, William Robinson, educator, religious writer; professor of philosophy, Trinity college, Toronto, after 1882; born at Inverurie, Scotland, 1829. Ordained priest, 1858; curate of St. Matthias,' Birmingham, 1857; LL.D., Hobart College, 1888; D.C.L., 1891; F.R.S., 1891; Slocum lecturer in the University of Michigan, 1899; president of the royal society of Canada, 1900; D.D., Queen's University, Canada, 1902. Author: *The Redeemer; The Comforter; The Four Temperaments; Witnesses to Christ.* Died, 1912.

Clarke, Adam, British Wesleyan divine and author, was born near Portrush, Ireland, 1762. From 1782 he preached in places as widely different as the Channel islands and Shetland, but after 1805 lived mostly in London. He died, 1832.

Clarke, Charles Cowden, English writer and critic, was born in 1787, at Enfield, Middlesex. He early imbibed a passion for the theater, and made frequent visits to London, where he formed the friendship of Leigh Hunt, Shelley, Hazlitt, Charles and Mary Lamb. On his father's death in 1820, he became a bookseller in London. In 1834 Clarke entered on that twenty years' course of public lectures on Shakespeare and other dramatists and poets which brought him so much celebrity and profit. In 1856 he went to live at Nice, but removed in 1861 to Genoa, where he died, 1877.

Clarke, Frank Wigglesworth, chemist; born at Boston, 1847; graduate of Lawrence scientific school, Harvard, 1867; D.Sc.; LL.D.; chief chemist of United States geological survey and honorary curator of minerals in United States national museum, since 1883. Member of numerous scientific bodies; chairman international committee on atomic weights; chevalier de la legion d'honneur. Author: *Weights, Measures and Money of All Nations; Elements of Chemistry;* etc.

Clarke, James Freeman, American theologian and writer, was born at Hanover, N. H., 1810; graduated at Harvard, 1829; Cambridge Divinity school, 1833; lecturer on ethnic religions, 1876-77. He wrote: *The Ten Great Religions,* his greatest work *Orthodoxy; Steps of Belief.* etc. Died at Jamaica Plain, Mass., 1888.

Clarke, James P., lawyer, United States senator, was born in Yazoo City, Miss., 1854; studied law at the University of Virginia, graduating in 1878; began the practice of his profession at Helena, Ark., in 1879; was elected attorney-general of Arkansas in 1892, but declined a renomination and was elected governor in 1894. At the close of his service as governor he moved to Little Rock and resumed the practice of law. Was elected United States senator 1903 and 1909.

Clarke, Samuel, English philosopher and theologian, was born at Norwich, 1675, and educated at Cambridge. He was for some time chaplain to the bishop of Norwich, a promoter of science; he afterward became chaplain to Queen Anne, and in 1709 rector of St. James. He died, 1729.

Claude (*klōd*) **of Lorraine,** or Claud Gelee, French landscape painter, born at Chamagne, in Lorraine, A. D. 1600; died in Rome, 1682. At the age of twelve, being left an orphan, he found a home with an elder brother, who was a carver in wood at Freiburg, and there showed some signs of genius. He made a tour in Italy, France, and Germany; in 1627, he returned to Rome, where he speedily made himself famous.

Claudianus (*klō-di-ā'nus*), **Claudius,** the last of the great Latin poets, came from Alexandria to Rome in 395 A. D., and obtained patrician dignity by favor of Stilicho, whose fall, 408, he seems not to have long survived. We have two epic poems by him, *Raptus Proserpinae* and the fragmentary *Gigantomachia,* besides panegyrics on Honorius and Stilicho, *Ediytia, Epigrammata,* etc.

Claudius (*klô'di-us*), **Marcus Aurelius Claudius Gothicus,** Roman emperor, born in Illyria in A. D. 214. He was of a poor family, but won fame as a soldier, and when the emperor Gallienus was murdered the soldiers made him emperor. He died in 270 from a pestilence.

Claudius, Tibrius Drusus Nero Germanicus, Roman emperor, born at Lugdunum (Lyons), 10 B. C. When Caligula was killed (A. D. 41), he was made emperor by the soldiers. This was the first time that an emperor was chosen by the army. The conquest of Britain was begun by him, and it would probably have been a Roman province had not Claudius been recalled to Rome; from his conquests in Germany he took the title of Germanicus. He was poisoned by his wife Agrippina, who wanted the empire for her son Nero, in A. D. 54.

Clausius (*klô'si-us*), **Rudolf Julius Emanuel,** German physicist, was born at Köslin, Pomerania, 1822. He was educated at Berlin, and held professorships of physics at Zürich, Würzburg, and Bonn. He discovered the principle of virial in mathematical physics and published a number of books on physical subjects. Died at Bonn, 1888.

Clarton, Kate (Mrs. Charles A. Stevenson), actress; born New York, 1850; first professional engagement with Miss Lotta, Chicago, 1870. Created part of Louise in *The Two Orphans.* First starring tour, 1876. Died, 1924.

Clarton, Philander Priestley, educator, U. S. commissioner of education, was born in Bedford county, Tenn., in 1862; graduated from University of Tennessee, 1882; later studied at Johns Hopkins University, and in Germany; Litt.D., Bates College, 1906. Has been a teacher in public, normal and collegiate institutions. Editor: *North Carolina Journal of Education,* 1897-1901, and *Atlantic Educational Journal,* 1901-3. U. S. commissioner of education, 1911-1921.

Clay, Henry, American statesman, born 1777 in Virginia; was admitted to the bar 1797, and began his career at Lexington, Ky. In 1806 was elected to congress, and again in 1809 was chosen senator. In 1811 he was sent to the house of representatives, where he was immediately elected speaker. Clay is best known as the author of the famous Missouri compromise, and of the compromise of 1850, known as Clay's "omnibus" measure. In 1824 he was an unsuccessful candidate for president, but was made secretary of state by J. Q. Adams the successful candidate. He was then returned to the United States senate, in which he played a leading part for many years ensuing, especially in the tariff compromise of 1833. Clay was again a candidate for president before the first whig national convention in 1839, but Harrison was nominated and elected. He had in 1842 bidden farewell to the senate, but was persuaded to return to it after 1844, and took a leading part in effecting the slavery compromise of 1850. He returned to Washington from Kentucky for the last time near the close of 1851, and was soon prostrated by disease, under which he gradually sank; he was a gallant party chief, an eloquent orator and a skillful legislator. Died, 1852.

Clayton, John Middleton, American statesman and diplomat, born in Delaware, 1796; graduated from Yale, 1815, and became a noted lawyer. He was United States senator, 1829-37, 1845-49, and 1851-56. During 1849-50 he was secretary of state under President Taylor and negotiated with the British government the historic Clayton-Bulwer treaty. Died, 1856.

Clemenceau (*klā'mān'sō*), **George Benjamin Eugene,** prime minister and minister of interior, France, 1906-09, was born Chateau de l'Aubraie, Feole, Vendee, 1841. Educated at Nantes, and settled in Paris, 1860; resided in United States 1865-69; founded *La Justice,* 1888-1900; *Le Bloc* 1900-02; *L'Aurore,* 1903-07. Resigned as premier, 1909, and was succeeded by M. Briand. Author: *De la Generation des Elements Anatomiques; Le Voile du Bonheur;* etc. Died, 1929.

Clemens, Samuel Langhorne ("Mark Twain"); author, lecturer; born at Florida, Mo., 1835; educated at common schools, Hannibal, Mo., M.A., L.H.D., LL.D., Litt.D., Oxford; apprenticed to printer at twelve; became, 1861, private secretary to his brother when latter was appointed territorial secretary, Nevada. City editor of *Virginia City* (Nev.) *Enterprise,* 1862; founded, 1884, publishing house of C. L. Webster & Co., failure of which involved him in heavy losses; later paid its debts by proceeds of lectures and books. Author: *The Innocents Abroad; Roughing It; Adventures of Tom Sawyer; A Tramp Abroad; Life on the Mississippi; The Adventures of Huckleberry Finn; A Yankee at the Court of King Arthur; Puddinhead Wilson; Tom Sawyer Abroad; Christian Science; Autobiography of Mark Twain,* etc. Died, 1910.

Clement XIV., Giovanni Vincenzo Antonio Ganganelli, born, 1705, at St. Arcangelo, near Rimini; died 1774. At the age of eighteen he entered the order of Minorites, and studied philosophy and theology, which he then successfully taught. On the death of Clement XIII. he succeeded to the papal chair, 1769. Clement XIV. was remarkable for liberality of mind, address as a statesman, sound learning, and mildness of character.

Cleomenes III. (*klē-om'ē-nēz*), king of Sparta, reigned 236-220 B. C. He reestablished the institutions of Lycurgus, and made a new distribution of the lands, relinquishing his own property. Died in Egypt.

Cleopatra (*klē'ō-pā'tra*), queen of Egypt; born in 69 B. C.; celebrated for her beauty, was the daughter of Ptolemy Auletes, by whose will she was left joint sovereign with her brother Ptolemy, 51 B.C.; in 41 B.C. she captivated Mark Antony, who rejected Octavia for her sake. A quarrel with Octavius ensued; the fleet of Antony and Cleopatra was defeated at Actium, and they fled together to Egypt, where they both ended their lives by committing suiside in the year 30 B. C.

Cleveland, Frances Folsom, born at Buffalo, N. Y., 1864; daughter of Oscar and Emma C. (Harmon) Folsom. Graduated from Wells college, Aurora, Cayuga county, N. Y., 1885; married President Cleveland, in the White House, June 6, 1886. Married Thomas J. Preston, Jr., Feb. 10, 1913.

Cleveland, Stephen Grover, president of the United States, 1885-89, and 1893-97, was born in Caldwell, Essex county, N. J., 1837, academic education; LL.D., Princeton, 1897. Went to Buffalo, 1855 and was admitted to bar, 1859; sheriff Erie county, 1870-73; in 1881 was elected mayor of Buffalo; in 1884 was elected president of United States as democrat, over James G. Blaine, republican, by majority of thirty-seven electoral votes; in 1888 again democratic nominee, but defeated by Benjamin Harrison; returned to law practice, locating in New York; in 1892 again elected president as democrat, defeating President Harrison. He took up his residence, after his second retirement from the White House, at Princeton, N. J., where he died, 1908.

Clews, Henry, banker; born in Staffordshire, England; intended for the ministry, but left school at fifteen to enter mercantile life in New York, whither his father had taken him for a visit; at outbreak of the Civil War invited by secretary of treasury to become agent to sell government bonds. Many years treasurer American geographical society; connected with many city institutions and financial corporations. Author: *Twenty-eight Years in Wall Street; The Wall Street Point of View,* etc. Died, 1923.

Clifford, William Kingdon, English mathematician and philosopher, was born in 1845; was educated at Cambridge; appointed professor of applied mathematics at University College, London, in 1871. Died, 1879.

Clifford, Mrs. W. K. (Lucy Lane), daughter of late John Lane; married, 1875, W. K. Clifford, F. R. S. Author: *Mrs. Keith's Crime; Love Letters of a Worldly Woman; Mere Stories: A Woman Alone; Woodside Farm.* Died, 1929.

Clinton, De Witt, American statesman, was born at Little Britain, N. Y., 1769. He graduated at Columbia College, and after studying law entered the lower house of the New York legislature, in 1797. He was chosen United States senator in 1802. He was elected governor of New York three times. His greatest service to the state was

in urging the construction of the Erie canal. He died at Albany, N. Y., 1828.

Clinton, George, American commander and statesman, born in 1739. He served in early life under General Amherst against the French, and afterward studied law. During the struggle for independence he sat in the colonial congress, and was made a brigadier-general. Died, 1812.

Clinton, Sir Henry, an English general, was born about 1738; entered the British army, 1751, and succeeded Sir William Howe as commander-in-chief in America. After his return to England he was appointed governor of Limerick, and subsequently of Gibraltar, where he died in 1795.

Clive (*klīv*), **Kitty,** British actress, was born in London in 1711. She came out at Drury Lane about 1728, and continued to play chiefly at that theater till 1769, when she quitted the stage, and retired to Twickenham. She died at Little Strawberry Hill, 1785.

Clive, Robert, Lord, English statesman and soldier, was born at Styche, near Market Drayton, in Shropshire, 1725; died in London, 1774. He went to India in 1744 as a writer under the East India company, but three years later relinquished the civil for the military service, in which he greatly distinguished himself. Scarcely had he arrived when the nabob of Bengal captured Calcutta, destroyed the British factories near that city, and threw 146 of his prisoners into the memorable "black hole of Calcutta." The victory of Plassy, 1757, was Clive's retaliation for these wrongs. His last years were embittered by the attacks of his enemies, and by charges of malversation and abuse of power; but the house of commons rejected a motion against him, and declared that "he had rendered great and meritorious services to his country."

Clodd (*klod*), **Edward,** English scientist and writer, secretary, London joint-stock bank, limited, since 1872; born in Margate, 1840. Educated at Aldeburgh grammar school. Entered commercial life, 1855; clerk in London joint-stock bank, limited, 1862.

Clodius (*klō'di-us*), **Publius,** a famous Roman tribune, who committed sacrilege and was tried for the offense, but acquitted through bribery. He persecuted Cicero, who had become his enemy by testifying against him, and was killed in an encounter with Milo, 52 B. C.

Clough (*kluf*), **Arthur Hugh,** English poet, was born at Liverpool, 1819. In 1837 he entered Balliol College, Oxford; in 1842 he was elected a fellow of Oriel. In 1898 he published the *Bothie of Toberna-Vuolich*, a "long vacation pastoral" in hexameter verse. He traveled in France and Italy, part of the time with Emerson, and was appointed on his return in 1849, warden of University Hall, London. Died at Florence, Italy, 1861.

Clovis I. (*klō'vis*), son of Childeric I., was born about 465, and is regarded as the real founder of the French monarchy. He succeeded Childeric in 481. Having conquered Alaric, king of the Visigoths, in 507, he gained most of the south provinces, but was himself overthrown near Arles, by Theodoric, in 509. Died, 511.

Cobb, Irving Shrewsbury, author-journalist, born at Paducah, Kentucky, in 1876, became newspaper reporter at 17, and editor at 19, staff correspondent *Louisville Evening Post, Paducah News, New York Evening Sun and New York Evening World,* and represented *Saturday Evening Post* as war correspondent in Europe, 1914-15. Author, *Funabashi, Mr. Busybody, Roughing It de Luxe, Europe Revises Paths Of Honor,* etc.

Cobbe (*Kob*), **Frances Power,** 1822-1904, was born at Newbridge, Ireland. She was a theist, a supporter of women's rights, and a vivisectionist.

Cobbett (*Kob'et*), **William,** 1762-1835, British politician and writer, born at Farnham, Sussex. He was imprisoned for libel against the government. Published the *Register,* and wrote numerous books, among which were *Grammar, Cottage Economy,* and *Advice to Young Men.*

Coburn, Foster Dwight, secretary of Kansas department of agriculture, was born in Jefferson county, Wis., 1846; served in the Civil war in the 135th and later in the 62d Illinois Infantry; removed to Kansas, 1867, and became a farmer and stockman; secretary of Kansas department agriculture, 1882 and 1894-1914. Was editor of the *Kansas City Live Stock Indicator* nearly six years; has been a regent of the state agricultural college three times and president and vice president of its board of regents; chief of department of live stock, St. Louis exposition, 1904. Appointed United States senator from Kansas, June 4, 1906, but declined. Died, 1924.

Cochrane (*kok'ran*), **Thomas** (tenth earl of Dundonald). See **Dundonald.**

Cockburn (*kō'burn*), **Sir Alexander,** British jurist, was born in 1802; in 1822 entered Trinity Hall, Cambridge; in 1829 was admitted to the bar, and soon became distinguished as a pleader before parliamentary committees; in 1851 attorney-general, in 1856 chief justice of the common pleas, in 1858 a baronet, and in 1859 lord chief justice. He died, 1880.

Cockburn, Sir George, 1772-1853; English naval officer whose operations against Martinique secured that island to Great Britain. His last noteworthy sea employment was to convey Napoleon to St. Helena.

Cockran, William Bourke, lawyer, orator; born in Ireland, 1854; educated in Ireland and France; came to the United States, 1871; member of congress, 1887-89, and 1891-95, as democrat. Was again elected to congress, February 23, 1904, at a special election to fill a vacancy caused by the resignation of George B. McClellan; reëlected, 1904 and 1906. Died, 1923.

Cody, Col. Wm. F. (Buffalo Bill), was a scout and showman of international fame, born, 1846. He was known as "Buffalo Bill," a sobriquet given him after having killed 4,280 buffalo in eighteen months to fill contracts for construction gangs of Kansas Pacific Railway. He was a government scout and guide against Sioux and Cheyenne Indians, 1868-72. Member of Nebraskan Legislature, 1872. General of Nebraskan National Guard, 1890-1, and held many other offices of responsibility. For over thirty years he was manager of the "Wild West Show," and traveled with it through several countries. Buried on mountain near Denver. Died, 1917.

Cohan, George Michael, American comedian and playwright, was born in Rhode Island, 1878. While still a child he appeared in numerous plays and soon became popular on the vaudeville stage. Later he wrote, produced, and acted in many plays and musical comedies and wrote popular songs. Among his plays are *Get-Rich-Quick Wallingford, Seven Keys to Baldpate,* and *The Miracle Man.*

Cohen, Solomon Solis, physician; born in Philadelphia, 1857; graduate of Philadelphia Central high school, 1872, A.M., 1877; lecturer on clinical medicine, Jefferson medical college, 1888-1902; professor of clinical medicine, Jefferson medical college, since 1902. Author: *Therapeutics of Tuberculosis, Essentials of Diagnosis.*

Coke (*kōōk* or *kōk*), **Sir Edward,** English jurist and law writer, was born 1552; educated at Norwich grammar school and Cambridge; admitted to the bar in 1578; became solicitor-general in 1592, and attorney-general in 1594. He showed much harshness in his prosecution of Essex, Raleigh, and others; but his loyalty gained him the chief-justiceship of the common pleas, in 1606. The remainder of his life was spent in compiling his *Commentaries upon Littleton.* Died, 1634.

Colbert (*kōl'bâr'*), **Jean Baptiste,** a distinguished French statesman, minister of finance in the reign of Louis XIV.; was born at Rheims, France, 1619. To him the kingdom was indebted for the enlargement of its navy, for the acquisition of many of its foreign possessions, and for a large number of internal improvements. The gardens of the Tuilleries, the Hotel des Invalides and the facade of the Louvre were all the work of Colbert. Died, 1683.

Colby, Frank Moore, editor and educator, born at Washington, 1865; graduated from Columbia, 1888, M.A., 1889; lecturer of history, Columbia, 1891-95; instructor of history and economics at Barnard College, 1891-95; professor of economics, New York University, 1895-1900; resigned to become editorial writer *Commercial Advertiser,* 1900-02. American editor *Nelson's Encyclopædia,* 1905-06. Died, 1925.

Cole, Thomas, artist, was born at Bolton, England, 1801, and came to America in 1819, where he became one of the known landscape painters. In 1830 two of his pictures appeared in the Royal Academy, and he afterward made sketching tours through England, France, and Italy; but all his best landscapes were American. Died at Catskill, N. Y., 1848.

Cole, Timothy, wood engraver, was born at London, England, 1852, and came to the United States, 1857; entered employment of *Scribner's Magazine,* 1875. Received diploma, Chicago exposition, 1893; first-class gold medal, Paris exposition, 1900; grand prix, St. Louis Exposition, 1904. Honorary member society of sculptors, painters, and engravers, London. Died, 1931.

Colebrooke (*kōl'brōōk* or *kōōl'brōōk*), **Henry Thomas,** British orientalist, was born in London, 1765. He was a director of the Bengal Asiatic society, and made translations from the Sanskrit works on Hindu law, algebra, arithmetic, and mensuration, which were important contributions to the history of mathematics. Died, 1837.

Colenso (*kō-len'sō*), **John William,** English divine, was born 1814. In 1846 he was appointed rector of Forncett St. Mary, in the county of Norfolk, England, and 1854 first bishop of Natal, South Africa. Died, 1883.

Coler, Bird Sim, politician, financier, ex-comptroller of New York, born at Champaign, Ill., 1867; educated at polytechnic institute and Andover academy. Entered his father's banking house as clerk and later became partner of the firm of W. N. Coler & Co. Democratic candidate for governor of New York, 1902. Author: *Municipal Government as Illustrated by the Charter; Municipal Government and Tunnels and Bridges,* etc.

Coleridge (*kōl'ri-j*), **Hartley,** eldest son of Samuel Taylor Coleridge, born at Clevedon, near Bristol, 1796. In 1815 he was entered a scholar of Merton College, Oxford. He afterward attempted a private school at Ambleside, but failed. Near this little town he resided till he died, 1849.

Coleridge, Samuel Taylor, British poet, essayist, and dramatist, was born at Bristol in 1772. He was sent to Christ's hospital, and subsequently studied at Cambridge, where, in 1792, he obtained the prize for the best Greek ode. His *Sibylline Leaves* and *Biographia Literaria* found many admirers, and several of his poems have been given very high praise, particularly the *Ancient Mariner.* Among his other works are: *Remorse, a Tragedy, Christabec, Aids to Reflection,* etc. Died, 1834.

Colfax (*kōl'faks*), **Schuyler,** American statesman, vice-president of the United States, was born in New York, 1823. Elected to Congress by the newly formed republican party, in 1854; he remained a member until 1869 and was three times speaker. He died, 1885.

Coligny (*kō'lēn'-yē'* or *kōlēn'yē*), **Gaspard de Chatillon, Sire de,** French admiral and general of eminence, born at Chatillon-sur-Loing, 1517. Introduced at court, he served under Francis I. in Italy. Killed in the massacre of St. Bartholomew, 1572.

Collier (*kol'yĕr*), **Jeremy,** English clergyman and controversialist, was born at Stow cum Quy, Cambridgeshire, 1650. In 1697 he published his *Short View of the Immortality of the English Stage,* which fell like a thunderbolt among the wits. Consecrated bishop in 1713. Died, 1726.

Collier, Peter Fenelon, publisher, was born at Carlow, Ireland, 1849; educated at Mt. St. Mary's college, Cincinnati. Founder and publisher of *Collier's Weekly* and head of P. F. Collier & Son, publishers. Died, 1909.

Collingwood, Cuthbert, Lord, English admiral, was born at Newcastle-upon-Tyne, 1750. He entered the navy at eleven, and from 1778 his career was closely connected with that of Nelson, whom he followed up the ladder of promotion, step by step. A peerage was his reward. He died at sea, 1810, and was buried beside Nelson, in St. Paul's.

Collins, William Wilkie, English novelist, was born in London, 1824. He was educated at a private school. From 1848 he made literature his profession. His first novel was printed in 1850. Died, 1889.

Collyer (*kol'yĕr*), **Robert,** Unitarian clergyman; born Keighly, Yorkshire, England, 1823; learned the blacksmith trade, which he followed after coming to the United States, 1850. Was Methodist local preacher, but became a Unitarian in 1859; became Unitarian missionary in Chicago; founded and was pastor Unity Church there 1860-89; subsequently pastor of the Church of the Messiah, New York. Died, 1912.

Colonna (*kō-lōn'nȧ*), **Vittoria,** the most celebrated poetess of Italy, was born in the year 1490. When four years old she was betrothed to a boy of the same age, Fernando d'Avalos, son of the Marchese de Pescara. At seventeen they were married. After her husband's death in the battle of Pavia, 1525, she found her chief consolation in solitude and in the cultivation of her poetical genius. Died in Rome, 1547.

Colquhoun (*kō-hōōn'*), **Archibald Ross,** journalist, descriptive writer, born off cape of Good Hope, 1848, of Scotch parentage. Explored from Canton to Chamo to trace best route for connecting Burmah and China by railway, 1881-82; London correspondent Franco-Chinese war and whole far East, 1883-84; traveled extensively, and been London *Times* correspondent in various parts of the world. Died, 1915.

Colt, Samuel, American inventor, born in Hartford, Conn., 1814. He early conceived the idea of revolving fire-arms, and in 1835, took out a patent for the weapon since known the world over as "Colt's revolver." In 1848 he established a company for the working out of his patent, and built at Hartford one of the most extensive armories in the world. Died, 1862.

Columbus, Christopher, the discoverer of the New World called America, was born in the neighborhood of Genoa, 1446, and went to sea at the age of fourteen. The Mediterranean was the chief scene of his early activity. The turning-point of his life came in 1470, when he was wrecked during a sea-fight with some Venetian galleys off the coast of Portugal. He settled at Lisbon, and during the next few years made many voyages to Madeira and the Azores, and in 1477 one to Iceland.

Gradually there grew up in his mind the conviction that it was possible to reach India by sailing westward. This idea seems to have taken shape as early as 1474. After making a vain appeal to the senate of his native state, Genoa, he turned to the king of Portugal, but without result; then to Henry VII. of England, and to the dukes of Medina Sidonia and Medina Celi, who advised him to appeal to Isabella of Castile. But it was not till after seven years of heart-breaking delays that Columbus's proposals were accepted by the Spanish monarchs.

On August 3, 1492, he set sail with one small ship, the *Santa Maria,* and two caravels, the *Pinta* and the *Nina,* the whole expedition including only 120 men. His real voy-

age of discovery began when he sailed westward from the Canary Islands on September 6. His men were not inspired by his hope, and throughout the voyage he had to plead with and cajole them to proceed—a variation of the magnetic needle having reduced them almost to a state of terror. On October 12 land was sighted—an island in the Bahamas, probably what is now known as Watling I., but named by Columbus San Salvador. He discovered Cuba and Haiti (which he called Hispaniola), and set sail for Europe in the two caravels, his ship having been wrecked. After a stormy voyage, in which the two caravels were separated, he cast anchor at Palos, March 15, 1493.

He set out again on September 25 with a much larger squadron, and reached Dominica, an island of the West Indies, on November, 3. He returned from his second voyage in 1496, and set out on his third, which resulted in the discovery of the mainland of South America (1498), and from which he returned in irons by the authority of a newly-appointed royal governor. But the king and queen speedily restored Columbus to favor.

In 1502 he set out on his last voyage (1502-04), during which he explored the south shore of the Gulf of Mexico. After his return to Spain, he died at Valladolid, May 20, 1506. There he was buried, but his bones were removed first to Seville, then to Santo Domingo, in Hispaniola, and, although this is disputed by Santo Domingo, to the cathedral in Havana (1796), and again, after the Spanish-American war of 1898-9, back to Seville.

References.—*Lives of Columbus* by Irving, Phelps, and Winsor's *Narrative and Critical Hist. of America*. The great critical study of Columbus' life and family is by Harrisse. The standard English edition of his *Letters* is Major's translation. See also the *Letters* ed. by Ford. Among the best of the shorter biographies are those of Markham and Adams.

Columella, Lucius Junius Moderatus, the most learned of Roman writers on practical agriculture, born at Cadiz in Spain, and flourished in the earlier part of the first century of the Christian era.

Combe (*kōōm* or *kōm*), **George,** British phrenologist and moral philosopher, born in Edinburg, 1788. Investigation convinced him that phrenology was based on fact. The result was his *Essays on Phrenology*, 1819. Died, 1858.

Comenius (*kō-mā'nē-oos* or *kō-mē'ni-us*), or **Komenski, John Amos,** educational reformer, was born in 1592, in Moravia. He studied at Herborn and then at Heidelberg, became rector of the Moravian school of Prerau, 1614-16. Settling at Lissa in Poland, 1628, he here worked out his new theory of education, wrote his *Didactica Magna*, and was chosen bishop of the Moravian brethren in 1632. Finally, he settled in Amsterdam, and died at Naarden, 1671.

Commons, John Rogers, educator, economist; born in Drake county, Ohio, 1862; graduated from Oberlin, 1888, A.M., 1890; student Johns Hopkins, 1888-90. Professor of political economy, University of Wisconsin since 1904. Author: *The Distribution of Wealth; Social Reform and the Church*, etc.

Comnena, Anna. See **Anna Comnena.**

Comstock (*kum'stok*), **Anthony,** moral reformer, secretary and special agent of New York society for suppression of vice, was born in New Canaan, Conn., 1844. His brother Samuel having been killed at Gettysburg, he volunteered to fill his place in regiment, enlisting in the 17th Connecticut volunteer infantry, December, 1863; mustered out, July, 1865. Appointed Post Office Inspector of New York, 1873. Died, 1915.

Comstock, John Henry, scientist, professor of entomology, Cornell, born at Janesville, Wis., 1849; graduated, B.S., Cornell, 1874; instructor and professor there, except 1879-81, when he was United States entomologist. Died, 1931.

Comte (*kōnt*), **Auguste,** French philosopher, founder of the "positive philosophy," born at Montpelier, France, 1798. He studied at Paris, and attracted the attention of his companions by the boldness and novelty of his speculations. In 1832 was appointed professor of mathematics at the Ecolé Polytechnique, which situation he was forced to resign in 1852, on account of differences with his colleagues. Died, 1857.

Conant (*kō'nant*), **Charles Arthur,** author, banker, born at Winchester, Mass., 1861; Washington correspondent of *New York Journal of Commerce*, 1889-1901; special commissioner of war department in Philippines, 1901; member of commission on international exchanges of United States, 1903; Treasurer of Morton trust company, 1902-06. Author: *A History of Modern Banks of Issue; The United States in the Orient*, etc.

Conaty (*kon'ā-tī*), **Rt. Rev. Thomas James,** Roman Catholic prelate, bishop of Los Angeles; born in Ireland, 1847; educated at Montreal college, 1863-67; Montreal theological school, 1872; ordained priest, 1872; J.C.D., D.D., selected by American Catholic bishops, trustees of university, to succeed Bishop Keane as rector Catholic university, Washington, 1896, and appointed to position by Pope Leo XIII., who also conferred upon him, 1897, the title of domestic prelate and nominated him titular bishop of Samos, 1901; appointed to see of Monterey and Los Angeles, Calif., 1903. Died, 1915.

Conde (*kon'-dā'*), **Prince de, Louis I. de Bourbon,** younger brother of Antony of Bourbon, king of Navarre, was born 1530. During the wars between Henry II. and Spain, he distinguished himself at the siege of Metz, the battle of St. Quentin, and the capture of Calais from the English. In the second Huguenot war, 1567-69, Condè had coins struck with the inscription: "Louis XIII., first Christian king of France"; but at Jarnac, 1569, he was defeated, taken prisoner and shot.

Conde, Prince de, Louis II. of Bourbon, commonly termed "the great Condè," was born 1621. By the death of his father, 1646, he became head of his family, and, next to the duke of Orleans, the highest personage in the state. The war having been renewed by Spain, 1673, he again commanded the French in the Netherlands, and soon after retired to Chantilly, where he enjoyed the society of such men as Molière, Boileau, and La Bruyère. Died, 1686.

Condillac (*kon'dē-yak'*), **Etienne Bonnot de Mably de,** French philosopher, the founder of sensationalism, was born of a noble family at Grenoble, 1715. He was chosen a member of the French academy of sciences in 1738. He died on his estate of Flux, near Beaugency, in 1780. He based all knowledge on the senses.

Condorcet (*koN'dor'se'*), **Jean Marie Antoine Nicholas Caritat, Marquis de,** French philosopher and mathematician, was born in 1743. He first gained celebrity by his successful labors as a mathematician. His treatise on integral calculus, written when he was but twenty-two years of age, was eminently successful. He was outlawed in 1793, and shortly after was taken prisoner, when he poisoned himself, in 1794.

Confucius, the Latinized name of the Chinese philosopher Kung-fu-tse (Reverend Master Kung), was born (according to the best Chinese authorities) in 551 B. C., in the kingdom of Loo, now part of the province of Shantung, died 479 B.C. He set himself up as a teacher at the age of 30. His fame soon spread, and in order to propagate his doctrines he visited neighboring countries, preaching and teaching, and returning about 506 B.C. He left a grandson, Tse-tse, and in A. D. 1671 there were 11,000 male descendants bearing the name of the philosopher most of them of the 74th generation. These descendants constitute a distinct class in Chinese society.

No founder of any religion can boast of success greater than that of Confucius: but he was not the originator of a religious creed. While striving to introduce a ritual more minute than that of Moses, he rejected divine revelation, and erected a structure of moral philosophy founded upon the wants and tendencies of human nature. The books containing his doctrines, partly written by himself, partly by his disciples, bear almost the same relation to the Chinese world as the Bible does to the Christian. Confucius also collected the poems, folk-lore, annals, songs, and rites then in vogue in various parts of the empire. Editing and pruning these, he produced what are still known as the "classics"—*i. e.*, the *Book of History* (or Tradition), the *Book of Odes*, the *Book of Changes* (or Oracles), the *Book of Rites*, and so on.

References.—*Life and Labors of Confucius*, by E. H. Parker. Various works of Confucius are translated into English by Legge in *Sacred Book of the East;* compare also his *Chinese Classics.*

Congreve (*kong'grēv*), **William,** English dramatist, was born near Leeds, 1670. His first piece, written at the age of seventeen, was a romance entitled *Incognito, or Love and Duty Reconciled.* In 1693 he wrote his first comedy, *The Old Bachelor.* This brought him not only great reputation, but also the substantial benefit of a commissionership in the hackney-coach office. Died, 1729.

Conkling (*kongk'ling*), **Roscoe,** American politician, was born at Albany, N. Y., 1829. In 1846 he removed to Utica, N. Y., where he became district attorney, and was mayor in 1858. In the latter year he was elected to congress, and in 1879 became a member of the United States senate. In 1881 he resigned his seat in the senate owing to Garfield's assumption of the control over appointments in his native state. Died at New York, 1888.

Conn, Herbert William, biologist, was born at Fitchburg, Mass., 1859; graduated from Boston University, 1881; Ph.D., Johns Hopkins, 1884; instructor biology, 1884-6, assistant professor, 1886-8, appointed professor in 1889, Wesleyan University. Director Cold Spring Harbor biology laboratory, 1889-97; bacteriologist, Storrs experiment station, from 1890; he was made director laboratory of Connecticut state board of health in 1905; lecturer, Trinity College, 1887-9. Specialist on the bacteriology of dairy products. Author: *Evolution of To-Day; The Living World; The Story of Germ Life; The Story of the Living Machine; The Method of Evolution; Agricultural Bacteriology; Bacteria in Milk and Its Products; An Elementary Physiology and Hygiene for Use in Schools;* and over one hundred scientific memoirs. Died, 1917.

"Connor, Ralph." See **Gordon, Charles W.**

Conrad I. (*kon'rad*), was chosen king of Germany in 911, and was the first of the elected rulers of Germany. His short reign was spent in putting down his nobles, who were always rebelling against him. Conrad died, 918.

Conrad II., king of Germany and Roman emperor, was the son of Henry, duke of Franconia, and succeeded Henry II., the last of the Saxon emperors, in 1024. Conrad died at Utrecht, 1039, and was succeeded by his son Henry III.

Conrad III., the first Hohenstaufen king of the Germans, was born 1093, son of Frederick of Swabia. While under twenty, he had bravely supported Henry V., who in return granted him the duchy of Franconia. He unsuccessfully contested the crown of Italy with the emperor Lothair of Saxony. When St. Bernard of Clairvaux preached a crusade, Conrad set out for Palestine with a large army, 1147. An attempt by the duke of Bavaria to regain his dukedom was defeated by the nephew of Conrad. Conrad's health had broken during the crusade, and he died at Bamberg, 1152.

Conrad, Joseph, English novelist, was born in Poland (Joseph Conrad Korzeniowski), 1856. Upon the death of his father, though very young, he left home and entered the French merchant marine. Later he joined an English ship as mate and sailed for the East. Until then, at twenty, he had not known the English language, of which he was to become a master. His voyages are recorded with vividness and force and are filled with the atmosphere of the tropics and the orient and the effect of these places on Europeans who touch them. Among his works are *Almayer's Folly, The Nigger of the Narcissus, Lord Jim, Typhoon, Rescue.* He died in 1924.

Conscience (*kōn'syĀNs'*), **Hendrik,** Flemish novelist, was born at Antwerp, 1812, and died at Brussels, 1883. His *Phantazy*, a fine collection of tales and his most popular romance, *De Leeuw van Vlaenderen*, early made his name known.

Considerant (*kōn'sē'dā'rāN'*), **Victor-Prosper,** French socialist, was born at Salins, France, 1808; he entered the army, which, however, he soon left to promulgate Fourier's doctrines. On the death of his master, Considerant became head of his school and edited the *Phalange.* In 1849 he was accused of high treason, and fled from France. In Texas he founded a community, *La Réunion*, which flourished for a time. He returned to France in 1869, and died, 1893.

Constable (*kun'stá-b'l*), **John,** landscape painter, born in East Bergholt, Suffolk, England, 1776, died suddenly, 1837. The national gallery has his best pictures, *The Cornfield, The Valley Farm*, and *The Haywain.*

Constans (*kon'stanz*), **Flavius Julius,** emperor of Rome, was born about A. D. 320. He was the youngest son of Constantine the Great, on whose death, 337, he received as his share of the empire Western Illyricum, Italy, and Africa. He was a weak and cruel ruler, and at last Magnentius, his general in Gaul, sent some conspirators to kill him A. D. 350.

Constant de Rebecque (*kōn'stāN' dĕ rē-bek'*), **Henry Benjamin,** author and politician, was born at Lausanne, Switzerland, 1767. Educated at Oxford, Erlangen, and Edinburgh, he in 1795 settled in Paris as a publicist and after the second restoration of the Bourbons wrote and spoke in favor of constitutional freedom. He died, 1830.

Constantine I. (*kon'stan-tin*), called the Great; born in 272, at Moesia. On the death of his father at York, where he accompanied him, Constantine was proclaimed emperor by the troops; he was acknowledged emperor by the senate in 312, and thereafter an edict was issued named of Milan, granting toleration to the Christians. He had still to extend his empire over the East, and having done so by the removal of Licinius, he transferred the seat of his empire to Byzantium, which was thereafter called Constantinople, i. e., Constantine's city. Constantine was baptized in 337 as a Christian, after having three years before proclaimed Christianity the state religion. Died, 337.

Constantine XIII., Palaeologus, the last emperor of the East, born in 1394. The Turkish sultan, Mohammed II., determined to take Constantinople and laid siege to it with a great army, 1453. Constantine, who had only about 9,000 soldiers, resisted bravely for nearly two months, but at

last the Turks battered down part of the walls and the emperor and his little band of nobles were all slain.

Constantius I., called Chlorus, a Roman emperor, father of Constantine the Great, born about A. D. 250. He died at York, England, 306.

Constantius II., a Roman emperor, second son of Constantine the Great, born 317. His cousin Julian won so many victories that the army proclaimed him emperor, and Constantius marched against him, but died on the way, 361. He was succeeded by Julian.

Conway, Sir William Martin, English traveler, art critic, and geographer, born at Rochester, England, 1856; was educated at Trinity College, Cambridge. University extension lecturer, 1882-85; professor of art, University College, Liverpool, 1885-88; president of the Alpine club, 1902-04. Author: *Woodcutters of the Netherlands in the fifteenth century; Early Flemish Artists; Literary Remains of Albrecht Dürer; No Man's Land* (history of Spitsbergen); etc.

Conwell, Russell Herman, lecturer, educator, Baptist clergyman; born at Worthington, Mass., 1842; captain of infantry, 1862-65, in Union army; promoted to lieutenant-colonel, 1865; foreign correspondent *New York Tribune* and *Boston Traveler*, 1868-70, president of Temple College. Died, 1925.

Cook, Albert Stanburrough, educator; born at Montville, N. J., 1853; graduated at Rutgers college, 1872; M.S., M.A., L.H.D., LL.D., associate in English, Johns Hopkins, 1879-81; professor of English, university of California, 1882-89; professor of English language and literature, Yale, 1889-1921; Co-editor of *Journal of English and Germanic Philology*, 1897-1905.

Cook, Captain James, a celebrated English navigator, best known through his *Voyages Round the World;* born in Marton, in North Riding, Yorkshire, 1728. After his death, at Hawaii, one of the Sandwich islands, 1779, many honors were paid to his memory, both in his own and in foreign countries.

Cooke, Josiah Parsons, American chemist, was born at Boston, Mass., 1827, and was professor of chemistry at Harvard from 1850. His chief works are *Elements of Chemical Physics, Principles of Chemical Philosophy, The New Chemistry, etc.* Died at Newport, R. I., 1894.

Cooke, Sir William Fothergill, British electrician, born at Ealing, England, 1806; was educated at Durham and Edinburgh. In 1867 Cooke received the Albert gold medal; Cooke was knighted in 1869. He died, 1879.

Cooley, Thomas McIntyre, American jurist, was born at Attica, N. Y., 1824, was admitted to the bar 1846, and became professor of law at the university of Michigan, 1859; was associate justice Michigan supreme court 1864-68, and chief-justice 1868-85. He died, 1898.

Coolidge, Archibald Cary, instructor in history, Harvard, 1893-99, professor since 1904, born at Boston, 1866; graduated from Harvard university, 1887. With Taft party to Philippine islands, 1905-06; Harvard lecturer at the Sorbonne and other French universities, 1906-07. Has contributed to *American Historical Review*, the New York *Nation*, etc. Died, 1928.

Coolidge, Calvin (1872-1933), lawyer, graduated Amherst. Member Mass. Legislature. Lieut.-Governor and Governor of Mass. Re-elected Governor on the issue of law and order as exemplified in his handling of the Boston police strike. Vice-President, 1920. Became President, August 3, 1923, on death of President Harding. Took oath of office in home of his father at Plymouth, Vermont, and announced intention of continuing his predecessor's policies. Took up the coal strike and settled it by using all existing agencies. Vice-President, 1921 to 1923. President, 1923 to 1929.

Cooper, Anthony Ashley. See **Shaftesbury.**

Cooper, James Fenimore, famous American novelist, was born in Burlington, N. J., 1789. After six years' experience of naval life, he retired from the sea in 1810, and took up his residence at Cooperstown, Otsego county, N. Y. In 1821 appeared his first work, *Precaution.* In quick succession followed *The Spy*, a tale which at once secured for him a place in the first rank of novelists; his sea stories, his famous "Leather Stocking series" of Indian life and adventure. After passing some years in Europe, died at Cooperstown, in 1851.

Cooper, Peter, American inventor, manufacturer, and philanthropist, was born in New York, 1791. His first invention was an improvement in a machine for shearing cloth. In 1830 he erected iron works in Canton, near Baltimore, and here constructed after his own designs the first locomotive engine ever made in this country. But the work of his life was the founding of an institution for instruction of the industrial classes—the Cooper Union, New York, whose corner stone he laid in 1854. In 1876 the independent party nominated him for president of the United States, and he received nearly 100,000 votes. Died, 1883.

Cooper, Sir Astley Paston, a celebrated English surgeon, was born in Brooke, Norfolk, 1768; studied under Henry Cline, surgeon to St. Thomas' hospital, London, and was appointed demonstrator of anatomy there, 1789. In 1822 he was elected one of the court of examiners of the college of surgeons, and in 1827, president. He was a D.C.L. of Oxford, and an LL.D., of Edinburgh. He died 1841.

Copernicus or **Koppernik, Nicholas,** astronomer, born at Thorn, then in Poland, 1473, his family being supposed to have come originally from Westphalia. Having studied medicine and theology at Cracow, and law at Bologna, he was made a canon of Frauenburg in 1497. In 1500 he went to Rome, where he taught mathematics and astronomy. He studied medicine at Padua, and in 1505 finally left Italy for Prussia to carry out the work of his life.

Doubting that the motions of the heavenly bodies could be so confused and so complicated as the Ptolemaic system made them, he was induced to consider the simpler hypothesis that the sun was the centre round which earth and the other planets revolve. Besides this fundamental truth Copernicus anticipated many other of the principal facts of astronomical science, such as the motion of the earth round its axis, the immense distance of the stars which made their apparent position the same from any part of the earth's orbit, etc. His general theory also enabled him to explain for the first time many of the important phenomena of nature, such as the variations of the seasons and the precession of the equinoxes.

The great work in which Copernicus explained his theory, *De Orbium coelestium Revolutionibus* (On the Revolutions of the Celestial orbs), was completed in 1530, and published at Nuremberg in 1543. He died at Frauenburg, 1543.

References.—*Life and Works of Copernicus*, by Leopold Prowe; *Popular History of Astronomy*, by A. M. Clarke; and *Lives* of the astronomer by Gassendi, Von Hipler, and Polkowski.

Copley (*kop'li*), **John Singleton,** American painter, was born at Boston, Mass., 1737. Washington sat to him in 1755, and later, in London, he painted George III. and his queen. Here also he became the friend of such men as West and Reynolds. He died at London, 1815.

Coppee (*kō'pā'*), **Francois,** French poet, was born in Paris, 1842. For three years a war office clerk, he early gave himself to poetry, and with *Le Reliquaire* and *Les Inimites*, gained the front rank of the "Parnassiens." Dramatic critic for some years to *La Patrie*, Coppée entered the academy in 1884. Died, 1908.

Coquelin (*kōk'lan*), **Benoit Constant,** French actor, born at Boulogne, 1841, was admitted to the conservatory in 1859, and having gained the second prize for comedy, made his début at the Théatre Français, 1860. For a quarter of a century he played here with unbroken success, both in classical pieces and in rôles created by himself in the broader aspects of comedy standing without a rival. Died, 1909.

Corbin, John, novelist, dramatic critic, born at Chicago, 1870, graduated at Harvard, 1892, A.M., 1893; Balliol college, Oxford, 1894-95; dramatic critic, *New York* Times, 1902; dramatic critic *New York Sun*, 1905-07; literary manager, New theater, New York, 1908. Author: *An American at Oxford; A New Portrait of Shakespeare.*

Corday d'Armans (*kōr'de'dar'mäN'*, or *môN'*), **Charlotte Marie,** French heroine, was born in 1768, at St. Saturnin, Normandy, of a noble Norman family; sympathized with the ideas of the French revolution; visited Paris in July, 1793, with the purpose of assassinating Marat and Robespierre; she interviewed the former while in his bath, and stabbed him with a knife; was immediately apprehended and executed four days afterward.

Corey, William Ellis, capitalist, steel manufacturer, was born in Pennsylvania, 1866. At sixteen entered chemical laboratory of Edgar Thomson steel works; invented Carnegie reforged armor. Succeeded Charles M. Schwab, and has been president of Carnegie steel company, National steel company, and American steel hoop company; president of United States steel corporation until 1911.

Corneille (*kōr'nāl'*), **Pierre,** creator of French tragedy, born 1606, at Rouen. He studied for the legal profession, but a love adventure, in which he became the rival of a friend, first prompted him to write verses. In 1635 appeared his *Médée*, a declamatory drama, written in imitation of Seneca. Cardinal Richelieu, who aspired to be patron of the stage, wished to number Corneille among his retainers, but Corneille was so audacious as to alter the plan of a comedy, and thus lost the cardinal's favor. He now returned to his native place, where M. Chalon, suggested that he should turn his attention to tragedy. The result was *The Cid*, 1636, which was received with enthusiastic applause. He died, 1684.

Cornelia (*kor-nē'li-*), the daughter of Scipio Africanus, was the wife of Tiberius Sempronius Gracchus, who was consul, 177 B. C.

Cornelius, von (*fōn kōr-nā'lē-oos*), **Peter,** German painter, was born at Düsseldorf, 1787, and studied under Langer in the academy of his native town. His chief works are frescoes in the Glyptothek and Ludwigskirche, in Münich. Died, 1867.

Cornell, Ezra, American philanthropist, was born 1807, at Westchester Landing, N. Y., died, 1874, at Ithaca, N. Y. He began life as a mechanic and miller at Ithaca, N. Y. In 1865 he founded Cornell University at Ithaca, with an endowment of $500,000, to which he subsequently added nearly $400,000. He also established the Cornell library at Ithaca, at a cost of $100,000.

Corning, James Leonard, physician; born at Stamford, Conn., 1855; educated at Heidelberg and Würzburg; M.D., LL.D. Specially distinguished as neurologist; discoverer of spinal anæsthesia, 1885; member of many medical and scientific societies. Author: *Carotid Compression; Brain Rest; Brain Exhaustion; Local Anæsthesia*, etc.

Cornwall, Barry. See **Proctor.** Died, 1923.

Cornwallis, Charles, Marquis, English statesman and general, was born 1738. He entered the British army 1756; entered the house of commons 1760, and the house of lords 1763. In 1780 he defeated General Gates at Camden, won the battle of Guilford court house, 1781, and surrendered to Washington at Yorktown, October 19, 1781. Appointed, in 1805, governor-general of India, a second time. He died 1805 at Ghazipur, in the province of Benares, while on his way to assume the command of the troops.

Corot (*ō'rō'*), **Jean Baptiste Camille,** French painter, pupil of Michallon and Bertin, and founder of the impressionist school; was born in Paris, 1796. As a landscape painter he ranks among the first in the world. He died at Paris, 1875.

Correggio (*kōr-red'jō*), **Antonio Allegri,** celebrated Italian painter, called Correggio from the place of his birth, a small town near Modena, now called Reggio; was born 1493. He was the founder, or rather his imitators for him, of what is called by some the Lombard, by others the Parma school of painting. Died, 1534.

Correlli (*kō-rel'i*), **Marie,** English novelist; of mingled Italian and Scotch parentage and connections; sent to France and educated in a convent. Her first book, *A Romance of Two Worlds*, was an instant success, and from that time she devoted herself entirely to literature. She persuaded Edward Morris, of Chicago, to purchase Harvard House, Stratford-on-Avon and to present it to Harvard University, to which it now belongs. Died, 1924.

Cortelyou, George Bruce, public official, financier, was born in the city of New York, 1862; law schools of the Georgetown and Columbian (George Washington) Universities; LL.D. In 1895, was appointed stenographer to President Cleveland; 1896, executive clerk; 1898, assistant secretary to President McKinley; 1900, secretary to the president, and 1901, reappointed by President Roosevelt; was appointed secretary of the newly established department of commerce and labor, 1903. He entered the new cabinet, 1905, as postmaster-general, and 1907 was appointed secretary of the treasury. In 1909 he became president of the New York gas company.

Cortes, or **Cortez** (*kōr'tez*), **Fernando,** a Spanish adventurer; born in Medellin in Estremadura in 1485; he went early in the sixteenth century with Valasquez, to Cuba, and subsequently obtained the command of the expedition sent against Mexico. He advanced to Mexico, where he was at first received with friendly demonstrations; but on his seizing Montezuma, the Mexican king, whom he subsequently put to death by fire, a struggle ensued, in which many thousands of lives were lost. He eventually succeeded in putting down all opposition, and in overrunning Mexico. He was rewarded with the title of marquis, and a grant of land; but later, on his return to Spain, he found himself very much neglected. He died near Seville in 1547.

Corvinus, Matthias. See **Matthias Corvinus.**

Corwin, Thomas, lawyer and orator, was born in Bourbon county, Kentucky, 1794; removed to Ohio in early youth; was admitted to the bar, 1818; was elected a member of congress in 1830, in 1840 governor of Ohio; elected to the senate of the United States in 1845, and appointed secretary of the treasury by President Fillmore in 1850. Died in Washington, D. C., 1865.

Coue, Emile, French psychotherapist, was born at Troyes and educated at Nancy. He was a druggist and physician for many years, then retired to give all his time to his theory of cure by autosuggestion, of which the famous "Day by day, in every way, I am getting better and better" is the most characteristic note. Died in 1926.

Coues (*kouz*), **Elliott,** American ornithologist, was born at Portsmouth, N. H., 1842, and graduated at Columbian University, 1861; M. D., Columbian. His chief works are: *Key to North American Birds Field Ornithology, Dictionary of North American Birds*, etc. Died, 1899.

Coulanges (*kōō'tänzh'*), **Fustel de.** See **Fustel de Coulanges.**

Coulter (*kōl'tĕr*), **John Merle,** botanist, head professor of botany, University of Chicago since 1896; born at Ningpo, China, 1851; graduated at Hanover College, Indiana, 1870; Ph.D., University of Indiana; president of Lake Forest Uni-

versity, 1893-96. Author: *Manual of Rocky Mountain Botany; Manual of Texan Botany; Morphology of Angiosperms*, etc. Died, 1929.

Courbet (*kōōr'be'*), **Gustave,** French painter, was born at Ornans, Franche-Comte, 1819. In 1839 he was sent by his father to study law in Paris, but the bent of his nature was toward art. In 1841 he took to landscape work, painting in the forest of Fontainebleau. In 1844 he began to exhibit at the salon; and his works created a great sensation in 1850; he retired to Tour-de-Pelitz, near Vevay, in Switzerland, where he died, 1877.

Courtois, Bernard, French chemist, was born at Dijon, 1777. He is especially noted for having discovered the element iodine in 1812, by leaching the ashes of burnt seaweed. He did not make his discovery known until a year later, when the Institute named it iodine for its color. He was forgotten for a long period, until in 1832 the Academy of Sciences awarded him 6,000 francs, in appreciation of his services to medicine. He died in 1838.

Cousin (*kōō'zaN'*), **Victor,** French philosopher, was born in Paris, 1792; died at Cannes, 1867. After a literary career extending over many years, he was made, in 1830, under the ministry of M. Guizot, a member of the council of public instruction in France. He published a translation of *Plato*, in thirteen volumes, and a *Course of the History of Philosophy*, in five volumes, which was his largest original work. His last years were spent in retirement in the Sorbonne.

Couture (*kōō'tūr'*), **Thomas,** French painter, pupil of Delaroche, was born in 1815. His chief work is *Les Romains de la Decadance*. Died near Paris, 1879.

Coverdale (*kuv'ĕr-dāl*), **Miles,** translator of the English Bible, was born in Yorkshire, 1488; died in London, 1569. He was a monk of Norwich, but early devoted himself to the work of the reformation. The *Psalms* of Coverdale and Tyndale's translation are still used in the services of the church of England.

Cowley, Abraham, in his own day considered the greatest of English poets, was born in London, 1618. From Westminster school he proceeded in 1637 to Trinity College, Cambridge, and while there wrote, among many other pieces, a large portion of his epic, the *Davideis*, its hero King David. On Cromwell's death he went to Paris, and returned to England at the restoration. He died at Chertsey, 1667, and was buried in Westminster abbey.

Cowper, William, English poet, was born, 1731; died 1800. He was admitted to the bar in 1754, but did not practice. He passed many years at Olney, Buckinghamshire, in the society of Mrs. Unwin, Lady Austen, and the Rev. John Newton, engaged in religious exercises and charities. Lady Austen turned his attention to poetry, and after contributing sixty-eight pieces to the *Olney Hymns*, he published in 1782 his first volume. The ballad of *John Gilpin* gave him a wide renown. In 1799 he revised his *Homer*, and wrote his last poem, *The Castaway*.

Cox, David, noted landscape painter, was born at Deritend, a suburb of Birmingham, England, 1783. He studied in London with John Varley. From 1827 till 1841 London was his headquarters, but in 1841 settled at Harborne, near Birmingham, where he died, 1859.

Cox, Sir George William, English writer, mythologist, was born 1827, educated at Rugby school and Trinity College, Oxford. In 1877 he succeeded to his uncle's baronetcy. Among his works are *Times of Ancient Greece; Aryan Mythology; History of Greece;* etc. Died, 1902.
